An Important Book by the President of Yale

THE RELATIONS BETWEEN

Freedom and Responsibility

IN THE EVOLUTION OF DEMOCRATIC GOVERNMENT

(Yale Lectures on the Responsibility of Citizenship)

By ARTHUR TWINING HADLEY

From the Preface:—

"It is the object of this book to show what this ethical basis of democracy is, how it has arisen, and what happens if we try to ignore it."

The New York Tribune says:

"*President Hadley's discussion of these themes is, throughout, on a high plane, worthy of him and of the great university he represents.*"

CONTENTS

I Democracy in Theory and in Practice.
II The Basis of Civil Liberty.
III Freedom as a Religious Conception.
IV Freedom as a Legal Institution.
V Freedom as a Foundation of Ethics.
VI The Limits of Individual Freedom.
VII The Outlook for the Future.

$1.00 net. (Postage 10 cents)

FORMER BOOKS OF THIS SERIES

The Citizen in his Relation to the Industrial Situation
By BISHOP HENRY C. POTTER
$1.00 net

American Citizenship
By DAVID J. BROWN
Associate Justice United States Supreme Court
95 cents net

GORDON *TWO GREAT AUTOBIOGRAPHIES* HOAR

Reminiscences of the Civil War
By GENERAL JOHN B. GORDON
$3.00 net. (Postage 23 cents)

First Edition, Nov. 21
Second Edition, Dec. 8
Third Edition, Dec. 15
Fourth Edition, Jan. 10

"Should be read not only by all history-loving adults, but by every genuine American boy. There is nothing in fiction a tenth so interesting as the truth about our civil war."—*The Interior.*

"It is a big, brainy, full-blooded, manly American story, passionately thrilled with a high spirit of American hopefulness."—*St. Paul Despatch.*

"His battle scenes are living pictures; his compact force of statement is remarkable."—*Boston Daily Advertiser.*

"Altogether the most remarkable war book yet produced."—*Savannah (Ga.) Morning News.*

Autobiography of Seventy Years
By SENATOR GEORGE F. HOAR
Two Volumes, $7.50 net. (Express extra)

First Edition, Nov. 21
Second Edition, Dec. 8
Third Edition, Dec. 15
Fourth Edition, Jan. 10

"So packed is it with memorable things that the reviewer, selecting here and there a chapter or a passage for special notice, feels like one gathering pebbles at the seashore."—*The Dial.*

THE NEW YORK SUN says:

"A book which, considered as a contribution to the materials of American history, will rank with Benton's 'Thirty Years in the U. S. Senate' and Blaine's 'Twenty Years in Congress,' is the AUTOBIOGRAPHY OF SEVENTY YEARS, by George F. Hoar. From one point of view the narrative is decidedly superior to either of the works with which we have compared it."

CHARLES SCRIBNER'S SONS, New York

Back Numbers of the Nation.

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with THE NATION stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

The Nation.

A WEEKLY JOURNAL OF POLITICS, LITERATURE, SCIENCE, AND ART.

Established in 1865, *The Nation* was a pioneer as a journal of literary and political criticism of the highest order, conducted free from the control of party, school, or interest of any sort. It has long been a recognized authority at home and abroad. The list of contributors includes most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. *The Nation's* departments are:

THE WEEK. Brief Comments on the most important current events, domestic and foreign.

EDITORIAL ARTICLES. Careful and moderate discussion of prominent political and social topics.

SPECIAL CORRESPONDENCE. From all quarters of the globe, by intelligent and trustworthy observers.

OCCASIONAL CORRESPONDENCE. Letters to the editor on every subject germane to the scope of the paper.

NOTES. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.

REVIEWS OF BOOKS. By able writers and scholars (mainly specialists) of both hemispheres.

FINE ARTS. Competent criticism of art exhibitions and works of art, the drama, etc.

The style and form of the paper are chosen with a view to the most suitable shape for binding, and a set of *The Nation* preserved, bound, and indexed makes the most complete and readable record of current events of importance in the political and literary world available for the American Public. Two volumes are completed annually. The index and title-page accompany the last issue of each volume.

SUBSCRIPTION PRICE—$3 per year postpaid in the United States, Canada, and Mexico; $4 a year postpaid to other countries included in the Postal Union. Subscriptions for a shorter period taken at the yearly rate. Remittances should be made by check, draft, or money order, payable to *The Nation*. Specimen copies sent free at any time on request.

GEORGE FOX

An Autobiography

Being the Story of His Life as told in Selected Passages from his Journal. Edited, with Notes and an Introduction, by RUFUS M. JONES, M.A., Litt.D., Professor of Philosophy in Haverford College.

THE Journal of George Fox is one of the great religious autobiographies, and has its place with the "Confessions" of St. Augustine, Saint Teresa's "Life," Bunyan's "Grace Abounding to the Chief of Sinners," the "Life of Madam Guyon, Written by Herself," and John Wesley's "Journal." . . .

The present editor has undertaken the task of abridging and editing it, in the belief that the time is ripe for such a work. The parts of the Journal which have been omitted—and they are many—have gone because they possess no living, present interest, or because they were repetitions of what is left. The story, as it stands, is continuous, and in no way suffers by omissions. The writer of the Journal lacked perspective. Everything that came was equally important, and his first editors, in 1694, looked upon these writings as too precious and sacred to be tampered with or seriously condensed.

The notes which attend the text in this edition have seemed necessary for a clear understanding of the passages to which they refer. They have been made as brief and as few in number as the situation would warrant. The Introduction is an attempt to put George Fox in his historical setting, and to develop the central ideas which he expounded, though all points of detail are postponed to the notes. —*From the Introduction.*

The Nation.

NEW YORK, THURSDAY, JANUARY 7, 1904.

The Week.

While every one must regret Secretary Hay's disablement from ill health, there are some obvious advantages in having the Colombian negotiations turned over to a trained lawyer like Mr. Root. It is on the legal side, next to the moral, that the Administration's case has been throughout weakest. Secretary Root was in Europe when the blundering policy was undertaken, but immediately upon his return was credited with having induced the President to abandon one part of his rash plan—that to stop British merchantmen on the high seas. It was an instance of a cool-headed lawyer fearing to tread where impetuous statesmen rushed in. Irrespective of what is past, however, the present state of the case calls for legal acumen of a high order. The document which Colombia has presented in protest is a legal document; its contentions relate to the interpretation of law and treaty. Those things must mean more to a lawyer than to the mere diplomat. The latter may be disposed to take his wishes for the law, and to say, as Mr. Hay did when squarely asked why this Government would not allow Colombia to land troops in her own territory, "It is not thought desirable." A lawyer in his place would have anxiously inquired, "Where is my warrant?" All these and many other legal questions are now to be pressed upon the attention of the Administration more seriously than ever. We count it fortunate, therefore, that its special representative is to be a man skilled in the law.

The *Sun's* Washington correspondent says that the Administration is anxious for the ratification of the new Panama treaty because most of the President's advisers believe that the treaty of 1846 authorizes us only to keep transit open, leaving us with no right to take more drastic action to defend the Republic of Panama. These advisers are cold comforters, for has not the President himself already interpreted the treaty to mean that he may prevent all fighting on the Isthmus? Before there was a sign of a revolution, orders were issued to our navy to prevent the landing of Colombian troops within fifty miles of Panama or Colon. If Mr. Roosevelt must now have a treaty in order to do that sort of thing to protect Panama, he plainly confesses that he acted without legal warrant when he aided the incubating Republic of Panama. Such a course does very well, Mr. Roosevelt seems to feel, when there is nobody but a supersensitive press to criticise it. When Congress is in session, however, it is convenient to act under treaty. It looks better, keeps the Democrats quiet, and pleases Senator Hoar.

To suppose that the Colombians will be content with a sop thrown to them by Panama out of the $10,000,000 purchase money, or with the assumption of a portion of their national debt by the extemporized republic, is absurd. Strange as it may seem to some Americans, the Colombians are a high-strung, proud, and sensitive people. They feel about the shearing away of Panama just as we should about the cutting off of Florida from our country by a *coup de main*. Consequently, we may be confident that the hopes of Gen. Reyes and his colleagues look to some larger and more thorough-going adjustment than any mere money payment. It is more than foolish to talk about the Administration's being bound to "stand firm" and "yield nothing." Why should it stand still, firmly or otherwise, when by moving in a new direction it could accomplish its main object better? It is clear that new developments are to be expected. Colombia's present offers are, we believe, of a nature to make it entirely feasible for the President to end the whole controversy in a way satisfactory to all concerned.

Conservatism was the keynote of the utterances at the Democratic dinner on Monday night. Mr. Cleveland's letter closed with the words, "a safe and conservative Democracy." Mr. Hill cried out, "Fellow-Democrats, the people want a safe, consistent, level-headed, conservative administration." Mr. Olney, however, was the most important speaker, and his deliverance had the greatest significance. After detailing Democratic policies in foreign and in domestic affairs—"observance of treaties and obedience to international law," "respect for the rights of every nation, however small," "without making rumors and trivial events the pretexts for military demonstrations in foreign parts"—Mr. Olney added, "We have had a surfeit of sensations and of spectacles, and need a rest. We need it to recover our equilibrium." In short, the Eastern Democrats are giving plain warning that they regard safety and conservatism as the strongest issues. As Mayor McClellan phrased the appeal to the country at large, "Wherever they are to-night, in the East or the West, in the North or the South, let all Democrats hear our avowal." The candidates who are suggested also represent the conservative Democracy—Cleveland first of all, and Mr. Olney and Judge Parker. Whether or not we take Mr. Olney's tribute to Mr. Cleveland as a serious effort to bring him into the field, it is clear that delegates who enter the convention prepared to support an old-line Democrat are not likely to be stampeded for any man of the Bryan stripe.

With possibly two exceptions, Mr. McClellan's selections betray his readiness to accept the old Tammany doctrine that to the Wigwam workers belong the spoils. The men who got out the vote or worked at headquarters are the ones whom he has primarily considered in distributing his favors. Even his best appointees, Mr. McAdoo and Mr. Crain, are men who took an active part in the campaign against the good-government forces. Mr. McClellan, in thus limiting his choice, is in striking contrast to Mayor Low, some of whose best commissioners—Folks, De Forest, and Lederle—were practically unknown outside of what may be called professional circles. In retaining Commissioner Woodbury in order to placate independent Democrats, he has chosen one of the least eminent of Mayor Low's lieutenants, whose work has disappointed the public and has fallen below the Waring standard. The selection is, moreover, recognized in its true aspect as another exception which proves the Tammany rule. The most sinister aspect of the incoming Administration is, after all, the domination of Murphy. The fact that there is another boss in Tammany Hall, who has risen by way of the saloon, with bedraggled garments, stares us in the face, just as we are compelled to witness in the Republican party the supplanting of one "State leader" and autocrat by another. It cannot be ignored or belittled. The next two years Murphy will devote to strengthening himself and his position by means of a tool who relies upon his own feeble powers to counteract the evil influences of corrupt or inefficient commissioners, and is quite unable to see that a dozen police captains may nullify the reform efforts of a McAdoo.

Through the decision of the Supreme Court on the Gonzales case, the Porto Ricans are promoted from an anomalous position to that of "nationals" of the United States of America. Isabella Gonzales, a Porto Rican, was, on the 4th of August, 1902, denied admission at the port of New York. Commissioner Williams took the ground that she was an alien immigrant, likely to become a public charge, and thus liable to exclusion under the Immigration Act of 1891. On appeal, the Supreme Court

decides that the Porto Ricans, owing no allegiance to any other Power, are "nationals" of the United States and entitled to freedom of passage. In other words, they are virtually subjects, and under conditions which are generally applied, say, to natives in the French colonies, or to our own Indians; they are entitled to all civil rights under our Constitution and laws, but must acquire political rights (citizenship) by naturalization. (The Court expressly declines to consider the question of citizenship.) No one can doubt that the decision is in accord with substantial justice, but its full implications should be faced. The Filipinos, too, are our "nationals," and are entitled to pass freely and do business in our territory. It will be impossible to exclude them under any provisions of the Immigration Act. Here is only a hint of the embarrassments of a republic which injects into its body politic a great class of people who are neither citizens nor aliens. The logic of the situation is to prepare our "nationals" for citizenship with all expedition, or, should they seem undesirable as citizens, to restore them to their real status as aliens. The Supreme Court, in recognizing the national rights of the Porto Ricans, is tacitly making a strong argument for the independence of the Philippines.

The Boston Custom House episode should be a lesson to Secretary Shaw. He seemed to think that if he wanted to abolish the "release-bond" practice, the only thing he needed to do was to say so in plain terms. That may be the proper method out in Iowa, but in Boston they have always had a way of asking for the reason of things. And if they do not like the reason, they are apt to talk. Some persons over there seem to think that they have found the real reason for the recent bond-release ruling. It is said that politics is at the bottom of the affair. The collector, it appears, is a personal friend of Senator Lodge, and in overruling him the Secretary of the Treasury has trod on the toes of the Nahant statesman. Possibly Mr. Shaw could have effected his end without all this fuss if he had used a little Boston politeness. His direction to Collector Lyman to "go ahead and fix things, and I will see that you do not lose your official head," was in shocking taste. No wonder the Collector was "hurt," and called in Senator Lodge. But the Senator has his own ground of complaint. It was an ill-mannered act for the Secretary to make an important ruling in the Boston Custom House entirely on his own initiative. Massachusetts has no official Republican boss, but names are of no consequence. Senator Lodge and President Roosevelt have for more than twenty years been the warmest kind of political and personal friends to no purpose if the Senator has to refer the Boston merchants to the Secretary of the Treasury every time they come to him to help them fix things at the Custom House. No wonder it is said that Washington will hear from Mr. Lodge on this subject. It is time for the real status of the Secretary of the Treasury to be determined.

Increasingly vigorous protests are made against Gov. Pennypacker's plan to leave the Governor's chair for a seat on the Supreme Court bench of Pennsylvania. The leading newspapers of both parties are unanimous in their condemnation of the proposed turning over of the State government to the worst kind of Quay machine politician—Lieut-Gov. Brown. They declare that Brown could not be elected Governor on any ticket, and are of the opinion that Gov. Pennypacker's preëlection pledge to serve out his term should in honor prevent him from resigning now. At a public discussion in the North Broad Street Baptist Church of Philadelphia on Sunday week, a majority of the speakers criticised the Governor's course very severely, and with the entire approbation of the audience of five hundred men. But Senator Quay has assured the Governor of his hearty sympathy with the proposed "promotion," and it is therefore generally believed that this disgraceful deal will go through. As for the Governor, it is evident that his career is one which is worthy of the analytical powers of our best psychologists.

The appointment by Mayor Weaver of Philadelphia of a committee of public safety to report upon the theatre conditions in that city points the way for similar action by Mayor McClellan. The contradictory opinions as to the safety of our playhouses with which the press has been filled, merely emphasize the need of an authoritative finding. The new Fire Commissioner has been prompt in ordering an inspection of the fire curtains, and some managers have shown alacrity in opening their fire exits after every performance. But the published insurance rates for the various theatres show clearly that more important matters are involved, and it is extremely significant that some of the newest theatres are charged very high rates. What the public should know is whether in those cases where the proper exits are hampered by doors swung at right angles, by steep stairs leading down from the balconies, and by turns in the passageways to the street from the orchestra, the authorities cannot demand immediate alterations to safeguard the theatre-goers. Safeguarding the scenery is not the only requirement of the hour. Buildings in which large numbers of people assemble for any purpose should be rendered panic-proof as well as fireproof, if this is in any way possible. Mayor Harrison's radical action in closing all of Chicago's playhouses shows what a thoroughly aroused executive can do when he realizes the necessity of promptness and thoroughness.

In view of the differences of opinion among experts as to the security of our places of amusement, Mr. Perez M. Stewart's suggestion that there should be a committee of public safety to pass upon them has very considerable merit. Mr. Stewart was impressed with the necessity of such a body while Superintendent of Buildings in Manhattan, and particularly after the Park Avenue Hotel fire, with its needless loss of life. While the present Building Code has perhaps more stringent requirements than any similar municipal regulations, the responsibility for the lives of those who frequent halls, theatres, hotels, and restaurants is divided among the police, fire, and building departments. Some theatres are old and antiquated, but are beyond the reach of the law so long as they comply with certain technical requirements, such as asbestos curtains, etc. Frequently, too, they are wedged in the centre of blocks, and, therefore, have practically only one exit for orchestra and balconies. A commission of experts could easily be procured to pass upon these places of amusement and certify to their condition. Even if legislative sanction for such a committee should be required, it would be promptly forthcoming at this time. A certificate of safety from a body like this would be money in the pocket of every manager possessing one, as well as an asset to be advertised.

Pennsylvania is the latest State to feel the need of a rural police under control of its State authorities. For three months past the commonwealth has been disgraced by a series of crimes of violence in several districts, which shows clearly that the lawless elements have the upper hand. The Philadelphia *Press* reports that a lonely couple is tortured about every week; that houses are plundered, and that men working in isolated places, such as signal towers, are constantly in danger of being robbed and murdered. The *Press* attributes this epidemic of crime to the immigrants who have flocked to the State, and also to men who have been bred to violence by local disorders, as in the iron and coal regions. As in other American States, the only protection is provided by sheriff, constable, or watchman, and how precarious that is, every one knows who has ever lived in a rural community. Therefore, the remedy seems to be a State police patrolling the roads and supported in part by the localities served, and in part by State taxation. The same plan has elsewhere been advocated as a preventive of lynching, or in order to bring about the enforcement of certain laws.

In New York the need of a State police is most felt when it comes to the enforcement of the excise law. Take the Hudson River villages, for example. There is hardly one of them in which the statutes in regard to the sale of liquors are not persistently and openly violated. The officials whose sworn duty it is to enforce these laws are chosen by the voters of these same villages, and they are, therefore, content to wink at abuses and violations lest they be retired to private life at the next election. To many observers the only hope is a permanent State police to back up the now ineffective State inspectors. Its members could be shifted from county to county whenever they became too familiar with any one district. Such a force, if mounted, could also be assembled quickly for riot or strike duty, and, if properly handled, would be very much more effective than a similar force of militia. This argument should especially appeal to Pennsylvanians, who have had to pay out large sums for the National Guard in the long strike campaigns every other year for more than a decade. But, wherever tried, to be of any value, such a State police would have to be officered by men of military training, and would have to be entirely divorced from politics. It should follow the methods of the English county constabulary or the *gendarmerie* of France and Germany.

The report of the State Superintendent of Banking treats of some very important subjects. These include compulsory examinations, restriction of investments by trust companies, compliance by foreign trust companies with the restrictions of this State, cash reserves by trust companies, and weekly statements by trust companies and State banks. Most of these subjects have been threshed over before, but the promotion of "hazardous and experimental schemes" by trust companies is practically a new theme. The great underwriting deals of the last few years have in a very great number of cases failed to meet the expectations of those who went into them; but it is only during the past year that this fact has been demonstrated. It was not so very long ago that underwriting large industrial projects was considered a very safe and highly profitable business, and there was every temptation for many of the trust companies to go in for it. Owing to their not having to make public their affairs, as do the national banks, it has been difficult to form an opinion as to how far they have been affected by the setback to industrial underwriters. Doubts on this point have played their part in Wall Street in recent months, and no one will now question the wisdom of rigidly curtailing this kind of business in the future.

The best evidence that the industrial situation is sound at heart is the resumption of operations by mills which had been obliged to shut down. Every day adds to the list of these, and reveals a very interesting economic process. The mills did not raise wages until everything else had gone up on them. When the stock market brought about a prolonged period of tight money, consumers could not afford to pay so much for goods as formerly. It was necessary for the mills to bring about cheaper production, and the first step was a wage reduction. Manufacturers showed their good sense by quickly realizing the necessity of lower prices. The question was, Would the labor element be as quick to see the part they should play? When mills began to close all over the country, there was ground for apprehension, but it now appears that the shutdowns have in most instances been merely incidental to the adjustment of labor to new wage conditions. The frequent reopenings show that the labor element has in the main recognized the demand of the situation. The result is that the year ended without the widespread dislocation of industry which some people feared.

From the bare press reports it is impossible to judge of the activities of the Carnegie Institution. But, pending the distribution of the Year Book, it should be said that the drift towards research in the natural sciences is as marked as ever. To be sure, grants were given last year to the veteran Orientalist, Dr. Ward, for deciphering West-Asian seals; to Mr. Worthington C. Ford for calendaring the American archives at the Congressional Library; to Dr. Putnam for compiling a much needed directory of learned societies—but these were exceptional concessions to the historical sciences. That the Institution declines to subsidize systematic investigation in logic and metaphysics must be taken, we trust, not as evidence of contempt for philosophy as such, but of absence of attractive proposals in that field. But the scientific prepossessions of this unique foundation for research make it doubly desirable that it should be generous to the few really promising enterprises proposed in behalf of the humanities. In this regard Professor Seymour's report on sites for excavation in the Hellenic territory, and Mr. Pumpelly's preliminary account of vestiges of Mongol civilization in Trans-Caspia, deserve the friendly attention of the trustees. That the latter investigation might clear up obscure chapters in the history and archæology of Asia, readers of Sven Hedin's latest books of travels are fully aware.

The enthronement of a Roman Catholic archbishop at Westminster is an event of more than passing significance, for the ceremony did not take place humbly, but in a new cathedral which in certain respects rivals St. Paul's—the only church of the first architectural importance built by Protestants. Critics will differ as to the merits of Bentley's great basilica at Westminster. Many will regret its close adherence to Byzantine modes, but no person of taste will deny the impressiveness of the interior and the beauty of the fenestration, which is surpassed only in old Westminster itself. Pious Catholics will see in it a symbol of the Church Triumphant. They will recall that, since Mary's time, the Church, dispossessed of the great places of worship it had built, has lived a hole-and-corner life in England. The erection of a metropolitan church, quite as ambitious as any of the lost cathedrals, seems to mark the passing of the mission stage of Roman Catholicism in England. That the fact is viewed in a friendly light by the Protestant press, is a welcome sign of growing tolerance.

"A prudent lord," says Machiavelli, "should not keep faith when such keeping turns to his disadvantage." It is seemingly from this feeling that France will refuse to be bound by treaty to join the mad adventure of Russia in the Far East. Doubtless M. Delcassé, who is actively trying to bring the Russian Foreign Office into a peaceful mood, tacitly accepts Machiavelli's apology. "This counsel [of not keeping faith] would not be good if all men were good; but since they are bad, and do not keep faith with you, you need not keep it with them." But, of course, the French have a better reason for keeping out of the Far Eastern imbroglio. It is no affair of theirs; its scope was not foreseen when President Faure and Alexander III. exchanged toasts at Cronstadt, while practically France would have much to lose and nothing to gain in saving Russia's Korean chestnuts. There was, then, from the first a probability that the Dual Alliance would break down when applied beyond the Urals. Baron Hayashi, as reported in the dispatches, apparently has definite assurances that France will maintain a neutral attitude in the event of war. Here is unmistakably seen a first effect of the Anglo-French *entente*. The two nations are earnestly seeking peace at St. Petersburg. One cannot doubt that this common action will draw England and France still closer together, and will leave France in a merely platonic attitude towards the ally from whom she has received so little. Clearly we may expect a new shuffle of the diplomatic cards. France and England, with Italy, very likely, would form an alliance against which Germany and Russia might desire to combine forces. Thus the uncertainty in the Far East will probably result in a considerable readjustment of the European balance of power.

THE PRESIDENT ON THE DEFENSIVE.

President Roosevelt has heard from the country. He knows now, what he did not appear to dream of when he wrote his easy paragraphs about Panama in his annual message, that his course is open to serious objection. It has been challenged by men of weight in his own party, to say nothing of the independent press, on grounds of both morality and law. It is no longer possible to whistle down this opposition, or to put us off with the comfortable assurance that the President can do no wrong. Mr. Roosevelt himself has seen the need of attempting his own defence; and he makes it at great length in the message which he sent to Congress on Monday.

It produces no new facts, even with the extensive aid of a newspaper-clipping bureau, though it misstates some old ones. Thus, the President says that, just before the Panama revolution, he was thinking of "going to the Nicaragua route." But he has before stated that he had given that up as impracticable, on the advice of the most competent engineers. He also remarks that the idea of constructing the canal by "private enterprise" had long since been given up by this Government. Why, then, did it agree, in the Hay-Pauncefote treaty, that it might be constructed "either directly at its own cost, or by gift or loan of money to *individuals* or *corporations*"? Nor would his assertion that the orders to our naval commanders this year were of the same tenor as those of 1901 and 1902 bear examination. There is a sinister difference. Previously, the instructions had been simply to keep transit open, and last year Secretary Moody allowed Colombian troops to be transported; this year the orders were to keep Colombia from landing a force anywhere within fifty miles of the Panama railroad—that is, practically, anywhere on the Isthmus.

All these minor matters, however, are of small account beside the grave questions of law and policy which the President discusses. He frankly admits now that his course has been irregular. The recognition of Panama was, he surprisingly declares, "in no way dependent for its justification upon our action in ordinary cases." Mr. Roosevelt confesses that the "general rule" is against him. This is a great advance since November and December, when he was asserting that he had but done what this Government had "always" done. He does not deny to-day that "a new state should not be recognized as independent till it has shown its ability to maintain its independence." That is, he acknowledges that the precedents and the rules are adverse to the course he has followed. Then what is his defence? Why, simply that our "national interests" and "the interests of civilization" demand that we take this extraordinary and lawless step! In other words, when we want a thing intensely, we are entitled to trample upon propriety and the law in order to get it!

Now it is unnecessary to remind an historical student like President Roosevelt that every execrated political crime, every ruthless act of conquest, every wicked oppression of the weak, has been justified by its perpetrators on precisely this ground. Has he never read Napoleon's proclamations? That giant despoiler of the nations held exactly the language of President Roosevelt—all his plundering and murdering was for the "national defence" of France and the good of humanity. It is more than a coincidence that the President cites the words of Secretary Cass. They were written at the time when the slave-holding Democracy of this country was looking everywhere for new lands to subdue and pollute, and only shortly after that infamous Ostend manifesto which the first Republican platform denounced as "the highwayman's plea." What would those founders of the party have said had they conceived it possible that a Republican President in 1904 would make that plea his own?

What we say is that, with such principles of action avowed by the President, no country is safe from his aggressions. This Government was founded as a government of law. When the Executive sets the army or navy in motion, he must be able to point to warrant in the Constitution or in the statutes. But here we have Mr. Roosevelt erecting as the true standard the "national interest"—or what *he* conceives to be the national interest. Apparently, this chivalrous President intends for the present to confine his attacks to weak nations—those which, as he says with fine magnanimity of Colombia, are "helplessly unable to enforce" their will as against us. But who shall put a check upon him? If he is to be a law unto himself and set up his notion of the national interest as his sufficient guide, where shall we stop? Nowhere short of becoming a standing threat to the peace of the world. Such wild and lawless conceptions of public policy must be put down, or the man professing them rebuked by the people, unless we wish to see this nation embark upon a career of universal aggression.

The President's message, far from being the end of debate, is only the beginning of it. He has not answered the searching questions put to him by Senator Hoar. He passes over entirely his commission of an act of war against a friendly nation. This and his other violations of law and precedent are the real points at issue. They cannot be hidden by the President's cloud of irrelevancies. The question before Congress and before the country is simply whether this great nation is willing to twist a treaty, to turn its back on admitted precedents, and to violate international law, all in order to win a mean and mercenary advantage.

"INCHOATE RIGHTS."

It fairly makes one's head swim to try to keep up with the Administration's successive inventions of legal doctrine. On the heels of the President's garrulous message, the upshot of which is that the essence of law is *sic volo sic jubeo*, comes the published correspondence of Secretary Hay with Gen. Reyes. In it we have one more astonishing attempt to find warrant for an arbitrary and illegal determination. Franklin said that it was a hard case indeed in which a reason could not be found for what you wanted to do; but Mr. Hay's task is the infinitely harder one of finding a law for what he wants to do. Gen. Reyes had politely but pointedly asked him on what ground this Government forbade Colombia to land troops on the Isthmus to defend her own sovereignty. The Secretary replied by recounting recent events, and referring to the treaty between Panama and the United States. Then he said—and here is where you begin to lose your breath—that, although this treaty had "not yet become law," there were "already inchoate rights and duties created by it." In other words, though the law was nonexistent, it was in force.

This is a charming novelty of Secretary Hay's. A treaty pending carries with it inchoate rights. Very good. The bearing of this doctrine lies in its application. Colombia, for example, might have applied it while *her* canal treaty was pending. She might have demanded half of the $10,000,000 purchase money, on the ground that the treaty, though not yet ratified, had already created inchoate rights, and she would take $5,000,000 for hers, please. Having this doctrine by him all the while, we wonder greatly that Secretary Hay did not bring it into play in connection with some of his own reciprocity treaties. While they were still before the Senate, why did he not write to Chancellor von Bülow or Minister Delcassé that the mere fact of a reciprocity treaty's pendency created an inchoate right on our part to exact lower duties for our goods, though we were not yet ready to grant them to foreign goods? The reason is, of course, that either of those gentlemen would have told him that his new doctrine was preposterous nonsense. Gen. Reyes, however, being the representative of a weak nation, is expected to admit gracefully that our logic is as powerful as our guns.

Inchoate rights under a mere project of law would be made short work of by any court. If our right to go to war to defend Panama can be deduced from an unratified treaty, so can Panama's right

to receive her $10,000,000. Imagine a Comptroller of the Treasury letting a dollar go out on any such warrant! Yet it would be as valid for him as it is for the President. For neither, of course, is it anything more than waste paper. The whole argument would be ridiculous were it not an alarming indication of a lawless spirit in the men set for the enforcement of the law. Prof. Henry Loomis Nelson, writing from close observation, has declared that President Roosevelt has essentially a lawless mind. That is, he thinks only of what he wants done, and has a thoroughgoing contempt for everything, including the law and the testimony, that stands in his way, The wriggling tergiversations which have marked the attempt to justify the Panama trickery go far to confirm that diagnosis.

Mr. Hay's discovery of inchoate validity in a treaty that has, as yet, no effect whatever in law, may be compared with that other invention, all his own, that the refusal to ratify a treaty is an unfriendly act. That was the burden of one of his threatening dispatches to Colombia. For it he was deftly called to book by the Colombian Minister for Foreign Affairs. Señor Rico stated but an elementary truth, but it is one which covers with confusion Secretary Hay's present contention, as it did the former. Said the Colombian Minister: "Previous to ratification, a treaty is but a project which, according to the law of nations, has no rights or obligations; and for the same reason, to reject or delay its ratification is not cause for the adoption of measures tending to alter the friendly relations between two countries." He added with great force that, if such were not the case, the mere "preparing of the treaty would be the occasion of a serious danger, instead of an element of peace and progress." It is plain that it would be if a ruler were free to make an unratified treaty the ground of usurping the power of Congress to declare war. Happily, if the President of the United States really does that, he will be liable to impeachment.

It is evident that the master-motive of both Mr. Roosevelt and Secretary Hay in all this Panama recklessness has been a thorough contempt of the Colombians because they are not altogether such as we are, and because they are weak. This crops out in the President's message. He speaks of the "anti-social spirit" and "imperfect development" of the Colombians. How could such wretched inferiors expect to have their rights respected by the flower of Christian civilization? The old conception that laws were made for the protection of the weak has no place in Mr. Roosevelt's philosophy. Whom we can afford to despise we may wrong with impunity. Now contempt is as perilous a basis of intercourse between nations as between men. From despising people you soon pass to despising their rights; from contempt of their wishes you pass to contempt of our laws. The President's latest revelation of the way in which that spirit actuates him, has been too much for some of his warmest supporters. Whatever the immediate political and public effect may be, there can be no doubt what the verdict of the judicious will be upon the Panama high-handedness. Apropos of one of Palmerston's international aggressions, Lord Malmesbury wrote in his diary: "A low trick and unworthy of England." When the letters and journals of the present day come to light, how many honorable Americans will be found to have written in secret a like condemnation of John Hay and Theodore Roosevelt!

THE HANNA BOOM.

The Hanna boomers are still abroad in the land. At the annual "love feast" of the Indiana Republicans last week, Senator Beveridge spoke up bravely for Roosevelt, but there was much enthusiasm when Senator Hanna was described as "the most astute leader in the party." In Nebraska Gov. Mickey, who is a strong Roosevelt man, is reported to be alarmed over an attempt to undermine his candidate. In this State, as everybody knows, Wall Street much prefers Hanna to Roosevelt, and is prepared to back its preference substantially. In view of these steady efforts to bring Hanna forward, it is worth while to note his real elements of strength.

He can count upon considerable personal popularity in his own State. Ohio always has a favorite son, and to-day Hanna is the man. He could surely get the electoral vote in 1904—but so could Roosevelt or any other Republican, for the State is for the present as firmly fixed as Maine or Vermont. The party, then, is not under the necessity of nominating Hanna for the sake of saving Ohio.

Hanna's support among eminent financiers is, on the whole, a source of weakness rather than of strength, even in this State. Of course, huge campaign contributions would be a help, especially to a candidate like Hanna, who is not squeamish about spending money where it will do the most good. But corruption funds are not the be-all and the end-all in a political fight. Human passion and prejudice still play their part. It must not be forgotten, besides, that Wall Street has never been beloved outside of Wall Street; and the recent slump in stocks, which has impoverished thousands of small investors all over the country, has not warmed many hearts. The nomination of Hanna would be taken by every day-laborer, farmer, small shopkeeper, and professional man of moderate income as a signal that promoters, subsidy grabbers, bloated monopolies, protected Trusts, and law-breaking corporations had captured the party, body and soul. As a Republican leader in this city, who keeps close to the people, remarked the other day, "With Hanna on the ticket, we might as well not hold an election."

Hanna's greatest power, so far as securing the nomination goes, is with the machine politicians. Probably there are few States in which they would not be glad to see him overthrow Roosevelt. He could have the whole gang of venal Southern delegates at a low price for cash. He could secure many from the North by the judicious distribution of patronage—a business of which he is the acknowledged master. The rank and file of the "workers" would know that under Hanna there would be no nonsense about civil-service rules, no fussing over moral qualifications, no disagreeable inquiries into shady pasts—things that have made so many enemies for Roosevelt. Grave Senators would no longer have to sacrifice their dignity by solemnly protesting that the postmaster of their choice, though he looked the villain, was fit to be received in decent society.

More than this, there would be no damaging investigations of post-office thefts and land scandals, no prosecutions by "mugwumps" like Messrs. Bonaparte and Conrad; no painful explanations by former Cabinet officers; no indictments and sentences to prison for Beavers and other trusted friends of Congressmen. Hanna's stalwart defence of Rathbone and Heath has inspired all the rascals in both parties with confidence in him as a candidate. Every man who is thanking God for the statute of limitations would throw up his cap for Hanna. The only difficulty in the way of a sweeping victory would be the hostility of those citizens who do not flock with jailbirds. Exactly the same causes that would kindle enthusiasm in the "grafters" would alienate millions of plain people who are not looking for "plums," pickings, and rake-offs, and who have done nothing to make them fear the penitentiary.

As a candidate for election, President Roosevelt has obvious weaknesses. He will find those financiers who were troubled by the Northern Securities suit and by his attitude in the coal strike either lukewarm or positively cold. He must reckon upon half-hearted work from those spoilsmen of all grades—from United States Senators to district leaders—whose demands he has failed to recognize. He must also lose votes among the steady, conservative business men throughout the country, who regard him as impulsive and erratic. Yet, when all these deductions are allowed, he still retains far greater strength than Hanna. He is regarded as straightforward, incorruptible, fearless. If he is occasionally too strenuous and over-eager, he is, at any rate, not the tool of special interests. He is cordial, hail-fellow-well-

met, and is the possessor of certain engaging personal traits that make him enormously popular in the West. It is possible that such a candidate as Cleveland might consolidate all elements of opposition and beat him. Perhaps there are Republicans who might run almost as well as he. But the idea that Hanna could supplant him in convention and then carry the country is preposterous. A diversion for Hanna might conceivably bring in a Democratic President, but any one who is putting up his money on Hanna with the hope of really electing him is betting on the wrong horse.

OUR DEBT TO MR. LOW.

Mayor Low's Administration passes, but its works do follow it. New York city will never cease to show the impress of these two years of government under an honest, an intelligent, a high-minded and non-partisan Mayor. Mr. Low has made mistakes—some of them serious—which we have freely criticised; but above them all rise the solid achievements which an appreciative municipality should place gratefully to his credit now, as impartial history surely will hereafter.

We do not propose to detail here the record of the Administration which the voters put in power two years ago. It is known of all. It was spread before the city during the recent election, and no part of it was successfully challenged by its adversaries. Mayor Low's ability in practical affairs is of a high order, and was never displayed more signally than in the rehabilitation of our municipal finances. The intelligent care with which great public improvements were planned and watched over during his Administration; the attention given to the needs of the most needy, through efficient and considerate management of the Tenement House Department and the Charities Department; the improvement in the police force and the suppression of the grosser forms of public vice—all this is an old story, which needs no repeating here. But the moral of it all cannot be too often repeated. All details of public office are dry, as Disraeli said to the under-secretary, but it is necessary to master them. It was to this work that Mayor Low has given his days and nights. Only in that way can efficient government be had. The machinery will not run of itself. A spirit of energy and fidelity in the whole personnel of the public service has to be imparted from the man in control; and in this respect Mr. Low's example has certainly been all that could be desired. New York never had a more faithful or hard-working Mayor.

But it is the spirit even more than the methods of his Administration upon which it becomes the inhabitants of this city to fix their eyes. It was not a party Administration. The Mayor's chief obligations were not to a machine, but to the municipality. This left him free from the fetters which bind even a good man who becomes a partisan Mayor. He has no end of party claims to consider. He has to provide for troops of party hangers-on. His action in many matters has been mortgaged in advance. It is not possible for him to fasten his mind solely upon the work to be done and ask who is the best man to do it. But Mayor Low was happy in the possession of liberty. He was able to turn to the fit man, ignoring party designations. The result was to give the city a government in which a new principle was put into operation. Never before in this country has non-partisanship as the working basis of municipal administration been given a trial on so large a scale.

This is the chief thing for us to bear in mind. Here is the standard by which to judge Mayor McClellan. Mr. Low won his success in office because he was unhampered; because he could enlist available talent and public spirit without first seeing whether they were duly labelled with the correct party name. In other words, his range of choice was greatly enlarged, while his freedom of action—and the freedom of action of all his subordinates—was rendered more secure. Now it is unnecessary to argue that those are the essential conditions of successful administration. They are such in every other executive position known to man, and they are in the office of Mayor. Hence it is absurd to say that non-partisanship fails with the failure of Mr. Low to be reëlected. The non-partisan principle is simply a dictate of common sense, a mere platitude of business; and as soon as Americans make up their minds to manage their cities on common-sense and business methods, they will necessarily stand for non-partisanship. Mr. Bryan is returning from his European trip deeply impressed with our backwardness in city government, as compared with the level reached abroad. One reason certainly is that foreign cities do not tie themselves hand and foot under a partisan government. They leave their rulers at liberty to secure the best administration possible. But that is non-partisanship.

That principle will not die with Mayor Low's administration. Neither will the substantial improvements which have been wrought under it pass away and leave not a wrack behind. The good is the enemy of the bad. What the people have seen done for two years, they will insist shall be done in part, at least, during the years to come. We shall not fall back completely into the slough. In this way, even spasmodically, we win and keep a measure of reform—gaining only by painful inches. Good in itself, Mayor Low's Administration will be good in its future effects. It has given us an example from which succeeding Mayors will fall away at their peril.

NEGRO DISFRANCHISEMENT IN MARYLAND.

The negro is to be disfranchised in Maryland, although most of the causes which have led to similar action by the States farther south are absent. As compared with theirs, the negro population of Maryland is relatively small, being but 198 to every 1,000 inhabitants, in contrast with Mississippi, 585; South Carolina, 584; Louisiana, 471; Alabama, 452; Florida, 437; Virginia, 356; and North Carolina, 330. In Mississippi and in South Carolina, the first States to close the ballot-box to such of their citizens as had African blood in their veins, the negroes were in a large majority. Universal manhood suffrage, with free and fair elections, would make absolute negro domination at least theoretically possible. In Louisiana, Alabama, and Florida, the white majorities are so slender that a mere handful of Caucasians could, by allying themselves with the negro, have given victory to a party six-sevenths of whose voters were black. Even in Virginia and North Carolina it was quite possible for the highest State officers to be elected by a political party two-thirds of whose members were of African descent. In Maryland no person can be chosen by the vote of the State at large unless he receives more than three white for every two black votes. Nothing, therefore, which by any latitude of language can be called negro domination is possible there.

In all the other Southern commonwealths just named, negroes have held distinguished office. Two of them from Mississippi have had seats in the Senate of the United States. In Louisiana, Mississippi, and South Carolina men of that race held high State and judicial offices, and were sent to the national House of Representatives, as they were from Alabama and North Carolina. In all the States in which they are now disfranchised, negroes have filled county and other local offices of dignity, power, and emolument. Nothing of the kind has ever been known in Maryland. Not only has no negro ever been elected to any office of any kind in the State, other than that of city councilman, but no negro has ever been the candidate of any organized political party for office.

During the twenty-five years prior to 1896 in which the Democratic party controlled all branches of the State Government, no attempt at disfranchisement was ever made. There would seem to be less reason for it now than heretofore, as for ninety years the proportion of negroes to the total population of the State has been steadily diminishing, as appears from every census since 1810, when the ratio was 382 to every 1,000. When President Roosevelt entertained Booker Washington, the Maryland negroes were relatively only about

half as numerous as they were when Benjamin Banneker was the correspondent of Thomas Jefferson. There is not a single county in Maryland in which the negroes do not now constitute a smaller proportion of the total population than they did twenty years ago. Indeed, outside of Baltimore City and County there were, in 1900, 1,761 fewer negroes than there were in 1880. Maryland has really no black belt in the sense in which that term is used in the farther Southern States, in each of which there are many counties in which the negroes are in the majority. In some of these counties there are two, three, four, ten, or even fifteen negroes to one white person. The difference between conditions in Maryland and those prevailing in the other disfranchising States in this respect is very clearly brought out by the following table, showing the number of counties in each State in which (a) the negro males of voting age are more numerous than the white males of that age, the counties in which (b) they are at least twice as numerous, and the counties in which (c) they are more than three times as numerous:

	(a)	(b)	(c)
Mississippi	34	21	12
South Carolina	27	5	1
Louisiana	28	10	7
Alabama	19	12	9
Florida	14	2	1
Virginia	25	1	1
North Carolina	9	—	—
Maryland	1	—	—

Charles is the one Maryland county in which there are more adult male negroes than there are white. In that county the negro majority is sixty. Somehow or other, the advocates of the disfranchisement of the negro in Maryland have created the impression that in the so-called black counties of the State the negroes are replacing the whites. It has been frequently asserted, not only that this process is going on, but that it is a result of the local governments of these counties having been under Republican control for perhaps half the time since 1870. Now it is true that the three counties in question —Charles, St. Mary's, and Calvert—are increasing but slowly in population. Their economic condition is not good, but it is doubtful if it is very much worse than that of many other purely agricultural regions in the North and East. It is not pretended by any one that there have been any gross frauds in their local government. Indeed, they are so poor that no money is raised except for the most necessary expenditures, and what those are everybody knows. There is no chance to steal anything much worth the taking, no matter how knavish the officeholders might be. It is said, however, that their governments have been inefficient and have not spent with much wisdom what money they have had; all of which is doubtless true, but it will be very difficult to show that there was any difference in this respect between the years in which the Republicans were in power and those in which the Democrats ruled.

There is a prevailing superstition that things were very much better in those counties in ante-bellum days; that they were then rich, prosperous, and progressive, and that since the war the whites have left these counties and the negroes have crowded into them. Now the fact is that precisely the opposite is true. In the halcyon days "before the war" the population of these counties was decreasing, and was 2,600 less when Abraham Lincoln was elected the sixteenth President (42,177) than it was when George Washington became the first (44,809). On the other hand, in 1890, after thirty years of negro suffrage, they had 2900 more inhabitants than they had in 1860 (45,067), and a trifle more than they had in 1790. Slavery, and not freedom, tended to drive out the whites, who in 1860 numbered 6,000 less than they did seventy years before (22,551 and 16,590, respectively). In the forty years since 1860 they have regained (22,020) nearly all they lost in the preceding seventy years. The black population, which in 1860 was 3,300 more than it was in 1790, was in 1900 2,500 less than it was in 1860. In 1830, eight of the then nineteen counties of Maryland had more negro than white inhabitants. In 1900 there were only two counties in which such was the case, and in one of these the negro excess in total population was so small that there was a white majority among the males of voting age.

It is not seriously pretended by any one that the Republican State Government in power from 1896 to 1900 was not both honest and efficient. It was exceptionally so. More enlightened legislation was placed upon the statute-books in those four years than in the entire quarter of a century preceding them. The fact is, that a large majority of the white people of Maryland have never felt that the negro ought to be allowed to vote, and much of this feeling is entirely independent of the way in which the negro may vote or of the results of his vote. For many years no attempt was made to disfranchise him, simply because it was not then supposed that the Constitution of the United States could be defied or evaded. The States farther south have shown that it can be. It therefore now seems practicable, and the Democratic politicians are much interested in it because the large growth in the white Republican vote of the State and the greater independence of many of the Democratic voters have made Maryland a doubtful State. Under the conditions which have existed for the last eight years, the Democratic organization has been frequently compelled to nominate for office a very different class of men from those it would have liked to put in place, because it has known that those whom it likes the majority of the voters much dislike. If the managers can get rid of thirty or forty thousand negro votes, they will be for a number of years in absolute control. It is highly probable that a Constitutional amendment disfranchising the negroes, and not materially affecting the whites, will be adopted if it be submitted to popular vote. Many white Republicans have their full share of prejudice against the negro, and are likely enough either to vote for the amendment or to refrain from voting at all. Many of them have an idea that, if the negro is disfranchised, Maryland will become a Republican State. Whatever may happen in the remote future, there is no probability of such a result for many years to come. For eleven years now the current of elections throughout the country has been running towards the Republican party without any break, and with very few eddies. In the nature of things this cannot last much longer. When the reaction comes, as it must shortly, it will suffice for a while, at least, to hold the present members of the Democratic party to their old allegiance. With the negro disfranchised, the normal Democratic majority in Maryland will certainly not be less than thirty thousand, and may be more. Under such conditions the Republican party organization will go to pieces. All the waiters upon Providence will ally themselves with the Democracy. Maryland will be as thoroughly a one-party State as is Pennsylvania.

THE CHICAGO FIRE.

After every great theatre fire—and there have been many in this country—there has been a vast amount of discussion as to what might or might not have happened if certain things had been different—if a certain gas jet had not been left unprotected, if the exits had been larger and more plentiful, if the audience had preserved its equanimity instead of becoming panic-stricken, and so forth. In every instance an attempt has been made to prove that the disaster was the result rather of accident than of human carelessness; and although there have been coroners' inquests, grand-jury presentments, legislative enactments, and much indignant oratory, there has been no single instance, so far as we remember, in which any person has been held responsible and punished as he deserved.

It is impossible, of course, to see any bright side in so awful a catastrophe as that at the Iroquois Theatre in Chicago on December 30; but it is by no means impossible to profit by the one great lesson that it teaches. It is the same lesson that has been taught by many previous theatre fires, but wilfully disregarded—that inflammable mat-

ter will burn when fire is applied to it. This really is the one vital point to be considered in the matter. Without inflammable matter in a theatre there can be no fire. Without fire there can be none of the horrors of burning, suffocation, and mangling which inevitably follow. It is an excellent thing to be careful about fireproof walls, about strong, wide, and plentiful staircases, and the easiest possible means of exit and entrance; but all such considerations are trivial in comparison with the one essential of preventing the occurrence of fire altogether. Now, the fact that this prevention of the possibility of fire in a theatre is, in these days, perfectly simple, is the damning fact which proves beyond dispute the existence of criminal negligence somewhere in every case of fire in a place of public amusement. There would be no injustice in a law which should make a manager criminally responsible for the consequences of any such outbreak in his establishment, and until some such regulation is put into force, the country will be shocked from time to time by these so-called accidents.

What are the plain facts? There is no difficulty whatever in building a theatre of absolutely incombustible material. There is no reason why anything but iron, steel, brick, stone, or concrete should be used in the construction of a theatre, except for the stage, where wood, of course, must be employed; and wood can easily be made as impervious to flame as brick or cement itself. It is just as easy to make everything else in the theatre, the scenery, the ropes, the costumes, and whatever furnishings may be required for the seats or for decorative purposes, capable of resisting fire. In other words, it is only deliberate and wicked recklessness which permits the existence in any theatre of a single article that will burn at a flash.

Moreover, in these days of electricity and steam, there is absolutely no excuse, except the contemptible one of cost, for the presence of fire in any shape within the precincts of a theatre. All the furnaces for heating, all the dynamos for the provision of light and power, can be placed in their own fireproof structures entirely independent of and disconnected from the theatre proper. And all these facts are known and long have been known by every architect, by every builder, by every theatrical manager—and it might almost be added by every actor and actress—of any account in the country. At least twenty-five years ago experiments were made at Wallack's Theatre upon scenery painted in distemper and treated with tungstate of soda. A woodland scene was placed in the centre of the stage, and a gas flame, ten or fifteen feet in length, proceeding from the nozzle of an ordinary hose, was directed against it. The scenery gradually became red hot where the flame touched it, but only at that point. Presently the red hot part crumbled away and the flame passed through the hole to the other side without doing any further harm. The scenery did not catch fire at all, in the ordinary sense of the words, the damage being confined simply to the spot to which the fierce flame was applied. At the same time it was demonstrated that cloth, wood, and linen could be rendered equally slow-burning by a similar process. Another important point to be remembered in connection with these experiments is that the cost of the necessary chemicals, of which there are several varieties, is insignificant. There is not the shadow of a shade of an excuse for the men who neglect, or for the authorities who do not insist upon, this precaution.

These experiments were the outcome of the excitement which followed the terrible fire in the Brooklyn theatre in which hundreds lost their lives. They were fully reported in the public press, were discussed in theatrical and scientific papers, and in the Legislature, and no influential person connected with the stage could have been ignorant of them; and yet, after a lapse of nearly a quarter of a century, theatrical managers, with the consent of the public authorities, are putting all kinds of fuel into their new fireproof theatres as complacently as a man throws coals into his furnace, and then affecting amazement and horror when the stuff catches fire. One would have thought that sensible men would have learned before this that fireproof structures filled with combustibles are not fireproof at all. So far as the Chicago horror is concerned, it matters very little in what way the spark was applied. The one point from which public attention must not be diverted is the fact that it had combustible matter to feed on. Managers will put such matter into theatres so long as the law permits them to do so with impunity. They are not men of murderous intention, yet in their recklessness or ignorance they may be almost as dangerous as an insane person with homicidal proclivities. But all the responsibility does not rest upon them. The public can defend itself, if it chooses, through the legislatures. If it cannot be roused on such an occasion as this to demand the enactment and enforcement of penal laws compelling the proper chemical treatment of all stage trappings, it must take the consequences.

SYRACUSE.

SYRACUSE, November, 1903.

To the lover of antiquity and the student of the ancient world, Syracuse has a peculiar charm which it is hard to convey in words. The city played a far less conspicuous part in history than Rome or Athens, perhaps even than Sparta or Carthage. Its site is not so beautiful as some others of Sicily, not to speak of that of Corinth or of other cities in old Greece. Messina, with its azure channel widening from the strait to the noble expanse of the Ionian Sea; Taormina, looking down from its rocky shelf along many miles of romantic coast and up to the snowy cone of Etna; Palermo, with the superb sweep of its bay guarded at each end by lofty mountains, have each of them more perfect landscapes. Neither does Syracuse offer to the archæologist as abundant architectural remains as many a place of less importance. Pæstum, Ægina, Girgenti, Verona, Baalbec, Trèves, to take a few familiar instances, have finer relics from Greek or Roman times than any that have survived the shock of time at Syracuse. The special interest of this city lies less in its aspect or in its ruins than in the impression one receives of its former greatness, and in the association of its site with one great event which has been described by a supreme master of words. Syracuse was at one time the greatest city in the Greco-Italic world. She was more populous than Athens or Thebes or Sparta or Cyrene. She was the equal of Carthage in the three generations before that in which Carthage disputed with Rome the control of the Mediterranean.

On the eastern coast, and not far from the southeastern corner of Sicily, a low rocky island, less than a mile long, and about a quarter of a mile broad, lying across the mouth of a deep bay, makes an admirably sheltered haven some ten miles in circumference. The opening of this haven between the island and a promontory to the south is scarcely a mile wide. The defensibility of the islet and the excellence of the port made the spot an ideal one for a Greek colony. All round the bay, except at its north extremity, there is a strip of fertile plain, some four or five miles wide; and beyond this plain, to the west, there rise in a steep acclivity dry, flat-topped limestone hills, bearing those aromatic plants which made Hyblæan honey famous. The forms of these hills are not bold or striking, for the limestone strata lie nearly horizontal and are not very hard. But the views are everywhere lovely, for one has the smooth sheet of the harbor and the blue expanse of the Ionian Sea beyond; one has the glittering white of the buildings on the island set in the circumambient blue; one has the green of the cultivated plain with the gray hills behind; and over them, far away in the north, the snow-capped majesty of Etna. The landscape depends for its beauty more upon color than upon form; and as the colors are soft and quiet, the sentiment of the landscape is soothing, and steeped in a gentle calm. The fishing boats on the sea, the few coasting craft that lie at the quay of the little city, give a certain variety to the scene, but do not disturb the feeling of Old World repose.

Neither has the city itself anything striking in its external aspect. The skyline wants towers or spires. The castle at the southern extremity of the island is solid, and has some noble mediæval work in a ruined hall and a rich window, but it is not lofty enough to make a feature in the landscape. The other buildings are so closely pressed together and so much of the same height, that few of the palaces, which date from the fifteenth or sixteenth centuries, rise sufficiently above their neighbors to give much variety to the mass of houses.

The streets present many picturesque bits

of architecture, here a window and there a door of fifteenth-century work; with now and then a handsome palace in that stately, ponderous style which suggests the Spanish influence that so long told upon Sicilian builders. There is, however, no really fine church, for the ruthless hand of the restorer has swept away nearly all that had come down from mediæval times, and the later Renaissance and modern work is dull and often tasteless. Where a long, narrow street opens on the sea, one has often a charming view; there is always a pleasure in these southern towns in the clear air and brilliant sunshine as one emerges upon the sea front and catches the sparkling wavelets. As is usually the case in sites of limited area which have been continuously inhabited for many centuries, the remains of classical antiquity are scanty. Two fragments of temples alone remain from Hellenic Syracuse. One survives in the columns and part of the floor and front of a temple apparently of the fifth century B. C., supposed to have been dedicated to Apollo—a fine piece of work, but much damaged, and so crowded in by houses that its proportions and general effect cannot be duly appreciated. The columns of another have been preserved, embedded in the walls of the Cathedral, a building of no great beauty, for though its earliest form must date from a remote time, it has been modernized in an unattractive late Renaissance style. One might expect that in the open ground outside the Island more considerable ruins would remain. There are, however, but few. Three miles away, across the Great Harbor, two columns only remain of the temple of Olympian Zeus which contained a famous statue clothed in the golden mantle which Dionysius stole. There is also, a mile outside the modern town, the Greek theatre, whose seats, cut in the limestone rock, are still perfect. There is a Roman amphitheatre, somewhat more dilapidated, because its materials have been carried away to be used in building. With the exception of a stray column or two and some fragments of Roman work, and of the walls to be presently noticed, these are practically all that is left of old Syracuse.

In what, then, does the special interest of the place consist? In the site itself—that is to say, in an examination of the ground covered by the ancient city in its greatest extent, and in the identification of the spots which played a conspicuous part in its history. It was not only a vast and populous city, but, during the period of its greatest power, from B. C. 500 to B. C. 200, was more frequently besieged by large armies and fleets than perhaps any other city, so that the methods of attack and defence practised by the ancients can nowhere be better studied in their relation to the natural features which determined their employment. Originally confined to the isle of Ortygia, the city spread northwards beyond the narrow and shallow strait which divided it, on the north, from the mainland. Here the ground rises gradually to a sort of tableland, which breaks down to the east in bold cliffs towards the sea, and on the west slopes gently upwards for about five miles. The eastern or seaward part of this tableland, called by the Greeks Achradina, was first covered with houses; and presently, when it had been enclosed by a wall, it became part of the city, the strait having been now bridged over, as it is to-day. By degrees the city spread further to the west, until the whole plateau was (under Dionysius the elder) encircled by a wall which ran along the top of the line of cliff that bounds the plateau on the north and on the southwest. In this, its greatest extent, Syracuse was eight or ten times the size of the old isle-city, and had room for a million of people, though probably the population never reached that number, and large spaces remained unbuilt on. In the later days of the Roman Empire, as the prosperity of Sicily declined, Syracuse shrank slowly back to its former limits. It is now again confined to the isle of Ortygia, though a few houses are scattered over the lower parts of Achradina, within a mile of the modern town. The rest of the tableland either is cut up into fields, or remains a bare stretch of open ground, browsed by goats, covered with loose stones, but showing hardly any traces of the houses which must have covered large parts of it. The wall, however, can be traced all round, and in some places, especially on the north side, is pretty well preserved, while at the extreme northwest end there are considerable remains of the huge fortress, with its long subterranean galleries cut out of the rock, which Dionysius constructed to guard a point where the cliff did not give sufficient protection.

From the summit of this fortress, which stands high, there is a splendid prospect over the whole plateau, over the country to the north as far as Etna and the mountains of Calabria, over the Harbor and the plain which lies between it and the western hills. All the spots that figure in the great Athenian siege are visible. Immediately beneath is the break in the line of cliff by which the Athenian army ascended in that night attack on the Syracusan position which proved their ruin. This break is due to the fact (a fact that does not seem to have been noticed by the topographers, so far as the present writer knows) that at this point a dyke of igneous rock breaks through the limestone strata which form the cliff. The dyke has itself worn down to the level of the rock on each side, but its intrusion has caused the interruption of the precipitous face, and left a comparatively easy path from the lower ground to the plateau above. To the east one discovers the site of the Athenian circular fort, and the course followed by the walls which the besieger and the besieged respectively built. To the south are the battlefields in the plain on which the hostile armies strove. Full in front is the Great Harbor in which the decisive naval conflict was fought, when the enormous fleets almost filled the wide space of the harbor. To the northwest, some six miles off, is the glen by which the defeated Athenians strove to escape, and where they were met and turned back by the Syracusans. Far away to the south-southwest is the line of road along which, after that repulse, the Athenians made their last effort to break through the toils which had been spread around them, and along which the relics of the shattered host were brought back as prisoners to be shut up in those terrible quarries where most of them perished —last scene in the awful drama which we read in the imperishable pages of Thucydides.

It is Thucydides above all that has given the site of Syracuse its enduring and enthralling interest. He makes us realize, as one so seldom can in spots where great events have happened, the volume and force of human passion that has surged over the ground which now lies lonely, calm, and peaceful under our eyes. The ancient world is so far removed from us, and the data we have for many of the most striking passages in its history are so scanty, that it is seldom that imagination can body forth in vivid clearness the reality of events. Here, though houses and temples are gone, the features of the ground speak to us; and when they are illumined by the brilliant light which the great writer has poured upon them, they move us like a poem or a piece of noble music. The hosts march again over these silent, stone-strewn fields; the pæan rises from the struggling mass of warriors; the triremes, sped forward by the straining rowers, meet and crash upon the gleaming waters of the Great Harbor, beneath which lie the bones of so many valiant men.

POISONERS AND SORCERERS.

PARIS, December 16, 1903.

By a singular coincidence, two works have appeared, nearly at the same time, on the subject of poisonings, which have long been one of the curious chapters of history. I have before me the 'Poisons et Sortilèges' of Drs. Cabanès and L. Nass. with the sub-title, "Les Médicis; les Bourbons; la Science au 20e siècle." This volume succeeds another, chiefly concerned with poisoning in more ancient times—'Les Césars; Envoûteurs et Sorciers; les Borgia.' Dr. A. Masson has written a volume on 'La Sorcellerie et la Science des Poisons au 17e Siècle.' Curiously enough, our popular dramatist, Sardou, is just preparing for the stage a new play called "La Sorcière," in which the famous Sarah Bernhardt will take the principal part. The work of M. Funck-Brentano on the trials of the famous poisoners of the reign of Louis XIV. ought not to be forgotten; it is a very important contribution to history, though the author is sometimes carried away beyond the limits of severe criticism.

For some little time the doctors have seemed anxious to take their place among the writers of history and to solve problems which touch at the same time the fate of nations and their own profession.

"We can," says M. Masson, "form an idea of the way in which history was written under the reign of our kings, by the manner in which the Empress of China relates in her own way to her subjects the official history of the late campaign. Even to this day the Sultan is ignorant of the tragic death of McKinley, and believes that the President of the United States died of a cerebral congestion 'while visiting the Buffalo exhibition.' In Turkey, the death of King Humbert was reported in the official papers: 'The King of Italy died suddenly while bowing to the crowd.' When the late Shah of Persia was assassinated, the Turkish papers simplified the news and published the following information: 'The Shah felt slightly indisposed in the course of the afternoon, and his body was sent to Teheran.'"

In Russia, where so many tragical events have taken place, there was at once established a sort of tacit complicity between all who had profited by them, and it was only by degrees that the whole truth filtered through the official legends.

The science of poisons was an importation from Italy. History has preserved the

name of some of the famous poisoners who learned it in the land of the Borgias. The most famous of these is René, the perfumer of Catherine de Médicis, who was by some (justly or unjustly) considered his accomplice. René Bianco arrived in France in the Queen's suite, at the time of the marriage of Catherine with Henri II. He opened a shop in the Pont St. Michel, and occupied himself not only with perfumes, but also with poisons. The visits which Catherine sometimes paid to Ruggieri furnished Alexandre Dumas with chapters in some of his amusing novels. Ruggieri was another Italian, who was versed in astrology and occupied himself also with poisons; he became for a time the oracle of the Court, and the grave De Thou says that, after the massacre of Saint Bartholomew, Catherine consulted Ruggieri in order to decide what she was to do with the Princes of Navarre and of Condé, who were in her hands. Ruggieri was merciful, and, having consulted the stars, announced that the state had nothing more to fear from the two princes.

It was often said that the mother of Henri IV., the famous Queen Jeanne d'Albret, was poisoned when she left Navarre to go to Paris to attend the marriage of her son. M. Cabanès does not accept this version. Jeanne d'Albret was very ill already when she left for Paris; she was probably tuberculous. I have a portrait of her at that time, in which she is very emaciated. During one of the fatiguing ceremonies on the occasion of her son's marriage she took cold and died of pleurisy. An autopsy was made after her death, but nothing was found to justify the rumor, which became current, that she had been poisoned by means of toxic perfumes. Henri IV. was always silent on the subject, and never brought a direct accusation against the enemies of his mother.

The chapters written by M. Cabanès on the use of poison in the sixteenth century are very interesting, and he is able to correct many historical errors. He gives many details regarding the poisons employed at the time. The famous surgeon Ambroise Paré writes with much caution on the subject: "If I had my will, no man would ever have written on the subject of poison, so that we should have to defend ourselves only against beasts, which is easier than to defend ourselves against the wickedness of traitors and poisoners." He says also: "The way to defend ourselves against poison is very difficult, for the wicked poisoners and perfumers, who secretly sell poisons, conduct their villany so adroitly that they deceive the most expert."

We possess many documents on the history of criminality in the seventeenth century. Trials were frequent in which sorcery was really a cover for poisoning, and not a few of the sorcerers tried were in reality mere poisoners. In 1679 the King created the "chambre ardente," which had at once to judge 337 people suspected of being poisoners, and many were condemned to suffer capital punishment. From that date we hear no more of sorcerers, and trials for sorcery became exceedingly rare. On the other hand, trials for poisoning became more common. The regicides, instead of employing the poniard, tried poison. From the reign of Louis XIII. there are, in the Musée de Condé at Chantilly, 354 autograph letters which throw great light on this subject, as well as the 244 letters already known and published in the Historical Studies of Marius Topin.

M. Masson's chapters on Richelieu and Louis XIII. are particularly interesting. The medical account of Richelieu up to the time of his death is contained in a series of dispatches from Louis XIII., always uneasy about the health of his minister. These letters, written from many places, show the King's anxiety. He writes from Blois, on the 6th of June, 1626:

"My Cousin: I perceive all the reasons which make you desire rest, a rest which I desire, with your health, even more than you, provided you can find it in the care and principal conduct of my affairs. . . I am well aware, sir, that you despise all for my service, and that many of the *grands* wish you ill on this occasion, but be assured that I will protect you against whoever it may be. Louis."

In November, 1632, it was thought that Richelieu was in great danger. The King received news of him almost hourly, and wrote him short notes like this from Beaugency, on the 17th of November (8 P. M.): "My Cousin: I am exceedingly pained by your illness." These laconic notes were received by Richelieu at Bordeaux, where he was suddenly seized by a crisis in his malady. M. Masson tries to prove that Louis XIII. was constantly preoccupied by the idea that poison might be administered to Richelieu, and that the King had the same fears for himself. These fears were unfounded so far as the great minister was concerned, for he died from natural causes in September, 1642. His health had always been precarious, and he died of pleuropneumonia. He was all his life subject to an infirmity which caused frequent loss of blood, and all his portraits show him with a very pale, emaciated face. He was not allowed to ride horseback, and he often made journeys in a barge on the Loire.

Marie de Médicis, the mother of Louis XIII., is the subject of another medical study by M. Masson. Without entering into details, I give only his final verdict: "It is very difficult, after the review we have made of all the symptoms, to retain any doubt as to the mode of death of Marie de Médicis, and to believe that she succumbed to a malady having its natural evolution." The King and his mother were estranged from each other:

"In virtue of the axiom, 'Is fecit cui prodest,' people suspected all those who feared a return to favor of the Queen mother and were not without apprehensions that, if she made peace with her son, she would desire to take vengeance on those of whom she thought she had a right to complain. Richelieu was naturally accused of this crime, but the high favor which he enjoyed, a favor proved by the correspondence between the King and his minister, does not allow us to charge his memory with such a calumny."

"Marie de Médicis, a cardiac subject, did not die of heart complaint; . . . she died a violent death, like three-quarters of the members of her family."

M. Masson's study ends with the reign of Louis XIII. Drs. Cabinès and L. Nass enter the reign of Louis XIV. They speak at length of the attempts made at different times to poison Mazarin, the superintendent Fouquet, Colbert, Louvois, De Lionne; of the mysterious death of Madame, whose funeral oration was delivered by Bossuet *(Madame se meurt! Madame est morte!)*; of the death of Marie-Louise of Spain; of the criminal projects of Madame de Montespan; of the famous poisoners, Voisin and Brinvilliers. The deaths of the Grand Dauphin, the son of Louis XIV., and of his sons, are events which have entered into all memories and have been recorded in immortal pages by Saint-Simon. When Louis XIV. died, he left for his successor a child, of delicate health, who alone stood between the crown of France and the Regent, Philippe of Orleans. Rumors of poisoning were so current in the 17th century that the Regent was suspected of aiming at the crown by all means; these rumors were unfounded, but the governor of young Louis XV., M. de Villeroi, guarded the young King with so much jealousy that he led people to suspect that the child was in constant danger. Lagrange-Chancel made himself the mouthpiece of the enemies of the Regent of Orleans when he wrote the now well-forgotten poem of the 'Philippiques.' When Louis XVIII. was on the throne he once said to the Duke d'Orléans (the future Louis Philippe), who called on him at the Tuileries: "Avez-vous lu les Philippiques?" Louis Philippe was very much moved by the question (Louis XVIII. having a particularly harsh manner), but said nothing in answer. The King remained silent for some time, and then said: "Well, cousin, you may read the 'Philippiques.' Louis XV. lived long; the Regent was *un honnête homme.*"

Correspondence.

PROFESSORS' SALARIES AT AMHERST.

To the Editor of The Nation:

Sir: Your statement, in a recent article on "Some College Salaries," that professors at Amherst receive less than $3,000, is incorrect. Since 1901 the regular salary of professors has been $3,000. A large addition to funds was then made for increasing the salaries of professors and associate professors. It has also been provided that those who have reached the age of seventy and have served the college twenty-five years, may retire on a pension amounting to half-salary. George Harris.

Amherst, January 2, 1904.

AN AMERICAN POLITICAL SCIENCE ASSOCIATION ESTABLISHED.

To the Editor of The Nation:

Sir: As the result of a movement begun more than a year ago there was established at New Orleans, December 30, a society entitled The American Political Science Association, whose sphere of interest is the entire field of political science. Within this field its work will be similar to that now being done by the American Historical and the American Economic Associations for history and economics respectively, and its policy will be to maintain as close relations as possible with these two older bodies. Its membership will undoubtedly include many persons who are already members of the Historical and the Economic Associations, and it will hold its annual meetings at the same times and places.

The need for the establishment of this new society, which is to have for its object, as its constitution declares, "the encouragement of a scientific study of politics, pub-

lic law, administration, and diplomacy," is quite evident. By some few the opinion was advanced that this need might be met by the creation of a political-science section in the American Economic or in the American Historical, or in both; the sections thus created to form a joint section, to which should be assigned a certain part of the programmes of the annual meetings of those associations. A canvass of the views of those most interested disclosed, however, an overwhelming opinion that the need could not thus be satisfied. By them it was argued that, in the first place, such a political-science "section" would not attract the active support that a new national association would be likely to enlist; and, in the second place, that it would in but very small measure satisfy the needs of the political scientists. It was declared that what they desired was not merely an opportunity to read papers and to have them published in the reports of the annual proceedings of an existing society, but the establishment of some representative body that could take the scientific lead in all matters of a political interest, encouraging research, aiding if possible in the collection and publication of valuable material, and, in general, advancing the scientific study of politics in the United States.

It being thus demonstrated that a new association was needed, the only question that remained to be answered was as to whether there could be obtained a support sufficient to warrant its establishment. Inquiries pursued during the past year showed that such a support could be obtained, and therefore, as above said, the Association was created, a constitution adopted, and officers elected for the ensuing year. These officers are: President—F. J. Goodnow, professor of administrative law, Columbia University; First Vice-President—Woodrow Wilson, President of Princeton University; Second Vice-President—Paul S. Reinsch, professor of political science, University of Wisconsin; Third Vice-President—Simeon E. Baldwin of New Haven, Conn.; Secretary and Treasurer—W. W. Willoughby, professor of political science, Johns Hopkins University. Associated with these in the government of the Association were elected the following members of the Executive Council: Andrew D. White, former Ambassador to Germany; Hannis Taylor, former Ambassador to Spain; Jesse Macy, professor of political science, Iowa College; H. P. Judson, professor of political science, University of Chicago; L. S. Rowe, professor of political science, University of Pennsylvania; Albert Shaw, editor of the *Review of Reviews;* Bernard Moses, professor of political science, University of California; J. A. Fairlie, professor of administrative law, University of Michigan; W. A. Schaper, professor of political science, University of Minnesota; Herbert Putnam, Librarian of Congress.

Within this Association, sections are to be established dealing respectively with the following topics: (1) Comparative Legislation, including the practical operation of statutes, uniform legislation, and the promotion of publication, especially of indices and digests of record material; (2) International Law, including diplomacy; (3) Constitutional Law, including lawmaking and political parties; (4) Administrative Law, including colonial, national, State, and local administration; (5) Historical Jurisprudence; (6) Political Theory.

The enumeration of the above topics serves not only more particularly to indicate the prospective field of the Association, but to emphasize the fact that its work will appeal very strongly both to those engaged in academic instruction and to public administrators, to lawyers of broader culture, and, in general, to all those interested in the scientific study of the great and increasingly important questions of practical and theoretical politics in this country. Through affiliation with the American Historical and the American Economic Associations, it is believed that a trinity of societies will be created that will be able to assume and maintain an undisputed leadership in these allied fields of thought.

The constitution of this new association declares that it "will not assume, as such, a partisan position upon any question of practical politics, nor commit its members to any position thereupon." Any person is eligible to membership upon the annual payment of three dollars, or to life membership, exempt from annual dues, upon the payment of fifty dollars.

In conclusion, it may be said that the establishment of this association is a definite recognition of the fact that the study of politics and public law is a discipline distinct from that of history and of economics. It is scarcely too much to expect that just as the establishment of the American Historical and of the American Economic Associations marked the beginning of a new epoch in the scientific study of history and economics respectively in this country, so the creation of this new Political Science Association will mark the beginning of a new period in the scientific study and teaching of matters political in the United States. X.

January 3, 1904.

LIONS FOR TWO PRESIDENTS.

To the Editor of The Nation:

Sir: Consul-General Skinner, now on his return from the Abyssinian capital, "has been charged to deliver to the President two lions" as a present from King Menelik; and, as they could not well be shipped by express from Abyssinia, presumably the consul-general has them in his personal custody. It is to be hoped he enjoys the mission thus imposed upon him better than a certain earlier consular officer did a like trust.

In 1839, while Thomas N. Carr was consul at Tangier, a rumor came to him from Fez that the Emperor of Morocco intended making him the recipient of some barbaric present or other expressive of his regard for the Government of the United States. Consul Carr took immediate alarm, and sought the bashaw, who was the chief official at Tangier, to remonstrate. From the bashaw he got no satisfaction, and set about communicating with the Emperor; but, before he could do so, there came to his door a glittering official, attended by a file of soldiers, and bringing a full-grown lion and lioness—the finest ones, said Mr. Carr, that he had ever seen. The Moroccan official said he had come to give the consul the lions as a present. The consul said he could not take presents; the laws did not permit it. "But you are expected to forward these to your President," said the official. The consul said that the laws of Congress did not permit the President, either, to accept presents from a foreign Power. "Then you may send them to your Congress," replied the official. "But," remonstrated the distressed consul, "Congress will not accept presents; it has resolved to that effect." "Well," next inquired the Moroccan, "who is back of your Congress—who is the highest authority in your country?" "The people," responded the American. "Then send the lions to the American people," was the conclusive and triumphant answer of the official. Then the consul refused point blank to receive the lions for anybody or on any terms. "But," answered the Moroccan, "that is impossible. I have been sent to give you these lions, and give them to you I must and shall; it is the Emperor's orders, and in Morocco to disobey an order means to lose one's head; if you don't take the lions, I shall turn them loose in your street and put a guard across the head of it to keep them there."

Mr. Carr wrote to the State Department that the street in which he lived was a short *cul-de-sac*, in which were only half a dozen houses besides his own; that to turn lions loose in it would have made it uninhabitable, and, at the end of all his resources of resistance, he could see nothing to do but clear a room in his house and turn the lions into it. This he did, and his letter relating to the State Department the story of his adventure and his helplessness against the overpowering generosity of his Moroccan admirers is a most pathetic and moving paper. It is printed in full in House document No. 221, Twenty-sixth Congress, first session.

Communication sixty-four years ago was tedious to an extent which it is hard for those of our day to realize, and his letter, dated September 3, 1839, did not reach the State Department till November 5 of the same year. On November 12 a reply was forwarded, in which Mr. Carr was told that as it appeared he had done all that lay in his power to repel the invasion of the lions, he might send them to the United States by the first available ship, and the charges for transportation and for the subsistence of the animals while they remained members of his family would be allowed in the settlement of his accounts. At this point Document No. 221 drops the story. If the chapter—probably of equal or greater interest—relating the shipment of the lions, their arrival in this country, and their reception by the President, is in the public documents, I have not yet run across it. Giving the State Department's letter two months to reach Tangier, and making reasonable allowance for delay in securing a ship (only accidental sailing ships being available), the unfortunate consul must have had the lions in his household for the better part of six months.

The story of the progress of Consul-General Skinner's menagerie will, of course, be told more minutely, and if King Menelik's lions reach President Roosevelt he will have an easy outlet from the dilemma by way of the National Zoölogical Park in Washington, which, of course, did not exist in President Van Buren's time.

F. A. Crandall.

Washington, January 4, 1904.

Notes.

In March next, Houghton, Mifflin & Co. purpose bringing out the 'Memoirs of Henry Villard, Journalist and Financier, 1835-1900,' a two-volume autobiography, in which the journalistic portion outbulks considerably the financial. Many of the leading engagements of our civil war are described from personal observation and from special research in the Official War Records. There will be maps and portrait illustrations.

The Royal Society of Prussia has decided to publish a complete and monumental edition of the works of Wieland, under the editorial direction of Prof. Erich Schmidt of the Berlin University. This project is all the more a desideratum as none of the editions issued by the poet himself includes anything like all his writings; and the same is true of the later edition of Gruber in 1818-1828, and even of Duntzer's forty-volume edition in the seventies. The new edition will embrace everything known to have emanated from Wieland's pen.

Keats has been added to the 32mo "Oxford Miniature Poets" of the Oxford University Press (New York: H. Frowde). The Oxford India paper always taxes credulity by its compactness, and here we have 574 pages that might be doubled without straining the pocket. Opaqueness accompanies this thinness of paper, and the page is perfectly legible. Severn's portrait of Keats serves as frontispiece. There is an index and a table, but no other apparatus.

For the sake of illustrations by Howard Chandler Christy, the Bobbs-Merrill Co. of Indianapolis have arranged with Houghton, Mifflin & Co. for a new edition of Longfellow's 'Courtship of Miles Standish,' now nearing its half-century mark. Mr. Christy's designs are partly in color, partly in black and white. In neither series can we praise the skilled draughtsman, nor discover imagination out of the common. The get-up is attractive.

For obvious reasons of timeliness Messrs. Putnam have brought out a third edition of the late Mr. Whistler's 'Gentle Art of Making Enemies.' The book is elegantly printed, with broad margins, and yellow-backed, and with scarcely any eccentricity beyond the contents of the artist's several letters and the amusing index to captions.

After two years' suspension, 'The American Art Annual' (No. 226 West Fifty-eighth Street) reappears, including in its scope all the art events of the interspace. We need not dwell upon the usefulness of this handbook as a directory of artists, art societies, clubs, and schools, and as a record of exhibitions and important sales. Its scope is extended in the fourth issue by the inclusion of prices paid at auction for prints. Thus an enduring chronicle is left of the West, Marquand, and similar sales. The catholicity of the editor, Miss Florence N. Levy, is shown in a list of writers on art, mostly of the decried race of critics; but this list is manifestly incomplete. The misprints that disfigured the earlier issues have measurably disappeared. All in all, this meritorious work has been much improved, and is more than ever necessary to those who deal with the externals of our art.

It was in the sixties that Mr. Justin McCarthy settled in London for a journalistic and literary career, and his collection of 'Portraits of the Sixties' (Harper & Brothers) therefore represents his memories of the Englishmen most prominent at a time when his own powers of observation were at their freshest. The range includes actors, artists, society queens, and novelists, but most space is given to politicians. Mr. McCarthy does special service to the students of English politics by reviving the memory of parliamentarians who never quite attained to the first rank, but who prepared the ground for reforms commonly associated with more brilliant names, or whose work in other respects was educational and critical rather than popular. The appreciations herein given of Stansfeld, Baines, Thorold Rogers, and Roebuck, to say nothing of such parliamentary curiosities as Whalley and J. A. Blake, well deserve permanence. An interesting chapter on Mr. Goldwin Smith is an exception to the author's rule of excluding living subjects. The chief defect of the book is its insufficient illustration of the characteristics attributed to the various persons here described. Mr. McCarthy tells us, for instance, that in his early days in the House of Commons gallery he heard from his colleagues many an interesting and delightful anecdote of Dickens's skill as a reporter. Would it violate any confidence to let us hear them now? But perhaps Mr. McCarthy did not keep a diary, and his memory retains only the general impression. Mr. Knatchbull-Hugessen's title was Brabourne, not Braybourne (page 133), and the portrait of the late sergeant-at-arms should not have been inscribed "Capt. Gosset, M. P."

The number of subjects covered by the title 'The Tenement House Problem' is so great as to make it impracticable even to enumerate them. Many writers have contributed papers, and the editors, R. W. De Forest and Lawrence Veiller, also furnish monographs. Information is given concerning the housing conditions and tenement laws of many European and American cities, but New York receives by far the most elaborate study. Population has here been allowed to become dense beyond all parallel, and the attempts made to counteract the centripetal force have been altogether inadequate. The history of these attempts is set forth at length, and the prevailing conditions are described and illustrated by photographs, some of which should not have been inserted in a book of this character. The present law regulating the construction of tenement houses in New York is a long step in the right direction; but what is needed is to prohibit the dwelling of more than a certain number of people on an acre of ground. The book is published in two handsome volumes by the Macmillan Co.

'A List of Books (with references to periodicals) on the Philippine Islands in the Library of Congress' has just issued from that institution. Mr. A. P. C. Griffin has compiled it, and Mr. P. Lee Phillips has added a chronological list of maps in the same repository, together with a geographical index to these. They date back to 1519-22, and 134 are entered before the nineteenth century is reached. At No. 378 we start in with 1898, and the last entry under 1903 is numbered 860.

M. Samuel Cornut, the French writer, whose novel 'L'Inquiet' was reviewed in these columns, may have faults of his own, but nobody would deny him the quality of sincerity. There is in his last book, 'Le Testament de ma Jeunesse' (Paris: Fischbacher), a ring that cannot help appealing to the reader, however little he may care for the purely metaphysical part of this autobiography, which is, in truth, the biography of a soul—a noble, generous, but very complicated and restless soul. For the first fifty pages alone, which contain a true and refreshing picture of a village in French Switzerland, 'Le Testament' would be worth reading, and it can be read by every one with pleasure and profit. There is also a chapter on Davel, the patriot of the Canton of Vaud, which is a beautiful (albeit a bit rhetorical) tribute to a local hero too little known, and which the lovers of the "pays Vaudois" must be sure to read.

Commander Peary's graphic account of his four years' Arctic exploration, 1898-1902, is the paper of greatest interest in the December *Geographical Journal*. It closes with a brief outline of his future plans, and with the favorable comments which they elicited from members of the Royal Geographical Society. Dr. J. W. Evans describes a journey into northern Bolivia, a region of extraordinary beauty, and, on account of its rich gold-fields, "coveted by the Incas of Peru." He was accompanied by Mr. R. S. Williams of the New York Botanical Gardens, whose collection of plants "is, I believe, unrivalled by any other from the eastern slopes of the Andes. The species collected exceed 2,000 in number, of which 800 are cryptogams, and at least 160 new to science." Of great present interest is an orographic description, with a map, of the Republic of Panama by Col. G. E. Church. Though only about the size of Indiana, the country has some 500 short rivers, of which the Chagres is the "historic waterway." Referring to its unexampled floods, causing a rise of forty feet in twelve hours, Col. Church says, "it will be extremely interesting for the engineering and financial world to watch the coming contest between the Chagres River and the U. S. Treasury." The population, 340,000 in 1898, represents "such a heterogeneous amalgamation of Spanish, negro, and Indian blood, stirred together by the buccaneers of colonial times, that *white* may, in Panama, be strictly classified as a color. Until I saw a Panama 'army' of 150 men at drill, I had no idea that the human form could take such shapes and colors."

Academic honors for women are increasing on the Continent. Only recently, at its centennial celebration, the Heidelberg University ventured upon the innovation of giving the degree of doctor of theology to that sex, the recipients being the well-known Syriac specialists, Mrs. Gibson and her twin sister. Still more recently the Academy of Sciences of Paris bestowed the prize Da Gamo Machado on the Countess Dr. Marie von Linden, assistant in the Zoölogical Institute of the University of Bonn, for special researches on the pigments of the butterfly. The first fund ever willed to the higher education of women in Germany has just been given to Heidelberg in the shape of 200,000 marks as *stipendia* for women

students. It is a bequest from Miss Eleanor Wallot.

In the secondary schools of France, the *lycées*, as also in the universities, the study of the German language and literature is making phenomenal strides. At the recent *examen d'agrégation* in Paris there were ninety-nine candidates for seven positions for which the German was a required branch. The written tests covered many difficult themes, such as Nietzsche's relation to Schopenhauer, and the Epic of the Middle Ages, along with translations of selections from Zola and other writers into German. A prominent critical journal of Munich declares that German instructors in similar grades might well hesitate to exact such work of their pupils.

A number of new discoveries have added to our knowledge of classical literature. In the British Museum, remnants of the "Medea" of Neophron have been brought to light. This work has a special significance for Greek literature because it was composed in a prize competition with the "Medea" of Euripides. This fact, originally surmised by Wilamowitz-Moellendorff of Berlin, is fully confirmed by the London fragment, which is soon to be published. Remnants of a hitherto unknown drama of Sophocles, entitled "Achaion Syllogos," have lately been found in a papyrus collection deposited in the Berlin Museum. Publication in the near future is promised. Considerable portions of the 'Protreptikos' of Aristotle, which had hitherto been entirely lost, have been found among the recent papyri discoveries made in Oxyrhynchus by Grenfell and Hunt, and deposited in Oxford. The text is to be published early this year. A whole collection of Egyptian peasants' letters, written in Greek and dating from the third Christian century, have been deposited in the National Library at Florence, and will soon be published. They are full of new data regarding the agricultural affairs of the Egypt of the period, and constitute a welcome continuation of the letters of the Roman plantation owner, Lucius Bellenus Gemellus, dating from about 100 A. D., published some time ago in England. In the recently issued third volume of the Oxyrhynchus papyri of Grenfell and Hunt occur, among other things, fragments of a Latin translation of a work by Irenæus, Bishop of Lyons, who suffered martyrdom about 200 A. D. Professor Nestle of Maulbronn, in the Munich *Allgemeine Zeitung*, No. 249, draws attention to the noteworthy feature of the facsimile of this fragment, namely, that line 7, reproducing the words of Matthew xvi. and xvii., is distinctly marked off by quotation marks, and declares that this is by far the first and oldest evidence in existence of the use of such marks in the literature of the world. Nestle's article contains a mass of interesting palæographical details.

As has already been announced, three of the five Nobel prizes have been awarded this year to Scandinavians, each of the three countries being represented. According to the first newspaper report, the literary prize, which is awarded by the Swedish Academy, was to be divided between the two most eminent Norwegian writers, Ibsen and Björnson, and now an explanation is given of the exclusion of the former. It seems that one of the terms by which the literary prize was established was that it should be bestowed only on idealists. This shut out the great dramatist, whose chief pride it is that he has freed himself from what he regards as the weakness of idealism, and whose later view of life is habitually gloomy and pessimistic. It appears further that Björnson, who has an abiding faith in the steady advancement of civilization and the inherent striving after better things in human nature, was one of Nobel's favorite authors. It is rumored that Björnson intends to devote a large portion of his prize, which amounts to over $40,000, to the Teachers' Pension Fund of Norway. It is possible, however, that the rumor is suggested by the fact that the poet presented his birthday jubilee gift of over $5,000 to this object. It seems to be certain that Dr. Finsen has divided a large portion of his prize between the Finsen Institute and the Sanatorium for Heart Disease in Copenhagen.

—Othon Guerlac contributes a lively account of the French Chamber of Deputies to the January *Century*, with pictures by André Castaigne. The Thackeray-Baxter letters continue, and continue to be well worth one's attention. In one letter of the present instalment we have Thackeray's first impression of the 'Nile Notes.' "Do you know it's uncommonly clever? Or is it because of that criticism in *Putnam* that my grateful eyes are opened to Curtis's merits? The book is capital, . . . too luscious to read much of it at a time; but I send the author my regards, and am glad to like what he has done so." Sylvester Baxter gives an extended description of Mrs. Isabella Stewart Gardner's palace of art on the Boston Fenway, amply illustrated from photographs by Thomas E. Marr. Those to whom stolen sweets are always sweeter will read with intense interest the narrative of Ekai Kawaguchi, a Japanese Buddhist, who succeeded in maintaining a residence in Lhasa for two years, most of the time in the house of a Tibetan official, and escaped unharmed when he found that detection was imminent; but, after all, about the most important disclosure from the forbidden land is the fact that the young Dalai Lama is engaged in a struggle to free the civil service of his country from the clutches of the spoilsmen. With the presence of official corruption indicated, it might have been assumed that the sanitation of the sacred city is terribly bad. Senator Lodge and Commissioner-General Sargent discuss the immigration problem, arguing for a closer restriction. Senator Lodge advocates vigorously the application of the educational test. The weak point in the arguments of both is the failure to show that the foreign-born element has been peculiarly at fault in the evils from which the country has suffered since the supposed deterioration in the quality of European incomers began.

—The supply of first-hand material for the literary and social history of nineteenth-century New England is apparently as inexhaustible as the widow's cruse of oil. The *Atlantic* opens the new year with the first of a series of reminiscent papers by Thomas Wentworth Higginson, and promises during the year a series of extracts from the unpublished private journals of Emerson. Col. Higginson deals in the present issue with the Sunny Side of the Transcendental Period. Without attempting an answer, he raises the question why the literature of England during this period displayed so mournful and clouded an aspect, in contrast with the bright, hopeful tone of American letters. Considering his aggressive Americanism, as shown in the Longfellow biography, for instance, one wonders that he finds any difficulty in the problem at all. The failure of American conditions to-day to inspire a literature of the same lofty and serious moral tone as was produced in the time of Transcendentalism is a more important problem. Prof. Walter D. Scott of Northwestern University writes convincingly of the relation of the principles of psychology to effective advertising. Advertising is evidently in a fair way to take its place aong the ever-multiplying "sciences," and it will probably not be long until some purveyor of soap, bitters, or breakfast food, grown rich through its successful application, will come forward to endow chairs and schools of advertising in our colleges. The most intensely interesting article of the issue is Mr. Edwin Burritt Smith's account of the struggle in the Illinois Legislature against the Street-Railway ring. Unless the public administration can be kept free from the corrupt grasp of the public-service corporations, his conclusion is that public ownership is both inevitable and desirable.

—From Professor Lounsbury's second paper on the alleged corruption of the English tongue, in the January *Harper's*, even the much-abused "purist" can find a justification for his existence. The lesson to be derived from a knowledge of the way in which a language grows, he admits, does not release any man from the obligation to make his own usage conform to the best usage, so far as he can ascertain this, or to do all in his power to prevent the introduction of words, meanings, and locutions deemed objectionable on the score of inadequacy or impropriety. Of course this is just what the purist supposes that he is trying to do, and so the whole question simmers down to the qualifications of any particular censor. Professor Lounsbury has shown that specific forebodings of deterioration have not been fulfilled; that countless specific words, meanings, and expressions to which earnest objection has been made, have none the less found their way to unquestioned usage, and that deterioration in language is in reality only a reflex of some form of deterioration in the people who use the language. But, in showing all this, he has hardly shown that the widely spread tendency to resist innovation, even with all the mistakes which he so easily ridicules, has not been a positive factor for good in the development of English speech. We are not quite sure that a general willingness to be among the first by whom the new is tried would not produce a surfeit fully as dangerous as the anæmia to be feared from a general determination to be the last to lay the old aside. Professor Lounsbury's view of the newspaper as a factor in linguistic growth is highly optimistic. The newspaper writers, he holds, are a picked body of men, passionately championing causes in which they have a partisan faith, and, therefore, enjoying conditions most favorable to clearness, directness, and vigor of expression. Happy is Professor Lounsbury if he reads only newspapers written in the style and under the conditions described.

—Nature and art furnish the leading features in the January *Scribner's*. F. S. Dellenbaugh's description of a New Valley of Wonders recalls the narrative of Major Powell's Grand Cañon explorations, contributed to *Scribner's Monthly*, the predecessor of the *Century*, nearly thirty years ago. Mr. Dellenbaugh was a companion of Major Powell, and has but recently gone back to examine the "Little Zion" valley of southern Utah, a promised land which he was permitted only to view from afar in his earlier days. His description is, of course, copiously illustrated from his own photographs, and seriously tempts the reader to become an explorer and experience for himself the emotions to be aroused by setting one's foot upon ground which the foot of a white man has never touched before. M. H. Spielmann contributes a highly appreciative paper on Frank Brangwyn, in whom he finds a power, robustness, and versatility equalled only by the great masters in painting, whether of the present or the past. The article is accompanied by sixteen illustrations from Mr. Brangwyn's work. The Field of Art is given up to short memories of the recently deceased portrait painter, Alfred Quinton Collins. E. H. Blashfield, Frank Fowler, Kenneth Frazier, Will H. Low, and Robert Reid are the contributors, each showing a high regard for Mr. Collins as a man no less than for his work as an artist.

—The *American Journal of Psychology* has just appeared in a double number, edited by Messrs. Sanford and Titchener as a *Festschrift* in honor of its founder, the President of Clark University (Worcester, Mass.. L. N. Wilson). The *Festschrift*, a sizable volume of 430 pages, is dedicated "by colleagues and former pupils" to "Granville Stanley Hall, Founder of the first American laboratory for experimental psychology and of the first American journal for the publication of the results of psychological investigation; Pioneer in the systematic study of the mental development of children, and in the application of its results to educational practice; Ardent Inspirer in others of the zeal for new knowledge—in commemoration of the twenty-fifth anniversary of his attainment of the doctorate in philosophy." It has as frontispiece a good heliotype portrait of President Hall, and closes with a full bibliography of his published writings. No effort has been made to restrict the contents to the psychology of childhood and adolescence, the subjects with which in recent years President Hall's name has been more especially connected: the twenty-five articles cover the whole field of psychological interest, from college football to the subconscious, and from musical æsthetics to retroactive amnesia. Europe is represented by Professor Waller, who sends from the physiological laboratory of the University of London a study of judgments of time made under his direction by Miss Edgell; by M. Beaunis, who writes on dreams; and by Professor Kuelpe, who discourses on experimental æsthetics. Professor Motora sends from Tokio an elaborate paper on the conductivity of the nervous system. Among the American contributors we note, besides the two editors, the names of Professor Cattell, who, with the usual heartlessness of the statistician, analyzes the gifts and attainments of his psychological colleagues; of Professor Jastrow, who writes the article on the status of the subconscious referred to above; and of Dr. Adolf Meyer, director of the Pathological Institute of Ward's Island, who furnishes a masterly description of the neurotic constitution. All the papers, so far as we are able to judge, possess real merit; and in saying this we pay a compliment to the editors no less than to the contributors. President Hall is to be congratulated upon the receipt of a signal and well-deserved honor.

—Students of Rabelais now have their quarterly, *Revue des Etudes Rabelaisiennes* (Paris: Honoré Champion), of which the first number (xx+92 pp.), not dated, was probably published in July, as the miscellanies report the sessions for June of the Société des Études Rabelaisiennes, which is responsible for the magazine. Besides the constitution and list of members (about 250 at that time), there are articles which give the magazine a good reason for itself. Certain points in the history of Rabelais need discussion; his language, too, and many of his allusions may still be investigated with profit; and a considerable life is assured the quarterly by these needs, as also by the inclusion of his period as a subject of study. In this number M. Charles Whibley writes of "Rabelais in England," and considers especially Thomas Nash, the pamphleteer of the latter part of the sixteenth century, as much indebted to him. Prof. Pietro Toldo of Turin contributes "The Smoke of the Roast, and Divination by Signs." In the old popular tale of the first part of the title the poor wanderer is allowed to warm his rice in the smoke of a leg of mutton turning on a spit over the brazier. The owner of the mutton, seeing that a benefit has been conferred, demands pay for his grace; but the judge to whom appeal is made orders that a coin shall be rung down before the creditor, so that he may be rewarded with the sound of the money. Tamul and Khmer analogues are quoted for what is perhaps the origin of the story. M. Abel Lefranc, President of the Society, who seems also to be the leading spirit in the new enterprise, presents "Rabelaisian Problems: A Pretended Fifth Book by Rabelais." This is the book dated 1549, and made known by Ludwig Rosenthal of Munich, in 1900. It has defenders; but M. Lefranc, in this first part of his article, writes against the Rabelaisian authorship, and his quotations show an author who opposes abuses and is serious, but seems to lack Rabelais's wit and vigor. Among the notes are remarks on the dates of Rabelais, also by Lefranc. The date of his birth is uncertain, and the year of his death not precise; but an epitaph by the poet Tahureau, from a volume of his poems published in 1554, implies that he was dead at that time, while some MS. documents in the Bibliothèque Nationale speak of him as living in December, 1552, so that the assumed 1553 for his death is not far from the truth. It is interesting to note that there was an old Société des Amis et Admirateurs de Rabelais that existed from 1886 to 1892, and had annual sessions at Tours. It then failed on account of the death of its chief founders. It left behind few memorials—only the accounts of the annual sessions and two small pamphlets by M. François Audiger, founder of the society.

—It is now nearly thirty years since Gregorovius published his 'Lucrezia Borgia,' but Mr. J. L. Garner's translation of this celebrated biography (Appleton) is not open to criticism on the ground that the original has become obsolete. The merits of the book are so great that they well deserve to be recognized after the lapse of a generation. Less elaborate than Gregorovius's works on Rome and Athens, it bears the stamp of the same profound scholarship and the same sureness of judgment. Lucrezia Borgia would probably have attracted little attention but for the fame of her father and brother. She certainly did nothing that should have brought upon her the unpleasant notoriety which is attached to her name. Gregorovius styles her "the most unfortunate woman in modern history"; by which he means that the offences charged against her are more shocking than those launched against any other innocent. The innuendoes of Guicciardini, made current by Victor Hugo and a host of minor writers, are such as to blacken any character and create a zero point of moral turpidity, if only they are true. Roscoe, however, believed in Lucrezia's innocence; and Gregorovius, following up the inquiry with a much fuller grasp of the documents, acquitted her of the fatal, the damning accusations. There is no reason why we should discuss this matter at any length, but it may be as well to point out that Alexander VI. stands convicted of chronic irregularities by unquestionable evidence. Pastor, for example, is led regretfully to admit the laxness of his habits. On the other hand, the stories most unfavorable to Lucrezia sprang from political hostility or from the prurient gossip of the Renaissance. At the best she is not edifying, though doubtless she possessed some of the family strength. She grew up in a society where epicureanism flourished and the Decalogue was neglected. Like the rest of the Romans, she had her failings and deserves reproach, but that is a very different thing from saying that she was "a moral monster." The translation, while of average quality, is somewhat loose in its rendering of names and in its transcription of dates.

—M. G. Weulersse, travelling fellow, or *boursier*, of the University of Paris, who has already written a work on China, new and old, reviewed in our columns, follows it with another on Japan, of about the same size and general method of treatment. The text of 'Le Japon d'aujourd'hui' (Paris: Armand Colin) is devoted to social studies especially; but, along with much solid information, obtained after careful examination, there is a good deal of piquancy. It is when we come to the last chapter, on France and Japan, that we appreciate especially the author's parallax of nationality. It is entirely true, as M. Weulersse argues, that a knowledge of French is for a Japanese of great practical utility. In addition to the use he can make of it when spoken in Europe and the Western world generally, he has, in the regions to the southwest, or in French peninsular Asia, a field of advantage—provided always that French tariffs do not rise too high. The author reaches the culmination of French vanity, or patriotism, when he says (p. 335), "To speak English for a Japanese is banal; to speak French is a distinction," but his common sense compels him to acknowledge that the reason for what may

be called the official adoption of the English language was that of its world-wide use. He points out, without fear of contradiction, what he believes to be the cardinal fault of the Japanese, viz., its obscurity and lack of exactness. He thinks, therefore, that, on account of the superior clarity and precision of French, his own language ought to be that of the basis of culture and business in Japan. Of German, of course, he says naïvely that it is far from having the same merits of lucidity and music to the ear. He describes the country, the great cities, the adaptations of modern science and methods, and is particularly strong and clear in treating of the economic development of the Japanese Empire. He writes much more fully, however, on the subject of education, and his judgments are sane and praiseworthy, showing, indeed, that true French cosmopolitanism which we all admire. He objects to the abominable Briticism "Jap," and prefers the grand, ancient, sonorous, and distinctive title "Mikado." In our republican days it is hard to see any special dignity in the term "emperor," which describes one of a motley company of black, brown, yellow, and white figure-heads of power, on petty islands as well as in vast domains. The author is severe on the despotism of the Japanese father and husband in domestic life, but writes luminously and with sympathy of the position of woman. As French literature, apart from artistic themes, is not especially rich in literary pictures of Japan which have true perspective, and in which the *geisha* is not the all-overshadowing picture, this book will be welcomed as fresh, suggestive, and timely.

BOURINOT'S LORD ELGIN.

Lord Elgin. By Sir John George Bourinot. Toronto: George N. Morang & Co., Limited. 1903. 8vo, pp. vi., 276. With portrait. (Volume one of "The Makers of Canada" Series, edited by Duncan Campbell Scott and Pelham Edgar, Ph.D.)

Theodore Walrond's 'Letters and Journals of Lord Elgin' is a well-known work, and we believe is reckoned by Englishmen among the best of the political portraits. Little notice of it seems to have been taken by the late Sir John Bourinot, author of the work before us, for he refers to it only once, then not very respectfully, and miswrites the author's name. Sir John's own work, however, relates almost exclusively to the history of Canadian politics, a subject with which, having been long the clerk of the House of Commons, he was thoroughly competent to deal. His style is rather pleasantly redolent of his official position.

The Canadian situation with which Lord Elgin was sent as governor to deal, was the sequel of a twofold political storm which had passed over the country. There had been two rebellions, if they should not rather be called revolutions, contemporary yet distinct: one in British Canada, caused by the exclusive domination of the ultra-British and Tory junto nicknamed the Family Compact; the other in French Canada, justly designated in the Durham Report as a conflict of races—the conquered race striving to break the political yoke of the conqueror, who had monopolized office and power. Sir Francis Bond Head, the Governor of British Canada, was a traveller and writer of travels, astonished, as well he might be, at his own appointment. He was an honest, hotheaded fellow, well-meaning, and with nothing insidious about him. To compare his conduct with that of Lord Milner would be doing him a great injustice; but, like Lord Milner, he threw himself into the arms of a party, and thereby brought on a crash. The British Government, then in Liberal hands, dealt wisely and magnanimously with the crisis. It did not let loose upon the provinces the fury of martial law in the hands of inflamed partisans, hang people by the score, banish, fine, and disfranchise. It limited its measures of repression to the actual need. It sent out Durham to investigate and report; and, being informed by him in a very admirable state paper, that want of self-government had been the source of the outbreak, it granted self-government. The fruits of its policy are now seen.

When Elgin came out, though the storm was over, the waves were still running pretty high. The victorious Tories were incensed at being balked of their full measure of triumph over their foe. An act having been passed to indemnify unoffending parties whose property had been destroyed in the repression, Toryism was seized with a paroxysm of rage, and showed its loyalty by burning the Parliament House at Montreal and stoning the Governor, who had conformed to the new order of things by giving constitutionally, though it appears reluctantly, his consent to the obnoxious act. Elgin behaved with a prudence and dignity which must have had their effect, and calm, though not Tory complacency, was soon restored. Toryism in England sympathized with Toryism in Canada. Mr. Gladstone, still half-Tory, and, as Sir John Bourinot says, not well informed on the subject, characterized the Rebellion Losses bill as a bill for rewarding rebels. Carlyle also, from his point of view, was indignant. But Peel spoke the word of wisdom.

The transition from the old Colonial System—the rule of the Colonial Office through the representative of the Crown—to the new system of Colonial self-government was critical. The change had not been clearly and fully recognized even by the Colonial Office itself, which, especially when in Conservative hands, was inclined to slide back into the old system. Nor had it been fully understood by all Lord Elgin's predecessors. Lord Metcalfe especially, his ideas having been formed in the government of dependencies such as Jamaica and India, clung to the belief that he must rule personally, that the Ministers were his nominees, responsible to him, not to the people, and that his assent to a bill was personal, not constitutional; whence serious trouble had arisen. Lord Elgin thoroughly understood and well performed his part, which was to regulate and temper the transition, making the old system glide smoothly and quietly into the new. He was not to blame if all this trouble and complication was gratuitous and might have been avoided from the outset, so far at least as British Canada was concerned, by leaving people, who were perfectly competent, to manage their own affairs. The Government being now parliamentary and the Prime Minister being its responsible head, the Governor-General lags superfluous on the political scene, though what he can no longer do openly he is sometimes tempted or prompted by the Colonial Office to do underhand; as was seen when, partly by his personal influence, Canada was drawn into the South African war.

Canada was suffering, as Lord Durham had seen, from commercial depression, the consequence largely of exclusion from her natural market. This reached a climax when, free trade having won the day in England, the colonies were deprived of their preference and still left subject to the Navigation Laws. A large body of commercial men then signed a manifesto calling for redress, and, if redress were not granted, for annexation to the United States. To put an end to this movement in the best way, Elgin went to Washington and negotiated the Treaty of Reciprocity of which Canada enjoyed the benefit down to 1866, when its advantages were lost to both countries through the behavior of the ruling class in England towards the United States during the war of secession. He was probably helped by the Congressional representatives of the Slave Power, who feared that the annexation of Canada might turn the political balance in favor of the North. But he owed his success mainly to his own diplomatic skill—a little assisted, it might be, by his rank. The result was the immediate subsidence of the annexationist movement in Canada—a proof of the absurdity of the cry, now raised by Canadian manufacturers who profit by the tariff wall, that reciprocity would be followed by annexation.

The Reciprocity Treaty, as the work of a British diplomatist, may fairly be regarded as a set-off against any defaults of the British Foreign Office in its dealings with Canadian interests. But the notion that British diplomacy has neglected the interests of Canada, which Sir John Bourinot appears, with Canadians in general, angrily to cherish, seems not well founded. British diplomacy has always done for Canadian interests the best that diplomacy could do. That more should be done was impossible. The notion that the British people could be induced to go to war with the United States on a question of Canadian boundaries is absurd; and, of course, without presenting the alternative of war, no disputed claims could be enforced. When the Government of the Transvaal prayed for arbitration on the claim of suzerainty, its prayer was rejected on the singular ground that to consent to arbitration would be giving away the whole case, as in that instance it most assuredly would. If the American Government had chosen to follow this precedent in the case of the Alaska boundary, Canada would have had no redress. She could not have appealed to arms herself, and no British Government which had proposed to go to war about a boundary of the Yukon could have existed for twenty-four hours.

Canada now, angry at the partial loss of her cause in the Alaska boundary case, is calling for the concession of power to make her own treaties. Her Prime Minister at least puts forth that claim. To demand the treaty-making power is to demand the power of peace and war; and to demand the power of peace and war is to demand independent nationality. Great Britain would refuse to commit herself to the enforcement of treaties over the making of which she had no control. Foreign Governments would refuse to negotiate with any but a sovereign Power. "Never," says a leading Canadian journal, "did Can-

ada bulk so largely in the eyes of the world." That may be, and it is a gratifying reflection. But bulk is not sovereignty, nor by itself, when peaceful negotiations fail, is it military force.

It seems likely that Elgin's influence exerted on behalf of Canada was greatly felt in the final abolition of the Navigation Laws, which pressed very injuriously on Canada, while by the triumph of free trade and the repeal of the Corn Laws she had lost protection for her grain. Adam Smith, treating political economy not as an abstract science but as a set of practical rules, allowed certain exceptions to his doctrine of free trade. Among them were the Navigation Laws, which he believed to be necessary to the seamanship and therefore to the defence of the nation. Free trade having gained the day, in the wake of the repeal of the Corn Laws came the repeal of the Navigation Laws. It was violently opposed by the shipping interest. Protectionism at Liverpool avenged itself by depriving of his seat in Parliament Cardwell, who had voted for repeal. But the result was that, even in this instance, free trade was justified of its children. Canadian commerce, relieved of the incubus, prospered anew. As Sir John Bourinot says, "the immediate results were a stimulus to the whole commerce of the Province, and an influx of shipping to the ports of the St. Lawrence." The British shipping trade, instead of being ruined as the protectionists predicted, became more prosperous than ever.

A necessary consequence of the general concession of self-government was the disestablishment of the State Church. To this also Elgin advised consent, perhaps with a sigh so far as he was personally concerned; for, though liberal, he was highly religious, and wished religion to be the basis of public education. Great tracts of land had been set apart as "clergy reserves." To secularize these became the grand aim of the Liberals. After a violent party struggle it was accomplished, and nothing was left to the Anglican Church in the way of public endowment save certain "rectories" made over to her by a rather questionable act of Sir George Colborne. The Provincial University at Toronto had been confined to the Church of England; its governing body and professors being required to subscribe her Thirty-nine Articles. This was now thrown open; whereupon Bishop Strachan, the bellicose head of the Anglican Church, and to a great extent of the political party of which Anglicanism was the creed, bounced out of the "Godless University" as he called it, and founded Trinity College, Toronto, as a place of pure Anglican education. Trinity College is now, under wiser auspices, entering into confederation with the Provincial University. The Anglican Church, however, albeit disestablished, has preserved something of the conscious dignity of the State Church, and a lurking impression, which occasionally betrays itself, that the other churches are dissenters. It has also preserved its political affinities and connection. Its Synod at Toronto the other day wound up with three cheers for Lord Roberts.

The name by which the Church of England was established in Canada was that of a Protestant church; and lawyers held that the Presbyterian Church of Scotland, being recognized by the State, was entitled to a share of the endowment. This is one item in the overwhelming body of historical evidence which proves that, whatever relics of Catholic ritual might lurk in the first prayer-book of Edward VI., the Church of England was historically not Catholic, but Protestant. The attempt to make out that the Church, while calling itself and believing itself to be Protestant, has been all the time unconsciously Catholic, can be sustained only by arguments which a court of law would dismiss with contempt if they were advanced in support of any ordinary title, and which are still less worthy of attention when tendered in support of a spiritual pedigree. The Pope, when he was solicited by the Ritualists for recognition, replied with crushing force that the Anglican Ordinal did not even pretend to confer the power of transubstantiation.

Elgin, though he had been successful in guiding the transition, was probably not sorry to retire with honor from the position, which no constitutional theories could make other than equivocal, of a governor who did not govern and might any day be compelled, by men in whom he did not confide, to assent to measures which he could not conscientiously approve. Men far inferior to him were better fitted for such a part. He was presently sent to China with a joint British and French expedition to coerce the hapless and helpless Chinese—a service which he evidently abhorred, and performed as mildly as he possibly could; and to India, where, touching at the time of the Sepoy mutiny and witnessing the frenzy of the conquerors' panic and vengeance, he moralized in a monitory strain on the relations between the conquering and the subject race. Indian government was his last sphere of action, and India was his grave.

Prefixed to the volume is a good portrait of a man in whose features wisdom and benevolence were impressed. The volume itself is tastefully got up, and does credit to the publishing enterprise of Canada.

THREE STUDIES IN ENGLISH LITERATURE.

The Elizabethan Lyric: A Study. By John Erskine. (Columbia University Studies in English, II.) 8vo, pp. xviii + 344.

Platonism in English Poetry of the Sixteenth and Seventeenth Centuries. By John Smith Harrison. (Columbia University Studies in Comparative Literature.) 8vo, pp. xii + 235.

The English Heroic Play: A Critical Description of the Rhymed Tragedy of the Restoration. By Lewis Nathaniel Chase. (Columbia University Studies in Comparative Literature.) Columbia University Press (Macmillan). 8vo, pp. xiv + 250. 1903.

It is a natural result of the spread of English teaching in the last twenty-five years and especially of the more recent (still incomplete and tentative, but very remarkable) development of graduate research and study in the field of English and of general literature, that an increasing number and proportion of studies in literature, in interpretative criticism, and in literary history are emanating from the universities and are making their appeal to the public, general as well as academic. It is, of course, a question, and a question of two sides, how far the universities should permit themselves this appeal, even when the subjects treated, as in the three studies here considered, are conceivably of some general and popular interest. Address the public and you lower your standards, dilute your style, run the risk of the ad-captandum appeal—in short, "popularize" your matter. On the other hand, address the public and you perforce do away with pedantry and mere academicism, encourage literary style, and help to bring the universities nearer to the intelligent public.

It is another but a related question, too, whether the university monograph should seek popular book-form, with typography, paper, and binding of an artistic and expensive standard. Is not the practice of the German universities on the whole better? Granted that in all cases the doctor's thesis should be printed, are we not giving it a forced and factitious importance when we clothe it in all the costliness of form of a full-fledged book? On whom, in nine cases out of ten, does the burden of expense fall but on the one least able to bear it—the candidate himself? Such expenditures perhaps are justifiable only when the universities shall come to assume (as perhaps they should) the free printing of accepted monographs.

The departments of literature in Columbia University are to be congratulated on the high level of many of the recent studies issued under their care. Most of them have been excellent in plan; perhaps two or three of them have been less excellently corrected in detail; but all have had striking qualities of either literary and historical interest, or breadth of outlook and of generalization. The three studies here noticed are no exception. It would be difficult to suggest three subjects of greater interest or aptness for monograph treatment in the field of English. But the work and the results are not quite alike in all.

It is perhaps worth while to have an unfalteringly descriptive account of the Elizabethan Lyric. One wishes, however, that Mr. Erskine had seen fit to omit what is already in the literary histories and similar places (such as the most of chapters iii. and ix., for example), and had confined himself to literary criticism and to the discussion of new theses in the history of the subject of his study. For frequently he is not unskilful in criticism, and he makes several points of interest in literary history. His bibliography might be completer—he even ignores or is ignorant of Werner's 'Lyrik und Lyriker'; but in spite of this he enunciates a theory of lyric "unity" and of lyric "stimulus" that is suggestive of some of Werner's theories, as it is of Poe's, and that is sufficiently plausible in itself. It certainly serves the purpose of the author's formal analysis and criticism. Absolutely taken, however, we are not inclined to set much store by it. It postulates the conclusion that Spenser's 'Epithalamion' lacks lyric unity, and so is rather a series of lyrics than a single lyric poem. A similar ruling would probably follow for Pindar and the "prolonged lyric" generally. The sufficient answer is that, theory aside, hardly any poem makes a more unified emotional and artistic impression than Spenser's 'Epithalamion.' Nevertheless, on the whole, Mr. Erskine's work, in manner and method, is sympa-

thetic and acute. There is a good study of the structure and movement of the Elegy, in chapter iv. Would that more space had been spared for this sort of thing and less for perfunctory description. So the analysis of Sidney's Sonnets and the study of the relations of Sidney's sequence to that of Daniel, and of Daniel's to Shakspere's in chapter v., the discussion of Spenser's lyric work generally, and the bit on Marlowe at pages 199, 200, are all distinctly clever. The author is unaccountably unappreciative of William Browne, a poet whom Keats, with good poet's reason, admired. While chapter vii. presents some new corrections of old theories of the relations of Elizabethan music and Elizabethan lyric poetry (somewhat overstated, it is true), as a whole it seems to be based upon too slight an original study of the subject. We do not quite understand the author's conclusions (p. 140) as to the disuse of the lute in Elizabethan times. The testimony of contemporary references, such as those in the drama, will hardly bear him out. We have to query also statements on pages 107, 128 (the priority of Sidney's sonnets: Sidney died in 1586), 207 ff., and 309. The chief defect of the work is that it attempts too much. Chapters vii. (The Song Books and Elizabethan Music) and ix. (Metrical Forms) would require separate monographs.

Mr. Harrison has chosen for treatment a subject long since suggested by Professor Saintsbury. Elizabethan Platonism was an outgrowth of the Italian humanistic interpretation of Plato and of Plato's disciple Plotinus. Mr. Harrison has fully recognized and developed this idea, and a large part of his work deals with the relationship and parallels between Ficino and such poets as Spenser, Sidney, Milton, Drummond, and Henry More. The connection exhibited between Spenser's 'Four Hymns' and Italian Platonism as expounded by Ficino is remarkably close. We do not quarrel with the author's exposition of these matters in general—it is sufficient; but we must regret that in a work of this sort, in view of the difficulty of access to most of his foreign material, he has not found more space for the citation of parallels and illustrative passages at length. There are a few errors. At pages 13 and 25, "canto" and "book" are confused in the references to Spenser. In the reference on page 38 why not name the author? And the attempt (p. 129) to connect Shakspere's one hundred and fifth sonnet with the Platonic identification of the good, the beautiful, and the true seems to us extremely tenuous. Nevertheless, although the author does not appear to have followed his subject into all its ramifications and to have exhausted its possibilities, his is evidently a good piece of work, and a real contribution.

The same thing may be said, only in a less degree, of the essay on the English Heroic Play—an ideal monograph subject, dealing as it does with the history of a literary type, restricted, definite, finished, and significant. Mr. Chase's work has been honestly and intelligently done, but the results are presented somewhat obscurely. The book lacks style, good expository style, and there is drag and poverty of phrasing throughout. Much of the rather lengthy analysis of plays leads to no very clear results. The space taken might better have been given to a study of the relations of this largely exotic literary type to its congeners and to its partial sources in France and Spain; this was to have been expected in one of a series of Studies in Comparative Literature. Indeed, the relation of some of the elements of the Heroic Play to the late Elizabethan drama of the Beaumont-Fletcher group has never yet been sufficiently studied. These deductions made, however, the substance of Mr. Chase's monograph is excellent. The Columbia method in the study of literature, we repeat, although touched with minor defects and requiring greater correction and a somewhat stricter ideal of scholarship in detail, is already producing valuable fruit. This fact students of literature in other institutions make haste to recognize and applaud.

FOUR BOOKS ON INDIA.

In the perennial trickle of books about India appear occasionally works neither dashed off by travellers nor compiled by statisticians, but written carefully, with knowledge and with artistic sense. Of this sort is the pleasant volume of sketches called 'Cities of India,' by the ex-director of Indian Records, G. W. Forrest, C.I.E. (E. P. Dutton & Co.). The author calls his essays "labors of love," and they are descriptive, not at all labored, of the life and history of the best-known Hindu towns, from Bombay east to Calcutta and south to Madras, arranged with reference to a tourist's convenience. There are fifteen sketches in all, and together they make a literary handbook with which future travellers to India will do well to provide themselves, while for those who stay at home they give a delightful sense of travelling in that country. The pictures, with which the book is plentifully supplied, seem like old friends, familiar to all those who have been in the atelier of Bourne & Shepherd. But there is nothing hackneyed about the text, which weaves the past and the present together in warm and living colors.

India has recently published several books about herself, one of which is likely to attract the attention of Occidental scholars. Several years ago B. G. Tilak of Poona acquired a sudden reputation through a book in which he sought to prove that the Rig Veda dated from the fourth millennium B. C. Not content with this, Tilak since then has occupied the time he spent within an English dungeon as a "sedition-monger" in expanding his former thesis, and has now produced the perfect fruit of his later study under the title 'The Arctic Home in the Vedas' (Poona: Kesari Press). In this work Tilak cites the Rig Veda and the Avesta to show that the ancient Hindus and Persians were depositories of records extending back to the interglacial period, and that the "home of the Aryans" was originally about the North Pole. Our ingenious countryman, the author of 'Paradise Found,' will not be ill-pleased to find texts thus dating back to the time of Paradise itself; and the supercilious scholars who have looked disdainfully on the Vedas as too modern to be compared with the records of Babylon and Egypt, will hide their diminished heads—when this startling thesis is proved. In the meantime, lest the ethnologist think that man's polar origin here receives historical confirmation, it may perhaps still be believed that the "long darkness" referred to in the Rig Veda is not a night of several months, but the darkness of death. With this understood, much else that appears to support the new contention becomes explicable without having recourse to the Quaternary Era in its Pleistocene period to account for the Hyperboreans.

The writings of the late Prof. Max Müller all circle about India, though sometimes at a far distance. The last work from his pen is a posthumous publication inaptly entitled 'The Silesian Horseherd' (Longmans, Green & Co.). It appears that an American named Fritz Menzel amused himself with writing an anonymous letter to "Max," in which he took occasion to jeer at the professor's religious views and incidentally at the views of metaphysicians generally, signing himself Pferdebürla. The publication of this letter, and a reply to it, together with other theological correspondence, resulted in sufficient material to make a little book, the main title of which is due to the Pferdebürla (who describes himself, however, as a cowherd!); while the sub-title, "Questions of the Hour Answered by F. Max Müller," gives the key to the contents as understood by the late F. M. Müller. That the author believed himself capable of answering the questions of the hour by the application of his favorite teaching, which inculcates the identity of thought and language, can easily be believed by any one who knows the unperturbed serenity with which Müller continued to apply this unscientific equation to the problems of mental philosophy from the time he wrote his first lectures to the end of his career. The general thesis, that thought is impossible without words, is here applied to the doctrine of the Logos, and "in the beginning was the Word" (as the thought of God) is put forth as a sufficient answer to all horseherds (from Menzel to Darwin) who hold that mental capacity is a product of evolution. How to understand miracles in such a way as to be scientific and yet remain a Christian is also a question of the hour answered in this book, and there may be readers who will find comfort in giving their faith the refuge of the doctrine here set forth. We are not to believe that Christ fed the thousands with a few loaves and fishes—only "women and children" could believe that; but as Christians we are to believe the story, nevertheless, understanding it to mean that Christ gave spiritual food to thousands. Thus we cut loose from the women and children without cutting loose from our faith in the "inspiration" of the Bible. By defining faith and inspiration aright, we escape both the Scylla of doubt and the Charybdis of dogmatism.

This notice of books anent India would be incomplete did it not include a reference to the translation of the Hindustani "tale of life in Delhi forty years ago," called 'The Bride's Mirror.' The original text, together with notes and a vocabulary, was published a few years ago and reviewed in the *Nation*. The translation now following is idiomatic and careful. A few footnotes are added, containing information useful to the foreign reader ("pyjamas, *i. e.*, trousers," is not a fair example), as well as a running correction, in terms of actual pronunciation, of the words spelled with historical accuracy in the text. As Mr. Ward only follows the pedantic affectation of

many other writers in this particular, the comment we make on this practice is not aimed at him alone. It seems to be an absurdity to spell Panna Mal and then add, "pronounce Punna Mull"; to spell *faqir* and add "pronounce fukeer," etc., withal for every new instance and even twice for the same word! Why not write in the English text *begum*, as the English pronounce it, and not "begam," reserving closed *a* for the Hindustani text? Some writers even print "Pandit, pronounce pundit," though it would be as sensible to write "Pall Mall, pronounce Pell Mell." It is a trial of the reader's patience, if not of the writer's. Moreover, it is difficult to be consistent, and "Básu, pronounce barsoo," even raises a question of correctness; but Mr. Ward's *r* is apparently both part of a vowel and a consonant ("*zarda* pronounce *zurrda*"). The tale itself, though not interesting, is decent, being a moral novel intended to improve the minds of Hindu (pronounce Hindoo) maidens. It is about as exciting as are French novels of the same intent.

America in Literature. By George Edward Woodberry, Professor of Comparative Literature, Columbia University. Harper & Brothers. 1903. Pp. 253.

Professor Woodberry has brought together in this volume seven papers originally published in *Harper's Magazine* and in *Harper's Weekly*. One of them deals with the colonial period of our literary history; four with what the author calls "our nobler literature with its little western afterglow"; two present the author's estimate of our total literary achievement. Taken as a whole, these chapters sketch swiftly and unerringly, though with reference only to the greatest names, the literary development of America. But the book is not a history of literature in the ordinary sense. As the philosophers would say, the author's aim is normative rather than descriptive. He has undertaken—very appropriately for a professor of comparative literature—the task of appraising our poetic and prosaic wealth, of ranking us in the literary Mulhall. It need hardly be said that this is a perilous venture. Mr. Gosse attempted it for our poetry some years ago, and, by placing Longfellow somewhere "between Tegner and Runeberg," and dismissing Sidney Lanier's poems as the "elaborate and learned experiments of an exceedingly clever man," brought down anathema upon himself. But Mr. Gosse, being an alien, may have been prejudiced. Let us listen to one of our own kin, who may be expected to be very kind to our virtues, and to eschew that moroseness of critical temper which refuses to accept at their face value the watered stocks of enthusiasm. What is our literary rating on the books of such a critic?

From Mr. Woodberry we learn that, as compared with the English and the French, we are in literature distinctly second-rate. We have no Chaucer, no Milton, no Keats. Our authors are timid—they turn an apprehensive eye towards Europe; they lack inspiration; they lack passion; they lack power. Their spirits have not been stirred to the deeps beneath the lowest deeps by the great tragic mischiefs and the tears in mortal things. It is true we shall not wholly die in literature. We have literary virtues, though of the second rank, and our quality, such as it is, is singularly well sustained in our representative men. Our greatest names, Bryant, Irving, Cooper, Hawthorne, Longfellow, Emerson, Lowell, Poe—these eight and no others are admitted to the hierarchy—fall in one block just below the greatest names in English literature, and outrank every English man of letters of the second class. Moreover, in one respect we equal our rivals and in another we surpass them: we are as painstaking in our literary art as they are, and the ethical tone of our literature is far purer than that of any other nation.

At present, however, we are in the doldrums. Our literary activity passed its prime before the civil war, and the great writers have left no successors. No one of the present day is buoyed up by the consciousness of national life as the members of the elder group were sustained by the life of their local centres. Nay, more—and this is Professor Woodberry's most notable thesis—no American writer has at any time voiced adequately the spirit of the American nation. We recall at this point a remark of Mr. William Mason in his 'Memories of a Musical Life.' Mr. Mason says of Beethoven that his sonatas were unidiomatic of the instrument for which they were written. A like incongruity exists, so Professor Woodberry seems to say, between the spirit and the voice of the spirit of this country. Our literature is unidiomatic of the national life and ideals. This is a serious charge, for literature is nothing if not expressive of the life behind it. What we should do about it Professor Woodberry does not say. "The field is open," he proclaims, "and calls loudly for new champions." But where are the dragon's teeth, and who is to sow them?

Professor Woodberry's judgments and characterizations of authors and periods are almost without exception both felicitous and just. If he is somewhat less than just at any point, it is in his treatment of Whitman.

Fanny Burney. By Austin Dobson. (English Men of Letters Series.) The Macmillan Co. 1903.

The "English Men of Letters" series has already compromised its name by the addition of Sir Leslie Stephen's Life of George Eliot. The new volume on Fanny Burney shows that Mr. John Morley intends to make no distinction of sex, though his title seemed to imply one. Fanny Burney should by rights have taken precedence of George Eliot, for it was she who gave the franchise of fiction to women, made it respectable for a woman to write a novel, and so paved the way for Jane Austen, Maria Edgeworth, and the whole host of women novelists of to-day.

The life of the author of 'Evelina' is curiously divided in halves, so that she has two literary reputations—the one as Fanny Burney, the other as Madame d'Arblay. But the real break with literature, the moment that proved her to have no true vocation as a writer, came, not when she married her French *émigré*, but seven years earlier, when, like one of those hungry Greeklings whom Lucian pities and Juvenal satirizes, she exchanged her liberty and the society of the wits of her time for the proud position of dresser to the Queen. There was, in fact, about as much appreciation of literature at the English court as one of those wretched hireling Greek philosophers may have encountered among his Roman patrons. Macaulay's bitter philippic on the "sweet Queen" whose royal condescension nearly killed Fanny Burney, is not echoed by Mr. Austin Dobson. He seems to think that Fanny was not so ill-advised when she decided to mix the Queen's snuff instead of writing novels. At any rate, we owe to that decision a vivid if unpleasing picture of the backstairs life of an Anglo-German court, and an interesting proof that one vulgar woman can make a boarding-house atmosphere within the precincts of St. James's as elsewhere. In the society of Frau Schwellenberg, Fanny Burney lost what little vitality she had. But it was under other influences that she changed her style.

'Evelina,' on which her fame will always rest, was wholly her own. In her century, polite conversation was no doubt stilted when it was not, as in Swift's satire, a mere bandying of vulgar proverbs which were the equivalent of modern slang. When Lord Orville is asked his opinion of some waxworks:

> "The mechanism," answered he, "is wonderfully ingenious; I am sorry it is turned to no better account; but its purport is so frivolous, so very remote from all aim at instruction or utility, that the sight of so fine a show only leaves a regret on the mind that so much work and so much ingenuity should not be better bestowed."

Nor is the sense of humor that of our age. Evelina is proud to be assured by her lover that, after their first meeting, "every succeeding time he saw me I appeared to something less and less disadvantage." All this was a faithful reflection of Fanny Burney's circle and her time. Unfortunately, Dr. Johnson took up the author of 'Evelina,' and, though Mr. Dobson seems to be right in denying Macaulay's statement that he actually had a hand in the composition of 'Cecilia,' it was there that the change began. 'Cecilia,' with its careful antithetic style and dragging periods, was the result of those long visits to Mrs. Thrale at Streatham. After her marriage, Fanny Burney lived long in France, content to be eclipsed as Madame d'Arblay. When she emerged to write her father's 'Memoirs,' her style was no longer to be excused as Johnsonese. This is how she describes her father's rheumatism:

> "He was assaulted during his precipitated return by the rudest fierceness of wintry elemental strife; through which, with bad accommodations and innumerable accidents, he became a prey to the merciless pangs of the acutest spasmodic rheumatism, which barely suffered him to reach his home, ere, long and piteously, it confined him, a tortured prisoner, to his bed."

Of the 'Memoirs' Macaulay said: "The genius of Shakspere and Bacon united would not save a work so written from general derision." One may note, in passing, that Macaulay, with the inconsistency of the rhetorical critic, remarks of Addison in another essay: "Had he clothed his thoughts in the half-French style of Horace Walpole, or in the half-Latin style of Dr. Johnson, or in the half-German jargon of the present day, his genius would have triumphed over all faults of manner." Mr. Austin Dobson adds little to the famous *Edinburgh* 'Essay' which was written in the early forties, though his knowledge of

eighteenth-century life enables him to give a detailed and interesting picture of the distinguished people with whom Fanny Burney passed the first half of her life. Her own age estimated the author of 'Evelina' too high at first and then too low. Her personality was not interesting, and Mr. Dobson can do nothing for it. Fanny Burney "overheard the judgment of posterity," and met her eclipse as impassively as she had suffered her effacement at court or her triumph with 'Evelina.' Mr. Dobson's opinion that her 'Diary' is her best work may be correct, but it was not shared by her contemporaries, and never will be the judgment of the general reader.

The Valet's Tragedy, and Other Studies. By Andrew Lang. With Illustrations. Longmans, Green & Co. 1903.

This series of short essays is not marked by any unity of purpose if we may judge from the list of subjects, but a motive it does possess in Mr. Lang's unfailing love of the mysterious. If Scottish history furnishes him with such themes as 'Pickle the Spy,' the Casket Letters, and the Gowrie Conspiracy, his hankering after the dark and doubtful soon exhausts the plots of any single country. The commonplace detective deals with the present; the true artist seeks to force the secrets of the past. With Mr. Lang it is simply a question of a book or an essay. A book is more satisfactory, but then there are so many mysteries. Here he has given us within the compass of one volume twelve essays, each of which centres round a problem of evidence. As we all know, these investigations can be made extremely arid; but ingenuity, learning, and literary skill will carry a man to the heart of his audience even when they fail to cut all the knots. For example, most physicians will remain unconvinced by Mr. Lang's remarks upon the Voices of Jeanne d'Arc, but there are few who will not read the essay to the end.

While we shall avoid reprinting the table of contents, a hint of its attractions may be quickly given. The Man in the Iron Mask, the murder of Sir Edmund Berry Godfrey, Amy Robsart, the Voices of Jeanne d'Arc, and Shakespeare-Bacon—each of them a *cause célèbre*—are subjected in turn to Mr. Lang's cross-questioning, with results which are always clever and sometimes convincing. Among the subjects of less fame, the mystery of James de la Cloche, eldest son of Charles II., is the most prominent. As it is impossible for us to take up more than one of these studies in the obscure, we shall confine our brief notice to the Valet's Tragedy—*anglicè*, to the Man in the Iron Mask.

We pass by the well-known fact that the mask was made of black velvet, to consider a point which is at issue between Mr. Lang and M. Funck-Brentano. The Voltaire-Dumas version of the story is fantastic, and quite outside the pale of rational criticism at this time of day. So many other candidates besides the putative son of Anne of Austria have also dropped out of the race that the competition is now narrowed to Count Mattioli, a Mantuan politician, and Martin, the valet to Roux de Marsilly, who was tortured to death in Paris on June 22, 1669. M. Funck-Brentano supports Mattioli, and Mr. Lang the valet. Both men were imprisoned at Pinerolo and at Sainte-Marguerite. One of them died in the Bastile towards the close of 1703. Whether Mattioli or Martin was the survivor is an open question, but Mr. Lang shows conclusively that the legend arose out of the experiences of the French valet rather than of the Italian count.

We should be the last to magnify the importance of this episode. In itself it is of no historical moment, and it has become famous merely because it presents a puzzle. But, viewed under the above restriction, it is a puzzle which, having once interested Voltaire and Gibbon, still causes a certain amount of discussion. The salient facts seem to be as follows: Roux de Marsilly, a Huguenot, plotting in England against Louis XIV., was apprehended and cruelly put to death. His valet, whose real name was Martin, but whose prison name became Eustache Dauger, fell into the hands of the French ambassador at London, was smuggled across the Channel to Dunkirk, and thence transported with many precautions to the French fortress of Pinerolo in Piedmont. There he remained from 1669 to 1687, when he was removed to the Isles Sainte-Marguerite near Cannes. Mattioli's imprisonment at Pinerolo began in 1679, and he was transferred to Sainte-Marguerite in 1694. Mr. Lang thinks that he died there in the same year. M. Funck-Brentano considers that he was the prisoner who died in the Bastile and was *the* Mask. To cite the opposing evidence is beyond our purpose. Mr. Lang certainly makes out his case as regards the genesis of the legend. Whether or not Martin survived Mattioli is a minor question. The tragic part of the story is, that the valet may not have known the secret for which he was confined. After a hundred and fifty years of debate we reach this conclusion: "The long and mysterious captivity of Eustache Dauger . . . was the mere automatic result of the 'red tape' of the old French absolute monarchy. This wretch was caught in the toils of the system, and suffered to no purpose for no crime."

BOOKS OF THE WEEK.

An Examination of the Shelley Manuscripts in the Bodleian Library. By C. D. Locock. Oxford: The Clarendon Press; New York: Henry Frowde. 7s. 6d. net.

Augustin-Thierry, Gilbert. The Plot of the Placards at Rennes. (Conspirators and Police under Napoleon.) Translated by Arthur G. Chater. London: Smith, Elder & Co.; New York: Scribners.

Baldwin, May. A Popular Girl. (Novel.) The Mershon Co. $1.

Barbèra, Piero. Editori e Autori: Studi e Passatempi di un Libraio. Florence: G. Barbèra. 4 lire.

Bonehill, Capt. Ralph. With Boone on the Frontier. (Novel.) The Mershon Co. $1.

Brereton, Capt. F. S. One of the Fighting Scouts. (A South African tale.)—Under the Star-Spangled Banner. (A tale of the Spanish War.) The Mershon Co. $1 each.

Bunyan's Pilgrim's Progress, illustrated by George Cruikshank. London: Oxford University Press; New York: Henry Frowde.

A MIDSOMMER NIGHTS DREAME
LOVES LABOUR'S LOST *The* **COMEDIE OF ERRORS**
The **MERCHANT OF VENICE** *(In Feb.)*

". . . I am convinced that these editors are the best equipped among us all for the beautiful yet arduous labor which they have taken in hand. The plan is mature and satisfying; it is what editing should be, or what, more's the pity, it so often is not."—EDMUND CLARENCE STEDMAN.

THOMAS Y. CROWELL & CO., 426-8 West Broadway, New York

The Nation

VOL. LXXVIII—NO. 2011. THURSDAY, JANUARY 14, 1904. PRICE TEN CENTS.

Miss J E Maundy 62
Public Library 21803

THE CLOSE OF THE DAY

By FRANK H. SPEARMAN

A new novel by the author of "The Daughter of a Magnate," "Held for Orders," etc.

A story of the stage as it touches the lives of a woman who is an actress and a man of large means who loves her. Mr. Spearman has given his story a very strong human quality that cannot fail to win for it a great number of sympathetic readers. He has known how to bring the worlds of large mercantile speculation and of dramatic lights and shadows into a harmonious unison without undue emphasis of the meretricious in either.

12mo. Cloth. $1.25.

THE STORY OF THE EXTINCT CIVILIZATIONS OF THE WEST

By ROBERT E. ANDERSON

A vivid narrative based upon the facts and traditions of the great races that peopled the American continent before the European settlement. Beginning with Plato's "Atlantis," Professor Anderson has gathered into a few brief and interesting chapters all that has been brought to light to support the theory of a pre-Columbian discovery of America. The Mound-Builders and the Indians are given adequate treatment, and the latter part of the book is taken up with an account of the great Aztec civilization, and the conquest of Mexico and Peru by Cortez and Pizarro and their followers.

16mo. Cloth, $0.35 net; postage, 4 cents additional.

STEPS IN THE EXPANSION OF OUR TERRITORY

By OSCAR P. AUSTIN

Chief of the Bureau of Statistics in Washington

The purpose of this new volume in the Expansion of the Republic Series is to deal entirely with the territorial aspects of the subject. By means of an extensive series of maps, the complete chain of circumstances that have led to the present domain of the United States will be pointed out. Mr. Austin's maps present some curious territorial items that will give to the book a unique place. His broad knowledge of the subject is shown in the accompanying account of what the maps mean, which readers are sure to find a valuable contribution to the history of our country.

Illustrated with many Maps. 12mo. Cloth, $1.25 net; postage, 12 cents additional.

ENGLISH LITERATURE AN ILLUSTRATED RECORD

By RICHARD GARNETT, LL.D., *and* EDMUND GOSSE, LL.D.

Illustrated with Colour Plates, Photogravures, Wood-engravings, and Many Lithographic Facsimiles; also a Large Number of the Best Accredited Portraits of English Authors, Autographs, Title-pages, Caricatures, Facsimiles, Etc.

In four volumes, Imp. 8vo., cloth, $24 *net;* half morocco, $40 *net.*

Although there have been histories of English literature almost without number, the present work is distinctly a novel and original work. Except to the scholar or the special student the average literary history of any country is a dryasdust combination of dreary facts, for the historian rarely has space in which to illuminate his story with those side-lights of fancy through which history may be made at once accurate and entertaining. In the present work, the publishers and the historians have labored hand in hand, both the text and the reproductions of rare documents giving it a general interest which it could not obtain by any other means. It appeals both to the keen insight of the student and to the legitimate curiosity of the general reader. —*The Boston Transcript.*

The Nation.

A WEEKLY JOURNAL OF POLITICS, LITERATURE, SCIENCE, AND ART

Established in 1865, *The Nation* was a pioneer as a journal of literary and political criticism of the highest order, conducted free from the control of party, school, or interest of any sort. It has long been a recognized authority at home and abroad. The list of contributors includes most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. *The Nation's* departments are:

THE WEEK. Brief Comments on the most important current events, domestic and foreign.

EDITORIAL ARTICLES. Careful and moderate discussion of prominent political and social topics.

SPECIAL CORRESPONDENCE. From all quarters of the globe, by intelligent and trustworthy observers.

OCCASIONAL CORRESPONDENCE. Letters to the editor on every subject germane to the scope of the paper.

NOTES. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.

REVIEWS OF BOOKS. By able writers and scholars (mainly specialists) of both hemispheres.

FINE ARTS. Competent criticism of art exhibitions and works of art, the drama, etc.

The style and form of the paper are chosen with a view to the most suitable shape for binding, and a set of *The Nation* preserved, bound, and indexed makes the most complete and readable record of current events of importance in the political and literary world available for the American Public. Two volumes are completed annually. The index and title-page accompany the last issue of each volume.

SUBSCRIPTION PRICE—$3 per year postpaid in the United States, Canada and Mexico; $4 a year postpaid to other countries included in the Postal Union. Subscriptions for a shorter period taken at the yearly rate. Remittances should be made by check, draft, or money order, payable to *The Nation*. Specimen copies sent free at any time on request. Address

THE NATION, 206-210 Broadway, N. Y.

FIFTY-NINTH ANNUAL STATEMENT

OF THE

New-York Life Insurance Co.

JOHN A. McCALL, President.

346 and 348 BROADWAY, NEW YORK CITY.

JANUARY 1, 1904.

ASSETS.

(Company does not invest in or loan upon stocks of any kind.)

United States, State, City, County, and other Bonds, book value, December 31, 1903	$247,994,383
Bonds and Mortgages (455 first liens)	24,531,774
Deposits in Banks, at interest	22,126,134
Loans to Policy-holders on their Policies as security (reserve value, $40,000,000)	28,502,073
Real Estate (38 pieces, including 12 office buildings, valued at $16,000,000)	12,725,000
Loans on Bonds (market value, $6,522,660)	5,280,000
Quarterly and Semi-Annual Premiums not yet due, and premiums in transit, reserve charged in Liabilities	6,167,727
Premium Notes on Policies in force (Legal Reserve to secure same, $3,000,000)	3,139,284
Interest and Rents accrued	2,185,672
Total Assets (per Certificate of N. Y. Ins. Dept.)	$352,652,047

LIABILITIES.

Policy Reserve, per Certificate of New York Ins. Dept. (see below), December 31, 1903		$300,090,347
All other Liabilities: Policy Claims, Annuities, Endowments, &c., awaiting presentment for payment		5,456,654
Additional Reserve, which the Company voluntarily sets aside in excess of the State's requirements.	$6,859,193	
Reserve to provide dividends payable to policy-holders during 1904, and in subsequent years, per policy contracts—		
To holders of 20-Year Period Policies and longer	23,539,923	
To holders of 15-Year Period Policies	6,991,284	
To holders of 10-Year Period Policies	477,607	
To holders of 5 Year Period Policies	375,002	
To holders of Annual Dividend Policies.	830,915	
Reserve to provide for all other contingencies.	8,031,122	
Total Additional Reserves		47,105,046
Total Liabilities (per certificate of N. Y. Ins. Dept.)		$352,652,047

INCOME, 1903.

New Premiums	$16,235,782
Renewal Premiums	57,146,392
Interest, Rents, etc	14,887,357
Total Income	$88,269,531

DISBURSEMENTS, 1903.

Death Claims paid	$16,860,082	
Endowments paid	4,305,941	
Annuities, Dividends, Surrender Values and Trust Instalments	13,503,991	
Total paid policy-holders	$34,670,014	
Commissions, Brokerages, and all other payments to Agents	9,696,673	
Home Office and Branch Office Salaries and Physicians' Fees	5,359,984	
Taxes, Advertising, and all other expenses	3,156,788	
Total Disbursements		$52,883,459

INSURANCE ACCOUNT.

	Number.	Amount.
Paid-for Insurances in Force, December 31, 1902	704,567	$1,553,628,026
New Paid-for Insurances, 1903	171,118	326,658,236
Old Insurances Revived, etc.	1,534	3,216,798
Totals	877,219	$1,883,503,060
Total Terminated in 1903	64,508	138,290,161
Paid-for Insurances in Force, December 31, 1903	812,711	$1,745,212,899
Gain in 1903	108,144	$191,584,873

CERTIFICATE OF SUPERINTENDENT OF STATE OF NEW YORK

INSURANCE DEPARTMENT.

ALBANY, January 2, 1904.

I, FRANCIS HENDRICKS, Superintendent of Insurance of the State of New York, do hereby certify that the NEW YORK LIFE INSURANCE COMPANY, of the City of New York, in the State of New York, a Mutual Life Insurance Company, having no capital stock, is duly authorized to transact the business of Life Insurance in this State.

I FURTHER CERTIFY that, in accordance with the provisions of Section eighty-four of the insurance law of the State of New York, I have caused the Policy obligations of the said Company, outstanding and paid for on the 31st day of December, 1903, to be valued on the following basis: Policies known as the Company's three per cent. Policies, and all Policies issued since December 31, 1900, being valued as per the American Experience Table of Mortality with three per cent. interest, and all other Policies being valued as per the Combined Experience Table of Mortality with four per cent. interest; and I hereby certify the result to be as follows:

Net Reserve Value of Policies	$281,227,489 00	
" " " Additions	3,374,092 00	
" " " Annuities	15,760,186 00	
Total		$300,361,767 00
Less Net Reserve Value of Policies re-insured		271,420 00
Total Net Reserve Values		$300,090,347 00

I FURTHER CERTIFY, from the sworn Report of the Company on file in this Department, that the Admitted Assets are $352,652,047 57

Reserve Values of Policies as calculated by this Department		$300,090,347 00
General Liabilities		5,456,653 95
Additional Reserve, which the Company voluntarily sets aside in excess of the State's requirements	$6,859,193 00	
Reserve to provide dividends payable to policy-holders in 1904 and in subsequent years	32,214,730 84	
Reserve to provide for all other contingencies	8,031,122 78	
Total Additional Reserves		47,105,046 62
Total		$352,652,047 57

IN WITNESS WHEREOF, I have hereunto subscribed my name and caused my official seal to be affixed at the City of Albany, the day and year first above written.

FRANCIS HENDRICKS, Superintendent of Insurance.

The Detailed Annual Statement of the Company, giving list of securities held, etc., will be supplied on application. Address,

NEW YORK LIFE INSURANCE COMPANY, 346 and 348 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 14, 1904.

The Week.

We are now more than two months away from the Panama revolution—that brilliant stroke which was to give us an Isthmian canal while we waited. Yet how much "forrarder" are we for all our reckless haste? We have got a dubious treaty conveying a clouded title. Even that treaty is not yet out of committee, where it is being discussed and amended, and will not be for a week or so. After that the best prospect is of a debate and delays extending over months, while at the end, after ratification, the treaty will at once be taken to the courts and an injunction sued out to prevent the illegal payment of money from the Treasury. And all this in the name of speed! How much time have we saved compared with the method of going on patiently to negotiate with Colombia? Very little, we venture to say; and, while foolishly trying to save time, we have lost moral prestige. Impetuous young men usually find out, as the President is doing, that there is something to be said, after all, for slow but sure.

Another instance of the embarrassment which the President causes his friends by headlong action without due regard to the law, was disclosed in the Senate's long debate on Friday, over the nomination of Mr. Buchanan to be Minister to Panama. Several grave legal difficulties presented themselves. The office itself had not yet been created by Congress, but Mr. Roosevelt hastened to fill it. Furthermore, before being confirmed by the Senate, Mr. Buchanan posted off to the Isthmus and promptly presented his credentials as Minister. Where is the law for all this? Senator Lodge knew all about it, of course; but Senator Spooner, suffering the disadvantage, as compared with the junior Senator from Massachusetts, of being a lawyer, had serious doubts about the legality of the President's course—to the general astonishment, for this is an Administration which "does things," and laws were never meant to fetter a brave and strong Executive who sees what he wants and takes it. So affirms the Senate in its calm ex-post-facto confirmation of Mr. Buchanan.

Senator Lodge airily declares that Colombia had no excuse whatever for rejecting the Hay-Herran treaty, since it was her own proposal and had been accepted by this Government with only "slight modifications." Well, the documents are on file, and they show that Secretary Hay insisted upon very serious modifications of the Colombian offers. For example, the provision for mixed tribunals having jurisdiction in the canal strip was Mr. Hay's own proposition. Moreover, the annual rental first demanded by the Colombian Minister was $600,000. Our Secretary of State, in a note which was practically an ultimatum, cut this sum down to $250,000. As the treaty was to run for at least 100 years, this meant a difference of as much as $35,000,000. But, of course, to a Big American like Senator Lodge, who always thinks in hundred millions, this was only a "slight modification."

Senator Hoar, in his recent autobiography, refers to the saying that the difference between Lodge and himself is that the former has no conscience, while the senior Massachusetts Senator has one, but disobeys it. The latter part of the epigram Mr. Hoar attacks with some asperity; the part referring to his colleague he passes by, as if that were too much for even his powers of controversy. Most people, we fancy, have left off discussing Senator Lodge's morals. His logic, his tact, his political good sense, are the really debatable matters, so far as he is concerned. In his speech on January 5 he vehemently defended the President on grounds which the President himself has abandoned. Mr. Roosevelt confessed on Monday that his action in recognizing Panama was against all precedent. On Tuesday this bosom friend, Senator Lodge, maintained that the "beaten path" had not been departed from an inch. Such are the misfortunes of a Senator with his speech all in type and incapable of alteration on account of such a trifle as a President's message! Senator Bacon made a cruel thrust at Mr. Lodge. The latter was arguing with immense learning that Congress had nothing to do with the recognition of new republics. Thereupon the Georgia Senator asked him how he had advocated in 1895 the joint resolution of Congress recognizing the Cuban republic. It was an awful blow for a great Constitutional lawyer.

The rebuke of President Roosevelt by Yale professors, which was made public on Monday, is perhaps the most damaging blow that his Panama venture has brought him. He has been proud of the repute in which he has been held in academic circles. Yale herself gave him the degree of LL.D.; but now her most eminent professors, Republicans though most of them are, join in a petition filled with expressions which must cut him to the quick. They imply that he has been defiant of law and precedent; that he has trampled upon the rights of the weak; that he has brought the good name of the republic into peril. There is nothing partisan about this utterance from New Haven. It is simply the grieved voice of men of weight and learning, who feel that President Roosevelt has been false to them, and has forgotten the obligations of an educated man in his high office. This grave and reasoned protest of the leading men of Yale, and of influential citizens of New Haven, should rouse the President to the need of taking speedy steps to find an honorable adjustment of the controversy, and to save his public character from the wreck which persistence in his present course threatens.

It is a ghoulish trick to try to reap benefit from public misfortune, but this is just what the people of Massachusetts and California are trying to do. To relieve the intense suffering caused by the great coal famine of a year ago, Congress repealed the duty on anthracite and suspended that on bituminous coal for a year. This period will expire on January 15, 1904. Bills are now before Congress to continue the suspension indefinitely, or at least for another year. Some designing persons say quietly that a year might be enough, as that would possibly carry us to the date of a new general tariff measure. Messrs. McCall and Roberts of Massachusetts have both introduced bills, and California is also anxious for free coal. This attempt to reap an advantage for certain manufacturing industries of New England and California at the expense of the coal mine operators of Pennsylvania is dastardly. Messrs. McCall and Roberts may have mistakenly supposed that they could do Massachusetts a service by advocating free coal. But he serves his party (or his State) best who serves his country best; and is not Pennsylvania the United States when it comes to the tariff? Massachusetts and California ought to learn from Mr. Chamberlain that the different parts of an Empire should agree as to what industries each should pursue. Massachusetts used to be a busy iron manufacturing centre, but of late years the industry has been declining, owing to her not being able to draw on Canada and Cuba for her raw materials. But the point is, what does she get in return for agreeing to a duty on coal and iron ore? Lodge could tell.

"Prominent business men" of New York are warned that it is "up to them" to prevent a horrid disaster to the country. A member of the Senate Finance Committee tells them that they are

making a great mistake in supposing that they can safely vote for a "good" Democrat in the place of President Roosevelt. Does New York want tariff revision? Assuredly not. But that is what will happen if President Roosevelt is defeated. A Democratic President would certainly mean a Democratic House. But the Senate would still be Republican, the prominent business men reply. True; but it is reasonably certain that the present temper of a number of the Republican Senators is such that the country cannot depend upon an unbroken Senate to save it, as it did on a similar occasion when Mr. Cleveland was President for the first time. In a word, Wall Street is given to understand that if it again insists upon "committing harakiri with the country's business interests," some of the Republican Senators will take it for granted that the people want a change of tariff policy. It all comes back to this: Roosevelt or tariff reform. Many severe moralists would not hesitate a moment over which to choose. But your prominent business man is made of other stuff. Vested interests are all he thinks of, and can there be any such thing without protection?

The Hanna boom is beginning to alarm friends of President Roosevelt. Hitherto they have regarded the cheers for Hanna as so much "hot air"—to use Postmaster-General Payne's admirable phrase. So many States—including Ohio—were pledged to Mr. Roosevelt that his nomination was thought to be as inevitable as the procession of the seasons. But the sappers and miners of Mr. Hanna have never rested night or day; they have had plenty of tools and powder; and though they have succeeded in keeping well underground, an occasional muffled explosion has conveyed a warning that they are already under the outworks. The citadel against which they are moving is Pennsylvania, that home of anthracite operators and railway owners, that forcing-bed of protectionists. Senator Quay is learning that strong financial interests in New York and elsewhere, with which he maintains such a delightful intimacy, are making a dead set for Hanna. The tradition of Pennsylvania politics is not one of lofty idealism, of the sacrifice of corporations to the welfare of the people; and Senator Quay is not only bred in the tradition, but is strengthened in the faith by a personal susceptibility to financial arguments. Should he waver in his adherence to Roosevelt, the outlook for a renomination would grow black. Hanna boomers are cropping up here and there throughout even the West. Mr. Roosevelt's Gibraltar; and Mr. Hanna himself, by withholding the call for the National Convention, allows the movement to gain momentum.

Postmaster-General Payne, in his annual report, accords hearty praise to Mr. Bristow, which is more than Mr. Bristow could give Mr. Payne. It will be remembered that the Sherlock Holmes of the Department, in his memorandum on the frauds, pointedly omitted the name of Mr. Payne from the list of those who had aided his investigations. Mr. Payne, however, expresses the pious hope that, as the thieves have been discovered and the work of some divisions reorganized, all irregular and criminal practices will now disappear. While we join him in wishing that his Department may henceforth be a hotbed of virtue, we fear that something more than reorganization is needed to make and keep it such. The great desideratum, as Mr. Bristow expressed it, is "honest, intelligent, and vigorous administration," and in one or more of these points both Charles Emory Smith and Mr. Payne have failed. Mr. Payne himself has been so notably lacking in vigor that his greatest service to the Department would be his own resignation.

The town of Pineapple, Alabama, is now convinced that lynching does not pay. It did not hold this opinion until lately, but the way in which it changed its mind is set forth in the Southern press. It seems that Pig Melton, colored, and some friends, being engaged in a game of "craps," differed as to their proceedings, with the result that Pig died from a pistol shot. The murderer at once left for other regions after wounding a white man, but an accessory to the crime was arrested and confined in the Pineapple calaboose. This man, one Stewart, had so far forgotten himself as to threaten white persons with bodily injury. Some of the "most prominent citizens" of Pineapple decided thereupon to teach him and his people "their place." Storming the calaboose, they practised various indignities upon him, winding up by knocking him on the head and setting fire to the calaboose, so that there should be no need of a funeral. Unfortunately for Pineapple, the flames—"reinforced by God's disapprobation," the colored people say—spread from the calaboose to a feed store, next to a wagon repair shop, then to the bank, until in the course of their triumphant progress they laid a large part of the town in ashes. Then there was a sudden realization that lawlessness, after all, did not pay, and men who had merely "grunted with satisfaction" at the killing of a nigger "grew blind with fury" at the results of the mob's work. In consequence, five of the leading citizens have been on trial before three justices, charged with the murder of the negro prisoner, Stewart, and the town is filled with excited people from the surrounding country divided into two camps—those who favor the lynchers, and those who mourn the destruction of Pineapple's most important business streets.

The decision of the United States Steel Corporation last week to omit entirely this quarter's payment of dividends on the common stock, must have impressed the financial mind less forcibly than the company's statement of earnings. The passing of the dividend was an inevitable consequence of diminished earnings. To put the matter briefly: net receipts for the closing quarter of 1903 decreased $17,141,000 from the same quarter in 1902—a shrinkage of 53 per cent. For December alone, the record showed a decrease of $5,500,000, or 64 per cent. Payment even of a dividend of ½ per cent. on the common stock would have called for $2,700,000, which would have been nearly one-fourth of the year's entire surplus after routine depreciation charges. In fact, if interest and depreciation allowance, this past quarter, had borne due proportion to the similar expenditure reported for the twelvemonth, then no dividend was earned, even at the reduced rate of the preceding quarter. Under such circumstances, it would have been folly to pay it. It must frankly be admitted that this is not a reassuring showing; but it must also be kept in mind that conditions, during the past quarter, were unfavorable in a degree which may not again be experienced. Open discussion of reduction in the price of steel, actual secret reduction by competitors, and rumors, current from time to time, that trade agreements might be abrogated and general price-cutting ensue, all had their place in the trade's history for the quarter. It would have been surprising if orders for steel had not fallen to nominal figures under such circumstances. With this must also be considered the fact that labor cost was still at the high level of the trade's most prosperous months, and that the export orders, whatever they may turn out to be, had not yet made their influence felt.

The Steel Corporation is meeting the situation as it should be met. The company's real danger, a year or two ago, lay in rash acceptance of a belief that the mere fact of consolidation in the trade had done away with the violent fluctuations in consumers' demand which have always marked the history of the trade. Such a theory begins to do mischief when it is used as an argument for a too large paying-out of surplus in dividends and for increase of bonded debt. The company's action on its common-stock dividend, and its peremptory stopping of conversion of stock into mortgage bonds, are the best guarantee of a wiser policy in the future. Nor should the management's courage in laying the quarter's return of earnings before the shareholders be overlooked. The great importance of the example set in

this matter by the Steel Corporation to other industrial combinations again invites attention to this point. It is not as agreeable to publish poor earnings as to make such brilliant showing as that of a year ago. But we are firmly convinced that the company's situation is the stronger because of this publication. Let it, for instance, be imagined that, when the common dividend was passed, all official information as to earnings had been refused. Where would the Steel Corporation, or any of its securities, have stood then?

Mr. Chamberlain is not the kind of a man to let his chagrin be seen, but he must have realized Thursday that some days are dark and dreary. Two such events between sunrise and sunset as the rumored return of the Duke of Devonshire to the Liberal party and the Board of Trade statement for the year 1903, would have struck most men in his position as a case of piling Pelion upon Ossa. The position of the Duke since October 5 has been so anomalous that his reported agreement with Lord Rosebery should excite no surprise. To one of his methodical mind the rôle of a free lance is distasteful. Though he is ready to break with his party on a question of principle, he is not built to wander about in the cold. His resignation from the Ministry three months ago was a blow to the Balfour-Chamberlain policy, the effect of which, however, would have been greatly impaired if he had retired to sulk in his tent, or had decided to wage guerrilla warfare. But the Duke is like a party platform in the United States—he is disposed at times to "view with alarm" the proceedings of public men. He did so in the case of Mr. Gladstone and Home Rule. Evidently, if rumor correctly represents him, he thinks the present crisis as alarming as the previous one, and as calling for another *volte-face*. But the significant fact is, that the Duke never goes anywhere politically without a host of followers. Mr. Chamberlain can spare him, but not his retinue. The doubled Liberal majority in Thursday's bye-election indicates as much.

The Board of Trade figures leave Mr. Chamberlain in a ridiculous light. He has been proclaiming from the housetop that British trade is on the road to ruin, but the official figures show that the total foreign trade of the nation in 1903 was greater by $125,000,000. And, most amusing of all, of the $56,042,685 increase in exports, $36,772,100 is contributed by manufactures alone, although the owners of British mills and foundries were supposed to have lost their grip on the world's market. Possibly when the itemized figures appear they will show that this gain in the exports of manufactured goods was in the colonial trade. But what difference does it make where your market is? The profits from the colonial trade are, there is every reason to believe, as good on a given amount of business as from that, say, with the United States. It is also rather hard on Mr. Chamberlain that of the increase of about $74,000,000 in imports, less than $11,000,000 represents manufactured goods. In short, the figures tally with what may be considered a very sound condition of British industry.

With the Duke of Devonshire and Mr. Chamberlain fighting for the possession of the Liberal-Unionist party, that organization obviously plays the part of the corpse in a Homeric combat. The rights of the matter are all with the Duke, who, fearing that the Liberal-Unionists may be dragged into the fight for fiscal reform, demands that a party which has served its purpose should be decently buried. Mr. Chamberlain, on the contrary, is sure that the name and good will of Liberal Unionism are still worth something. So he plans to galvanize the opponents of Home Rule into some semblance of tariff reformers. To the Duke's reminder that the Liberal-Unionist party is hopelessly divided on the fiscal issue, he replies with a challenge to a test of strength. Mr. Chamberlain seldom makes vain boasts—for domestic consumption; and it is very likely that he feels comfortably sure of a protectionist majority. But he must see clearly that Liberal-Unionism converted into protectionism would no longer have even a name to live, and that the change could not be managed without arousing very costly animosities. When Mr. Chamberlain builds up a new party in the open, no one may gainsay his right; when he humiliates his old leaders to gain control of a moribund organization, he takes counsel of mere pugnacity. It would be a disastrous triumph to take the high hand with the free-trade Liberal-Unionists. Already many of the Conservatives, notably Mr. Goschen and Sir Michael Hicks-Beach, have strained every point not to oppose the Government. But not even their warm feeling for Mr. Balfour would hold them to neutrality if Mr. Chamberlain makes fealty to himself the sole test of Unionist loyalty.

It need trouble no loyal Frenchman to learn, as the dispatches announce, that Joan of Arc was of Italian extraction, for the pedigrees of heroes and heroines probably are very seldom of racial purity. Dante himself, we are told, came of German stock, while Napoleon, for that matter, was only a Corsican. If the French were to renounce all foreigners who have won fame as Frenchmen, their pantheon would be decimated. The more serious attack upon Joan's fame is not the assertion of foreign ancestry, but the attempt to make her a saint of the Roman Catholic Church. To be sure, St. Louis fairly holds his own in an anti-clerical age, but this canonization is so old that it may be winked at. It would be otherwise if the Maid of Dorémy were to be canonized now. The anti-clericals might insist on omitting her name from the school histories, and some very bad paintings that depict her martyrdom might be removed from public buildings. At present Joan is merely beatified—a distinction, in French eyes, not unlike the possession of a minor decoration, say the *palmes académiques*. But her canonization seems imminent, and the gaining of a saint is hardly to be compared with the loss of a national heroine. Accordingly, the Pope should be advised before he advances Joan out of all popularity. Possibly the sagacious Pontiff counts upon chauvinism to offset the drawback of the Church's approval. It will always remain true that Joan harried the English mercilessly and that they slew her shamefully.

The report, apparently confirmed in international banking circles, that the Russian Government's application for a loan at Paris has been unsuccessful, is a striking incident in the diplomacy of the Eastern crisis. If, as the banking community believes, facilities have been withheld by the Paris bankers at the instance of the French Government, a situation would be shown to exist which would go far to explain the present attitude of France. It has been no secret that the French press and people have for some time been asking, a little querulously, what France is getting out of her relations with Russia, compared with what she gives. Thus far, the one tangible outcome of the Franco-Russian *entente* has been the placing of French investment capital freely at Russia's disposal, when occasion for one of that country's periodical borrowings arose. It is not to be supposed, even if the bankers' view of the French Government's attitude is accurate, that the discouragement of loans to Russia now is a sign of unfriendliness. It may, however, be part of a policy which is using every expedient to prevent hostilities in the Far East. But, on the other hand, it does not appear that a similar restraint, by financial methods, is being placed upon Japan. No announcement has been made regarding that country's purposes or opportunities, in the matter of borrowing from Europe; but advices from Lombard Street are in notable contrast with the Paris reports just noticed. London appears to take for granted the providing, in its own market, of the requisite credits for Japan. This happens in face of the fact that London is already overburdened with its own "undigested securities," while Paris is so abundantly supplied with capital that it is lending unusually large sums in London.

AN INTERNATIONAL LIBERAL PARTY.

It was a shrewd and just remark recently made by Prof. William James, to the effect that questions of justice between nations and peoples pass swiftly nowadays beyond the bounds of the countries immediately affected. The sense of outrage at sight of oppression quivers round the world. Defence of the oppressed—be they Jews or Finns, Macedonians or Filipinos, South Africans or South Americans—is a matter of international concern. Something like a consensus of humane and liberal minds has come to be established the earth over. It has no recognized organs, no committees, no machinery; but it everywhere leaps to reinforce conscience, to stay the stroke of brutality, to argue the cause of the weaker. In the presence of this world-wide body of enlightened opinion, it is well for those struggling for the right in any given land to lift up their eyes and see with what a cloud of witnesses they are encompassed, and how their hands are held up by the wise and good of all nations. We may afford to drop local names, such as Anti-Imperialists or Pro-Boers, for the sake of enrolling ourselves in this grand army of humanity.

The existence of what we may call an international Liberal party, impalpable but powerful, set for the enfranchisement and safeguarding of all mankind, is forced upon our notice whenever an act of injustice looms large upon the world's horizon. What instant sympathy the English minority had from the United States in their protests against the subjugation of the Dutch republics! And it has been repaid with interest. Messages from the best opinion of England were never wanting to those Americans who spoke up for justice to the helpless Filipino. Nor are they lacking to-day, when it is again a question of our mighty Government setting at naught the rights of a feeble nation. Very unpleasant reading for President Roosevelt and Secretary Hay have the most weighty British newspapers recently contained. An English publicist, who has given a thousand proofs of his friendly feeling for this country, writes us of the pain which the "amazing" course of Mr. Roosevelt towards Panama has caused him. It is the international jury bringing in its moral verdict.

There is more than a coincidence in the fact that this universal knitting together of humane instincts thus reveals itself. It is the Old Guard of Liberalism closing up the ranks. When militarism and the strong arm are everywhere asserting themselves, as against law and considerate good faith, it is but natural that they who are of one mind against this policy of force should feel their solidarity, and act, so far as they are able, upon their common principles. At any rate, the way in which one deep of humanity answers to another, across territorial lines and regardless of estranging seas, is among the most striking signs of the times.

While the champions of fair dealing and equal justice are thus united by invisible bonds in a kind of international freemasonry, the believers in the mailed fist and the big stick are singularly at odds. Instead of supporting, they revile each other. In order to compound for their own sins in that kind, they heartily damn the similar deeds of another. Thus, our own Jingoes were among the loudest in condemning English aggression in South Africa. It is a kind of tribute which hypocrisy feels compelled to pay to virtue; it cannot refrain from the wrong itself, but it will soundly rate others who are guilty of it. And, of course, the foreign Jingoes pay ours back in their own coin. They resent the criticism of a fellow in iniquity. At the moment when Mr. Chamberlain was most violently attacked in the American and German press, he proudly drew himself up and said: "As I read history, no British Minister has ever served his country faithfully and at the same time enjoyed popularity abroad." That is the true provincial, the truly barbaric, note. We shall doubtless hear it echoed by American newspapers and politicians apropos of Friday's dispatch from Colombia praising those Senators who stand firmly at Washington for the rights of the weak. "Yah! You are popular in Colombia. That proves that you must be bad Americans." There must be no more inquiry than Chamberlain would allow, whether there is a question of morality and of justice involved. Just a raucous whoop —"Popular abroad! Now what have you got to say for yourselves?"

Against such unthinking and savage cries international Liberalism stands and will stand. The oscillation of the past few years has seemed to make brute force and commercialism triumphant, but the swing will be the other way, all in good time. Till then lovers of freedom and justice can do little but protest and agitate and educate and—wait. But they have no occasion to feel mortified over their comparative isolation and impotence. As Taine wrote to his friend, it is not the few thinkers and moralists who perceive the truth and cling to the right for whom one ought to feel sorry, but rather for those who go with the multitude to do evil.

GOVERNOR ODELL AND THE CANAL.

Governor Odell's plan to raise money for canal enlargement is the most important part of his message. In reviewing the work of the State Government, he offers a number of suggestions, some of them excellent; but they relate mainly to routine matters. His recommendation, for example, that our prisons be remodelled and their sanitary condition improved, will be endorsed by every humanitarian and penologist. His advocacy of a law to prevent the future construction of grade crossings is equally sound. These subjects, however, are secondary, for he has bestowed more thought on the canal, and his scheme will provoke eager discussion.

His way out, we regret to say, strikes us as impracticable. The problem is to raise $101,000,000. The two common solutions would be either a tax or a bond issue. Certain economists regard bonds as wasteful and unwise, because the interest charges, which may exceed the principal, are, from one point of view, a dead loss; because, also, the postponement of payment may blind taxpayers to the recklessness of expenditures and swamp a State or city with debt. Yet, in spite of the advantages of paying as you go, the established policy in this country has been bonds for permanent improvements, so that future generations may share the burden for roads, parks, and buildings which they enjoy. Accordingly, it had been generally supposed that an eighteen-year bond was contemplated. Such was the idea in the minds of voters when they cast their ballots. Any plan which immediately increased the pressure of taxation might have been defeated. As to this fact there can be no dispute: Governor Odell, in his last message, talked of the amendment to the Constitution so as to provide a bond issue and avoid "excessive taxation." In his speeches to the farmers last autumn he explained the very light tax needed to carry the bonds.

It is, therefore, surprising to have him say to-day, "While the referendum provides for a yearly direct tax and the payment of the debt in eighteen years, I am sure that the general expectation is that some other method may be devised." He then proceeds to an elaborate statement, which, in brief, is this:

(1.) Pay the entire cost of the first five years' work without resorting to bonds, by the expedient of raising an additional $5,500,000 per annum by indirect taxation.

(2.) Divide the large payments during the last five years (assuming that ten years will be required for construction) into two classes: (a) $5,500,000 per annum as before, from the State revenues; (b) the remaining $50,000,000 raised by annual levies of $10,000,000 each on the counties. In return, give the counties for use in their sinking funds State bonds which shall bear cumulative interest, not payable annually, but on redemption.

(3.) In the decade following the completion of the canal, pay off the bonds given to the counties by the State revenues, raised as before by indirect taxation.

Result: Canal paid for in twenty

years; direct tax on counties refunded; large interest payments avoided; saving, estimated by Governor Odell, $41,790,000.

This saving is, of course, an item worth considering. Governor Odell urges it with the economic arguments already referred to. Nevertheless, there are obstacles which render the device unworkable. In the first place, it is too complicated to be understood by many members of the Legislature; and to the average voter it would be hopeless confusion. He could not grasp it, and would suspect it to be a bit of financial jugglery. In the second place, if he grasped it, he would condemn it; for it would mean, virtually, the raising of $10,000,000 annually for five years by county levies, and he would be no happier under this load than under a direct tax by the State. The counties might, as Governor Odell suggests, issue bonds instead of discharging the levies in cash; but here again is a return to deferred payments and interest—and a plunge into "perplexed and intricate mazes." Add to these objections the necessity of two Constitutional amendments—as the Governor himself admits—and the project has scarcely a leg to stand on.

But, granting that the Legislature would be complaisant, the voters approve, and the amendments pass, there is still the trifle of securing $5,500,000 by indirect taxation. On the success of this effort everything depends. Last year the Governor wrote:

> "The money for payment of principal and interest of the debt could be met by a dividend tax upon the capital stock of manufacturing corporations, which would produce about $2,400,000, and by modifications of existing revenue laws by slightly increasing the rates affecting others than corporations."

He now wants to raise annually about $2,500,000 more than would be required for mere interest charges and sinking fund. This crucial point he passes lightly over in the phrase, "assuming that new revenues will be provided," but he gives no hint as to the source of these new revenues. Where are they to come from? It is doubtful whether there is any source from which $5,500,000 can be raised by indirect taxation. If there be such a source, the Governor should name it. At present he occupies the singular position of advancing a plan for raising $113,750,000—including interest—without a word as to where the first $5,500,000, or, indeed, the whole sum, is to be found.

Should the Legislature accept his idea seriously, we should have an endless debate as to ways and means, delays necessitated by further amendment of the Constitution, and possible bedevilling of the whole undertaking. It seems certain that no one who is not at heart an enemy of the improvement and anxious to see it abandoned, will turn from the plain and simple method of a bond issue and a small direct tax to meet the interest. Any other course is full of danger to the canal.

THE RUSSIAN AND JAPANESE FORCES.

Whatever might be the eventual outcome of hostilities between Japan and Russia, the army and navy of the David of the Eastern nations would begin a campaign with very considerable prestige honestly earned in the war with China, and enhanced during the relief of the legations in Peking. Of all the allied troops which entered China in 1900, the Japanese won the highest praise from military observers for bravery and dash, combined with sobriety, good discipline, and efficiency of transport. The officers had their men well in hand, and cared for their simple needs with surprising forethought. And the intelligence of the enlisted men was second only to that of our American soldiers.

This is one of the most important of the advantages possessed by the Japanese. Stout fighters as the Russians demonstrated themselves to be in the Turkish campaigns of 1877 and 1878, capable as they are of withstanding hardships certain to overcome less sturdy troops, they could not enter into a struggle with Japan with the zest and enthusiasm which would inspire their rivals. For the latter the struggle would be almost one for freedom and independence, with everything depending upon the celerity and intelligence of the first movements for the war. Excellently trained and organized as the Japanese army is, it can at best but number 430,000, of which 250,000 were available for foreign service in 1900. That it is weak in cavalry is generally admitted. Writing in the *Journal of the United States Cavalry Association* of a visit to a Japanese cavalry regiment, Capt. C. D. Rhodes of our new General Staff last year declared that "the Japanese cavalry is, in efficiency, far behind the infantry and artillery, which, as we know, are of the first rank." This he attributed largely to the lack of proper mounts, Japan being wofully deficient in draught and cavalry horses of proper size. But it is characteristic of the admiration of American officers for the Japanese army that Capt. Rhodes recorded his belief that only a few years would elapse before the cavalry would be on a par with the other arms.

American observers of the Russian troops in China in 1900 formed a very low opinion of their military value. "The treatment of the men is of the poorest," says an English critic, who admits, however, that they are thereby soldiers inured to the severest hardships. Just how many the Japanese would have to face in Mantchuria, it is extremely difficult to estimate. Before the Boxer campaign there were 35,000 troops in eastern Siberia. The First and Second Siberian Army Corps, which could in time be called upon, number about 150,000 men and 286 guns. Additional reinforcements might bring the total Russian forces in the East to 200,000 men, widely dispersed over a very considerable extent of territory. Should Japan dominate at sea, as is confidently predicted by the best professional opinion, she would be able to land a force far outnumbering any army which Russia might assemble within the next four months. There can be little doubt that the size of the various Russian garrisons has been greatly exaggerated.

But the chief weakness of the Russians would be in their communications with their base of supplies—European Russia. Should Japan control the seas, they would have to fall back upon the Trans-Siberian railway—a frail, single-track line, badly built, and badly managed, and interrupted by Lake Baikal. Moreover, it is extremely vulnerable and would call for large protecting forces, as would the Mantchurian garrisons, for it must be remembered that Russia would have to fight in a practically hostile country, which would itself have to be overawed. Obviously, therefore, Russia would strain every nerve to control the sea, for the double purpose of drawing supplies by water and preventing the landing of Japanese troops in Mantchuria or Korea.

But, on the water, the advantage would seem to lie with the "Yankees of the East." The Russian navy is without experience in war, and is as destitute of efficient naval bases and repair yards of use in winter as the Japanese are well provided with them. Accustomed as the Russians are to cold-weather operations, they cannot in this respect surpass their possible enemies. Commander Francis M. Barber, U. S. N., who accompanied the Japanese torpedo boats to Port Arthur in the zero weather of the 1895 campaign, could not say enough in praise of the extraordinary hardiness and endurance of their men. The Japanese personnel as a whole has received the highest praise from European critics. "Their crews are inspired by the keenest spirit of zeal and patriotism." The judgment of their officers is "marked by courage, capacity, and admirable resourcefulness." The standard of discipline is that of the British navy, by many of whose officers the Japanese sailors have been instructed. Sir William White, the eminent English authority, has summed them up by saying that "they have shown themselves fully equal to the great responsibilities involved in using during war as well as peace a fleet replete with every modern improvement in machinery, guns, and equipment."

So far as the numerical comparison between the Russian and Japanese ships

in the East or en route is concerned, the Russians have the advantage, particularly in battleships. But their heaviest vessels are of widely varying types and speed, and far less homogeneous than the Japanese. Only three of their armored cruisers can be said to be up-to-date, though they possess at Port Arthur a very large and well-reputed flotilla of torpedo boats and destroyers. For the Russians the best move in the event of war is thought in many quarters to be a concentration of their fleet in the Gulf of Pechili. As long as it was intact and a large military force was at Port Arthur, the Japanese could enter Mantchuria only by way of Korea, a long and difficult route to the objective of any land campaign—the cutting of the Trans-Siberian railway. That these problems have been carefully studied by the Japanese General Staff is notorious. Nor can it have overlooked the importance of striking quickly after a declaration of war.

THE CARNEGIE INSTITUTION.

The second Year-book of the Carnegie Institution contains the complete record of its work to date, and it appears that what the administrators have left undone is quite as significant as what they have done. They have been in no haste to appropriate the whole income. In a little more than a year they have voted for research, publication, and office expenses $182,130—less than two-fifths of the income of the fund. Applications from investigators to the amount of $2,200,398 lie before them, grants recommended by the Advisory Committees run to $911,500. This total demand of $3,111,898—supposing even that many of the requests are frivolous—shows that the Carnegie Institution has not been carrying its coals to Newcastle. The small total of actual grants as compared with the applications proves that the fund is being distributed in the most conservative spirit, and upon mature deliberation.

We pointed out, on the publication of the first Year-book, that the fund was gradually being appropriated to the use of natural sciences to the exclusion of *litteræ humaniores*. Nothing in the present Year-book requires us to change that comment. Out of total appropriations of $182,605, $20,000 was allotted to ethnology, archæology, bibliography, etc. Astronomy, geology, and physics took the lion's share of the funds, with biology not far behind. Projects of especial interest now approaching realization are the establishment of a desert botanical laboratory at Tucson, Arizona, and the preparations for a geological survey of eastern China. Wholly in the spirit of Mr. Carnegie's donation is the assumption of the 'Index Medicus' by the Institution. This great bibliography was begun in 1872 by Dr. John S. Billings and Dr. Robert Fletcher, but was discontinued twenty years later for lack of financial support. It is a case where the appearance of Mr. Carnegie *ex machina* has justified the faith of the authors, while the Institution has been happy in finding a great and needy work ready to its hand. A commendable clause of the deed of foundation required the Carnegie Institution to coöperate with existing learned bodies, supplementing rather than rivalling their work. Pursuant to this ideal, the trustees have maintained twenty tables at the Marine Biological Laboratory at Wood's Hole, and have made grants of $1,000 each to twenty-five "research assistants" in as many colleges and universities. In these grants the scientific bias already noted is very apparent. Three beneficiaries are psychologists, one is an economist, one a historian; the other twenty were all scientists.

But the preponderance of science in the councils of the Institution is shown most clearly in the specific recommendations of the Advisory Committees. Physics desires $250,000 per annum—half the fund; geo-physics would be content with a yearly $150,000; astronomy has two projects calling annually for $80,000 and $150,000. Compare with these suggestions such faint-hearted requests as $45,000 annually for psychology—a scientific subject, properly speaking—and $17,500 for history. Archæology would turn out to have similar modest claims if the $120,000 asked for "exploration" were analyzed. The conclusion is inevitable: either such subjects of research as archæology, art history, philology, history, philosophy, economics, are already so comfortably provided for as to have no claim upon Mr. Carnegie's support, or else the Institution is not at present so organized as to give these historical studies a hearing. An examination of the miscellaneous applications not sanctioned by the Advisory Committee shows a similar preponderance of scientific interest.

It would clearly be unfair to prejudge the course of the Institution until it is in full operation. With the unappropriated three-fifths of the fund it would be possible to set the balance straight. What we wish to observe is a tendency, rather than a danger. It is evident that the great scientists stationed at Washington have too exclusively the ear of the trustees. The absent are always wrong, say the French; and the representatives of art and literature are generally absent from Washington. Indeed, the Carnegie Institution is in some risk of seeming to narrow its scope by an embargo. The trustees have resolved that no grant should be made for logic and metaphysics. It may be that no worthy project in these fields lay before them, but the time might come when logic or metaphysics might have quite as deserving a collective enterprise to offer as a desert laboratory or a geological survey.

What the historical sciences need is a spokesman, and for this reason the trustees are to be commended for printing in the Year-book Professor Seymour's report on excavation sites in Hellas, and Mr. Raphael Pumpelly's preliminary survey of the trans-Caspian region. Professor Seymour has recently travelled through continental Greece, Asia Minor, and the Ægean Islands. He finds at Corinth, Thebes, and Antioch opportunities for major excavations of the first importance; in the Spartan region small sums devoted to the study of ancient seaports and trading routes might cast new light upon the relations of Greece with the more ancient East. Here lie possibilities as definite and promising as, say, the investigation of aluminum alloys. Mr. Pumpelly's report suggests an historical mystery to solve—that of the ancient Mongol Empire, which had its seat in what is now Turkestan. Students of Asiatic civilization know vaguely that between Chinese civilization in the East and Arab and Persian culture in the West there are many connecting links. Did we know more definitely of Genghis Khan and Tamburlaine, many historical problems would approach solution. Mr. Pumpelly reports that tumuli are frequent in this region, and the sites of buried cities well known. Sven Hedin, in his recent exploration of the country, found inscriptions, and there is good hope that manuscripts are safely preserved under the desert sands. Is not the writing of this unwritten chapter of history as important as the investigation of double stars or cryptogams?

But comparisons are superfluous. The body of the sciences is made up of many members, all of which are honorable. What we wish to emphasize, as we congratulate the Carnegie Institution upon its auspicious beginnings, is that a generous grant to such projects as those outlined above will prove to all critical well-wishers that the new Institution is to be no mere auxiliary to science in the narrower sense, but rather the impartial promoter of all studies that tend to interpret nature to man and man to himself.

THE TWO JOANS.

All visitors to Paris recall Frémiet's spirited Joan of Arc, which closes so proudly the Rue des Pyramides. But only the more observant will have noticed that this famous equestrian statue has assumed an unfamiliar look; indeed, Parisians have only recently made the discovery. Joan's creator has very frankly owned up, and the metamorphosis of the monument now constitutes a very interesting case in art history, and raises unusual questions in the border-line of æsthetics and ethics. In a word, Frémiet had long chafed under the general criticism of his masterpiece. Re-

port has it that he haunted the little Place de Rivoli and eagerly listened to the chaffing of the crowd. Gradually the artist came to the conviction that the crowd was right, that the contrast between the slender, steel-cased girl and the clumsy war-horse was excessive. We are ready to believe that such self-criticism is not uncommon among the great artists. But Frémiet went further and began a second Joan. It was chance that favored the substitution of the amended work for the old. The digging of the subway in the Rue de Rivoli made it necessary to remove the old Joan to Frémiet's studio. The new Joan soon guarded the Rue des Pyramides. All this was done without a by-your-leave to the officialdom that has French art in charge, and a mystified Paris wavers between admiration of the *coup de main*, indignation over broken red tape, and regret for the old Joan, who, departing, gains partisans even among those who had scoffed.

It is a signal assertion of the inalienable right of the artist over his work. That was a paradox which the late Mr. Whistler delighted to defend, denying with Olympian assurance that the passing of a few guineas could ever alienate an artist's rights in his own creation. Evidently, M. Frémiet felt that the city of Paris merely held his statue in trust, subject to his discretion. Very likely such a rule might be conceded without causing a general removal of civic landmarks. Rather few sculptors, for example, are likely to reclaim their equestrian statues. The liberty would hardly be abused. But the question is less that of a more or less theoretical right than of the advisability of altering essentially a finished work of art. Does or does not the public gain a kind of vested interest in its old Joans which the artist is bound to respect?

Writers have generally given an emphatic negative, treating the public with cavalier indifference. Did not Mr. George Meredith leave out dearly loved digressions when he revised 'Richard Feverel' and the others? Has not Mr. Joseph Conrad rewritten favorite short stories into novels? Poe perhaps was the classic offender in this sort, selling the same materials to half a dozen papers, and leaving his editors in confusion as to which form represented the author's choice, which showed his impecuniosity. Tennyson, like most poets, suppressed his juvenile verse with unsparing hand, while our own Whitman cut so deeply into his 'Leaves of Grass' that the appendix of rejected readings serves the faithful as well as the poems themselves. It may be recalled, also, that what is admittedly the finest passage of Lowell's "Commemoration Ode" was a retouch, though contrariwise Whittier may be most happily remembered by the admirable hymns that other hands have extracted from his long poems. Enough for literary revision. Copyright and public taste give it the fullest latitude. From Chaucer down, the poets have had to be read in parallel columns.

Yet it must be feared that this tolerance of emendation rests, not on general zeal for improvement, but on ignorance that any change has been made. Many of us, one may suspect, would read our "Hamlet" in the abridged first quarto without greatly missing the best passages in the play. Such indulgence the painter or sculptor will rarely have. A chapter may be inserted or withdrawn from a book; a cubit can hardly be added to the stature of a portrait without attracting somebody's attention. A casuist would argue from this that there are peculiar opportunities for duplicity in the literary art as compared with painting or sculpture. But the fact seems to be merely that the appeal to the eye is simpler than that to the intellect. The work of art readily becomes a kind of public possession. In a sense, it seeks the public, while a book must be sought. The penalty, then, of working for the greater public is loss of control of the artist's work. It ceases to belong to him; admiration or mere habit establishes the claim of the man in the street. Of course, there are painters whose work is in a constant state of revision and their patrons in corresponding postures of desperation or expectancy. But these are not the men who will ever paint the walls of our civic buildings, adorning them for all time. It is best that the artist should feel that his work is deeded to those who care for it, while the work of art is so distinct an entity that it has a kind of right to continued and unaltered existence. No artist need fear to stand on his complete work, even on the least satisfactory to himself. Time does the work of selection when the old Joans give grounds for repentance; a truly philosophical sculptor would much sooner forget than mend them. M. Frémiet's generous ruse seems to come of the oversensitiveness of a mind too much given to retrospect.

THE AMERICAN HISTORICAL ASSOCIATION AT NEW ORLEANS.

NEW ORLEANS, January 2, 1904.

Two years since, at the meeting of the American Historical Association, Charles Francis Adams made the suggestion that the Association might very properly give its attention, in some measure, to the discussion of questions of practical political interest; that it might, by introducing the scholarly and the historical spirit into such discussions, raise the intellectual level on which political campaigns are ordinarily conducted. Except for his own address on "An Undeveloped Function," this suggestion has apparently led to nothing. The Association has not entered into practical politics by formally discussing the political issues of the hour. Indirectly, however, the meeting of the Association just ended in this city has, perhaps, done something to achieve the object that Mr. Adams had in mind. Whether political or not, there are now before the people of the United States great practical questions, one of which certainly centres in Southern conditions, and of which the Southern point of view is different from that of the North and the West. The best hope for the satisfactory solution of questions that are in any measure sectional, the best hope for raising the discussion of them, when they are discussed, to a higher intellectual level, is the sympathetic appreciation by each section of the position of the other. It is not too much to say that the "race problem" will be much farther advanced towards a satisfactory solution when the people who do not live in the South really understand this "problem" as it presents itself to the Southern people, than it is now. To this end the meeting of the Historical Association here has contributed something. Whatever might be accomplished by such formal discussion as Mr. Adams suggested, probably much more can be accomplished to achieve the object he had in mind by developing this other "function" even farther than it has been developed—the function, namely, of bringing together, in the different sections of the country, the leading teachers of history from every section, who, we may remind ourselves, sometimes have very creditable notions on practical political questions; and, if they do not always like to embalm these notions in formal papers, are yet human enough to discuss them judicially and otherwise among themselves.

In the more ordinary meaning of the term, the meeting at New Orleans was an unusually good one. If the attendance, in point of numbers, was not so satisfactory as it sometimes has been, in point of quality it was above the average, and decidedly so in its representative character. From the Far East and the Far West the representation was certainly better than might have been expected. If the Middle West and the South did not exceed expectations, the former sent as many as usual and the latter naturally many more. The formal programme was a good one, though longer than usual—longer, indeed, or rather more crowded, than seemed altogether desirable. While the twenty-minute limit was quite generally observed, the number of papers was often sufficient either to extend the sessions or to exhaust the interest of the audience unduly. On the other hand, that twenty minutes is altogether too short a period for the satisfactory development of the subjects presented was frankly asserted by many who read papers within that limit, and tacitly admitted by others who, in order to observe the rule, were forced to omit a part, and sometimes the best part, of their contributions. Finally, the number of papers and the frequent sessions gave, in the opinion of many, a somewhat too formal character to the meeting. Informal discussion was, indeed, tried in two of the sessions; but discussion of this sort ordinarily proves unsatisfactory precisely because it is informal in name only. The common result of making provision for it is the mere addition of a number of shorter, but equally formal, papers to the programme. Really informal and spontaneous discussion is absent, and, it is true, is with difficulty evoked in connection with a formal paper. But this, precisely, is the

strongest objection to the long programmes and the numerous sessions.

The conditions for emphasizing and developing the social side of the meetings were very favorable at New Orleans. There were the fascinations of the city itself for every student of history, and the genuine Southern hospitality extended by its inhabitants to the Association, the altogether charming effect of which was to give to each member the impression that he individually had been made free of the city. In words of welcome and in acts of service, no less than in Southern skies, there was a warmth that in no place left any ice to be broken, whether it acted upon frontier independence, New England exclusiveness, or metropolitan polish. In this respect the visitors to New Orleans will not soon forget the Louisiana Historical Society, Tulane University, the Round Table Club, and other societies, and many citizens whose active kindness brought them into direct relations with the Association and its members. Peculiarly apt was the selection of the Cabildo, the old Spanish State-house fronting Jackson Square, for the initial meeting. With equal appropriateness the opening session of December 29 was devoted to the Louisiana Purchase, the final consummation of which took place in that building, and to the several phases of the history of Louisiana Territory. Professor Sloane's paper, on "World Aspects of the Louisiana Purchase," furnished the proper background. Briefly and clearly, Mr. W. W. Howe traced the history of the Civil and Common Law in the Territory, showing how each has been made to supplement the other until there is no longer any conflict between the two in essential principles. To prove that New Orleans was far from being disaffected towards the United States at the time of Burr's expedition was the aim of Dr. McCaleb's paper. Secretary Thwaites told, and with his usual success vivified, the story of the Lewis and Clark Journals, and pointed out the importance of the promised publication, probably within the year, of these records, wholly freed from the transforming influence of Biddle and the interpolations of Dr. Elliott Coues. By a happy coincidence, during the reading of Dr. Shepherd's paper on the Spanish Archives the commander and officers of the Spanish cruiser *Rio de la Plata* came in, and were introduced to the audience, which greeted them by rising. After the session they were the special guests at the luncheon served to the Association in the Justices' rooms of the Cabildo, where they were entertained under some linguistic difficulties, lightened greatly, and in some cases perhaps enlivened, by the English of the guests and the Spanish of the hosts.

During the afternoons, when there was no regular programme, many visitors explored the French quarter, which centres in the Cabildo and Jackson Square, formerly the Place d'Armes. Within easy reach are many places made famous by history or fiction, from the Cabildo itself and the old cathedral to the "Haunted House." The evening was given to the customary joint session with the Economic Association at Newcomb College. In the address of welcome, President Alderman of Tulane University spoke of the Old South and the New. The New South is characterized, he said, as the old was, by an intense loyalty to certain ideas. The Old South was ready to die, and did die, for State sovereignty. The New South is equally ready to die for a new principle—the principle of "race integrity." The South desires the welfare of the negro—desires it, perhaps, rather more than the North. It will put no obstacle in the way of his advancement, but two things it will not submit to—social equality and political control. Sectionalism is gone forever, unless it can be "galvanized into life again by the joint efforts of Senator Tillman and the Union League Club," and the "race problem" can best be solved by time and silence.

After a searching analysis by Professor Seligman of the social elements in economic law, the address of President Lea was read by Professor Haskins of Harvard. The address put into clear and convincing form the ideas that are at the basis of the best historical work now being done in this country and in Europe. Mr. Lea began by dissenting from the notion that it is the province of history to illustrate any system of ethical principles or to teach conventional moral doctrines. If history proves anything, it proves that there are no fixed ethical conceptions. The only standard is in the individual conscience, and that standard changes from generation to generation, from age to age. The duty of the historian, therefore, is to reconstruct the past in as close approximation to the reality as may be. To understand by investigation, to explain how an institution came to be what it was at any given time and how it was transformed in response to the needs of a new environment, to comprehend a great historical personage from his own point of view and that of his age, to show that he was the product of his age, and why, probably, he could not have been different—this is the whole duty, the highest possible privilege, indeed, of the historian. All that is vital in the historic conception, all that makes valuable the serious study of history, was clearly set forth by Mr. Lea, himself a recognized master.

Of the many excellent papers read in the subsequent sessions there is no room to speak in detail. From the conference on the teaching of history in the South, one learned that the difficulties there are such as in the main exist nearly everywhere—indifference, lack of money, lack of sources and of books. The papers of Wednesday evening and Thursday morning indicated the growing interest in the history of territorial expansion, and in a more critical study of the Constitution. On Thursday evening Professor Giddings read in part and in part summarized his paper on the relation of sociology, economics, and history. From the half-serious discussion that followed, it appeared that the sociologists think historians have been so busy perfecting a method for finding things that they do not know what to do with what they have found; and that historians think sociologists are merely giving new and attractive names to that once active but long-since defunct something called the Philosophy of History. On Thursday afternoon the annual business meeting of the Association was held at the New St. Charles Hotel. The principal action, aside from routine business, was the abolition of the church-history section, the organization of a Pacific Coast Branch Association, and the establishment of a new prize, out of the Herbert Baxter Adams Fund, to be known as the Herbert Baxter Adams prize. Goldwin Smith was elected president for 1904.

THE ECONOMIC ASSOCIATION AT NEW ORLEANS.

NEW ORLEANS, January, 1904.

It is safe to assume that for many years to come the sixteenth annual gathering of the American Economic Association held during the Christmas recess will remain vivid and distinct in the minds of those who attended it, as "the New Orleans meeting." An easy restrospect of the Association's scientific sessions of the past ten or twelve years summons back, mournful to relate, not this particular presidential address nor that profound discussion, but such material circumstances as the isolating snowstorm of the Indianapolis meeting, or a memorable smoker of the Ithaca assembly, or cherished midnight reunions in the Cosmos Club of Washington. But this is, after all, an old story, for the reading of papers, whatever their content, is but a "leave to print," and it is personal contact and mental attrition and professional stimulus that bring scientists together from the four quarters, often at no mean cost of time and effort; and it is as these ends are or are not attained that, reminiscently at least, the game seems worth the candle.

In plan and scope the New Orleans meeting was easily the most ambitious in the history of the Association. A joint meeting with the American Historical Association in the lower South; a special train from New York, affording tourist stops at Richmond, Atlanta, Montgomery, Mobile, Chattanooga, and Luray; a programme giving prominence to the discussion of Southern agricultural and industrial problems by recognized experts—were not only planned in detail, but realized with brilliant success. Many persons and influences contributed to this end; but more than to any other single factors are they due to the energy and administrative capacity of President Seligman, at one end, and the enthusiasm and devoted effort of the chairman of the local committee, Professor Aldrich, of Tulane University, at the other.

The meeting opened actively on December 29 with a series of admirable papers and discussions on Southern agricultural problems. Tobacco, sugar, rice, and cotton were in turn reviewed by such specialists as Mr. Lawson H. Shelfer, tobacco expert of the United States Department of Agriculture; Mr. William C. Stubbs, Director of the Louisiana Sugar Experiment Station; Mr. S. A. Knapp, President of the Rice Association of America, and President D. F. Houston, of the Agricultural and Mechanical College of Texas. Particular interest attached to Mr. Shelfer's statement that both the Cuban filler tobacco and the Sumatra wrapper could be produced in the United States by proper selection of soil and climatic conditions; and to Mr. Knapp's authoritative account of the development of rice culture in Louisiana and Texas since 1885, and its extraordinary economic possibilities for that region and for the country at large.

But withal it was the boll weevil that held the centre of the stage. No feature of the meeting was more instructive or impressive to the Northern members in attendance than President Houston's description of the

pest, and his conclusion, based upon the experience of Texas, that it is probably useless to attempt to exterminate the weevil or even to arrest its spread, and that the hope of a profitable crop must be sought in the use of improved methods of cultivation. A less resigned attitude was taken by Louisiana experts, who announced the intention of that State to wage a vigorous fight against the weevil by State resources, in co-operation with prospective Federal aid. The point was very well made that improved methods of culture, however possible with the white labor of Texas, were impracticable in any large way in Louisiana and throughout the cotton belt, and that if this constituted the only remedy, the situation was really hopeless, and a permanent decrease in the supply of cotton, with its attendant calamities, must be anticipated.

The afternoon session was devoted to a consideration of the industrial problems of the South, and suffered somewhat by comparison with the brisk, tonic quality of the morning's papers. Mr. D. A. Tompkins of Charlotte, N. C., and President Charles C. Thach of the Alabama Polytechnic Institute, reviewed the cotton industry, and Mr. Richard H. Edmonds, Mr. C. E. Vawter, and Mr. Stuart Wood took a general survey of Southern economic problems.

It is not depreciating the two presidential addresses to say that President Alderman's speech of welcome looms up as the striking feature of the joint session with the American Historical Association, on Tuesday evening. In warmth and intensity of feeling, in vigor and beauty of phrase, and in precision and depth of thought, it was a remarkable deliverance. It enunciated the doctrines of racial integrity and white supremacy in the South, free of all sophistry and in uncompromising vigor; but with a context that raised the whole to the dignity of an intellectual manifesto and an historical document. It is much to be hoped that the address will find early and independent publication.

President Seligman's address on "Social Aspects of Economic Law," although profound and scholarly to a degree, struck a narrower note than his memorable paper on "The Economic Interpretation of History" at the Washington meeting, or than his first presidential address on "Economics and Social Progress" in Philadelphia. It is not easy even for the most fruitful mind to conceive a universal message in three successive years, and a real contribution of limited range is always to be preferred to a thin generalization. "The subordination of the individual to the social element in economic life" was President Seligman's text, and the domain of public finance his field of illustration. American students of finance have been bewildered by an apparent conflict between theoretical doctrine and practical application. Thus, the faculty theory of taxation seems to be in flat contradiction with the recent history of American finance. The opposition is, however, apparent rather than real, and is due to the fact that we have put the emphasis upon the individual rather than the social aspect of economic law. The corrective must come through a more careful study of taxation based on the existence of economic law, with particular reference to the shifting and capitalization of taxation. Withal, Professor Seligman's attitude was high optimism, in some contrast with the general trend of his earlier writing in this direction:

"Our American system is therefore moving in the right direction. We do not levy our so-called indirect taxes indiscriminately as of old; but, apart from the tariff, the importance of which is only secondarily fiscal, we limit the subject of Federal taxation to a very few articles of widespread consumption. We no longer, in our most advanced States, attempt in practice to levy a general property tax, but are content, as is almost true in New York to-day, with State taxes levied not on individuals, but on inheritance and corporations. Finally, while in local taxation we still hold to the theory of a general property tax, in practice we are fast coming to the well-nigh exclusive taxation of real estate."

Wednesday morning's session, on economic theory, was probably the most stimulating and scientifically useful of the meeting. The basis of the discussion, a carefully thought-out review of "The Relations between Rent and Interest," by Professor Fetter of Cornell, had been printed and sent some weeks before to the participants in the formal debate—Professors Carver of Harvard, Hollander of Johns Hopkins, Keasbey of Bryn Mawr, Taylor of Nebraska, Dr. McFarlane of Philadelphia, and Mr. Whitaker of Leland Stanford. The result was a series of compact, incisive criticisms that were distinctly worth while. Professor Fetter's contention, in continuation of his earlier studies and in line with the writings of a group of modern critics, was that the classical distinction between rent and interest was relative to the peculiar conditions of English economic life in the first quarter of the nineteenth century, that it finds no warrant in modern industrial organization, and that if the old terms are to be retained in economic terminology it must be in association with new concepts. The conspicuous fact revealed in the discussion of the paper was an astonishing reaction from the hypercriticism of recent theories of distribution back to at least the confines of the classical theory. Not since Professor Marshall broke a mighty lance in defence has there been a more signal "rehabilitation of Ricardo" than this discussion suggested. Incidentally, the debate afforded a successful test of the plan of devoting an entire session to the consideration of a single controversial paper on economic theory, printed and circulated in advance.

A meeting of the Council and delightful social engagements took up Wednesday afternoon. The evening's session was given to corporate and public finance, with papers on "The Management of the Surplus Reserve," by Professor Meade of Pennsylvania, discussed by Professors Grey of Northwestern and Hatfield of Chicago; on "The Theory of Loan Credit in Relation to Corporation Economics," by Dr. Norton of Yale, with a diverting discussion by Professors Cleveland of New York and Farnam of Yale; and on "The Relation of Federal and State Finance," by Professor Goodnow of Columbia, with discussion by Professors Daniels of Princeton and Plehn of California.

"The Trust Problem," with the principal paper by Prof. Henry C. Adams of Michigan, and formal debate by Professors Farnam and Emery of Yale, Meyer of Wisconsin, Rossignol of Denver, Robinson of Illinois, Dr. Bemis of Cleveland, and Mr. Theodore Marburg of Baltimore, offered an inviting programme for Thursday morning's session. Professor Adams's paper was in the main devoted to a disproof of the four lines of argument which figure prominently in current justification of the existence of exclusive industry. The propositions thus successively assailed were: first, Trusts are the result of natural law, and therefore a healthful industrial evolution; second, the economic law of competition persists, no matter what be the form of industrial organization; third, Trusts are productive, and should receive our approval as labor-saving devices; fourth, common-law principles already provide remedy for any conceivable abuse of the liberty of contract. Passing on to a so-called "solution" of the Trust problem, Professor Adams urged that any satisfactory programme of reform must not content itself with dealing with Trusts in a formal manner, but must touch the underlying causes of industrial consolidation, as involved in our systems of education, transportation, and labor organization.

The discussion of the paper disclosed characteristic diversity of opinion, inclining on the whole to a more conservative and less depressing estimate than that suggested by Professor Adams. But both paper and discussion evidenced how much economic theory has yet, in this one direction, to do. Until scientific analysis shall have determined with greater precision the general trend of modern industry, and shall have indicated, more convincingly than heretofore, an assignable limit to the size of the modern industrial unit, any radical legislative programme for Trust regulation seems proximate and insecure.

The meeting terminated brilliantly in a second joint session with the historians. The principal paper, by Professor Giddings of Columbia, on "The Relation of Sociology to History," was entertainingly discussed by Professors Small of Chicago, Cooley of Michigan, and Ward of the Smithsonian for the sociologists, and by Professors Emerton of Harvard, Burr of Cornell, and West of Michigan for the historians. In this battle royal the share of the economist was the traditional fate of the would-be peacemaker in a turbulent household. When reciprocal belaboring began to weary, historian and sociologist suspended hostilities long enough to join forces in common abuse of the economist. A little more real than puppet of straw, a degree more worthy than scholastic controversy, the residual of such debate seemed no larger, and a future generation will surely appraise it as idle and profitless.

Any account of this most successful of meetings which should omit reference to the gracious hospitalities showered upon the Association from arrival to departure, would be a bloodless chronicle. It is not possible to enumerate even a considerable part of those from whom genial courtesies were received. But none who were Mrs. T. G. Richardson's guests on Wednesday afternoon will ever forget the exquisite beauty of that tender picture of a by-gone social life. The Creole stories at the Round Table Club's "smoker," the excursion on the Mississippi, with stops at Chalmette and at a great sugar "central," the session in the Cabildo, the strolls, "conducted" and otherwise, in the Vieux Carré, the snug little dinner-parties in delightful Old World restaurants, and the reunions and discussions that lasted far into the night in out-of-the-

way corners—all these will linger long and fragrantly.

The business affairs of the Association were found in a very satisfactory condition. The Council voted an expansion of publication activity, and coöperation with the economic inquiries of the Carnegie Institution was authorized. Chicago was selected as the place of meeting in 1904, with the expectation of coming to Baltimore in 1905. Professor Taussig of Harvard succeeds to the presidency. J. H. H.

Correspondence.

THE CHICAGO FIRE.

To the Editor of The Nation:

Sir: Whatever details an investigation of the Iroquois Theatre disaster may bring out, the significant fact remains that it was due to the gross neglect of existing ordinances on the part of the police and building departments of the city. This neglect was known, tolerated, and tacitly approved by the Common Council, a body legally elected by the voters of the city. Sifted to the last analysis, it will be found that some six hundred innocent people, mostly women and children, lost their lives because the general public does not appreciate and understand the necessity of electing competent men to public office. The genesis of the popular notion that election to office endows a man with the appropriate mental and moral attributes of that office, is an enigma to students of psychology and political science. Qualifications palpably necessary for a position of trust and responsibility in private affairs are, for some inscrutable reason, waived by the general body of voters in electing a man to a position immeasurably more important in public affairs. Is this a survival of the old belief that the king can do no wrong, and possesses by virtue of his office miraculous and superhuman characteristics, or that the laying on of hands transmutes an ordinary mortal into something infinitely superior, or that the accolade makes the chivalrous knight? Whatever the origin of the notion may be, it is plain that it exists and flourishes in full vigor in democratic America, and will die very, very hard.

Indeed, it seems to be a law of human nature that every step in advance in political science must be taken literally through pools of human blood. When one sees in front of a recently built, officially inspected, and formally licensed theatre a truck wagon, hurriedly pressed into service, filled so high with corpses that the powerful horses could not start the ghastly load without the assistance of the police, it comes home, at least to those of us who have lost friends in the fire, that reform is needed. Within the last few months murder and assassination in broad daylight on public highways as a result of labor disputes, the picketing of funerals, and the stoning of ambulances and hearses, have excited, as it were, a ripple of mild astonishment in the public mind that such things could really be. To stir the complacent and optimistic American public it is not enough to point out examples of public plunder, weakness and laxity of administration, or moral turpitude in legislators; what the public has to have before it in order to stir it from its apathy towards municipal reform is the sight and smell of fresh, warm human blood. The blood of the martyrs is the seed of reform.

E. L. C. Morse.

THE NEGRO IN NEW ORLEANS.

To the Editor of The Nation:

Sir: Your editorial, "Mr. Schurz on the Negro Problem," which appeared in the *Nation* of December 31, makes it apparent to Americans at the South that the *Nation* shares the same vindictive spirit common to almost all Northern writers whenever the race problem is discussed. It is clearly within the right of the *Nation* to offer any criticism of the South's treatment of the negro which it sees fit. It is more within its right to offer advice tending to the solution of this problem, and Southerners interested in its solution would hail with delight a single sincere suggestion. But this the *Nation* does not attempt. It merely vilifies the South, after misrepresenting conditions by phrases such as "Every door of hope opening into the professions is slammed in the face of the black men because they are black," "Pro-slavery ideas are again asserting themselves," and citing isolated cases as Southern sentiment.

An unprejudiced investigation of conditions will show these statements, even if founded upon fact, to be grossly exaggerated. There is no door closed to the negro in the South except the door to social equality, of which you say the South is in "silly dread." Is it meant that social equality is impossible, or that it is not dreadful? The Deity closed the door to social equality, and it is not given to man to open it. If God had meant the negro to be the white man's equal, would he not have made him *white?*

The city of New Orleans, which does not pose as a model, can give ample proof that the negro is offered every opportunity for his betterment. Here the negro children are educated in schools supported by taxes which are paid almost entirely by white people. There are five or six colleges and universities supported by private contributions, and by the local and general governments, where negro men and women are taught the higher branches. Negro physicians receive their education here, and practise without interference. There are negro lawyers who daily practise their profession, one of whom stands out prominently and enjoys the respect of all Orleanians; and this is the Far South. If we do not invite him to our homes, that is a matter of personal taste (since we do not live in the Executive Mansion), and is nothing to any one else.

In conclusion, allow me to say that we are not monsters, thirsting for the blood of innocent negroes, but men who know from our fathers what Southern civilization is, and that it falls upon us to protect our race, our civilization, and our name, be the cost what it may.

Harry Prentiss Sneed.

New Orleans, January 4, 1904.

[We recall that it was from New Orleans we received, not long ago, a letter enclosing official testimony (or what was deemed such), expressly obtained from Nashville, in disproof of our perfectly well-founded statement that a skilful colored dentist in Nashville had many white patrons. This horrible fact acted on the Southern imagination like the simple luncheon at the "Executive Mansion." That a white man should consent, for his own relief from pain and for the care of his teeth, to prefer the best colored to the best white service because the latter was inferior, was too shocking for belief, and every effort was made to obtain the name of the practitioner—certainly not for his worldly comfort and peace of mind.

Mr. Sneed's is also the second letter within a week that we have received from a Southern source—friendly in both cases—which ends in visions of bloodshed. As our New Orleans reporter of the late meeting of the American Historical Association shows on another page, a welcoming university president could not keep his hospitable hands off of bloody graves. The only attacks on "race integrity" that we know of were made during the existence of slavery. The only demands or entreaties that we hear of are for justice and fair play. Why are these met, even in sane and enlightened circles, by threats of a fresh civil war and a fresh blood-letting on a grand scale? As well attempt to argue with the master of twenty legions. —Ed. Nation.]

EARLY MAPS OF LOUISIANA.

To the Editor of The Nation:

Sir: The writer came recently to New Orleans in search of material for an historical subject which he is investigating. Among other valuable material, he finds at the Howard Memorial Library a notable collection of maps illustrating the cartography of Louisiana. This collection is the property of the Librarian, Mr. William Beer. The fact that nowhere outside of Washington is so complete a collection to be found, leads the writer to lay before the readers of the *Nation* a brief notice of its character.

The collection consists of some two hundred mounted maps, in loose sheets, and of about fifty atlases. The whole ranges in date from the end of the sixteenth century down to 1878. The majority, however, belong to the eighteenth century. Roughly speaking, the collection corresponds to the list of maps of Louisiana described by Justin Winsor in the fifth volume of his 'Narrative and Critical History of the United States,' although there are many examples not mentioned by Mr. Winsor.

Certainly, the student of the historical geography of Louisiana will find nowhere better conditions for examining a valuable collection of rare maps than at the Howard Memorial Library. He will have a room and a large table placed at his disposal, and he will find Mr. Beer courtesy and kindness itself in placing all in his hands without restriction. The winter months bring many visitors from the North to New Orleans, and it is the hope of the writer that some among them will not leave the city without having seen this little-known collection.

B.

New Orleans, January 3, 1904.

LIONS FOR *THREE* PRESIDENTS.

To the Editor of The Nation:

Sir: Mr. Crandall, in his very amusing letter published in this week's issue of the *Nation*, overlooks a still earlier precedent from the same source. On January 6, 1834, President Jackson says, in a special message to Congress of that date:

"I communicate to Congress an extract of a letter recently received from R. J. Leib, Consul of the United States at Tangier, by which it appears that that officer has been induced to receive from the Emperor of Morocco a present of a lion and two horses, which he holds as belonging to the United States. There being no funds at the disposal of the Executive applicable to the objects stated by Mr. Leib, I submit the whole subject to the consideration of Congress for such direction as in their wisdom may seem proper."

In what manner the embarrassed Consul "held" his charges does not appear from the message, but Jackson adds, with characteristic directness, that instructions have been given to all ministers and consular officers that "they will not under any circumstances accept presents of any description from any foreign state," unless previously authorized by Congress.

Cannot some one tell us the subsequent history of these lions? C. H. Lee.

Racine, Wis., January 9, 1904.

TRANSLATIONS OF ISOCRATES.

To the Editor of The Nation:

Sir: As I am the unfortunate "hack writer" denounced by Professor Cook in your issue of December 31, I feel that I owe to my publishers and the public the penitential exhibition of myself in the pillory of your epistolary column for the edification of friends and the exhilaration of those otherwise minded. My case is the harder that at the moment when the Devil prompted me to pen the wanton statement that Isocrates had never been translated into English, there was standing within ten feet of my elbow a bibliographical manual from which I could have transcribed nearly all the erudition with which Professor Cook dazzles your readers. But I very much wanted an *index* to Isocrates; I had never seen or wished to see a translation. I was eager to make my next point that he would be (is) intolerable stripped of his Greek garb, and I gave myself hopelessly and irremediably away.

Let me save my main contention from the ruins. Isocrates is of interest to the professional student of Greek style, to the specialist in Greek history, to the investigator of Aristotelian origins, to the Platonist who wishes to measure the altitude by which Plato towers above the flats of the commonplace moral sentiment of the fourth century B. C. But in himself he is a platitudinous rhetorician, and his writings, regarded as mere literature, are the abomination of desolation and would be intolerable in an English version. On this point I throw myself upon a jury of my peers and confidently anticipate acquittal; and I challenge peremptorily all venire-men who have not read Isocrates through three times within the past year.

As I am in a sobered and moralizing mood, permit me to raise a question of ethics, or rather of taste. One naturally points out blunders in a book which he reviews. If the book is hopelessly bad, one "slates" it. To the *Nation*, as an organ of the collective intelligence, one sends any new nugget of fact or rectification of errors that may interest its readers. But does one go out of his way not merely to rectify but to denounce slips in dissertations, articles, or books not under review? Are we, following the example set by Professor Francke a year or two ago, to send to the *Nation* our marginal notes on the doctor's dissertations produced under the supervision of our colleagues—when they venture to publish them? Shall I, to compare great things with small, proclaim that Professor Jebb could not have read Andocides, in view of certain misstatements which I have noted on the margin of his 'Attic Orators'? Errors, of course, ought to be corrected. But how?

Paul Shorey.

University of Chicago, January 5, 1904.

BEN JONSON ON USAGE IN LANGUAGE.

To the Editor of The Nation:

Sir: In considering the question how far neologisms may be admitted into literary English without degrading the style, Ben Jonson's views are perhaps worth remembrance. He says:

"Custom is the most certain mistress of language, as the public stamp makes the current money. But we must not be too frequent with the mint, every day coining, nor fetch words from the extreme and utmost ages, since the chief virtue of a style is perspicuity, and nothing so vicious in it as to need an interpreter. Words borrowed of antiquity do lend a kind of majesty to style, and are not without their delight sometimes. For they have the authority of years, and out of their intermission do win themselves a kind of grace like newness. But the eldest of the present, and newest of the past language, is the best."

I am, sir, etc., Wm. Hand Browne.

Baltimore, January 8, 1904.

Notes.

The Macmillan Co. will shortly publish 'The Reformation,' in the Cambridge Modern History; 'Transitional Eras in Thought,' by Prof. A. C. Armstrong of Wesleyan University; 'Life of Jeremy Taylor,' by Edmund Gosse, in the English Men of Letters series; 'Points at Issue,' by Prof. Henry A. Beers of Yale; and 'The Divine Vision, and Other Poems,' by "A. E."

A pretty reprint for the holidays was Thomas Moore's 'Odes of Anacreon,' with reproductions of designs by Girodet de Roussy (G. P. Putnam's Sons). These vignettes, if they lose something in sharpness, are graceful adjuncts to the letterpress. They have each a page to themselves, being mounted.

A welcome selection from Jowett's translation, 'The Four Socratic Dialogues of Plato,' with the Master's analyses and introductions, and with a short but pithy preface by his successor, Edward Caird, proceeds from the Oxford Clarendon Press (New York: Henry Frowde). The get-up is what we expect from this house, and the volume is a handy one of less than 300 pages.

The same publishers bring out once more William Rossetti's edition of Shelley's 'Adonais,' revised with the assistance of A. O. Prickard, M.A., of New College. As compared with the previous issue of 1890, more attention has been paid to the classical sources of the poem, while the parallel passages from authors ancient and modern have been multiplied. The apparatus, including memoirs of Shelley and Keats, is six times the bulk of the text.

A dozen years have compelled Mr. George G. Chisholm to exchange occasional patching for an extensive revision and rewriting of his admirable 'Handbook of Commercial Geography' (Longmans). The general character of this work received careful consideration and exposition at our hands on its original appearance, and it is now unnecessary to do more than advertise the fact that it has been brought up to date in a period of active change. Besides a new preface, there is a special introduction to this edition that well deserves to be pondered. Mr. Chisholm points out, as others have done before him, that the Panama Canal does not mean for this country a shorter way to the East, but only between the Atlantic and Pacific coasts of our hemisphere. He refrains from discussing the burning question of preferential tariffs, but draws up a table of exports from the United Kingdom from 1843 to 1890, which is remarkable for constancy, in spite of fluctuations. Even in the case of the group France, Belgium, Holland, Germany, Sweden, and Norway, the ratio is unchanged for the two extremes of the above period; nor is there anything alarming in the decline in the direction of the protectionist group, France, Germany, Italy, Russia, and the United States. "Our commerce during the last ten or twelve years has, on the whole, still continued to increase." Mr. Chisholm has wisely retained the older tabular series, supplementing them. Among his acknowledgments of assistance, the chief is given to a lady, Miss J. B. Reynolds, B.A., holder of a diploma from the Oxford School of Geography.

A collection of sixty-odd plates after Sir Joshua Reynolds, with a brief biographical sketch by A. L. Baldry and a "List of Principal Works" of the artist, is issued under the printer's name as the first number of the "Newnes Art Library," of which Frederick Warne & Co. are the New York publishers. Such a publication, modest in aim and sufficiently so in price, might have its value if the plates were only well executed, but, unfortunately, they are not. So far are these reproductions from the grayness which is generally considered the besetting sin of half-tone work, that they are violently crude and disagreeable in their extreme black and white effect—almost everything beyond the high lights being so lost in impenetrable shadow that the design and meaning of the picture are often nearly indecipherable. We must also protest once more against the mingling of reproductions from old engravings with those from the original pictures, especially when, as here, this is done without warning and without credit to the engraver. Such action is, to use plain English, an imposition. Considering all this, the best we can say of the little book is that a good idea has been spoiled in the carrying out.

The Washington *Post's* folio 'History of the City of Washington, its Men and Institutions' is typical of many such works in the personal portion. Here, classed under sundry heads of Early Church History, Educational Advantages, Financial Inter-

ests, Railroads, The Press, Bench and Bar, Representative Men, etc., are biographical sketches with portraits and views of buildings, carried to such intimate details as that "Mr. and Mrs. ——— are active members of Calvary Baptist Church and Sunday-school, and have a family of three daughters," while "Mr. ——— is a devoted lover of music, and possesses a fine voice that might have brought him a handsome income upon the stage." This is the journalistic side. The historical, which has been carefully edited by Allan B. Slauson of the Library of Congress, is also abundantly illustrated with views and maps. In sum, there is a mass of chronicle and present-day information sufficient to render this work valuable for reference, but chiefly in public libraries. No literary claim can be made for it.

The volumes of the New International Encyclopædia (Dodd, Mead & Co.) are now appearing with such rapidity that any notice of them must be of the slightest; yet it is to be hoped that this speed—produced, apparently, by pressing competition—may not handicap accuracy and finish. That encyclopædias cannot be built in one year, or ten, has been learned painfully by European publishers, and American energy may well be wary in applying the methods of hustle to so delicate and difficult enterprises. And that this caveat is not uncalled for is evident from some phenomena in the four volumes recently issued (xi.-xiv., Larrey—Rice-bird), three of them together. Can it be by some gigantic, yet hardly conceivable, carelessness that the same map occurs three times, under New Brunswick, Nova Scotia, and Prince Edward's Island? Of course, it is very handy to have a map for immediate reference, but if such prodigality was the intention of the publishers, the expense would have been much better devoted to three, separate and larger-scaled. Further, misprints are still too numerous. They invade even the headlines —almost as bad as that supreme typographical unluckiness, a misprint on a title-page—and run up to at least twelve on one page, 974 of volume xiii. And the pity of it is that these things, so preventable in themselves, disfigure a book which is showing with every volume steady and laudable improvement. As an encyclopædia of American interests for American readers, it is undoubtedly the best and fullest in existence. The number of articles rising above the hack level is increasingly large. Both contributors and, more important still, editors, are exhibiting conscientiousness and care. No fear of competition or plea of business interests should be allowed to hinder the finish and patient revision which a work like this inevitably demands.

It must be confessed that the last volume of the Dent-Macmillan "Mediæval Towns" series, that on Seville, is a great disappointment ('The Story of Seville,' by Walter M. Gallichan, with three chapters on the artists of Seville, by C. Gasquoine Hartley, illustrated by Elizabeth Hartley). Matter enough there is in the Moorish, Spanish town overlooked by the Giralda and the great cathedral, the birthplace of Velasquez and Murillo, dim with memories of lines of splendor-loving Muslim princes, of Pedro the Cruel and Maria de Padilla, of Ferdinand and Isabella, of Cervantes and Columbus. The Silver Street runs down the Guadalquivir from the Golden Tower and links it with the Indies; the roads of Spain stretch inland and link it to the life and thought of the whole peninsula, from Roman times to ours. And so the historian and describer of such a city has need of wide learning. There are no materials with which an agile and discreet compiler can work; the story of Spain has not yet been told. That has still to be drawn from sources hardly opened, Saracen and Spanish alike, and a Spanish scholar has recently lamented that the fictions and blunders of Conde have not even now ceased to exert their unhappy influence. Yet a student of Arabic as was Dozy, and a student of things purely Spanish as there are many, might write on Seville a book to dream over. Of that there is no touch here. Only the chapters on art have any value or even life; they will act as a somewhat extended Baedeker for the tourist. Perhaps he may be helped also by the chapters on Seville of to-day and information for the visitor, but that is a more open question. The illustrations are good, but not numerous; there are some curious misprints.

English translations of Persian poetry in any degree adequate are of the rarest, and therefore the 'Hundred Love-Songs of Kamal ad-Din of Isfahan,' rendered into prose by Dr. L. H. Gray of Princeton and thence into verse by Mrs. E. W. Mumford (London: Alfred Nutt; New York: Charles Scribner's Sons) may be welcomed at sight. A second sight leads further, for the translation is most sympathetic and graceful, and handles easily Kamal's characteristic wealth of idea. Of course we have here, in these *ruba'iyat*, nothing like FitzGerald's magic art, nor does the original strike Omar's deep human note which bore paraphrase so well. Kamal was a singer of "the strange woman" and of the bitter tenderness of such passion, not of the eternities. His quatrains have here been handled freely—expanded and, apparently, condensed—and are arranged, in spite of their independence in the original, into a more or less connected whole.

The American Law Book Company issues, as a separate publication, 'Collision at Sea,' being the article under that heading, by Mr. Julian Bedford Shope of the New York bar, in its 'Cyclopædia of Law and Procedure.' Mr. Shope discusses every phase of his subject briefly, but clearly, from the standpoints of statute, custom and decision, strengthening his position by ample quotations of precedent. With the history, the romance, and the tragedy of collisions at sea he has no concern. The loss of the Collins Line *Baltic* or H. M. S. *Victoria* would be to him simply a case "and nothing more." An index of cases cited would have been helpful. Even the sailor would do well to study this excellent brochure, which defines his duties and responsibilities under every conceivable circumstance. As for the practising admiralty lawyer, it is quite indispensable.

The Year-Book of the Bibliographical Society of Chicago, 1902-'03, indicates a pause in this organization's growth and activity, due to a lack of membership and funds. It will undertake no other publication this year except the present pamphlet of proceedings, whose permanent value lies in the abstract of a paper on the libraries of Rome and their facilities for the student; some notes on the bibliography of the history of philosophy; others on the bibliography of mathematics; others still on Italian communal history. Further, Mr. William Beer calls attention to the existence and history of the New Orleans Academy of Sciences.

In its cover of green and gold, the third Annual of finance and economics is published (in French) by the Mikado's Minister of Finance in Tokio. The large pamphlet of 172 pages gives a conspectus of resources well worthy of the detailed and critical study of the financier. The elaborate tabulation enables one to take in at a glance the development of Japanese revenue from $16,000,000 in 1868 to $125,000,000 in 1903, and the expansion of foreign commerce from $10,000,000 in 1873 to $129,000,000 in 1902. Chapters and figures on Formosa will interest the student of colonization, for they seem to show encouraging progress from the financial point of view. Space does not permit a detailed notice, but we must call attention to the beautifully executed map of the empire, showing all the railways projected or completed, and the entire system of submarine telegraphs and marine postal routes and steamer lines, not only with Formosa, Korea, China, and Russian Asia, but also with Europe, Australia, and North America. In a word, the commercial relations of Japan with the world are now established with her own ships. Twenty tables, with lucid comment, treat of agriculture and commerce. Ten more deal with foreign trade. Other divisions, with detail of text and statistics, show Japan's banking system, and her railway and steam-navigation companies. The introductory matter of three pages gives the latest corrected figures as to the coast line, geographical limits, and population, which in 1900 was, in round numbers, 45,000,000. The old plan of taking yearly enumerations has been abandoned in favor of a decennial census, which, it is expected, will be wrought out with scientific exactness, fulness, and elaboration. On the basis of the steady annual increase of half a million, the Mikado's subjects, including Formosa and the Pescadores, cannot now number much below fifty millions.

—The four years 1588-1591 in Manila are very adequately covered by the documents reproduced in Volume VII. of 'The Philippine Islands, 1493-1898' (Cleveland: The Arthur H. Clark Co.). Here we have the question of *encomiendas* and tributes from the natives pretty well threshed out, with the sharp-tongued Bishop Salazar chief advocate for the natives. Unfortunately, he hurts his own case with posterity, and disturbs somewhat our conviction that he speaks the truth as to the abuses perpetrated on the natives, by his recklesssness of speech, his partisan attitude toward all who did not bow to his prestige, his lawless use of threats of excommunication. We begin to suspect that the Spanish laymen in the islands were not so utterly bad, but that a contest for supremacy over the natives had something to do with the quarrel, especially when the Jesuits (who, like the Augustinians, were discriminated against by the Dominican bishop) virtually accuse him of permitting his priests to live too well off the natives and of burdening them with undue marriage and burial fees. The tribute controversy will be finished in Volume VIII. Besides these contemporary

disputes, Volume VII. contains Friar Juan de Plasencia's 'Customs of the Tagalogs," one of the few standard documents for reconstructing Preconquest Filipinodom. Scholars new to the subject, however, should be warned against relying implicitly upon it as an ethnological document of first rank. In selection of material and in minor details, this work improves as successive volumes appear. Why, however, should the English text contain, within the limits of one hundred pages or so, such varied renderings of "Philippine Islands" as "Filipinas Islands," "Philippinas Islands," "Philipinas Islands," "Phelipinas Islands," "Phelippinas Islands," etc. If it is desired to show the various Spanish spellings of the time, let them be put in brackets; but the phrase "Filipinas Islands" ("Filipinas" being a feminine plural adjective in Spanish) is a barbarism in English.

—Two more volumes of the current 'Meyer's Konversations-Lexikon' (New York: Lemcke & Buechner) carry this perennial work on from *Bismarck* to *Differenz*. The leading articles, respectively, are (in III.) Books and (in IV.) Germany *(Deutschland)*. The former is beautifully illustrated with facsimiles, as of Gutenberg's 42-line Latin Bible of 1455, and also in the field of bookplates. Germany is exhibited in a brave series of maps, physical, climatic, linguistic, confessional, historic; others, again, showing density of population, the garrisons of the armed camp called (Christian) Western Europe, the diffusion of Germans on the Continent, and of Jews in Germany; finally, the Imperial colonial possessions in Africa. There is a bird's-eye view of German literature in periods, along with the usual description of the country and the course of its history. The other maps in these volumes partly relate to Germany—as Brandenburg, Bremen, Charlottenburg, Chemnitz, Danzig, and partly have a world-wide interest, like the excellent one embracing the imminent theatre of war in the Far East—China, Japan, and Korea—together with another, on a larger scale, of Pechili and Shantung; a map of international maritime trade routes; one of Brazil and Bolivia, showing the disputed *imperium in imperio* of Acre, and Southern Brazil, a new Germany.

—American purchasers will find convenient the maps of Cuba, Jamaica, and Porto Rico, of Chicago, etc. American affairs in the text continue to show the need of a competent overhauling, to eliminate the biographic deadwood, and to effect a proportionate and intimate treatment. We will instance the space allotted to James Freeman Clarke, Cassius M. Clay (whose death occurred too late to be caught), and Cropsey the painter; the allotment of one-sixth of the space given to Boston and its map to the game of Boston; the neglect of other biographies of John Brown than Von Holst's sketch; the omission of the Brooklyn Bridge in the plans and views of these structures, though the projected North River Bridge is represented; the very inadequate sketch of ex-President Cleveland, and the dismissal of his second Administration as devoid of incident when it woke (over Venezuela) the fatal war-flame that swept us presently into imperialism. Five pages are given to Dante, and seven to Darwin and Darwinism. Byron gets two and a half to Browning's three-quarters. Whereas the 'Dictionary of National Biography' allows George Combe the phrenologist half a page more than Andrew, Meyer mentions him only as his brother's biographer. We must not forget to remark the increasing number of inserts (with Roman folios) illustrating practical topics like steam boilers, bread-making machinery, plate-working tools, springs and wells, plans of the world's bourses, etc.

—The 'Memoirs of an American Lady,' by Mrs. Grant of Laggan, appeared in London ninety-six years ago. Between 1808 and 1876 the book was reprinted six times, four of the six editions bearing the name of an American publisher. Within the past few months it has been edited once more by the author's godson, Gen. James Grant Wilson (Dodd, Mead & Co.), under whose care the text is presented in handsome form and supplemented by an excellent sketch of Mrs. Grant's life. As a literary *tour de force* the 'Memoirs of an American Lady' merits some notice from the present generation. The subject is Mrs. Philip Schuyler, a woman who possessed, along with cleverness and force of character, a great power of inspiring affection; but the remarkable thing is that the book should have been written when Mrs. Grant was fifty-three years of age, and forty years after she had left America. In other words, the biographer was only thirteen when she said farewell forever to this friend of her girlhood; yet the colors of the picture are fresh, and its historical interest is considerable. Mrs. Grant knew Albany as it was in the period between the close of the Seven Years' War and the outbreak of the Revolution, when the Mohawks were still a feature of the neighborhood, and when the spirit of political restlessness was beginning to disturb the colony. Her father, Capt. Duncan MacVicar of the Seventy-seventh Regiment, owned a tract of land in Vermont, which, of course, was lost during the Revolution, and with it vanished any hope that his daughter might have cherished of becoming an heiress. Mrs. Grant, however, was made a Tory not by personal misfortunes, but by nature. She loved Albany for "the morality, simple manners, and consistent opinions of the inhabitants," but the rise of American democracy filled her with dread and dislike. We refer here to the general reflections which are called forth by the train of events that began shortly after she returned to Scotland in 1768. To her, Franklin is merely a high priest of Plutus, "the legitimate father of the American 'age of calculation.'" Hamilton, she admits, is an exception—"yet, after all, an exception that only confirms the rule. What must be the state of that country where worth, talent, and the disinterested exercise of every faculty of a vigorous and exalted mind were in vain devoted to the public good?—where, indeed, they only marked out their possessor for a victim to the shrine of faction?" We mention this attitude of mind because it is so characteristic of the author, a thorough-paced Tory if ever there was one, and yet a Tory who could love the individual Whig, as she loved Jeffrey in later days. Her account of colonial life in New York was highly esteemed by Washington Irving and James Paulding. The present edition will doubtless rouse fresh interest in both Mrs. Schuyler and Mrs. Grant.

—Julian Ralph's 'The Making of a Journalist' (Harper's), is an entertaining book derived mainly from the writer's experience. His theory of the journalistic career is that all courses of study are useless and impracticable, except with a view to editorial work, and even then the would-be editor should begin as a reporter. But how do people obtain an opening for reporting? According to Mr. Ralph, a young man nowadays who wants a position on a newspaper, and has only his wits to help him to it, should walk the streets until he sees "something novel or peculiar," and then describe it and offer his account to the best newspaper in the place. This may be a good way, but that such advice is offered seriously shows what journalism in our day is. What Mr. Ralph has in mind is almost altogether "sensations" and "stories." Newsgathering he thinks no longer of importance as a help to youngsters desirous of getting hold of a "beat," because all really important news is now gathered by the press associations. The book is enough to make Greeley and Raymond stir in their graves. Their idea that a newspaper might be made by editing, and that everything else would follow in the train of good editorial work, has become, in Mr. Ralph's world, the height of absurdity.

—'Comments of John Ruskin on the Divina Commedia,' compiled by George P. Huntington (Houghton, Mifflin & Co.), is an attractive volume of some two hundred pages, composed of scraps from Ruskin's works in which reference is made to Dante. Nearly all the selections are taken from books published between 1852 and 1886. Although Ruskin did not really know Dante until he was twenty-six, he became and remained a diligent and appreciative reader of the 'Commedia,' as we may see from the frequent allusions in his subsequent writings. Like most readers, he was apparently unfamiliar with Dante's minor works; of the great poem, the part he knew best was the "Inferno," and he was least acquainted with the "Paradiso." Professor Norton, in a brief "Introduction," discusses both the kinship and the profound differences between the ancient Florentine and the modern Englishman, showing how the one affected the other. Then we have some pages of Ruskin's general observations on Dante, after which come the comments on individual passages. These remarks, though generally interesting and stimulating, are seldom of particular value to the student of the 'Commedia': they throw more light on Ruskin than on Dante. Occasionally, however, we are led to consider a passage from a fresh standpoint, as when, on page 200, we are told of Dante's dislike of clouds. Repeatedly Ruskin contrasts Dante and Milton, always to the detriment of the latter; the 'Paradise Lost' is most searchingly criticised on page 17. Botticelli's illustrations to the 'Commedia' receive well-deserved praise. "Flaxman's outlines to Dante," on the other hand, "contain, I think, examples of almost every kind of falsehood and feebleness which it is possible for a trained artist, not base in thought, to commit or admit, both in design and execution."

—The Oxford Reader in Egyptology, Mr. F. Griffiths, has recently been examining, in the light of monuments and inscriptions, several of the paradoxes of Herodotus con-

cerning the eccentricities of Egyptian customs. Herodotus fares at Mr. Griffith's hands much as he has recently been faring under Mr. C. F. Adams's treatment of the problems of Salamis. It seems that the Father of History often yielded to a Hellenic temptation to describe as Egyptian any custom that was strange. He was more certain to make sure of the strangeness of the custom than to have proof connecting it with Egypt. Egyptian men, he says, stayed at home to weave, the women went abroad. Such evidence as there is goes quite against this paradoxical statement. Another unaccountable proceeding of the Egyptians of Herodotus was that men carried burdens on their heads, and women on their shoulders. Here, again, the monuments show men carrying burdens on their shoulders and women balancing the like on their heads, precisely according to the practice of the modern Egyptians. One curious point in favor of Herodotus, however, is the very ancient hieroglyphic sign meaning 'work,' 'to carry' or 'canal-cutting.' This unquestionably represents a man with a basket on his head. Herodotus strangely declares that there were only priests and no priestesses in Egypt. The contrary is abundantly vouched for by the monuments. The head official was always a man, and a special term, "singers," was applied to priestesses. These facts may account for Herodotus's statement. There seems, however, little to account for his paradox to the effect that daughters, not sons, were bound to maintain their parents in old age. What he says about writing, kneading, circumcision, and the objection to woollen grave-clothes seems fairly well borne out by the monuments.

—M. René Dussaud continues his researches in the epigraphy and mythology of middle Syria. Following his 'Voyage Archéologique au Safa,' noticed some little time ago, we have now another and even more thorough record of exploration and inscription hunting in Hauran. His 'Mission dans les Régiones désertiques de la Syrie moyenne,' in collaboration with Frédéric Macler for the itinerary, is extracted from "Nouvelles Archives des Missions Scientifiques," volume x. (Paris: Imprimerie Nationale). It contains a short statement of the route, with archæological notes, a study of the locality as to character of the soil, nature of the ancient populations and their cultivation—"simplement à dégager les caractéristiques"—a collection of 904 Safaite inscriptions, a complete Safaite glossary and onomasticon for all the published inscriptions—by Littmann, Dussaud in his two journeys, De Vogüé, and Wetzstein—180 Greek and Latin inscriptions, 20 Nabatean inscriptions and 33 Arabic, all carefully indexed. Many of these consist of a word or two, and most of proper names only, yet among them is the five-line Nabateo-Arabic inscription of en-Nemara, of A. D. 328, in the Nabatean character and strongly marked with Aramaisms, but at bottom good classical Arabic, and thus, so far, our earliest specimen of the language of the Qur'an. The next in date seems to be the trilingual of Zebed of A. D. 512. That others will be found can hardly be doubted, and among them the Marquis de Vogüé's derivation of the Cufic script from a degraded Nabatean is acquiring a tolerably firm basis. To leave such matters of letters, it is curious to note from this same inscription of en-Nemara how a certain Imr al-Qays—an ancestor, it may be, of the great Arab poet—held the desert then for Rome, and gained therefrom the style and crown of King of all the Arabs. Nowadays the same task lies with the Turkish Governor of Damascus, and it is cheering, if rather surprising, to learn from M. Dussaud that Nazim Pasha has solved for the time the Druse question, and that there is peace in the Mountain; a real peace and not simply a solitude. In a brochure of sixty-eight pages (Paris: Ernest Leroux) M. Dussaud has further put together eight 'Notes de Mythologie Syrienne,' dealing with the different symbols and images of the Syrian solar deity. One detail is of general interest: the type of the Good Shepherd in early Christian art is here again derived from that of Hermes Kriophoros, yet not directly, but through a young solar deity, similarly "kriophoros," of Oriental origin.

WALLACE ON LIFE IN THE UNIVERSE.

Man's Place in the Universe: A Study of the Results of Scientific Research in Relation to the Unity or Plurality of Worlds. By Alfred R. Wallace, LL.D., D.C.L., F.R.S. McClure, Phillips & Co. 1903.

This latest work of the Nestor of scientific authors is so far unique in spirit and purpose that the critical reader may fail to grasp its underlying idea without some study. In reading it through, the first impression would be that of a rather disconnected treatise on astronomy, in which the structure of the universe is set forth with some detail, but without any apparent relation to humanity. After this flight through the more distant regions of space, the reader is brought homeward, and proceeds to a survey of the planets. Then he lands on solid earth, and passes in review the main facts of meteorology, geology, and natural science generally. The conditions of organic life are next demonstrated. Not until the end is approached, and the reader has had time to arrange his ideas, do the logical order of presentation and the unity of the theme become apparent. Then the conclusions are moulded into a well ordered system well calculated to excite attention even on the part of those who cannot accept them in their entirety: The universe is a rounded whole; our solar system is situated in its centre. Of the eight planets revolving around our sun, the third occupies a peculiar position. Organic life requires the concurrence of a great multitude of conditions which exist on our particular planet, but cannot well be fulfilled in any other part of the universe than its centre, nor in the neighborhood of any star but our sun, nor on any planet revolving round that sun except the one on which we dwell. In order to be a seat of life, a planet must revolve in a nearly circular orbit at such a distance from the sun that it shall receive exactly the amount of light and heat that ours does. It must be surrounded by an atmosphere formed of a combination of nitrogen and oxygen in the proper proportion. The force of gravity on the surface of this planet must be the same as we find it, because, were it greatly different, it could not retain the proper amount of atmosphere at the proper pressure. Aqueous vapor must be present in sufficient quantities to produce the right amount of rain. But we need not go farther into details. They may be summed up by saying that the planet must correspond so closely to ours in almost every important particular that, accepting the conditions, the author may be quite right in his estimate of the improbability that they are all combined on any other body.

This doctrine is certainly an extreme case of reaction against the popular ideas which prevailed two or three generations ago, when men like Sir David Brewster and Thomas Dick pointed out to admiring readers the adaptability of other worlds to become the abode of human beings, and even calculated the possible number of inhabitants who might derive their sustenance from the ample acres of Mars and Jupiter. It must be confessed that the general trend of the discoveries of modern science has been in the direction of the reaction which Mr. Wallace carries to so extreme a point. It cannot be denied that the conditions of organic life on our globe seem to be of a very exceptional character; and that, so far as research has yet gone, these conditions are not likely to exist on any other planet of our system except, perhaps, Mars. We have no evidence of the existence elsewhere of solar systems like ours. Revolving double stars have been known ever since the time of the elder Herschel, and the spectroscope is now making known to astronomers the existence of great planets revolving around many of the stars; but the general rule in all these cases is that the orbits, so far as developed, show degrees of eccentricity quite incompatible with the regular round of conditions which prevail on the earth.

As a piece of analytical reasoning, in which the greatest variety of facts are, with artistic logic, arrayed in support of the conclusion, the book is well worthy of its distinguished author; and yet we doubt if many readers will accept his conclusions. The web of his argument is woven according to all the rules of art, but its texture is too finespun to bear the weight it is expected to carry. It is an attempt to prove a negative in a case where no such proof is possible. Wide though our knowledge of the universe has become, it is infinitesimal when compared with the range it will have to include before anything positive can be said on the subject of life in other worlds. There are probably more than a hundred million stars in the heavens. Of these we know that one—our sun—has an orderly system of planets revolving around it in nearly circular orbits. We know that among the hundred million there are several thousand double stars—suns revolving around each other—in orbits of which we, as yet, know little more than that their variety is infinite. Perhaps fifty or a hundred of these orbits are known. We also know of a few hundred stars which have dark planets revolving around them. There is not one star out of a thousand of which we know anything more than that it exists, and that it shines with a certain light, which, when analyzed, gives a particular kind of spectrum, sometimes like that of our sun, and sometimes not. There may be thousands, nay millions, of solar systems like ours the existence of which we have no means of determining. Looking at the question as one

of probabilities, the chances are very much against Mr. Wallace's theory.

Perhaps the weakest point of the whole argument is the extent to which it rests on the idea of our sun occupying a central position in the universe. It is quite true that, to all appearance, our position does not deviate from the centre to an extent that can be determined by any methods yet known. But in such a case the very word centre must be somewhat indefinite. It is not a point, only a region, and a region which is very wide and ill-defined. The idea is also open to the objection that, even if our sun is, in our age, in the centre, it could not have been so in past geological ages. It is moving through space at the rate of some ten miles a second—a motion so rapid and so little subject to change that it must have been following its present course for millions of years. It is as certain as anything in such a subject can be, that our system did not occupy the central position when life commenced on the earth, and will cease to occupy it in the future. Mr. Wallace's argument that, after all, the motion may be limited in extent is of the lamest kind. The fact is that the astronomer can reach no conclusion as to the precise condition of the universe at a time when, according to current geological theories, the surface of the earth began to assume its present form. The geologist demands hundreds of millions of years; but the universe of the astronomer, considered as a system, could not, seemingly, have existed in its present arrangement through so long a period. The author's conclusion, therefore, seems incompatible with the most certain deduction from observed facts which astronomy permits of our making.

Another consideration will not fail to occur to the thinking reader, which he will hesitate in bringing to bear only because the author of "Natural Selection" is perhaps as eminent an authority as any other on the subject. That the life which has developed on the earth in the course of ages must be such as the conditions prevailing on our planet made possible, follows as a matter of course, because otherwise it would never have existed at all. We may also admit that these particular forms of life could never have been evolved under any other conditions. But does it therefore follow that no life whatever could have been evolved except that which we have on earth? The fish we find in the ocean are suitable to their environment and could not live in any other. Does it follow that in an ocean of some other substance no animated creature would ever have come into existence? Such questions can be answered with certainty only by experiment, but the opportunity for trying the experiment is wanting. Such observations as we can make of the surface of the earth do give color to the view that life cannot be evolved except at certain temperatures. There is little living matter at the two poles. But, at the other extreme, we find that the warmer the climate the more abundant the life which it supports. Granting a due amount of moisture, no part of the world is so hot that plants, animals, and even men do not thrive. So far as we can judge, an earth yet hotter than ours would have been yet more fertile in life—perhaps almost up to the boiling point of water. Below this point there is a range of temperature wide enough to include countless planets among the many millions which may form other solar systems. Taken altogether, the author's argument seems as inconclusive as it is ingenious and comprehensive.

SIBERIA PICTURED BY AN EXILE.

Sixteen Years in Siberia. By Leo Deutsch. New York: E. P. Dutton & Co. 1903.

In this delightfully written and admirably translated book the public is furnished with an account of exile life in prison by one of the most famous of the "politicals," who in his day bore the reputation of being unrivalled for his daring and his resourcefulness. As the Siberian experience was chiefly in the prison at Kara, and as the author, naturally, had a wide acquaintance with his fellow-politicals, both men and women, the reader will recognize various facts and persons already more or less known to them through Mr. Kennan's work on the Russian exile system. At the end of an interesting preface for the enlightenment of the public as to the general revolutionary question (written from the revolutionary point of view exclusively), the translator expresses the belief that the Russian original of the volume (evidently printed outside of Russia) will soon be placed on the prohibited list by the Russian Government. It is a pity to deprive the reader of the enjoyment imparted by this flavor of forbidden fruit, but in all probability it will never be interfered with by the censorship committee. This is not the only work by an exile on prison experience (in Siberia, Schlüsselburg, and Sakhalin) published of late years. Like the Russian books from which Mr. Kennan derived much of his information concerning prisons, the works referred to have been published in Russia, with the censor's permission, although some of them contained pictures of convicts chained to barrows, and statements quite as obnoxious (presumably) as those in the present volume. In this case, in particular, the comparisons made of German prison methods and officials with the same things in Russia—distinctly to the advantage of the latter—would probably appeal to the censor in various ways.

Mr. Deutsch tells us that in 1884 he went from Zurich to Freiburg with a consignment of revolutionary literature which was to be smuggled into Russia. At Freiburg the German police arrested him, without a warrant, for having in his possession literature which was openly and legally sold by German booksellers in their shops; he was illegally detained; the police seized a young woman who chanced to ascend the steps of the hotel, and dragged her to the station, insisting that she was his wife, although both parties protested, and with truth, that they had never set eyes on each other before. The description of German prison methods and officials, and of the manner in which his interpreter (appointed by the authorities), one of the university professors, plotted for his release or escape in the very presence of his jailers, is instructive and illuminating in the extreme. "Extradition stared me in the face; I could not banish the fear of it," said Mr. Deutsch; and he then proceeds to explain, in brief, the cause of his alarm. He, with others, had attempted to murder an informer—a renegade from the revolutionary cause—but the man had survived and given the authorities information about his would-be assassins. Later, Deutsch had been arrested, with others, for stirring up the peasants at Tchigirin to revolutionary activity, but had escaped from prison before trial, and lived abroad for years. Extradition on the first of these counts would throw him into the category of ordinary criminals; extradition on the second count would place him in the class of political criminals. The latter was what he feared. While the two Governments were arguing this point, he learned to know the German prison régime well, and mentions, among other instances of arbitrariness and severity, that the officials peeled and quartered oranges brought to him by his friends, lest tools for escape might be concealed therein; and that he was never allowed a light, although in the stone prison there was, practically, nothing to burn; while in the wooden prisons in Siberia and the wooden barracks on the road prisoners and guards smoked freely. In strong contrast to this was the manner in which the Russian gendarmes received him at the frontier, and vied with each other in doing the agreeable and making him feel at home. This was, on the whole, the attitude of the Russian prison officials and authorities.

In spite of the fact that the German Government had surrendered Mr. Deutsch only on the express condition that he should be tried as a common criminal, not as a political, the Russian Government cleverly and gradually shifted its ground; and as a political prisoner he was condemned, after long imprisonment, to exile at Kara. He narrates his experiences in the different prisons of European Russia in considerable detail, and the foreign reader is amazed at the laxity of discipline—as, indeed, he is later on with instances of the same sort in Siberia. There was great freedom of intercourse; prisoners were not forced to wear their fetters, nor to have the half of their heads shaved, for months at a time. Once, in Siberia, Mr. Deutsch's bag, containing, among other things, his fetters (which he was supposed to be wearing) was stolen from him, and, on his reporting the loss to the proper officer, the latter calmly hunted up another pair in order to conform to regulations to the extent of providing them, and pleasantly watched him packing them up instead of donning them. At one point Mr. Deutsch says that the politicals would have been glad to be placed on the footing of ordinary criminals, though it does not appear quite clearly from his tale why they should; the common convicts had to do all the dirty work for the politicals' prison, and the officials were not bound to be courteous to the former, as they were, traditionally, to the latter. Indeed, the manner in which the politicals were chronically in revolt against the regulations, and in which they dictated manners to officials high and low, is decidedly astonishing to any one familiar with prison methods in other lands, especially when he learns from Mr. Deutsch that many of these men were being exiled for murder and thefts on a large scale, equally with the common convicts. The superintendent of the Moscow prison was so kind and lax that they meditated giving him a testimonial, but the captain declined to let them diminish their scanty stock of money in

that way. The author naïvely states that afterwards they changed their minds about this man, because he decoyed them into a trap, and had their heads shaved and their fetters riveted on by force (after they had refused to submit), as the officer who was to assume charge of them on the journey demanded that the regulations on those points should be observed. They opposed the officials in regard to the number of persons to be placed in each of the three-horse teams in which they travelled across Siberia, to the river or road route from Tiumen, to pretty much everything.

Our author records much more liberty than is generally supposed to exist in Siberian exile parties; for instance, he says that they stayed a week in Tomsk, and during that time made acquaintance with all the exiles there, as these latter were allowed to visit the newcomers in the prison. He comments on the surprising fact that hardened robbers and murderers were so easy to rule, and gives instances of the desperate character of some convicts; he chronicles the amiable chats between the fugitive convicts met on the road and the officers in charge of their own gang; he records the beneficent effect of the long journey. "We felt born anew," he says; "our open-air life worked wonders following on our long imprisonment. Many who had left Moscow weak and ill became robust in health during the journey."

From time to time the author gives brief biographies of the members of his travelling party, or of prisoners whom they meet on the way. He is engagingly frank, and there is no reason to doubt that he really perceives nothing out of the way in well-born, well-educated women abandoning their husbands and children to do revolutionary work, robbing a Government vault of a million and a half of rubles for the "cause," or trying to assassinate officials. Most of the women were as fractious (on principle) as the men, and frequently provoked official rigor, to which they replied with the terrible hunger-strikes. On the other hand, as in the case of the Romny school-girls, he records not a few instances where the prisoners are entirely innocent of all evil deeds or even intentions; and others still where terrible results grew out of trivial misunderstandings. Of course these incidents might bear another interpretation if narrated by a person of different sympathies; but Mr. Deutsch's account impresses the reader as truthful, and inspires the same sort of regret as does ill-usage of the innocent inmates of an almshouse or asylum at home.

The account of life in the prison at Kara is brief in comparison with what precedes, but it is sufficient to furnish a vivid picture of the conditions prevailing there. One would like to have heard more about the forced labor in the open air; but Mr. Deutsch merely alludes to it in passing as a great alleviation. In the prison they had their library, their individual handicrafts for amusement, and a certain degree of comfort. The impossibility of securing solitude, even for a moment, seemed to most of the prisoners as maddening as the lack of company does to the convict in solitary confinement in our western jails.

While still an exile, though no longer in the prison, Mr. Deutsch was asked to aid the Government officials in taking the census, travelled with Government equipages, lodged in the official quarters, and so forth, in a way which must greatly astonish the reader, to whom such things have hitherto been unknown. Eventually, Mr. Deutsch went to live in Blagovestchensk, and he gives a vivid picture of the situation there which resulted in the massacre of many Chinese. As other accounts, equally veracious, apparently, represent that affair in a diametrically opposite light, the reader must select the version he prefers. That the author is not free from errors (or discrepancies) of statement is shown by the fact that he mentions Sergius Bobohoff (page 285) as having been expelled from the St. Petersburg veterinary college "towards the end of the sixties," and then (page 286) says: "Bobohoff was but a youth when I entered the prison"—in 1885! In one or two other cases he produces an erroneous impression, as when he speaks of Schlüsselburg prison and the Island of Sakhalin as places from which no prisoner ever returns. He has followed up the career of many members in conspiracies to which he alludes, and frequently mentions their names and their late or present occupation. Yet among the persons so mentioned are some who have been released from Schlüsselburg and Sakhalin (they did not make their escape, as Mr. Deutsch did from Siberia), and who have been or still are in the Government service, with all their lost rank and rights restored; and that not through having turned informers—as one might infer from some of his remarks—but in a perfectly straightforward, honorable manner.

From the outline above given the reader will see that the book is not only intensely interesting, but important for the impartial study of Siberia and of Russian affairs, and a valuable addition to a collection on those subjects.

Rousseau and Naturalism in Life and Thought. By William Henry Hudson. Charles Scribner's Sons. 1903. Pp. 252. ("The World's Epoch Makers.")

This little work is well calculated to excite the reader's desire to know more of its subject by study at first hand. The lesser half of it is a sufficient biographical sketch; the remainder is devoted to a brief analytic examination of Rousseau's works, and a suggestion of his influence upon his contemporaries and posterity in thought and deed—"a vital force in history." This is a timely service as preparation for the bicentennial of Rousseau's birth, now only eight years distant; nor is it neutralized by Mr. Hudson's constant passing from banning to blessing. In the end, forsaking all apology for defects which the author of the 'Confessions' half expiated by becoming his own recording angel, Mr. Hudson gives an impression of an essentially amiable and humane character; democratic in sentiment; charitable to the poor and needy; "in the midst of insincerity, cynicism, flippancy, . . . frank of speech and always in earnest; and, according to his lights," proclaiming "idealism and religion to a world steeped in materialism and unbelief"; in short, "a man of a profoundly religious nature," to whom, accordingly, is dedicated a chapter on his religious writings.

The biographer of one whose name has become synonymous with paradox, is perhaps excusable for some contradictions on his own part. A proof-reader might have challenged the sentence on page 116: "Though [as an author] he possessed but little *versatility* of interest or power, Rousseau's writings are considerable in bulk and *various* in character" (italics ours); to wit, comedies and a fragment of a tragedy; "several operas and musical interludes," including the first example of libretto and music from the same brain; "a fair amount of occasional verse; some translations; a number of works on botany and music; and various miscellaneous treatises on diverse subjects; besides the few really important volumes with which his name and fame are now almost entirely associated." This is pretty well for a writer devoid of versatility, and will bear comparison with the high-born Goethe's many-sidedness (partly drawn out by Rousseau himself). Mr. Hudson purposely omits all separate consideration of Rousseau's musical and botanical passions, each of which, however, has been made the theme of an elaborate German monograph. In general, here, as in most lives of Rousseau, his musical inheritance is very unsatisfactorily related to his career.

There is no select bibliography, and references to authorities are confined to the footnotes. In these Mr. Hudson cites once and again Ritter's admirable 'La Famille et la Jeunesse de J.-J. Rousseau,' yet strangely pronounces the Genevan "a plebeian of the plebeians" (p. 223). It is true that no ancestor bearing his name made his way into the *haute bourgeoisie* and became a ruler in the little Swiss aristocracy, but the Rousseaus were thrifty breadwinners, left money to hospitals, the poor, to the College, and belonged of origin to the Huguenot class whose two expulsions from France, under Henry II. and Louis XIV., are justly regarded as having impoverished the country of its best blood. Ritter's summary is:

> "One thing at least is certain: Rousseau is a child of the middle classes in Genevan society, and belongs throughout his line of ascent to very good and old families. His four great-grandfathers were Genevan burgesses—a watchmaker, a master tanner, a merchant draper, a man of law. And if, on several sides, pursuit of his origin discovers peasant families, at other points in the genealogical table we meet among his ancestors, direct or collateral, members of the highest aristocracy in Geneva, who held the supreme magistracies of the city from the fourteenth to the eighteenth century."

Indeed, one who reads M. Ritter's documented chapters will be struck by the general resemblance of the Rousseau family proper to the average New England "tree" which thousands of ardent genealogists are incessantly endeavoring to construct and perfect.

Mr. Hudson cannot agree with those who, making all allowances for Jean-Jacques's shortcomings, find "there is still left much that we can both admire and love." "To me," he says (p. 115), "Rousseau, as a man, is a degenerate, who does not even possess the personal fascination which sometimes goes along with degeneracy." We have already cited expressions that considerably abate this charge, which recalls Lincoln's wish, to a detractor of Grant, that he had more such "drunken" generals. But the personal fascination appears to us unquestionable and to account for many

strokes of good fortune in the critical period of youth as well as later. Of this the two authentic portraits from life, particularly Ramsay's, give evidence; and it must have been his chief recommendation to Mme. de Warens. As Mr. Hudson, by the way, cites Rousseau's designation of this protector and paramour as "mamma"—a term particularly odious in view of their ages and the twofold relation—we will quote M. Ritter's explanation that it was used in an old sense having no regard whatever to maternity. "The mistress of a house used to be called *maman* by her intimates; and so Voltaire called his niece, Mme. Denis, who kept house for him at Ferney." It might better be translated, then, either Mistress or Lady.

The difficult task of analyzing works now hard to understand and to reconcile with one another has been laudably performed by Mr. Hudson; but he should have reported Rousseau's censure of his correspondents who used 'Émile' literally as a manual in the education of their children, instead of as an inspiration. (Mr. Hudson, in passing, might have laid stress on the need of a student's going to the Letters for a real acquaintance with Rousseau; but they are nowhere treated as a whole.) Mary Wollstonecraft's memorable reply to 'Émile' is overlooked. At page 185, Herbert Spencer's cardinal principle of moral education is said to have been anticipated by Rousseau; while at page 206 we read:

"But Mr. Spencer himself informs me that at the time his 'Education' was written he had not even heard of the existence of 'Émile,' that he has never read it since, and that he knows nothing whatever of any of Rousseau's theories about any matters, save what he has picked up in general reading about the Social Contract."

A few slips may be remarked. Motiers is persistently misprinted "Môtiers." At page 188, *in petto* once more stands for "in little." At page 110, the "after history and present resting-place" of Rousseau's bones are said to be "uncertain." They were, however, exhumed and identified in the Panthéon on December 18, 1897, and of course replaced. Examination of the skull confuted the legend of suicide by shooting.

Pilgrim-Walks in Rome: A Guide to its Holy Places. By P. J. Chandlery, S.J. London: John Griffin; New York: The Messenger.

This is a book with a specific and strictly limited purpose. It is written for Catholic pilgrims in Rome, and apparently for no one else. The general reader might cavil at its sweeping exclusions, but the author fairly disarms criticism in advance by a frank and explicit statement of just what he has not attempted. Even Christian archæology is touched upon very lightly; for that the reader is referred to Marucchi and to Father Grisar. In many respects the volume gains by this singleness of purpose, and those who come to Rome *devotione Catholica*, to use the author's quotation from Petrarch, will find it a faithful guide, and unencumbered by matter which would seem to them trivial in comparison with their spiritual interests. As Father Chandlery, in his very candid introduction, says:

"'Pilgrims who visit the Eternal City in this Catholic *spirit of devotion* . . . will take but a secondary interest in the monuments of antiquity, the colossal works of architecture, the records of imperial greatness, the treasures of art, literature, archæology, stored in its galleries, libraries, and museums—they know that Rome has something far grander to show than these evidences of material prosperity and intellectual power."

After this, we know what not to expect. For a Jesuit, it must be said that the work is unscholarly. It is surprising to find such a statement as that regarding Pope Sylvester II. (d. 1003): "The tomb was opened in 1648, when the body was found well preserved, dressed in state robes, with the *tiara* on his head." One is tempted to believe that this was due purely to haste and carelessness; the author surely cannot be ignorant that the tiara first came into existence in the fourteenth century. Altogether, the book shows signs of hasty compilation. Father Chandlery's attitude toward legend in general, and toward shrines and relics in particular, is one of uncritical acceptance. True, he tells us that, where the authenticity of these treasures has been questioned by recent writers, he notes the fact; and once or twice there does appear a feeble "Qualified as inadmissible by Marucchi," but in a way which by no means suffices to establish a judicial attitude. The author's studies have evidently been more devotional than archæological. Style there is none, and extremely little sympathy with the native Roman preference in objects of devotion; else Sansovino's "Madonna del Parto," easily the prime favorite of the entire city, would not be dismissed in a casual sentence of four lines.

The one genuinely human trait of the book is the author's evident and huge relish for the grosser splendors of the baroque Jesuit churches. Gilding and carving, the convolutions of twisted columns over high altars, the heaping up of serpentine and porphyry and lapis-lazuli—all this delights him, and he lets you see that it does—that he regards it as a visible sign of the triumph of his order. It is, at any rate, a harmless pleasure. Of course, there are occasional references to the "usurpation" and the "vandalism" of the present kingdom, and extracts from the lamentations of Hare; but, in the main, the author is at peace with mankind. As a pilgrim's handbook, this publication is fairly comprehensive, and will often be found useful, though rarely interesting.

The Autobiography of William Simpson. Edited by George Eyre-Todd. London: T. Fisher Unwin. 1903.

Odysseus himself was a stay-at-home, and his career almost monotonous and uneventful, when compared with the man and the life recorded in this book. During forty years (1854-1893) William Simpson, pioneer of "war artists," was an observer on the spot of most of the great wars and historic events in which England was interested. Beginning with the Crimea—where he earned the title of "Crimean Simpson"—travelling just after the Mutiny through nearly all India and studying its people, its architecture, and its antiquities for the purposes of illustration, he next accompanied Napier to Magdala, marched with the Germans into Paris, stayed there through the Commune, and later still took part in the Afghan war, and by mere chance escaped assassination with Cavagnari. Among his peaceful experiences were the Afghan boundary commission, the Vatican council of 1869, the tour of the Prince of Wales in India, the opening of the Suez Canal, and many royal marriages. All these, as well as Schliemann's discoveries at Mycenæ and Warren's at Jerusalem, he illustrated or described for the London *Illustrated News* or other papers. Keeping careful diaries wherever he went, he was enabled by their means during the last five years of his life (he died in 1899) to write this autobiography.

It is obvious that not much which is positively new can be expected from such a book, for the whole endeavor of the author was to get the results of his observations before the public as soon as possible after he had made them, and this he did through the medium of the daily or weekly press long ago. We shall therefore never know how much of what is now common property was first given to the world at large by him, either in his pictures or by his pen. And, further, the personal and individual, not the public, element is the conspicuous one throughout this book, which indeed was written for his daughter, so "that when she grows up she may learn something of her father's life." Nevertheless, there is a certain charm in the homely, straightforward style, which holds the reader; and so do the constantly shifting scene, the varied incidents, and the events historically great or familiarly attractive, all described so simply and without any of that "fine writing" in which the ordinary newspaper man takes such delight. Above all, there is throughout the note of truthfulness, for which, as one of his co-workers wrote, Simpson was unequalled among his fellows, and for an "almost passionate zeal for the examination and inquiry to get at the truth, and to set it forth by pen and pencil." He was a self-educated man, who by hard work and fair play rose to the top of the profession which he created, and by his modesty and veracity (which never interfered with his success as a special artist or correspondent) won himself friends in every walk of life, even in the highest. Thus, the present King, when Prince of Wales, received him upon terms of friendship, and, on the death of the Duke of Clarence, Simpson was the only newspaper man admitted to Sandringham, where he sketched the dead prince upon his bed, the family passing in and out of the room the while.

The book contains some two dozen full-page pictures, reproduced from original drawings by Simpson, which are now owned by the King, the British Museum, and others. Of these, the two most interesting are, first, that of the tomb of Omar Khayyám (from which, by the way, Simpson sent to Quaritch some seeds from rose-bushes there growing, and from these seeds plants were cultivated and set out on the grave of FitzGerald); the other, two states of the drawing of the Prince of Wales's elephant attacked by a tiger, the first showing Simpson's original sketch, and the second the same picture as redrawn in the office of the London *News* for reproduction in that paper.

The Apocryphal and Legendary Life of Christ. By the Rev. James De Quincy Donehoo, M.A. The Macmillan Co.

The sub-title gives a full description of this volume: "Being the whole body of the Apocryphal Gospels and other extra-Canon-

ical Literature which pretends to tell of the life and words of Jesus Christ, including much matter which has not before appeared in English. In continuous narrative form, with notes, Scriptural references, prolegomena, and indices." The author has attempted to deal with the heterogeneous and mainly puerile literature, usually termed apocryphal, as Tatian in the second century dealt with the four canonical Gospels. He is candid in his portrayal of the character of the material he uses, and attributes most of it to heretical sources. But he thinks it will prove interesting. Its most important lesson, however, is "that of the utter unlikeness of this literature to the canonical books of the New Testament," a fact recognized by all who have known anything of the Apocryphal Gospels. This is the first work of the kind in English, and has the advantage of including much matter recently recovered; but even this matter adds little to our knowledge.

The introduction has been made with care, and the bibliography is full and up to date. The compilation, in the body of the work, is almost entirely from the eighth volume of the 'Ante-Nicene Fathers' (American edition). The difficulty, however, of constructing a "continuous narrative" is obvious on every page. The separate accounts are so incongruous, the basis of fact so attenuated, to put it mildly, that a consistent and orderly story cannot be arranged. The footnotes, which show a good deal of research, help the reader to some extent; but when curiosity has been satisfied, one will ask whether the material deserved such patient efforts. The author deems the literature of some value, despite its origin and its intrinsic worthlessness, as showing the sources of many popular superstitions, and as contributing to an understanding of mediæval art. Probably this is the most that can be said in commendation of such a volume.

The New Epoch as Developed by the Manufacture of Power. By George S. Morison. Boston: Houghton, Mifflin & Co. 1903.

The late George S. Morison achieved distinction as an engineer and bridge-builder, and in his profession occupied a very high rank. He did not write much outside the field of his immediate professional work, and this little posthumous essay is all the more welcome. As a few lines of introduction inform us, it was ready for the press in 1898, but was not then published. The manuscript is now printed as he left it.

The fundamental idea which runs through the volume is that the present age of the world marks the beginning of one of those great ethnical periods which embody a distinct advance and change in human civilization. As, in prehistoric speculations, ethnologists have accustomed us to think of successive stages marked by the discovery of the use of fire, by the introduction of the primitive forms of projectiles, by pottery, by the domestication of animals, by the manufacture of iron and the invention of written characters, so Mr. Morison thinks that what distinguishes our present world from the historical world as it existed down to the beginning of the nineteenth century is not steam, or railroads, or the telephone, or the telegraph, but something which underlies all our inventions, which he calls the possibility of manufacturing power. We believe he called it, in one of the original addresses or articles embodied in the book (a list of which is given in the preface), the *multiplication* of power. Either phrase expresses succinctly his idea.

To condense what he says: A new human capacity was needed to make an epoch as distinct as those in primitive society. This has been found. Man has learned to generate power, to produce, wherever needed, practically unlimited power. "Whatever the measure of a single machine, that machine can be used to make a greater one." The steam-engine, Mr. Morison admits, is still almost the sole representative of manufactured power—perhaps he had in mind stored electricity as the next great invention in this direction, but what he insists upon is, that the method is a secondary thing. "The great advance came with the ability to manufacture power at all."

Mr. Morison, in the remainder of the book, traces the effects which the new capacity has in its relation to business, capital, government, civil engineering, the university, and education in general. But here, unless we are mistaken, his argument depends quite as much on the effect of the inventions by means of which intelligence is transmitted as on those which represent the manufacture of mere power. The telephone and the telegraph, for instance, are changing the world. By means of the former, two industries, a thousand miles apart, which would formerly have competed with one another, can be combined under the eye of a single master; by means of the latter the intercourse between nations, which was formerly managed entirely by diplomatic representatives, can now be carried on directly between the heads of Governments, making our ambassadors and ministers often seem like instances of ornamental survival. Mr. Morison has a good deal to say about the effect of the annihilation of distance on the art of government. But is all this the same as what he means by the manufacture of power? Possibly the manufacture of power is only one of the many distinguishing marks which separate our age from all that have gone before; if so, Mr. Morison has pressed his theory too hard. But he has given a name to what was without one before; and this is no small feat. This volume will be found full of interest and suggestion.

BOOKS OF THE WEEK.

AN INTRODUCTION TO ECONOMICS

By Prof. HENRY R. SEAGER, of Columbia. 560 pp. 8vo.

This work attempts to present the principles of Economics in vital relation to the facts and problems of contemporary business life. A distinctive feature is the introductory sketch of the rise and progress of modern industry in England and the United States, which is designed to suggest the historical perspective so necessary to the judicial treatment of present-day problems. Distribution receives particular attention. Four chapters are devoted to monopolies.

Early Western Travels: 1748-1846

A SERIES of Annotated Reprints of some of the best and rarest contemporary volumes of travel, descriptive of the Aborigines, and Social and Economic Conditions in the Middle and Far West, during the Period of Early American Settlement.

Edited, with Historical, Geographical, Ethnological, and Bibliographical Notes, Introductions, and Index, by

Reuben Gold Thwaites

Editor of "The Jesuit Relations and Allied Documents," "Wisconsin Historical Collections," "Chronicles of Border Warfare," "Hennepin's New Discovery," etc.

Illustrated with facsimiles of the original title-pages, maps, portraits, views, etc. 31 volumes, large 8vo, cloth, uncut, gilt tops. Price $4.00 net per volume (except the Maximilien Atlas, which is $15.00 net).

The edition is limited to 750 complete sets, each numbered and signed, and in addition thereto a limited number of the volumes will be sold separately.

WITH AN ELABORATE ANALYTICAL INDEX TO THE WHOLE

Almost all the rare originals are without indexes. Here this immense amount of historical data is made accessible by reference to one complete index.

THE SERIES COMPRISES

Weiser's Journal of a Tour to the Ohio in 1748.
Croghan's Tours into the Western Country, 1750-65.
Post's Western Tours, 1758-59.
Morris's Journal relative to his Thrilling Experiences on the Maumee in 1764.
Long's Voyages and Travels of an Indian Interpreter and Trader, 1768-82.
Michaux (André) Travels into Kentucky in 1795-1796.
Michaux (F. A.) Travels to the West of the Alleghenies, 1802.
Harris's Tour into the Territory Northwest of the Alleghenies, 1803.
Cuming's Tour to the Western Country, etc., in 1807-9.
Bradbury's Travels in the Interior of America, 1809-11.
Brackenridge's Voyage up the Missouri, 1811.
Franchere's Voyage to the N. W. Coast, 1811-14.
Ross's Adventures of the First Settlers on the Oregon, 1810 1713.
Buttrick's Voyages, Travels, and Discoveries, 1812-19.
Evans's Tour of 4000 miles through Western States and Territories, 1818.
Flint's Letters from America, 1818-20.
Hulme's Tour in the West (Ohio, Indiana, and Illinois) 1818.
Flower's Letters from Lexington and Illinois, 1819.
Flower's Letters from Illinois, 1820-21.
Woods's Residence in English Prairie, Ill., 1820-1821.
Faux's Tour to the United States, 1819-20.
Welby's Visit to North America and Illinois, 1819-20.
Nuttall's Travels into Arkansas Territory, 1819.
James's Expedition from Pittsburgh to Rocky Mountains, 1819-20.
Pattie's Personal Narrative of Expedition from St. Louis to Pacific, 1824-27.
Ogden's Tour through the Western Country, 1821-1823.
Bullock's Journey through Western States, 1827.
Gregg's Commerce of the Prairies, 1831-39.
Wyeth's Journey from Atlantic to Pacific, 1832.
Townsend's Journey across the Rockies to Columbia River, 1834.
Maximilien, Prince of Wied-Neuwied's Voyage in the Interior of North America, with large Atlas, 1833.
Flagg's Far West, 1836-37.
Smet's Letters and Sketches, Residence among Indian Tribes, 1840-41.
Farnham's Travels in the Great Western Prairie, etc., 1839.
Smet's Oregon Missions and Travels, 1845-46.
Palmer's Travels over the Rocky Mts., 1845-1846.

Important Announcement
François' Beginner's French
65 cents
By VICTOR E. FRANÇOIS
Instructor in French, College of the City of New York
This book puts the conversational method within the reach of teachers, and enables them to use French in their classes from the very beginning. Each of the forty-nine lessons contains brief statements of rules, short French texts, exercises in transposition, questions, grammar drill, and English sentences and passages for translation into French. The lessons are followed by selections for memorizing, the conjugations of the auxiliary verbs, a list of irregular verbs, and a full vocabulary. The recent official changes in the French orthography are taken into account.

The Nation.

A WEEKLY JOURNAL OF POLITICS, LITERATURE, SCIENCE, AND ART

Established in 1865, *The Nation* was a pioneer as a journal of literary and political criticism of the highest order, conducted free from the control of party, school, or interest of any sort. It has long been a recognized authority at home and abroad. The list of contributors includes most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. *The Nation's* departments are:

THE WEEK. Brief Comments on the most important current events, domestic and foreign.
EDITORIAL ARTICLES. Careful and moderate discussion of prominent political and social topics.
SPECIAL CORRESPONDENCE. From all quarters of the globe, by intelligent and trustworthy observers.
OCCASIONAL CORRESPONDENCE. Letters to the editor on every subject germane to the scope of the paper.
NOTES. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
REVIEWS OF BOOKS. By able writers and scholars (mainly specialists) of both hemispheres.
FINE ARTS. Competent criticism of art exhibitions and works of art, the drama, etc.

The style and form of the paper are chosen with a view to the most suitable shape for binding, and a set of *The Nation* preserved, bound, and indexed makes the most complete and readable record of current events of importance in the political and literary world available for the American Public. Two volumes are completed annually. The index and title-page accompany the last issue of each volume.

SUBSCRIPTION PRICE—$3 per year postpaid in the United States, Canada, and Mexico; $4 a year postpaid to other countries included in the Postal Union. Subscriptions for a shorter period taken at the yearly rate. Remittances should be made by check, draft, or money order, payable to *The Nation*. Specimen copies sent free at any time on request. Address

THE NATION, 206-210 Broadway, N. Y. City.

LONGMANS, GREEN, & CO.'S NEW BOOKS

STEAM-BOILERS

Their Theory and Design

By

H. deB. PARSONS, B.S., M.E.

Consulting Engineer.

Member American Society Mechanical Engineers; Member American Society Civil Engineers; Member Society Naval Architecture and Marine Engineers; Professor of Steam Engineering, Rensselaer Polytechnic Institute

Large 8vo. With over 170 illustrations, Index, &c.

387 pages. $4.00 net. By mail, $4.20.

This volume is intended for the use of engineers and engineering students in technical schools and colleges. For the student it will be found to contain both the underlying theory and the practical design, with the reasons why usage has adopted some methods in preference to others.

For the practicing engineer the book will be found to contain rules, both theoretical and empirical, to guide him in preparing his design, with discussions of various designs and formulae,

The drawings are usually working drawings selected from actual designs, and generally the book covers those points which in practical office work have been found to be perplexing and hard to find in other books of reference.

A prospectus of the book with specimen pages will be mailed to any address upon request.

NEW BOOKS OF TRAVEL

ROUND KANGCHENJUNGA

A Narrative of Mountain Travel and Exploration

By Douglas W. Freshfield, F.R.G.S., lately President of the Alpine Club. Royal 8vo. With Maps and over 40 Illustrations. $6.00.

"It is a fortunate chance, alike for the author and the public, that this book should appear at the very time when public attention is being turned by the course of events towards the region with which it deals Mr. Freshfield's book is an excellent piece of literary craftsmanship; it betrays the man of letters on every page."—*Sir Martin Conway in the Daily Chronicle* part of that roof of "Mr Freshfield has given a delightful description of *London.* the world which is still little known; he has a keen eye for natural scenery and for picturesque incident with a happy knack of pleasant illustration. Altogether the book is one to read, and it appeals to various tastes."—*Morning Post, London.*

SOUTH AFRICA AFTER THE WAR

By E. F. KNIGHT, Author of "Where Three Empires Meet," etc. With 17 Illustrations. 8vo. $3.60, net. By mail, $3.78.

"Mr. Knight has given to the general reader, not alone to the student of South Africa, a book of considerable value . . . "—*American Review.*

"One of the most interesting and informative books on South Africa that *The Empire* has been called upon to review for some time past. . . . "—*The Empire.*

SIR HORACE RUMBOLD'S Further Recollections of a Diplomatist

By Sir Horace Rumbold, Bart., G.C.B., G.C.M.G, 8vo. $6.00

"The present volume abounds in good stories and sketches of the most eminent people at home and abroad in the latter half of the nineteenth century."—*Morning Post.*

"Sir Horace Rumbold in 'Further Recollections of a Diplomatist' is even more interesting than he was in earlier volumes."—*Athenaeum.*

AUSTRALIND: A Narrative of Wanderings in Western Australia and the Malay East.

By H. Taunton. 8vo. $4.00.

"The book is full of interest all through, though, perhaps, the chapters devoted to pearl-fishing are the most attractive, and the history of the manner in which a pearl called 'The Southern Cross' was 'faked' is well worth reading."
—*World.*

The Nation.

NEW YORK, THURSDAY, JANUARY 21, 1904.

The Week.

In selecting St. Louis for the convention of 1904, the Democratic National Committee has again acknowledged the steadily growing influence of the Middle West in our political affairs. But, after all, the place of meeting is of trifling importance this year as compared with the struggle for mastery of the conservative members of the party and the populistic elements. The intensity of this contest could in no way be affected by the selection of one city or another. But in delaying the convention until July 6, the National Committee took a wise step. It will have two weeks in which to note the results of the Republican convention at Chicago before selecting the party standard bearer. If the Democratic leaders are as shrewd in profiting by the Republican manœuvres as they were in declining to go to Chicago for the benefit of a rich and noisy candidate, they may gain a decided political advantage by choosing the later date. As was to have been expected, there was no really serious effort made to bring the convention to this city. Even the Tammany leaders were but half-hearted in their "demands" for it. And the Western Democrats showed quite as little desire to become the guests or the protégés of Tammany Hall as in former years. The Murphy crowd must play at penitence and reform a little longer before they are taken at their own estimate by the party at large.

Mr. Bryan has again planted himself sullenly athwart the path of Democratic progress. His speech at Lincoln on Monday night was a defiant challenge. The whole Kansas City platform, silver madness and all, is his ultimatum. It is a bold "hold-up" of his party which Mr. Bryan is attempting. The result must be to put an end to the efforts which the sane leaders of his party have been making to live and work with this man. They have been for some time treating him, as Izaak Walton urged fishermen to use a frog—"tenderly, as if they loved him." It had been said that Mr. Bryan was growing "reasonable"; that he was really willing to subordinate personal vanity to the success of the party; and that some working basis could be arrived at with him. He now makes no concealment of his purpose to ruin his party if he cannot rule it. Just what he hopes to accomplish by his threats must be kept clearly in mind. He has no hope of a nomination himself. Even he sees that to be impossible this year. But he does not wish to be elbowed off the stage, even politely. He will not be "placated" in any such way as to seem to surrender the last remnant of his power. His bid is evidently for a veto power. To obtain that, under the two-thirds rule of Democratic conventions, he has only to beat up the chaparral and get together, by hook or by crook, one-third of the delegates. He is willing to strike hands with the most unscrupulous in order to win that minority control. Apparently, to that end, he is even ready to yoke his fortunes with a candidate, W. R. Hearst, whose nomination, if it were conceivable, would be the signal for an explosion of lubricity. Behind all, of course, is the implicit threat of bolting in case Bryan and all his works are cast out by the convention.

"International eminent domain" was the great argument in the Senate on Friday. Senator Spooner, who had before committed himself to the highwayman's plea that we could have done what we did on the Isthmus, treaty or no treaty, said that he was still a little doubtful about the new doctrine. Apparently, it is the name that staggers him, not the thing. When the time comes to settle the question who has the credit of originating international eminent domain, Lieut. O'Connor of the U. S. Tenth Cavalry should not be overlooked. He has an article in the last number of the *Journal of the Military Service Institution*, written before the Panama revolution, in which he cautiously and speculatively advances the doctrine. He admits that it would be a "dangerous" principle, even in theory, and says that the United States "could hardly be the sponsor" of it, since we have "always insisted on the *integrity* of South and Central American States." Lieut. O'Connor's prevision of the alarm and anger which such a step would provoke among the latter, is justified by the effects of the Panama aggression. The press of countries to the south of us has teemed with condemnatory and apprehensive expressions. Thus, the *Tribuna* of Durango, Mexico, speaks of Spanish-Americans as now having the sword of Damocles suspended over their heads, and adds that "whenever Uncle Sam finds it desirable, he will, by a movement which he will call humanity and civilization, cut the thread, and his chosen victim will disappear from among the nations."

Mr. Roosevelt never does anything by halves, but it is hard to believe the dispatches which declare he favors a service pension for civil-war veterans. In all the pension debauch, no President, we believe, has ever gone so far as that. To convert the reckless lavishness of our pension laws into a universal dole has been too evident an indecency for a President to countenance. Hence we must decline to believe that Mr. Roosevelt has cast dignity to the winds, and will give his moral support to a bill providing an alms of $12 a month to all veterans of ninety days' service who suffered no disability through their brief soldiering. The bill would grant the same pensions to widows of such soldiers, where the marriage took place before January 27, 1890. That the Grand Army of the Republic should endorse such a bill is a sign of its complete demoralization. A President could not take it up without notifying the people that he was willing to be something less than a President now, in order that he might be President again.

Gov. Cummins of Iowa believes with the Greek philosopher that "everything flows." His idea is to keep things moving, and he succeeded pretty well in his inaugural address on Thursday. But he wants to keep others moving, too. "Standing pat," he says, is losing the markets of the world to this country, and it is high time to raise the flag of reciprocity aloft. The Governor is not a man to take refuge in glittering generalities. He comes right down to particulars, and tells the farmers that what they need is reciprocity with Canada. This is bearding the lion in his den; but the Governor knows that if you look the lion straight in the eye you can master him every time. So he asks the farmers, point blank, if they would like to lose the market which would be created by our vast imports into Canada rather than meet Canada in competition in the things which they produce. Why, he says, in their sharp struggle with Illinois, Wisconsin, Minnesota, and other neighboring States they never would be able to discern the influence of Canadian competition in corn, oats, hay, butter, etc. But this heresy is nothing to his remarks about South America and Europe. Actually, we can make treaties with them that will give work to ten American workmen for every one displaced. This is shocking. Has the Governor forgotten all about the cattle upon a thousand hills that would be in mourning if reciprocity with South America were put in effect? That gentle philosopher who said that he loved to see the hind quarter of a lamb gambolling on a hillside would have to go to Argentina if Gov. Cummins had his way.

Simultaneous ratification of the Chi-

nese trade treaties with the United States and Japan was doubtless contemplated. It followed within a few days Russia's most explicit declaration that she would scrupulously honor in Mantchuria all treaties made by China. As if to take up the word before it had been forgotten, Mukden, Antung, and Tatung-tao are straightway made free ports. Indeed, Mr. Hay had expedited the declaration by the unusual method of exchanging treaties by cable notification. Such eagerness to hold the Russians promptly to their promises was quite justified by the apparent imminence of war. Once consuls of the civilized Powers are appointed to the treaty ports, the open door in Mantchuria becomes a fact, for the Russians will hardly use toward their peers the cavalier methods freely applied to China. We have already pointed out the advantages of the new treaty in abolishing the cumulative transport tax, called the likin, and in securing Chinese rights for American inventions. Short of a general break-up in the Far East, a foothold for trade will have been secured, and the danger of a Russian monopoly extending over half a continent measurably lessened. For the proclamation of the treaty at this critical time credit is due, not only to the patient diplomacy of Mr. Hay, but also to his alacrity in meeting the turns of an adroit foeman. Nowhere will Mr. Hay's skill in fence be more fully appreciated than in the Russian Foreign Office.

As to the open door—it makes all the difference in the world whose door is to be opened. We have just arranged it so that the Russian door in Mantchuria shall swing wide, but a day later the French Ambassador reminds us that our own in the Philippines is tight closed. When Congress ratified the act remitting the export duty on hemp to shippers to the United States, we predicted that this breach of the Treaty of Paris would not pass without protest. The rebate was clearly in contravention of the promise to give equal treatment to all nations—including our own—trading with the islands. Instead of living up to this contract, we have played a sharp game, as if our engagement did not apply to Philippine exports. Great Britain, France, Germany, Italy, Belgium, and Holland have made diplomatic representations to the State Department on this subject, and France has hinted through her Ambassador that she may be obliged to meet the American rebate by imposing a countervailing duty on American hemp products. Such a course would be fully justifiable. It would also serve as a reminder to Congress to inform itself before voting important laws. The hemp rebate in the Philippine bill was in the nature of a "joker." Nobody knows how it slipped in, though the motives for its presence are obvious; and it was made law almost without consideration. The proper course now is to repeal the preferential, put ourselves in an honest position towards our commercial rivals, and not till then dwell overmuch on the open door. When it is recalled that an export duty is unconstitutional, the words of Martin Littleton at Albany, on Thursday night, fall with the mighty impact of truth. "We have gone," he said, "from a constitutional to a commercial age." Let us at least play the commercial game fairly.

The international arbitration conference at Washington has very wisely concentrated its efforts upon the attainment of an Anglo-American treaty. Six years ago such a treaty was ignominiously cold-shouldered by the Senate, though urged by both Cleveland and McKinley. But times have changed since then, and the principle of arbitration has gained ground. The Hague Tribunal has been established; France and Italy, England and France, have entered into permanent agreements for peaceful adjudication of contested claims; Mr. Balfour has not the suspicious attitude of his illustrious uncle towards the new-fangled diplomacy of peace; and a Senate that is trying to square the Panama aggression with general moral principles is in a more amiable mood than was the body which voted President Cleveland's emergency "war credit." Possibly, the former arbitration treaty was over-elaborate. If so, a simpler document could be drawn, while, for Powers fairly committed to the principle, the Hague Tribunal furnishes promptly all the machinery of an international court. More than a century ago we contributed the Republican idea to France; to-day we need not be ashamed of borrowing in turn the idea of adjustment of international difficulties by orderly judicial processes, rather than by the evasions of diplomacy or the brutal arbitrament of war.

The statement of foreign trade for December, issued on Friday, is one of the most remarkable on record. Both the export trade and the month's excess of exports over imports surpass all precedent. But what is still more impressive is the suddenness with which this position has been created. In the nine months ending with September, excess of merchandise exports over imports fell $10,678,000 below that of the same period in 1902. But so swiftly has this situation changed that the twelvemonth's statement, now before us, shows an export surplus $97,825,000 above the preceding year. It may also be remarked that not only does the export trade for 1903 surpass all previous yearly figures, but the import trade also reaches an unprecedented total. This, taken altogether, is an extremely wholesome showing. The large excess in exports, especially these three past months, has been a timely and great aid in paying off the floating debt created abroad by our bankers and railway managements. It is an interesting though not unusual sign of the times that, in proportion as the country shows its ability to pay off such maturing debt by shipment of its products, Europe displays increased readiness to extend the loan to our corporations in a more permanent form. If the trade position continues this year on the lines of the December statement, some interesting financial results may follow. It should, however, be observed that of the $123,900,000 increase in last year's exports over 1902, $88,100,000 came from the single item of cotton, and as a consequence almost entirely of the higher price.

The cut to forty hours a week in Lancashire has been followed by the stopping of 85 per cent. of the cotton spindles of Normandy for one day a week; and it is reported that this will continue until the end of March. The European mills have been paying vastly larger amounts than usual to this country for cotton, but they have not been getting much larger supplies. It is no wonder, therefore, that they hesitate to run to their full capacity, considering the inability of some of their largest customers to pay higher prices. If it is hard work to raise quotations on cotton cloths right here in the United States, it is not going to be an easy matter to do so in China and other markets. While the old stock of the raw material held by our mills lasted, they were, of course, in some sort of position to meet the demands of their customers, but they are now beginning to run on cotton bought at the high figures of the season. At the same time, buyers of goods are running short, so that it may soon be seen which side has the greater resisting power. Meanwhile, the talk about new fields of cotton culture increases very fast. The latest rivals of our cotton planters are "large Transvaal interests," which now have their agent here studying American methods. Under the mere law of chances some of these new projects should amount to something.

Mr. Robert C. Ogden's annual dinner to the members of the Southern and General Education Boards is always a notable event, if only because of the interchange of views among the Southern and Northern men who attend. Generally, political questions are wholly avoided, but there was one utterance at the gathering this week by a Southern man—President Mitchell of Richmond College—which deserves more attention than it has thus far received. He declared emphatically that the Democracy

could do itself and the South no greater harm than by inserting an anti-negro plank in its coming national platform. We believe that President Mitchell represents in this matter the views of the broadest and most liberal men in the South. They feel very keenly the mischief done by agitators of the Vardaman, Tillman, and Gorman type, who stir up race prejudice and passion merely in order to obtain a temporary political advantage. By playing upon the fears of the "poor whites," they create an issue which, in Maryland, at least, is purely factitious, but which vastly strengthens their hold upon their States. Since "the evil that men do lives after them," the misunderstandings and hatreds aroused are likely to last long after the demogogues' bones have been interred. It is more encouraging to note, therefore, that more and more Southerners of prominence are realizing just what kind of game these men are playing, and how directly it strikes at Southern progress, happiness, and prosperity.

A new way to collect old debts was revealed last week in the evidence on the Stonecutters' trial. This organization, it will be recalled, was made up of employers who bid collusively for contracts, and of a union that shared in the profits gained by the employers. An incidental advantage of this alliance to the employer was that the walking delegate became his friend and faithful servitor. Thus, Mr. Cosgrove, with a troublesome account of $2,110 uncollected, simply put the bill into the hands of the Stonecutters' Union. The threat of a strike brought the dilatory debtor to time, and Mr. Cosgrove paid "voluntarily" $510 (25 per cent.) to the Union for its services. Naturally, the debt-collecting function of the Stonecutters' Association—which was not inaptly called "the horse market" by the knowing—was inoperative except against outsiders. It constituted a formidable argument in favor of joining the horse market. What view the courts will take of these transactions remains to be seen; sociologists will do well to note that the longed-for "alliance between labor and capital" does not invariably make for good morals or even for permanent industrial peace.

The Central Labor Union of Philadelphia has decided to urge the school teachers of that city to organize a union and become affiliated with it and the Federation of Labor. They will find encouragement in a recent dispatch announcing the formation of a "women's union-label league" in Massachusetts, headed by a Wellesley professor. This is organized to see that the union stamp is attached to all feminine gear, and what more natural than that we should insist upon tagging school teachers, as is proposed in Philadelphia? As soon as the instructors in that city are organized, there should be courses in every school on the great benefits of unionism. Pupils should be taught to "picket" any building whose teachers have not joined the union, and every "scab" mentor of youth should at least be snowballed. We have no doubt that the Republican machine of Philadelphia, which has been of such service to and has profited so much by the teachers' political machine, will welcome this plan of organization. But why stop with the teachers? Why not unionize the children while you are about it, and train them from the beginning in the way they should go? Having drunk in the doctrine of organized labor with their a b c's, there could never be any fear of their wishing to enjoy the right to work for themselves when and where they might please.

Russia, apparently, has been unwilling to take the responsibility of a war in the Far East, and, by a timely withdrawal of her extreme demands, has opened a hope of peace. To-day the negotiations stand very much where they did some months ago. Japan recognizes Russia's ascendancy in Mantchuria, Russia Japan's in Korea. At issue are only such minor matters as neutral zones along the Yalu and the opening of Korean ports—nothing worth fighting about. The obstacle of Japanese incredulity as to Russian promises remains, however, and it may turn out that the war spirit has got beyond control in Japan. Indeed, the pro-Russian press has freely charged that the Katsura Ministry was using the hackneyed but always effective argument of peril from abroad to keep itself in power. Libellous as the charge probably is, it indicates the belligerent temper of the people of Japan. If war is indeed averted, it will be largely due to the generous efforts of the Czar and of that great statesman now in undue obscuration, Sergius de Witte.

With the threat of the French Government to proclaim five bishops without the Pope's consent, the strife between Church and State passes into an acute stage. Waldeck-Rousseau, in the now famous Associations law, intended merely to check the religious orders; M. Combes strikes frankly at the treaty between France and the Vatican. Under Napoleon's Concordat, embodying an earlier right, the French Government reasserted the prerogative of nominating bishops to the Holy See. The nature of this nomination has been the occasion of much dispute. Is the Pope obliged to accept it? If so, his part in the transaction becomes merely nominal. Is the State bound to present nominations for a vacant diocese until a candidate acceptable to the Pope is found? If so, his Holiness exercises a formidable right of veto. In any case, the Pope may refuse consecration and leave the Bishops-elect without official sanction for their promotion. Practically, these ticklish questions have generally been avoided by a private conference, in which the State assured itself of the eligibility of its nominee. Under a bitterly anti-clerical government like that now ruling in France such an adjustment is difficult. M. Combes has chosen to force his candidates through, as a token of the jurisdiction of the State over the Church. He is ready to see the Papal Nuncio withdrawn from Paris, which would leave the Concordat without machinery for its enforcement. His action can hardly be taken as a mere dispute over nominations. It seems rather the first move in a more extensive campaign, the aim of which is the complete subordination of the Church to the State.

A series of articles in the *Berlingshe Tidende* of Copenhagen, discussing the proposed Scandinavian tariff union, show why such an arrangement could not be accepted by Denmark under any condition but that of practical free trade. Since 1863 only slight changes have been made in the Danish tariff, and all but one of these have been reductions. The principal industry of the country, agriculture, is wholly unprotected, and its unprecedented growth in recent years proves free trade to have been a tonic rather than a poison for this particular branch. Believing that what is good for one may be no less good for another, Danish agrarians are beginning to petition the Rigsdag for a tariff reform that would result in substantially reducing the tax upon all imports. They have learned the lesson which even our Western farmers are beginning to learn, that the unprotected interests contribute to the support of the favored. In 1888 the present high-tariff system was adopted by Sweden, and, nine years later, Norway followed suit. One of the results in both countries has been a rise in the price of most articles out of all proportion to the advance in wages. From 1897 to 1900, the Swedish exports to Norway fell from 21,000,000 kroner to 7,000,000, and the imports from 33,000,000 to 22,000,000, while the exports to Denmark rose from 43,000,000 kroner to 48,000,000, and the imports from Denmark from 49,000,000 to 63,000,000. A similar increase in the trade between Norway and Denmark appears. In view of these facts, it is not strange that Denmark is unwilling to enter the protection trap, all the more because the increase in the export of Danish agricultural products to England during the past nine years has ranged from a hundred per cent. on butter to four hundred per cent. on eggs. No protective country in Europe can show anything like the same growth in these industries.

"THE INTERESTS OF CIVILIZATION."

In sending portions of the Panama correspondence to Congress, the Administration has not seen fit to give in full the notes of the Colombian Minister of Foreign Affairs. As we read them in the *Diario Oficial*, they contain several apposite and crushing rejoinders which, it is easy to imagine, the President and Secretary Hay might not care to make public. It may be right to learn from an enemy, but it is a little humiliating to learn your international law from an antagonist. It will be remembered that Mr. Roosevelt instructed Minister Beaupré to inform the Colombian Government that "the interests of civilization" required him to do as he had done at Panama. As to that, replied Minister Rico, if the United States denies Colombia her rights, "civilization will suffer a disaster incomparably greater than would be the temporary obstruction of transit across the Isthmus, since the peace and the very existence of nations depend principally upon the observance of public treaties."

This is not simply a shrewd return thrust. It is the statement of a truth of the first importance. Treaties and the safeguards of international law are, between countries, what the civil and criminal law is between individuals. To agree to abide by them, instead of doing every man what seemeth good in his own eyes, is the very beginning of civilization. Private vengeance is the symbol of barbarism. Orderly justice by established tribunals, set for the interpretation and applying of written laws, is everywhere accepted as the leading sign that a given country is civilized. That was the burden of President Roosevelt's letter, last summer, against lynching. Its worst feature was not its brutality, but its defiance of law. Defenders of lynching asserted that "the interests of civilization" required the summary and horrifying execution of certain miscreants. "Not so," said the President, "black as their crime may be, their lawful trial, with every legal right guaranteed, must be insisted upon if we are not to relapse into savagery."

International lynch-law, however, the President seems cheerfully to approve. In the Panama lynching, he put himself squarely alongside the Cossack. Russia announces that she will sacredly respect all treaties referring to Mantchuria so long as they do not run counter to her own interest. That is exactly what Mr. Roosevelt really signifies by his talk about the interests of civilization being superior to a treaty. He means his own idea of what those interests require. Just now it is a canal—and not merely a canal, but one made sure of before the Republican Convention. What it will be next, no man knows. That is why his lawless course at Panama has filled thoughtful men with alarm. A President who refuses carefully to inquire what the law is, and then to follow it scrupulously, may at any moment set the world on fire. International law is the great bulwark of peace between the nations. It assures the weak that the strong will not take unfair advantage of them. But if it is to be set aside contemptuously by a ruler at the head of a mighty people, no land can feels itself safe from a President who, like Pompey, acts at once as the executive and the subverter of law.

It is useless for the supporters of the Administration to pretend that its action at Panama was strictly in accord with the treaty of 1846. This is not a matter of abstract speculation. It is not as if the treaty had never been interpreted. This very Administration interpreted it in 1902, and did so in a way diametrically opposite to its interpretation in 1903. The proof is accessible. It lies in Senate Document No. 10, Fifty-eighth Congress, Special Session, which contains a part of the dispatches and instructions relating to the disturbances on the Isthmus in 1902. In its very forefront we have the statement by Capt. Reisinger, our senior naval officer present, asking directions from the Navy Department, but adding: "I am fully aware of the fact that by treaty and convention we are not supposed to take charge *until the Colombian Government* has announced its *inability to guard the road*." That had been, in fact, the practice so invariably that Senator Foraker, in his blundering defence of the President the other day, actually took it for granted that the Colombians invited our marines ashore last November! Nothing of the kind occurred. The very Colombian troops which were on their way, for all we knew, to keep the transit open, we denied permission to land. Yet, only a year before, our Government had done the direct opposite. It assisted the Colombian Government to reassert control. It even rebuked Admiral Casey, by implication, for having gone too far and hurt the sensibilities of Colombia. No wonder that, with this record behind it, and so close behind it, the Administration should have boldly flung itself for justification, not upon the treaty, but upon "the interests of civilization."

That phrase has always been in the mouths of conquerors. Those of them who could not find, in statute or treaty, warrant for what they wanted to do, fell back upon an imagined public good. It is the mark of a lawless mind. Civilization as between nations moves forward just as it does among the inhabitants of any one of them. Vengeance is no longer glutted in private; the feud and the vendetta disappear; trial by ordeal gives way to trial by evidence; the law becomes the one refuge and arbiter. In a similar way has the sacredness of treaties and international law been built up. To throw scorn upon both now, as President Roosevelt has done by his treatment of Colombia, is, by so much, to plunge the nations back into the chaos and old night from which they have so painfully emerged. What the interests of civilization really require is that *his* lawless doctrines be repudiated.

NAVAL DISORGANIZATION.

A movement which will bear watching is on foot in Washington to induce Congress to create, by law, a General Staff for the navy. A circular has just been published through which the instigators seek to promote their ends, and which they have, we are told, placed in the hands of every Senator and every Representative. A copy of this *ex-parte* plea has reached us. It is made up of extracts from the message of President Roosevelt, from the annual report of the Secretary of the Navy, and from the annual report of the Chief of the Bureau of Navigation; of a flaming article by Rear-Admiral Luce; of a description of the plan and working of the Navy Department by Captain Mahan, taken from *Scribner's;* and of two memoranda, one by Admiral Dewey and the other by the Chief of the Bureau of Navigation.

The President's utterance contains the gist of the matter. "We need," he says, "the establishment by law of a body of trained officers who shall exercise a systematic control of the military affairs of the navy, and be authorized advisers of the Secretary concerning it." Parenthetically, we may remark, statement is not proof. What the President thinks is one thing; what the navy needs may be a very different matter. Secretary Moody states the problem in halting and academic fashion, although he appears to go as far as he dare on the side of disapproval. "It is not my purpose to recommend specifically at this time any of these proposals, but only to bring them forward for the earnest discussion and consideration which their importance deserves. Mere change is not reform, and none should be attempted until it appears clearly that conditions would be bettered thereby." The other advocates are enthusiastically in favor of a complete recasting of the organization of the Navy Department, and the practical subordination of the Secretary to a committee of officers over which he can exercise but scant control. The circular is a brief for those who urge a revolutionary shearing of the functions and powers of the constituted head of the navy. As ex-Secretary Long writes: "Under such circumstances the Secretary could hardly fail to lapse into a figurehead in the administration of the navy." No wonder that Mr. Moody extends but slight encouragement to the scheme.

We are tempted to inquire why no one

comes forth, in strong and intelligent opposition, to point out the benefits which will accrue to these promoters as individuals. It might be asked whether the creation of a new office—that of vice-admiral—now lacking in the navy, is not part and parcel of the plan, and, if so, to what person the advanced rank and greater pay are supposed to be already promised. Another query is, why, with twenty-seven rear-admirals on the active list, more admirals should be necessary, and what other new shore employments with rich emoluments are contemplated. The present system, however faulty, brought the navy through the last war with name unsmirched. The Secretary would be wise to exhaust the authority now residing in him before creating a hideous monster to destroy him. It may be asserted positively that Mr. Moody has now in the General Board, the office of Naval Intelligencer and the Naval War College as much of a General Staff as he needs, and if he wishes more he can have it by a stroke of his pen. In this respect, there is no parallel with the condition of the army before the Spanish war. To call for legislation on the score which Admiral Luce speciously advances, that "these various war boards, under what name soever they may be known, . . . are illegal," is mere quibbling. Already the General Board, which is practically a General Staff, has been given powers of great extent; it threatens to usurp others of still wider scope, and has grown so large in the number of those who are employed directly and indirectly in its labors, and so catholic in its activities, as to cause the apprehension that the navy was made for the General Board rather than the General Board for the navy.

A defender of the existing organization, while admitting frankly that it needs mending in some ways, would demand of these agitators definite proof of the necessity of this proposed revolution in the Secretary's responsibilities and authority. All that they give us is vaporous allegations. We are entirely ready to concede that the Navy Department requires a change in its methods, now choking the navy by an excess of red tape and by an all-absorbing centralization which a legalized General Staff would doubtless aggravate rather than lessen.

We cannot agree with Admiral Dewey that "a General Staff is indispensable to the efficient and economical administration of the navy in the routine service of peace." The way to economize is to reduce the avalanche of paper work in the navy, not to increase it; and a board of officers appointed by the Secretary can formulate plans for naval campaigns just as the General Board is now supposedly doing. That the majority of naval officers are in favor of the proposed attempt to enlarge the number and power of their colleagues who settle in (or upon) Washington, is doubtful, to say the least. To take a stand for the whole service in opposition to the expressed desire of the President and against the special purpose of the Chief of the Bureau of Navigation, the dispenser of assignments to duty, holding in his hands the distribution of departmental favor or disfavor, is not to be expected of a poor naval officer, who would unquestionably pay very dearly for his temerity. Unless some means can be devised to obtain a truthful expression of service public opinion, this scheme will pretend to embody what the navy wishes, and it will thus find acceptance with influential persons on grounds which may be true or which may be false.

If Congress were to amend any proposed draft of a bill creating a General Staff by two simple provisions—first, restricting the choice for a chief of staff, with or without the rank of vice-admiral, to those rear-admirals having at least four years to serve on the active list before retiring for age; and, secondly, prohibiting any officer whatever from having duty in Washington for more than six years before attaining flag rank, we venture to predict not only that the enthusiasm of the advocates of this measure would promptly wane, but also that it would be at once replaced by as active an antagonism.

ROOSEVELT OR HANNA?

Senator Hanna ought to be presented by his admirers with a 'Complete Letter-Writer.' He remarked sorrowfully on Friday that he had sent out two thousand letters denying that he was a candidate for the Presidency, and that he thinks that ought to settle it. Yet politicians go on working like beavers for his nomination, the rank and file of the party clamor for him, and the Republican Campaign Committee is overwhelmed with offers of large subscriptions in case Mr. Hanna is the candidate. All for lack of a convincing English style! It would seem so easy for the Senator to protest his undying loyalty to Roosevelt in an unmistakable way. But we see here one of the advantages of the professional literary man in politics. Mr. Hanna cannot make people believe that he is not seeking the Presidency; but if President Roosevelt were to write a letter expressing his conviction that the success of his party required his withdrawal, we are sure that his skill as a ready writer would leave even the wayfaring man in no doubt whatever.

The Hanna boom has plainly affected the nerves of the White House. A hypochondriac old gentleman residing there could be no more fidgety and apprehensive than appears the actual rugged and good-natured occupant. The cries of distress which he is emitting seem to be very bad tactics. Now, if ever, is the time for displaying the famous Rough-Rider coolness under fire. A most consuming desire for renomination should be better masked; to betray such an acutely nervous dread lest the prize be snatched by another, comports ill with the tradition of a dashing and imperturbable Roosevelt. Can this flurried official be our erstwhile contemner of the weakling?

It is impossible to avoid seeing the comic aspects of the Republican situation. What means this angry talk about "treachery," with which all the Administration organs are filled? Is the President the Government, and does opposition to his renomination brand one a traitor? Certainly, there seems to be some kind of lese-majesty involved, to account for the angers in celestial minds at Washington. By contrast, the attitude of Senator Hanna is dignity personified. Nome of these personal ambitions for him. Patriotism, the good of the party, are his watchwords. It is not his fault if thousands of Republicans are saying that Roosevelt cannot be elected, but that he himself can be. Is not the party free to choose? Mr. Hanna would have it understood that he is not a self-seeking candidate, whatever others may be. He has tried to stop the movement in his favor. If, nevertheless, it goes on, that may be a reflection upon the President's availability, but the Senator's withers are unwrung.

Another amusing feature of the flurry is the obvious fear of many Roosevelt supporters lest they may be laying their money on the wrong horse. Yes, they are for that gallant hero, the people's idol, the greatest, wisest—but, gracious Heavens! suppose the other man should win? It is all very fine to shout treachery, but no article stands higher in the political confession of faith than the avowal that treason successful is no longer treason. This consideration is one which the events of 1896 should have borne in upon the *Tribune*. At that time it was the traitor. Did it not basely abandon Platt and the State machine, then bitterly anti-McKinley, and strike hands with Mr. Hanna? That was treachery until Hanna elected his man, whereupon it became political foresight and a basis for recognition. No one, therefore, should be more chary than the *Tribune* in hurling about charges of treason to Roosevelt.

In all seriousness, the movement to nominate Mr. Hanna, if possible, is now unconcealed. Every day's news reveals the sappers and miners at work. The Hanna men announced on Saturday that they were in control of the Indiana State Committee. In St. Louis, the *Star* flops from Roosevelt to Hanna. These effects defective come by cause. Politicians do not take their political lives in their hands without a hint from the higher

powers. The Hanna campaign for the nomination is fairly on, and it may easily prove formidable. Its strength to-day is in its very secrecy and subterranean manipulation. The method is astutely chosen. Were the Senator to come boldly out into the open and fling down his gauntlet, the President would promptly pick it up, issue a clarion appeal to his friends, and seek glory or the grave in war. But how can he fight a fellow in the cellarage who denies that he means to fight at all? The obscurity of the situation is doubtless one of the things which most fret the President. He uttered a loud amen when a visitor said the other day that it was to be wished that Senator Hanna would either "fish or cut bait." But the shrewd Ohio man will probably maintain for a time his ambiguous position. To abandon it would weaken him; to remain in it both bothers and handicaps Mr. Roosevelt.

Incidentally, the immaculate Mr. Perry Heath dropped an interesting hint on Sunday as to the nature of Hanna's strength and the validity of his candidacy. Ten railroad presidents, out of fifteen seeking obscurity at the Waldorf-Astoria, had promised Hanna their unqualified support. This was said with the air of "Poll me the railroad presidents of a country and I care not who casts its votes." It was a striking intimation that Hanna is the candidate of commercialism, impregnable among those who have most to gain from special favors, most to fear from the impartial enforcement of the laws. Nobody who has seriously considered the political situation imagines that Hanna can conquer in the name of capitalism, but the frank citation of the railroad presidents showed where his trust is lodged. Even more significant was Mr. Heath's description of Mr. Hanna's helplessness before friends who urge him to stop making Presidents and be President himself. Hanna, says Heath, cannot turn and brain these tempters with a baseball bat; he must speak them kindly. As to this matter, opinions will differ. In the past, unwilling candidates have managed to make their resolution known without resorting to a baseball bat. But if Senator Hanna is indeed determined not to run, he will never find a fairer mark for the baseball bat than the devoted but indiscreet head of Perry Heath has just afforded. That the secretary of the Republican National Committee is blatantly campaigning for Hanna—and unrebuked—is a fact too significant to be explained away by those who think Hanna is "out of it"; and very ominous to all who think Mr. Heath should be out of the secretaryship.

VOLUNTARY PUBLICITY.

The President of the Sugar Trust declined last week, with some asperity, to give the public information about his business. Now, it is sometimes the case with virtue as with greatness: some are born virtuous, some achieve virtue, and some have it thrust upon them. Yet, say what one will about the United States Steel Corporation, the publicity of its accounting is a high virtue. When this vast corporation was formed it was considered one of the most astonishing departures in the entire history of trade. It was believed to represent the Trust mania carried to its extreme limit. Nevertheless, no sooner was it in operation than it began to print very complete quarterly statements of its condition, placing itself in this respect on the same basis as the railroads. It was a remarkable precedent. The public had no reason to expect such frankness. The popular idea of an industrial combine was a blind pool—the Amalgamated Copper Company was a flagrant example; but regarding no Trust was much knowledge of an official character obtainable. To be sure, it was believed by some that the virtue displayed by the Steel Trust sprang from an ulterior motive. In order to make the common stock active, the early declaration of dividends was desirable; but it was necessary to justify this course—hence the publication of earnings.

The earnings may or may not cease to be given out. This, however, can be said: the policy of publicity having once been adopted by the Steel Trust, it can never be abandoned without gravely impairing the prestige of the concern. It may be that the virtue of this conporation in the matter of publicity has been merely accidental. None the less, it has created a standard to which other corporations will gradually have to conform. The Steel Trust may reverse its practice; it may be managed hereafter by men who will employ the old blind-pool methods of the Standard Oil enterprises. But it has shown what excellent results can be attained by a policy of voluntary publicity. The Steel Trust has had a position in the stock market which few Trusts have been able to acquire. Its stock has been widely distributed, whereas most of the industrial combines have found it practically impossible to get their common stocks out of the hands of the promoters and underwriters. People are not such fools as many suppose. They exercise some discretion in going into a blind pool. Glance a moment at the most notorious instances of this sort—the Standard Oil, the American Sugar Refineries, and the Amalgamated Copper Companies. The public did not get into the first until it had demonstrated its safety beyond all reasonable doubt, and the same can practically be said of the second. Besides, both the Standard Oil Company and the Sugar Trust were formed long before the recent Trust period. The speculative character of the Sugar Trust was not ignored in the late eighties and early nineties, but a concern that went on year after year paying big dividends on its common stock was pretty sure to find its securities regarded as a sound investment eventually. The public unquestionably went into the Amalgamated Copper deal in very large numbers and lost heavily; but this was because the project was engineered by men whose names were regarded as a guarantee of success.

It is practically true that the investing public have let the Trusts alone because of the lack of knowledge of their affairs. If this was the case in the heyday of the combines, it will be still more so in the future. And yet investors would have been glad to buy the Trust securities if they could have done so with their eyes open. Those of them who actually bought into the blind pools acted in accordance with a tendency which has long been noted. The great increase in the wealth of the nation has necessitated a broadening of the securities market. The Trust movement of 1897-1902 was a rash attempt to satisfy a felt need. The railroad reorganization movement which followed the panic of 1893 had so strengthened the position of a vast amount of securities as to drive them into strong-boxes, leaving the floating supply inadequate to absorb the rapidly increasing wealth occasioned by the repeated good harvests and the improved industrial situation. Demand was so far in excess of supply that the idea got abroad that almost anything would sell, and Trust promoters did not feel called upon to scrutinize their own methods too closely. But this was a mistake; the investing public, for the most part, continued to ask what sort of things they were buying.

Many causes have contributed to the industrial Trust movement, but one of the strongest has been the necessity of centralizing capital in a way to admit of large issues of securities against the manufacturing business of the nation. The crude attempts made in the last six or seven years in this direction do not of themselves vitiate the movement. The mistake was made of supposing that "water" would do as well as real value. The water is still being squeezed out; but the most paradoxical feature of the whole situation is that the Trust which broke every record known to mankind in the matter of industrial capitalization, was also a pioneer in the one point essential to the real diffusion of industrial securities. Industrial corporations can have no solid standing in the stock market without publicity of accounts. The demand for such securities is bound to increase very fast. The public must have them; and if the corporations do not voluntarily publish periodic statements of earnings and balance sheets, a movement to compel them to do so will be pretty sure to assert itself.

"FROM A SMALL GARRISON."

Out of a small garrison, Forbach, in Alsace-Lorraine, has come a book from the pen of a Prussian officer, Lieut. Bilse, which, by its gloomy pictures of decadent military life as seen in a frontier town, has stirred Germany from end to end. By those opposed to militarism, it has been hailed as a veritable 'Uncle Tom's Cabin.' By most defenders of the Prussian army, it has been indignantly denounced as a gross libel. But it gave rise to one of the most brilliant Reichstag debates of recent years, in which Chancellor Bülow locked horns with Bebel, and the new Minister of War, Gen. von Einem, made his début in defence of the army. "When I had read that book," said the Minister, "I threw it aside with disgust, and declared it disgraceful that a Prussian officer should have written it." Later he announced: "A second Forbach is not possible in the Prussian army."

But that there was one Forbach and that it was truthfully described, Gen. von Einem has admitted more than once. Why else should every officer in the Forbach battalion save three have been immediately cashiered, transferred or otherwise punished? Why else should the Minister have publicly placed the blame upon the commanding officer for the conditions described? Why else should he hasten to explain that such rottenness exists nowhere else in the army? Yet, while thus confessing the truth of the picture painted by Lieut. Bilse, he sent that officer to a fortress prison for a year, dismissed him from the service for violating army regulations and disseminating slanders, and brought about the confiscation of the offending book. Such gratitude for truth-telling is, of course, characteristic of the despotic system at which Lieut. Bilse's criticisms were aimed. The very suppression of his volume enormously increased the demand for it, so that the publishing-house in Vienna which is now printing it cannot begin to supply the demand from all quarters of the globe.

Yet Lieut. Bilse is neither a Social Democrat nor one opposed to militarism *per se*. His is essentially the work of a man who loves his profession, and who would abate certain evils which he attributes to exceptional conditions and to the results of a thirty years' peace. Apart from his sad chronicle of the habitual drunkenness of his fellow-officers, of their lack of professional zeal, of their adultery and immorality as being due to the laxity of an inefficient commander, the book is essentially a tract written with so much earnestness and feeling as to engage the reader's sympathy. Lieut. Bilse's two most attractive characters are the best officers in the regiment, yet both of these are forced to resign, one because he was unjustly denied promotion, the other because of an indiscretion which involved no wrong-doing. It is into the mouths of these men that Lieut. Bilse has put his suggestions for army reform.

One of them, Capt. König, would have the War Office energetically oppose the luxurious methods of life which lead so many officers to destruction. He would have the officers consider themselves less a class by themselves, ranked by divine right above all civilians, and more the servants of the people, chosen to teach the young men of the nation for periods of one to two years. Capt. König would make the service so attractive that every soldier would leave it with regret, while more patriotic, more devoted to his sovereign than ever before, instead of, as so often nowadays, a ready recruit for the Social Democracy. Surely, Gen. von Einem cannot take exception to such sentiments as these.

In order to show more clearly how the ordinary soldier is made receptive of the doctrines of the Social Democrats, Lieut. Bilse rather awkwardly interjects into his narrative the story of a faithful non-commissioned officer of nine years' service, who, because of false accusations and official red tape, is degraded and imprisoned, and then turned out into the world without a cent, to make his way as best he can. This man prospers, and in due time appears on the platform as one of the ablest of the Social-Democratic leaders. A private who is denied coal for his barracks room by a bickering sergeant dies of pneumonia. Another is scarred and maimed for life by being pushed against a kicking horse by the same sergeant. Another deserts after being repeatedly struck and abused by the lieutenant whose servant he was. That these are altogether exceptional cases even Gen. von Einem could not allege. A week earlier there was tried and sentenced Sergeant Breidenbach for more than one thousand specified cruelties to subordinates. His immediate superior, Lieut. von Hellermann, is now serving a sentence of three months' confinement to his quarters. The War Minister roundly denounced such wrongdoing, but he condoned the "harmless box on the ear" which is the usual beginning of such excesses of authority.

All in all, the success of 'From a Small Garrison' must be attributed not so much to the book itself as to its having touched responsive chords among the people. Every German citizen is more or less familiar with some of the evils Bilse has portrayed. There may have been, and probably was, a little more immorality and drunkenness in Forbach than in Mainz or Heidelberg or larger garrisons, but the destructive and demoralizing tendencies exist in the larger towns, and will remain there because they are inherent in the military system. And this the German people are gradually coming to realize in greater and greater numbers, in large part owing to the propaganda of the Social Democracy. They are beginning to tire seriously of the drain upon the country's resources because of so great an army, and they are giving up their sons less willingly than heretofore to two years of unproductive labor. But there must needs appear more than one tract similar to Lieut. Bilse's before the truth strikes home.

NEW LIGHT ON THE CONSTITUTION

The Constitution of the United States is no longer regarded in the light of a fetish, by either politicians, statesmen, or students of history. Politicians and statesmen, it is charged, either do not regard it at all, or tell us that it must be "adapted" to changing conditions. Historians, on the other hand, are turning to the Constitution with new interest, though their point of view is widely different from that of the practical statesman. Of mere laudation there has been quite enough, and the modern student approaches the Constitution as a critic, destroying if he must, reconstructing where he can. One lesson is by now fairly well learned: the Constitution is no mere "creation," but is an adaptation of institutions that had long been familiar to its framers. As yet there has been little textual criticism, though there is clearly recognizable a tendency in that direction. For exact and valuable criticism of this sort students are indebted to no one more than to Prof. John Franklin Jameson, whose recent 'Studies in the History of the Federal Convention of 1787' has been reprinted from the report of the Historical Association for 1902. There are eleven studies, covering only seventy-eight pages in all. The first three deal with the letters from members of the Convention; the last three are bibliographical. Studies iv. to viii., inclusive, deal critically with the various "plans" out of which the Constitution was finally fashioned. It is these five studies which give high value to the series; their value, indeed, is out of all proportion to the modest claims made for them by their author, and it may be well to call special attention to them before they are finally interred in that grave of respectable dull things, the Association Reports.

The Virginia plan, presented to the Convention by Gov. Randolph, is taken up first. There remain to us four different texts of this plan. All of them are copies, and none of them, in the opinion of Professor Jameson, reproduces exactly the original. Slight variations would, of course, inevitably appear in copies, which, we may assume, were made rather hastily. But another, more serious source of variation is ordinarily overlooked. The texts which we have were made from copies that members of the Convention made in their own hand for their own use. They were not thinking about keeping their copies intact for future historians, and, consequently, "there would always be much chance that a member, following the progress of debate and conclusion with his paper before him, should interline it with some of the additions or amendments which were successively resolved upon, and that these should creep undistinguished into some fair copy which he might subsequently make" (p. 105). Prof. Jameson is able to show clearly enough, by reference to the Journal of the Commit-

tee of the Whole for June 4 and 5, that some important variations in resolutions six and nine of the Madison text were made in this way, and the original ninth resolution he has been able satisfactorily to reconstruct.

The fifth study is a new and successful attempt to reconstruct the plan presented by Charles Pinckney. The history of the document sent by Pinckney to John Quincy Adams in 1818, and published in the journals in 1819 as the "Pinckney plan," is well known. Its resemblance to the report of the Committee on Detail was so close as, à priori, to raise suspicion. It was almost immediately discredited by competent judges, and since 1840 it has several times been proved to be anything but the original Pinckney plan. Professor Jameson reviews in his clear and telling style the evidence against the authenticity of the document, and then proceeds to reconstruct in outline the plan which Pinckney actually presented. The conclusion is, that Pinckney's plan closely resembled the Virginia plan, though it gave more attention to the executive and judicial departments, and added some new features, like the provision for a council of revision, from the New York Constitution. Confirmatory evidence from three independent sources is presented to bear out these conclusions. First, anything advocated by Pinckney, early in the Convention, against the general opinion may be assumed to be part of his plan. Second, a letter from Read to Dickinson, May 21, describes a plan that can only have been Pinckney's. Third, the 'Observations,' published by Pinckney shortly after adjournment, whether ever actually delivered in the Convention or not (Professor Jameson thinks they were not), cannot differ widely from the plan which he presented. The evidence gathered from these three independent sources makes it quite clear that the plan which Pinckney sent to Adams in 1818 was not the original plan at all.

What, then, was it? Professor Jameson's reply to this question is as discreet as it is suggestive: "It is not possible to say that Pinckney answered Adams's request by setting down and copying the printed report of the Committee on Detail, paraphrasing to a small extent here and there, and interweaving as he went along some of the best remembered features of his own plan. But it is possible to declare that if he had done this the result would have been precisely like that which in fact he sent to Washington" (p. 124). This admirable distinction does not hide the fact that Pinckney, however he may have arrived at his results, was more interested in making it appear that the Committee of Detail got most of its thunder from him than he was in furnishing Adams with an exact copy of his original plan. The supposition that the report of the Committee on Detail was copied from Pinckney's plan, rather than vice versa, is conclusively disproved by Professor Jameson. We cannot go into the question here; those who still doubt (or still believe) are referred to the Studies direct.

When this reconstruction of Pinckney's plan was all but completed, the author came across a manuscript containing a copy of considerable portions of the plan itself. This manuscript was James Wilson's rough draft for the Committee on Detail, in the possession of the Pennsylvania Historical Society, published as number viii. of these Studies. That we have here portions of the long-lost Pinckney plan, Professor Jameson has no difficulty in showing; so far as it goes, it confirms in every respect his own previously worked-out conclusions. But it does more than that: it shows that, contrary to the general belief, Pinckney's plan was used by the Committee on Detail, and it is now possible to refer to precise clauses which were incorporated into the report of that committee. The conclusion of Professor Jameson is apt: "As a maker of the Constitution, Charles Pinckney evidently deserves to stand higher than he has stood of late years, and . . . he would have a better chance of doing so if, in his old age, he had not claimed so much."

Studies vi. and vii. deal critically with the New Jersey plan and the outline of Hamilton. Of the former there are four texts, but it is impossible to reconstruct the original with certainty. Professor Jameson has, nevertheless, brought to light two important manuscripts, preserved in the Paterson papers, which are shown to represent preliminary stages in the elaboration of the plan in question. The eight texts of Hamilton's outline are treated in the same careful manner, and, in spite of the fact that Hamilton's own copy has been preserved, there is no sufficient evidence "for declaring with confidence that any one of the variant texts represents exactly the original document which was brought before the Convention."

Certainly Professor Jameson has placed all students of American history under obligations for these excellent studies.

THE WINTER EXHIBITION AT THE ACADEMY.

LONDON, January 2, 1904.

It is long since the Royal Academy of Arts has had to face such severe and sustained criticism as during the last year or so. Its schools have been declared inefficient, its summer exhibition a farce, its choice of members an insult to art, its administration of the Chantrey Bequest a swindle. Some concessions, already, the Academy has felt compelled to grant. It has introduced certain innovations into its schools, it has changed the rules in regard to the submission of work both by Academicians and by outsiders for its annual show. But where concession would mean confession of hopeless inability, it has "sat tight," with the perseverance characteristic of its methods. No defence has been offered to the attacks upon the manner in which money, left by Chantrey for the purchase of works of art "of the highest merit," has been squandered on popular "pictures of the year" that happened to be by Academicians or their friends, until the Chantrey collection in the Tate Gallery has become a reproach to every intelligent artist and art-lover. Indeed, to leave no doubt as to their attitude, those Academicians who hold the Trusteeship because of their official rank made, if anything, a feebler selection than usual last spring, when the attack was just beginning in several influential papers; and I do not think that anybody has ever been given such practical proof that art has little to do with the election of Academicians as in the Winter Exhibition for 1904 that has just opened. Let me explain.

This exhibition is supposed to be, and as a rule is, one of Old Masters. But it is now a fairly well-established tradition that, when the occasion presents itself, space should be reserved for the work of Academicians who have died within the past twelvemonth, or, at least, since the organization of the show of the preceding winter. When this led to the exhibition of Millais or Leighton, there seemed some justification for such a reservation. There was a period in Millais's career when he came very near developing into a master in every sense of the word; Leighton, indifferent painter as he might be, or rather was, had large ideas of the dignity of art. His work, as his admirers never ceased to urge, seldom failed in scholarship. It was learned, which is something when beauty is so rare. But take the three men who, owing to the chance of death, this year receive the honor of special representation. They are H. T. Wells, T. Sidney Cooper, J. C. Horsley, whose names, I fancy, are unknown in America, or, for that matter, anywhere outside of Great Britain. Horsley did make quite a reputation for himself, and about ten or fifteen years ago, was very prominently before the British public. But it was not due to his painting, Royal Academician though he was; it was simply because of his energetic protest against the nude in art—a protest that went straight to the heart of the British Mrs. Grundy. I really had forgotten what manner of picture he manufactured until I came into the room where several have been hung. He was a painter of the anecdote, domestic or historic as the case might be—now a little story of "Mary, Queen of Scots, in Captivity," now of "Rent Day at Haddon Hall," or again of "The New Dress"; each and all in appropriate costume. It was not his fault, perhaps; it simply happened that anecdote was what was expected of the painter when he began to work.

Sidney Cooper, no doubt, was known better and more widely. He found his subjects in cattle and sheep, and he became in the end quite a conspicuous personage because of his vigor and industry in a patriarchal old age. In reports of the Academy, the critic loved to write and the public loved to read of the "veteran" Sidney Cooper, the "doyen" of the Academy, and so on. The few pictures included in the present show explain that he must have first made his mark by his patient and painstaking study of the Dutch painters of similar themes, of men like Verboekhoven.

Wells, it seems to me, must have had more in him at the start than either of the other two. I was surprised when I came upon a fairly large "Portrait Group" by him, dated 1861-62. The faces of the four people gathered about the dinner-table, upon which the cloth is still spread, the fruit and glasses not yet removed, have little character, it is true. But some of the detail —the white cloth, the white gown of the one woman, the oranges, the delicate tint of the glasses—is all excellently rendered, while there is something in the conception and arrangement of the whole group that makes me wonder if Wells did not come for a time under the influence of Fantin-Latour and some of the younger men then working in Paris. But if he did, he profited so little

that less than ten years later he was painting a huge portrait of Hatherley, the Lord Chancellor, in his official robes at an official function, that is as dull and wooden and perfunctory as the great British public could desire.

Now the work of these three men being, as it is, completely insignificant, it might be useless to mention it at all were it not for the impossibility of going into the room which it fills without remembering that during the last twelvemonth a painter who was really a master has also died in London, and that for him there is now no space on the Academy walls. That Wells, Cooper, and Horsley were Academicians, while Whistler never received official recognition, demonstrates better than almost anything I could write the absolute failure of the Royal Academy as an institution representing all that is greatest and finest in the art of men working in the country that supports it. It is said that the Academicians did intend to pay Whistler after death the tribute they had denied him during his lifetime. The rumor also is that they were refused in the quarters to which they applied for his work. It is as well. His absence is really his most eloquent justification.

Evidently, Academicians have felt that the three painters for whom they have been obliged to find a place among the masters do not figure altogether to their credit; and so they have given still more special prominence to one of their former presidents, Sir Thomas Lawrence. I am not sure if so many portraits by Lawrence have ever been gathered together before. Certainly, I have never seen so large and representative a collection. But I hardly think that Lawrence gains by this sort of "one-man" show. He was an extremely accomplished painter; of that there can be no question. He was the last of a great school; he inherited a fine tradition, which exercised some restraint upon him even at his worst, though he did a great deal to belittle it before handing it down, in turn, to his successors. He was an excellent draughtsman, if at times he did do extraordinary things in the way of bad drawing; and his technical command was masterly enough to win him the recognition of the French, who, for long, knew no other English painters than Lawrence and Constable. But with the fine tradition there had come also to Lawrence that tendency to the artificial, the affected, which was always characteristic of English portraits from the time Van Dyck was summoned to England to paint them. Van Dyck reduced his method to a formula. Even now, at the Academy, one of his portraits of Henrietta Maria, hanging between a simple Dutch matron by Rembrandt and the "Juan de Pareja" of Velasquez, reminds one how essentially conventional was his way of looking at the people he painted, compared to the fine realism of the Dutch and Spanish masters. Lely and Kneller, with their simpering shepherdesses and posing cavaliers, exaggerated the formula almost to an absurdity. Even Reynolds could not escape, but hovered perilously near the ridiculous when he made his sitters figure in allegories and myths, and gave to his little girls and boys the sweetness that has been such a snare for modern painters far less great than he. And it was this sort of sentiment or sweetness that Lawrence, living in a sentimental age and himself a sentimentalist, carried to excess. When only one of his pictures is seen, his very artificiality, his aggressive affectations, may seem amusing. But when, as now, it is found repeated in portrait after portrait, it becomes cloying and tedious to the last degree.

The test to which he is submitted at the Academy is by no means an unfair one. Many of his most famous and popular pictures are included: the "Miss Farren" that has been so often engraved; groups like "Countess Gower and Child," "Lady Acland and Children," to which the engraver Samuel Cousins gave such wide popularity; the attitudinizing "Master Lambton"; the large portraits of Pius VII. and Cardinal Consalvi, painted for the Waterloo Gallery at Windsor and now lent by the King; and as many more no less well known. In most of these he seems simply possessed by a demon of prettiness; not only in his children, where there might seem more excuse for upturned eyes, sham pathos, self-conscious posing—all the more artificial in the case of a series of the children of the Abercorn family because of their delightfully absurd "sun-ray" frames; but the same sweetness or sentiment runs riot in his women, in his men. His own portrait, though one of the best shown, is full of it; so is the "Benjamin Gott, Esq.," the "Hon. Berkeley Thomas Paget," even the Pope and Cardinal.

Lawrence, again, had a very fine sense neither of color nor of composition. He did not seem able to scrape his palette clean of the hot, sharp red that appears in one picture after another, now in a curtain, now in a chair, now in a bit of drapery, now in a space of sky or glimpse of landscape. Nor could he get the broad simplicity and quiet dignity that Van Dyck, for instance, gave to a background, though the materials are the same. How ugly the lines made by the curtain that opens behind the throne of Pius, and how confused the architecture seen beyond; how the accessories in the portrait of the Cardinal distract from the interest of the figure, already none too interesting in itself! And yet these are two of his most celebrated pictures. What a weakling Pius would seem by the side of Velasquez's Julius; how little Consalvi could hold his own with one of Holbein's simplest ecclesiastics, or of Reynolds's statesmen—for example, the portrait of Charles James Fox as a young man, in the same gallery. Really, the most satisfactory Lawrence is the "Miss Farren." It is curious that here, where there might have been some reason for the theatrical, nothing could be simpler. The tall, graceful woman in white, holding her cloak at the neck with one hand, while the other drops at her side as if from the delicate weight of the large feather fan it clasps, seems about to step across the canvas, and is delightfully placed against a broad, open landscape and wide space of blue sky. There is very subtle, very tender rendering of textures in the white satin of the cloak, the white clinging muslin of the gown, the gray feathers of the fan. The lines are free and flowing, the whole picture full of charm, the exception that will not disappoint those who have hitherto seen it only in the many prints. And yet, I believe it is one of Lawrence's earliest works, done before he had become so distressingly the fashion. Several drawings by him, two or three being notes for the pictures, are also shown. Altogether, there has not been, at all events in recent years, such an excellent opportunity to study the work of one of the few distinguished artists who have succeeded Reynolds as President of the Academy. As if to prevent the public from falling into the error of supposing that all were as distinguished, a number of pictures by Sir Francis Grant are hung with the Lawrences. They would seem more at home in the Summer Exhibition.

The rest of the collection is rather a medley. Apparently Academicians feel it incumbent upon them to provide the Morellian with his opportunity for attributions, and, accordingly, a room is filled, more or less, with early Flemish and Italian masters. There is nothing very notable, though one or two marvellous little studies of detail by Flemings, known and unknown, one or two decorative Madonnas by Florentines, and a beautiful "Young Man with Hand on Skull," attributed to Giorgione, will remain the fine or charming things they are, no matter by what other names they may be labelled before the exhibition closes. There is also a dignified series of Van Dycks, including the stately "Lord John and Lord Bernard Stuart." The only Rembrandt and Velasquez are the two I have mentioned. A few Venetians are scattered here and there. Reynolds, Romney, and Raeburn have a place, though not a very prominent one, and there are at least two landscapes that interested me—or perhaps I should say three, and include Hobbema's "On the Road to Scheveningen," that has something of the large impressive composition of the National Gallery picture. Of the other two, one is a "View of Verona," by Canaletto, admirably put together; the Adige, between its white houses, leading up to the Castel San Pietro on its little hill, and, above, the Italian sky, spacious and serene. The other is a rocky, barren Spanish valley, with the Escorial set down in its midst, attributed to Rubens in the catalogue, though immediately afterwards a note explains that Rubens asserted the picture to be by Verhuist. There is certainly little in it to suggest Rubens, and as a landscape it is of no particular importance; but as a topographical record made at an early date in the history of the Escorial, it has its value. Despite the exceptions, the series of Old Masters, as a whole, has often been surpassed in previous years.

The fact is, Academicians have tried to do too much. In addition to the three painters to whom I have referred, they have also undertaken to honor two other of their recent fellow-members, the sculptors Onslow Ford and Harry Bates. Neither is shown to advantage, while both are overshadowed by the large collection of bronzes, chiefly Italian of the fifteenth and sixteenth centuries, arranged in the same room. These, lent by several collectors, add to the confusion of an exhibition in which unity has been as completely disregarded as on the walls of the summer show.

N. N.

THE CHEVALIER DE LIMOËLAN.

PARIS, December 30, 1903.

M. Lenotre is incessant in his researches in the mysterious domains of the French Revolution. He goes down into the lowest

parts of the crypts of history, shows us many curious characters who either are forgotten or have always escaped notice. The earnestness of his work and its melodramatic character have won him the favor of the public. It is pleasing to leave the great stage of history and to enter the dark *coulisse*. There is also a highly philosophical side in this author's reconstruction of despised or forgotten characters. Lenotre shows us, perhaps unconsciously, the complex character of human nature. The humble heroes, the criminal figures that he depicts, reveal this extraordinary complexity, which probably becomes more apparent in revolutionary times, when life ceases to have a calm and natural flow.

The last character he has drawn out of a deep shadow is a certain Breton gentleman, the Chevalier Limoëlan.

"The chevalier," he says, "was one of those noblemen who, from their twentieth year, thrown into the Breton *chouannerie*, led the adventurous life of partisans, knew sleepless nights, in winter without a roof, proscribed, hunted, outlawed, and who became brigands. He made war against the *Bleus*, attacked the diligences—a sport which was in high favor in the time of the Directory—and conspired, like everybody else."

After the pacification of the Vendée, he affected to admire Bonaparte, the First Consul, and to long for a quiet life. He lived with very pious relations, and became engaged to a young lady of Versailles, whom he intended to marry as soon as his name was erased from the terrible list of the *émigrés*. He wrote to the Minister of Police on the 3d of December, 1800:

"Though I have not been treated in such a way as to enable me to have confidence in the Government, since I have not yet been erased from the list of the proscribed, as was positively promised me, I am not so mad as not to recognize its strength and consequently conspire against it. I assure you, Citizen Minister, that my sole aspiration is for absolute tranquillity, and that I remain in Paris only because I am afraid I should not have peace in Brittany."

Limoëlan had, however, another object: he had come to Paris to make an attempt on the First Consul. The Royalists for a little while had some hope that Bonaparte would become a Monk. They had been obliged to abandon that hope, and had come to look upon him as their most dangerous enemy. The Chevalier found an accomplice in an old companion-in-arms in Brittany, named Saint-Réjant. They had at their service an elderly Chouan, named Carbon, who had been valet to Limoëlan. They thought at first of attacking Bonaparte in the neighborhood of Malmaison, but the Consul was always surrounded by a strong escort. They thought of blowing him up in his carriage in Paris, when he was on the way from the Tuileries to the theatre. Dynamite was not yet invented, and they had recourse to common gunpowder. They filled a cask with it, and placed it on a common cart. On the 22d of December Limoëlan, Carbon, and Saint-Réjant, dressed like common carters, with blue blouses, conducted the heavy cart from the Rue St. Martin to the Rue Neuve-Égalité (Rue d'Aboukir). Carbon there left his companions, and two men, who remain unknown, helped Limoëlan and Saint-Réjant as far as the Place du Carrousel.

The Carrousel was still, at that time, very irregular, and was half covered with houses, which disappeared only during the Second Empire. The First Consul was to go that evening to the Opera, to hear Haydn's oratorio, "Saul"; the performance was to begin at eight. Only Limoëlan and Saint-Réjant remained with the cart; they had two hours to wait. Limoëlan posted himself at the corner of the Carrousel in order to advise his companion of the Consul's arrival. Saint-Réjant, pipe in mouth, charged himself with setting fire at the proper moment to a tinder fuse; which was to burn some seconds before the explosion—long enough to give him time to run and seek shelter in the Rue de Malte.

"The moment approaches," says Lenotre. "Saint-Réjant turns the horse and places him so that the cart shall occupy half the street; he offers twelve sous to a little girl, thirteen or fourteen years old, to hold the horse's head a moment. The child accepts. They have to wait a few minutes more. Eight o'clock strikes; the cavalry escort comes out of the Court of the Tuileries. Saint-Réjant watches for the signal which Limoëlan is to give. . . . But Limoëlan does not move. Already the grenadiers of the Guard approach at a high trot, are lost in the Rue Sainte-Nicaise. Saint-Réjant, surprised, takes the fuse and applies his burning pipe."

What happened after the explosion? None of the witnesses in the trial which followed could exactly tell. The detonation was fearful; all the houses in the neighborhood fell. The carriage of the First Consul was already at a distance; it simply shook with the commotion of the air, as did all the horsemen, who felt themselves lifted from their saddles. The cart, the horse, the little girl had disappeared; the Apollo Café, to which the wounded and the dead were transported, presented a scene of carnage.

For a whole month Fouché's police made vain endeavors to find the instigators and the actors in the plot. Were they Jacobins? Were they Royalists? At last the police found traces of Saint-Réjant. He had been blown by the explosion under a door of the Louvre; he ran, almost unconscious, to the Pont Royal, made a bundle of his blouse, which he threw into the river, and went by a roundabout way to the room which he occupied in the Rue des Prouvaires. He was very ill, and was spitting blood. The next day he took refuge in the Rue d'Aguesseau, in the house of a Citoyenne Jourdan. There he received, by the hands of two nuns, five hundred francs on the part of M. de Limoëlan. Carbon found another refuge in a house where lived a Mlle. de Cicé, an elderly nun who was, so to speak, under the guidance of Father de Clorivière, an uncle of M. de Limoëlan, a Jesuit, whose ambition was, under the Republic, to reconstitute the Society of Jesus, and who remained in Paris during the worst days of the Terror. The house of Mlle. de Cicé was a sort of cloister; the monastic life did not please Carbon; he left the convent on the 18th of January, and was arrested in the evening of that day. A week afterwards, the police found Saint-Réjant, who was wandering without any asylum. The examination of Mlle. de Cicé, and of various women living with her, proved that Limoëlan was the principal instigator of the plot.

"Mlle. de Cicé was heroic. She undoubtedly knew the retreat of the young Chouan; she knew at least where was hidden Father de Clorivière, who was never discovered, and of whom she was the devout and faithful servant. Several louis had been found in her room, wrapped in a paper on which was written, 'Argent de ces Messieurs.' What Messieurs? The Royalists? The conspirators? She would say nothing; she tired the patience, the cleverness, the tenacity of Réal, of Limodin and Desmarets, the able acolytes of Fouché. . . . Fouché was reduced to letting it be known he had agents in all the camps, that he would spare the life of Limoëlan if he consented to see him. Limoëlan sent him an answer, by Bourmont, it is said, that he had no confidence in the minister."

Carbon and Saint-Réjant were condemned to capital punishment on the 1st of April. Meanwhile, Limoëlan was hiding in the abandoned crypt of the Church of Saint-Laurent: he remained there four months, when he succeeded in leaving Paris and regained Brittany. Curiously enough, his crime had transformed him; he had always been pious, he became a mystic. Lenotre will have it that remorse entered his soul at the very moment of the execution of his plot; he never gave the signal which he was to give to his accomplice.

On his arrival in Brittany he learned that his fiancée had made a vow to become a nun if he escaped the scaffold. She had just taken the veil. He booked as a common sailor on a merchant ship, and lived some time in New York under the name of Guitey, painting portraits which probably still exist. In 1806, we find him in Savannah, afterwards in Baltimore, where he entered the seminary of the Sulpicians of Sainte-Marie, to find a retreat. He wrote to his sister, Madame de Chappedelaine: "All my past views seem to be now very petty, and I have never so much regretted the time that I have lost." He added: "I will answer the wishes of my uncle, so often addressed to Heaven. I have been slow to express my gratitude for an almost miraculous preservation. . . . You know what I mean."

His letters were infrequent, and the English cruisers often stopped the ships coming from America. In the United States, people were quite ignorant of his identity and of the part which he had played. At the Seminary in Baltimore he was known under the name of Clorivière. Some people believed that he was a Bourbon prince, miraculously escaped from the prison of Bonaparte. He never spoke about the past, but wore the cross of Saint Louis, which, he said, had been sent to him in 1800 by the brother of Louis XVI. He was ordained a priest on the 1st of August, 1812, and Archbishop Carroll of Baltimore made him curate of Charleston. He was not well received there by the populace, which was imbued with revolutionary ideas. He was looked upon as a Royalist *émigré*, and his situation was so painful that he was tempted to return to France after the Restoration of the Bourbons. He had already taken passage for Havre when a pious person begged him to remain and to assume the direction of the Sisters of the Visitation at Georgetown. He accepted the offer; the Sisters looked upon Father de Clorivière as a saint and a martyr. He never saw France again, and died in October, 1826.

Correspondence.

THE PETRARCH MONUMENT.

To the Editor of The Nation:

Sir: Next July, Italy celebrates the 600th anniversary of the birth of Petrarch, and

Arezzo, his native place, will dedicate a monument to him. It has been suggested that there are archæological societies, as well as individuals, in the United States that would be glad to avail themselves of the privilege of contributing something towards this monument to the pioneer of Humanism and of all modern scholarship.

Throughout Europe, contributions are being made, not by philologists only, but by lovers of literature, who honor in Petrarch one of the masters of modern poetry, and, after Dante, the spokesman in verse of modern love. If every living American who has ever written a sonnet will discharge his debt to Petrarch by subscribing to this fund for Petrarch's monument, our American quota will be worthy of America's reputation for generous giving.

Subscriptions may be sent to Prof. Richard Norton, Director of the American School, No. 5 Via Vicenza, Rome, Italy, or to either of the undersigned. In either case they will be acknowledged and forwarded to the committee in charge of the celebration.

Very truly yours,

WILLIAM ROSCOE THAYER,
8 Berkeley St., Cambridge, Mass.;
THOMAS WENTWORTH HIGGINSON,
29 Buckingham St., Cambridge, Mass.

THE KANT CENTENNIAL.

TO THE EDITOR OF THE NATION:

SIR: At the recent meeting of the American Philosophical Association held at Princeton, the question of a recognition of the hundredth anniversary of the death of the philosopher Kant was referred to the Executive Committee, with power to act. The time has seemed to the Committee too short for any formal recognition of the event by the Association as a body on the day in question, which is, moreover, an inconvenient time for a meeting; but the following memorandum has been approved, and it is desired to give to it the widest possible circulation among those interested. Will you kindly contribute to this by giving it a place in the *Nation*, to the end that the occasion may not pass without some commemoration, in our colleges and universities, of the work of the most epoch-making and influential philosopher of modern times? H. N. GARDINER.

NORTHAMPTON, MASS., January 17, 1904.

KANT CENTENARY.

"The members of the American Philosophical Association, by its officers, desire to call the attention of all teachers of philosophy to the fact that next February 12 is the centenary of the death of Immanuel Kant. They respectfully suggest that such memorial notice should be taken of this fact as in each case seems practicable. It is hoped that a more formal celebration of the illustrious services of this great thinker may be arranged for at the next meeting of the Association.

"(Signed) GEORGE TRUMBULL LADD,
"President.
"H. NORMAN GARDINER,
"Secretary."

TITIAN AND THE PERVIGILIUM VENERIS.

TO THE EDITOR OF THE NATION:

SIR: If Miss Keyes can prove that Titian possessed a copy of Catullus in which the "Pervigilium Veneris" was included, she will have carried the date of the first publication of that poem back by half a century or more. Until, however, such proof is forthcoming, I think we must adhere to the accepted version, according to which the "Pervigilium" was first published, from the only manuscript then known, by Petrus Pithoeus, in his edition of Petronius, Paris, 1577. Pithoeus had previously sent a copy of the manuscript to Justus Lipsius, and these two eminent scholars agreed in welcoming the discovery as a novelty, and one of the highest interest. It does not, therefore, seem possible that Titian can have had access to a printed copy; or to a manuscript one either, for in this case others must have had access to it also, and so precious a remnant of antiquity would not have been allowed to remain unpublished.

A comparison between the poem and the picture will show the impossibility of there being any direct relation between them, notwithstanding the general resemblance in their spirit justly pointed out by Miss Keyes. The "virgo Delia," whom Venus invites to her festival, is not a nymph, but the Delos-born Diana, as sufficiently evidenced by the appeal to her to refrain from hunting during the period: "Ut nemus sit incruentum de ferinis stragibus." But, although the undraped figure in the picture may possibly be Venus, or Peithoo, no one can believe either figure to represent Diana. There is no resemblance between either and the representations of Diana; nor is there, either in the personages themselves or in the accompanying sculpture, a vestige of the symbolism which in such a case could not have been wanting. It is, moreover, certain that a painter proposing to illustrate the "Pervigilium Veneris" would take care to make his landscape accord with the aspects of spring. The festival celebrated in the poem was held in spring, and the piece is almost as much a hymn of Spring as a hymn of Venus. "Ver novum, ver jam canorum, vere natus orbis est." There is nothing vernal in the picture: the leaves are fully formed, the rose is fully expanded, there is not a spray of blossom to indicate the season when "concordant amores, nubunt alites."

I cannot bring myself to leave the subject without citing the felicitous translation of the refrain of the "Pervigilium," "Cras amet qui nunquam amavit, quique amavit cras amet," in the 'Angel in the House' of the late Coventry Patmore:

"Let those love now who never loved,
Let those who have loved love again."

I remain, dear sir, yours very truly,
R. GARNETT.

HAMPSTEAD, ENGLAND, December 30, 1903.

[With this we will take leave of a theme as complex as it is interesting.—ED. NATION.]

Notes.

The Arthur H. Clark Co., Cleveland, announces "a series of annotated reprints of some of the best and rarest contemporary volumes of travel, descriptive of the aborigines and social and economic conditions in the Middle and Far West, during the period of early American settlement," under the general title of "Early Western Travels, 1748-1846." They will be edited, annotated, and analytically indexed as a whole by Reuben Gold Thwaites. Facsimiles of the original title-pages, maps, portraits, views, etc., will be further valuable features of this large enterprise. There will be 750 complete sets, with a separate sale of certain single volumes. The issue will begin in February, and will be at the rate of one volume a month—the thirty-first volume being the index.

Spring announcements by McClure, Phillips & Co. are 'Religions of Authority,' by Auguste Sabatier, translated by Louise Seymour Houghton; 'Human Work,' by Charlotte Perkins Gilman; 'The Shame of the Cities,' by Lincoln Steffens; 'Trusts of To-day,' by Gilbert Holland Montague; 'Making a Home,' by E. P. Powell; 'Russian Literature,' by Prince Kropotkin; 'William Butler Yeats and the Irish Literary Revival,' by Horatio Sheafe Krans, and 'Charles Dudley Warner,' by Mrs. James T. Fields.

Funk & Wagnalls Co. promise a new translation of Tolstoy's 'Sevastopol,' by Aylmer Maude, and 'Russia before the Bar of the American People,' edited by Isidore Singer.

J. B. Lippincott Co. have in preparation 'Teutonic Legends in the Nibelungen Lied,' by Prof. Wesley C. Sawyer of the University of the Pacific, and 'Forward,' a book of travel by Miss Boegli, a Swiss globe-trotter.

The Bobbs-Merrill Co., Indianapolis, will publish immediately, under the direction of Ralph Fletcher Seymour, 'The Love Letters of Abelard and Heloise,' in a limited rubricated edition with double page-borders and large initials.

In time of publication almost a campaign "Life" will be Jacob A. Riis's 'Theodore Roosevelt the Citizen,' to appear in the spring with the Outlook Company's imprint.

The Clarendon Press will issue immediately the Mimes of Herodas, with introduction, critical notes, commentary and collotype illustrations.

Dr. Höltsch, editor of the *Deutsche Monatsschrift*, has just completed and will publish in the near future an extensive work on the United States, with special reference to our political and economic development. As this is the first German work to consider systematically the activity of President Roosevelt, the author has arranged to transmit one of the first copies of the book to the President, through the German Ambassador in Washington, Count Speck von Sternberg.

The 'Letters and Memories' of Charles Kingsley, edited by his wife, in two volumes, are now added to the Library Edition of this author's novels and poems. The construction of this work cannot receive high praise, and it was all the more incumbent on the publishers (New York: J. F. Taylor & Co) to supply an index, though it would make more obvious, of course, the defects in the chronicle. There are portraits of Kingsley and his wife.

The Dent-Lippincott Temple Bible proceeds with 'Tobit and the Babylonian Apocryphal Writings,' edited by Professor Sayce, and 'Wisdom and the Jewish Apocryphal Writings,' edited by W. A. Stevenson. These dainty volumes have for ornament two frontispieces after Botticelli's "Tobit" and "Judith."

Three papers from the *Atlantic* and an

expanded address before the Harvard Memorial Society are brought together by Mr. William Garrott Brown in a volume entitled 'The Foe of Compromise and Other Essays' (Macmillan). The title essay bears rereading, and its trenchant analysis of political motive ought to prove helpful to the remnant who can still hear the voice of conscience despite the call of party. The "Defence of American Parties" is somewhat labored, and does little more than glide pleasantly over the surface of our political history, but it will carry an interest for those who like to have long periods or extended movements summed up for them in broad generalizations. The essay entitled "The Task of the American Historian," on the other hand, is a well-phrased plea for historical writing that shall be at once clear, simple, natural, honest, and interesting—a kind of writing of which the works of Parkman and Fiske are thus far the best examples. We could wish that Mr. Brown's style were not so unceasingly brilliant, and that the reader might occasionally be given a chance to take breath; but the book before us, like the same author's 'Lower South in American History,' must be given a prominent place in the field of recent American essay writing.

The Historical Manuscripts Commission of the American Historical Association has issued a selection of letters taken from the Salmon P. Chase papers, recently acquired by the Library of Congress. The two most notable features are the letters written to Chase from New Orleans in 1862-65 by George S. Denison, and the extracts from Chase's own Diary while in Lincoln's Cabinet. Denison was a New Englander who served as the agent of the Treasury in New Orleans during the occupation of the city by Gen. Butler. His duties led him to guard the port against illegal trade, and in the performance of them he found that Butler was himself involved in such ventures, permitting his brother to speculate successfully under cover of passes and permits. On this point the letters leave no room for doubt, and yet Denison admired the great energy and capacity for work that Butler showed, and regretted his removal, to give place to a more honest but less efficient executive. This very notable series of letters indicates the growth of Chase's political ambitions, to further which Denison lent himself. The same development, or rather deterioration, is shown in the general correspondence and the Diary. It is difficult to believe that the younger man, full of the contest for freedom and eager to bear his share of the needed sacrifices, is the writer of the sharp criticisms of his chief to be found in the Diary, and the schemer for his own advancement in so critical a period of the nation's history. The index is very inadequate, and a chronological arrangement of the material would have been an improvement.

'The Ship of State by those at the Helm' (Boston: Ginn & Co.) is one of the *Youth's Companion* series. It includes articles on the Presidency, by Theodore Roosevelt (written before he became President), the Life of a Senator, by H. C. Lodge, the Supreme Court, by Justice Brewer, and Good Manners and Diplomacy, by William R. Day. Adults will not find them very interesting, but they are intended for the young, for whom they afford an elementary account of the working of our institutions. The essays are, of course, rather optimistic in tone than the reverse. Mr. Lodge thinks that "the average of character and ability" in both Houses of Congress is "higher to-day then ever," and "has risen instead of declining during the hundred years of our history"; Mr. Day declares that it is "universally conceded" that our Consular Reports are "among the best, if not the best, anywhere published." Such value as the handbook has, lies in the details given of the actual operations of government.

F. Stroud's 'Judicial Dictionary,' of which a second edition has appeared in three volumes (Boston Book Co.), differs from ordinary law dictionaries in dealing with words and phrases as judicially interpreted. It also now gives statutory definitions. It seems to be intended to cover the same ground as "Words and Phrases" in one of our digests—there has always been such a title, if we remember right, in Abbott's New York Digest—but the volume is probably the only publication of the kind designed for the British Empire. That such a book is useful is a matter of course. There is an enormous amount of learning collected in these three volumes, relating to matters of everyday occurrence, which yet, except through some such compilation, is almost impossible to find. The commonest words and phrases have received in legal use interpretations which make resort to ordinary dictionaries, and often even law dictionaries, futile. Burglary, for instance, must be committed by night; but what is night? If there be *crepusculum* enough to discern a man's face withal, is there no burglary? We all think that we know what Damage means. But if the reader will turn to this title, he will find a great body of learning as to whether it includes damage to person or only to property. The titles are of unequal value, some of them going too much beyond the business of definition; but this is a defect very difficult to avoid.

Under the title 'Recent Literature on Interest' (Macmillan Co.) Profs. W. A. Scott and Siegmund Feilbogen present a translation of Böhm-Bawerk's latest criticism of the critics of his theory. The preface, by Professor Scott, gives a summary of the chief additions contained in the second edition of the 'Geschichte und Kritik der Capitalzins-Theorien,' the translation itself being of the appendix to that work. The state of the controversy about this most abstruse subject is very well set forth, both by the author and by the translator; but the number of misconceptions and misunderstandings still to be corrected is so large as to make the prospect of agreement seem remote.

One of the arguments of our protectionists used to be that the imposition of tariffs caused the production of valuable statistics; and the English publishers must certainly be grateful to Mr. Chamberlain for the stimulus given to their trade by his proposals. Among the publications thus called forth we may mention 'Elements of the Fiscal Problem,' by L. G. Chiozza Money (London: P. S. King & Son), and 'Free Trade, Protection, Dumping, Bounties, and Preferential Tariffs,' by Henry A. Agacy (Longmans, Green & Co.), both well-reasoned and earnest treatises, showing how deeply Englishmen are moved in this matter. The battle over free trade will be fought hard by both sides. A volume of lectures edited by Prof. W. J. Ashley, entitled 'British Industries' (Longmans), contains ammunition that will be used in the conflict, although the lectures were given before the present issue was fairly raised.

Prof. J. Shield Nicholson has prepared for the use of students a manual entitled 'Elements of Political Economy' (Macmillan), which is not to be regarded as merely an abstract of his larger work, although based upon it. Considering the severe condensation necessary, which precludes almost all concrete statement, the result must be pronounced successful. The treatment is simple, the style easy; and, as controversy is practically ignored, the book is readable. But where generalities only are dealt with, it is impossible to be accurate. Many nebulous propositions must serve as scientific principles, and a teacher who would use this as a text-book must know his subject. Thus, we read that "the essence of socialism is, positively, to promote the good of the whole society; and, negatively, to destroy the present system (individualism), which generates or permits the injurious privileges of classes and individuals." Such definitions can but confuse the student.

The sixth volume of the Publications of the Buffalo Historical Society, edited by its Secretary, Frank H. Severance, is a prosperous volume of nearly 700 pages, with portrait and other illustrations. There are six historical papers by Henry R. Howland; twelve narratives of early mission work on the Niagara frontier and Buffalo Creek; and a life of Horatio Jones, one of the partipants, as interpreter, in the Buffalo Creek talk with the Indians in 1793, whose portrait is reasonably identified in the curious drawing facing page 497. In this group the portrait of Timothy Pickering is excellent. There is still much matter of interest which we cannot specify.

The *Yale Alumni Weekly* for January 6 contains an interesting summary of Mr. Charles Goodyear's address at the Yale School of Fine Arts on December 1, on "The Asymmetry of French Cathedrals," which breaks fresh ground in the extension of his remarkable observations on horizontal and vertical curves and aberrations from the plumb-line in buildings of all ages from the Egyptian downwards, with unbroken continuity. As usual, Mr. Goodyear illustrated his discoveries with convincing photographic views, some of which are shown in the above journal.

The development of the arid West under the new reclamation law is the subject of a striking article in the *National Geographic Magazine* for January by Mr. F. H. Newell, the engineer in charge of the service. The object of the law is "primarily to put the public domain into the hands of small landowners"; and although the area which can be irrigated is relatively small, yet if two or three per cent. of our arid lands are ultimately reclaimed and put under cultivation, it will mean a population in the western half of the United States almost as great as that in the eastern half. The money value of the works, which are being prosecuted by a corps of about 300 engineers, can be estimated from the statement that, "if I am correctly informed, the proceeds from the small irrigated area in Colorado are already greater than from the mines." One of the largest projects is the construction of a dam on Salt River,

Arizona, which will be "one of the greatest in the world, being 230 feet from foundation to top." On the land along the river "there are sometimes as many as seven crops a year raised." The article is accompanied by maps and illustrations. Dr. John W. Foster tells the story of the Alaska Boundary Tribunal, and there is a summary, with some remarkable photographs, of Mr. W. A. Bentley's "Studies among the Snow Crystals.

In polyglot Austria, universities along strictly national or linguistic lines are becoming the order of the day. In Prague the German and the Bohemian have existed side by side for two decades, the attendance at the former being now 1,259, and at the latter 3,200. The agitation of the Italian students in Tyrol in recent months sought to compel the Government to establish a second Italian university in Innsbruck. Now the Slavs of Monarchy have inaugurated a similar propaganda, and demand a second Czech foundation at Brünn or Olmütz. This project is strongly opposed by the Germans, who, however, would not object to the establishment of another Czech university in such a predominantly Czech district as that of Kremsier, but with the proviso that a second German school of the same grade be located in a German city. Dr. Oberleithner, the leader of the Germans in the Moravian Parliament, declares that the solution of the Magyar university problem must be, "A German institution in Brünn; a Czech institution in Kremsier."

The educational world of Germany is now being treated to a remarkable professional controversy, the participants being members of the philosophical faculty of the Catholic faculty of Münster. Prof. Erich Adickes recently published a book entitled 'Vier Schriften des Herrn Professor Kappes, auf ihre Herkunft untersucht,' in which he furnished ocular demonstration by parallel columns that four of his colleague Kappes's works on logic and philosophy are almost throughout taken word for word from the works of other German savants. It is a case of plagiarism on a grand scale. A reply from the accused is not expected, but the Government will be compelled to do something in the matter.

The French text-book of general history by A. Hervé (Paris: Bibliothèque d'Éducation, Rue de Cluny), lately mentioned in these columns for its aggressive anti-militarist spirit, is arousing intense hostility in certain quarters. The committee of inspectors of primary schools in the Department of the Seine has just refused to put it on the lists of the public schools of Paris. A Deputy from Doubs asked leave to interpellate the Minister of Public Instruction because it is being used in some of the public schools in his department.

A new scientific journal, entitled *Physicochemische Rundschau*, has been launched in Berlin with the new year. Its chief purpose is to furnish a complete international survey of what is being done in physical chemistry and kindred branches. It will be edited by Dr. Rudolphi of Darmstadt. It will not publish special research articles, but will report progress in the department everywhere. The reports will be in the German, English, and French languages.

Two new journals in the department of physiology are also making their début. One of them is the *Archivio di Fisiologia*, edited by Prof. Giulio Fano, director of the physiological laboratory in Florence. It will publish articles in Italian, German, French, and English, and will be a semi-monthly. The other new venture is the quarterly *Journal of Physiology*, to be issued by the University Press of Cambridge, with Prof. James Ward and W. H. R. Rivere as editors.

The Baltimore Association for the Promotion of the University Education of Women offers a graduate fellowship of $500 for the year 1904-5. This Baltimore fellowship is available for work at either an American or a European university. In its award, preference will be given to applicants from Maryland and the South. Applications should reach the committee on award by March 20. Applicants may obtain blank forms for application from the President of the Association, Miss McLane, No. 1101 North Charles Street, or from any member of the following committee on award: Dr. Mary Sherwood, the Arundel; Miss Edith Hamilton, Bryn Mawr School; Miss Julia R. Rogers, No. 821 North Charles Street; Dr. Lilian Welsh, the Woman's College, Baltimore, and Miss S. R. Carter, St. Timothy's School, Catonsville, Md.

—Dr. Murray's New Year gift is the conclusion of the letter O in the Oxford English Dictionary (H. Frowde), or in other words the first half of volume vii. It ranges from Outjet to Ozyat, and is much occupied with out- and over- compounds. *Out of* is treated, in more than a page, as a separate vocable, analogous to *into*. What will be to Americans the most surprising historical revelation of this section—and must it not also be to most Englishmen?—is the account, under Outlawry, of the extraordinary parliamentary survival known as the Bill "for the more effectual preventing Clandestine Outlawries in personal actions," regularly introduced since 1743 at the beginning of each session before the reading of the King's speech, in token of Parliament's right to assemble on its own account and fix its own order of business. Under Outparter, it is shown that this word was admitted to dictionaries by reason of a misprint for Outputter; and this lexicographical lapse is humorously demonstrated by quotations. The useful term Output, derived from mining and manufacturing industries, did not find its way into general dictionaries till after 1880. Outland is now only a poetic archaism, but may have a better fate before it in view of what has overtaken Outlander, thanks to the Boers. While Johnson recorded Outstand, "to stand out distinctly or prominently," in 1755, the first quotation for the corresponding participial Outstanding is not till 1830 (Herschel). George Washington furnishes the earliest example of Outpost. Outside of, for except, is an Americanism.

—So is Emerson's Oversoul, but it has been caught up abroad; and so, by a curious natural selection, are Overalls (but Dr. Murray is misled by Bancroft into making mere trousers of it; it is all but what would be called nowadays a "union garment," lacking the sleeves, and fifty years ago was worn by boys at play to protect their jackets as well as their trousers), Overcoat (dating here from 1848, when "surtout" was often used), Overshoe (1851), Overskirt (1883), and Overwear (1890), A picturesque South African adjective is Overberg, 'ultramontane.' Over, itself a comparative of the element contained in *ab-ove*, has been compared (overer, overest, as in German *oberer, oberst*, and overmore, overmost). Purists who avoid "*over* one's signature" may notice that it is recorded here without comment, the first date being 1857 (in *Notes and Queries*). The verb Own, which apparently went out of use before 1300, was revived by Owner (from 1340); it was itself a derivative from the adjective Own, originally a past participle of Owe. Dr. Murray interestingly shows how Owe, from meaning "to have," came to mean "to be in debt." For the use of Owing, in phrases like "not one penny owing them," we find no corresponding sense in the verb.

—Making laudable use of a unique possession, Prof. Charles Eliot Norton has edited a little volume of selections from Thomas Gray's notes on Linnæus's 'Systema Naturæ' edition of 1758 (the tenth), with facsimiles of some of his drawings ('The Poet Gray as a Naturalist.' Boston: Charles E. Goodspeed). The droning beetle, the moping owl, twittering swallow, and chanticleer of the opening stanzas of the 'Elegy,' the favorite cat drowned in a tub of goldfish, suggest the observer of animated nature; but annotations and interleavings of the 'Systema,' which descended to Mr. Norton through Ruskin, first reveal the poet's absorption in this pursuit from the time when, past middle life, the Muse began to forsake him. "Some of the notes are in English, but most of them are in Latin, with numerous citations in French or Italian." They are briefest for the botany, but in this study, too, Gray was at home. There are numerous drawings of the heads of birds, of mollusks and testacea, many more of insects; all, as here reproduced, showing a strong sense of line. Mr. Norton's judicious selections embrace Gray's list of all the birds found in Great Britain, interesting to compare with Bewick's (1821). Thus, Gray's *Falcones* number thirteen to Bewick's twenty, with but nine forms in common. Two of Gray's four owls (or possibly three, as the White Owl and Screech Owl are identical in Bewick) are found among the five of the 'British Birds.' Another list is the names of birds found in Scotland. A third is the terminology for the description of insects, concerning whose orders and genera Mr. Norton reprints Gray's hexameters. The concluding extract relates to *Patella pellucida*, and ends with a question, to be made still more knotty by the 'Origin of Species,' "An varietas?" The thin volume has been beautifully printed by Mr. Updike at the Merrymount Press, and the impression of the facsimiles on the laid paper of the text is a triumph of special treatment. The effect is of parchment.

—With the seventh volume, the 'Writings of James Monroe' (Putnams) come to an end. The last years of his Presidency, to which he contributed so little strength, and a retirement embittered by pressing money needs, call for a sympathy which could not be granted in the years of his active partisanship. He did not grow in mental stature, and he never occupied the place of a "seer," consulted by political leaders. He had enjoyed the highest honor the people could confer, and he exercised

the ordinary duties of his office with indifference to the struggle for succession that took place in his Cabinet. To that extent he was dignified, although he never seems to have filled the requirements of the Presidency, and leaves the impression of timidity, often descending to meannesses that are unexpectedly petty. He did not cease from nursing his dislikes and grievances, and he spent his retirement in restating his diplomatic defeats, in explaining his conduct towards Jackson, and in preparing an autobiography, which has never been published. The small number of his letters published in this volume, which covers the last ten years of his life, is full testimony to the little estimation in which he was held in national politics. The advent of the younger Adams, with a policy of national administration that was aggressive, and in many particulars opposed to that of Monroe, left the ex-President stranded on the shoals of his own mediocrity. The growth of faction gave him no place in the councils of any party.

—Monroe never seems entirely to have grasped the meaning of American democracy, though he won all his honors from the Jeffersonian following. He never appreciated his own marked defects, which made his attempts to shine in diplomacy, in military service, and in politics, approach dangerously near to complete failure. He could not judge men or events, and his strong prejudices and short-sightedness interfered with his development. To be always on the defensive is not a happy attitude for one who aspires to lead, and Monroe was more ready to explain his past conduct than to take up the problems that faced him. He had a certain amount of plodding industry, serviceable in such a body as the Continental Congress, or in a governor's chair, which was used as a step to higher office. Yet even this quality proved obstructive to a wider view when the higher office was attained. He lost himself in detail, forgot the main lines of action, and, even when his own interests were most concerned, became wearisome by repetition of unimportant matter. His unconscious vanity was one cause of this, but it is unusual to find so much self-confidence associated with extreme sensitiveness to criticism. The series of volumes of his writings give a full and not lovable picture of the man; and even his bitter and narrow judgments of men who crossed his ambitions should not blind us to a certain yielding quality that caused him to be influenced by a will stronger than his own—by such men as Jefferson and Adams. The editor and publishers are to be congratulated upon the series.

—Under the title 'Un Philanthrope d'autrefois' (Paris: Plon) M. Ferdinand-Dreyfus describes the good deeds of La Rochefoucauld-Liancourt, a duke who was also a philosopher, a man of action, and a true friend of the race. The date of his birth (1747) recalls the fact that our own age has no monopoly of humanitarian sentiment, and that the eighteenth century was something more than a time of prose, cynicism, and loose living. Liancourt, coming shortly after Howard, was animated by an equal sympathy for the hardships of the common lot. We use an English analogy, because his benevolence did not exhaust itself in a flood of words, as so frequently happened among the disciples of Rousseau. The stanzas of the "Needy Knife-grinder" apply to a kind of claptrap which was talked on both sides of the Channel, but which flourished chiefly in France. The disposition of Liancourt, however, was wholly averse to flowers of language and acts of spectacular generosity. "Not what we give, but what we share" might have been his motto, for he threw his soul into all the various enterprises to which his name was attached. In many ways his career is more interesting than that of the typical philanthropist. The latter leads a life which as a rule is unmarked by picturesque or extraordinary events, but Liancourt was driven from France, lost his property, and endured the regrets of exile. He is not to be confounded with the *émigrés* of Coblenz. The fact that he sought refuge in England and then in the United States is a sufficient proof of his liberalism. He did not suffer the Revolution to drive him from France until a warrant for his arrest had been issued in the summer of 1792. He was no follower of the Comte d'Artois, but a liberal patriot who endured a great deal of obloquy from both parties, and could vindicate the purity of his motives only by the unvarying uprightness of his conduct. His personal disinterestedness is illustrated by his refusal to accept the fortune of Mrs. Dave. This lady met him at Bury Saint-Edmunds, where by the friendship of Arthur Young he had been led to settle for a time. Being without direct descendants, she left him considerable property, but, like Spinoza under similar circumstances, he returned it to the heirs. His political disinterestedness is illustrated by his opposition during the closing years of his life to the policy of Charles X. Liancourt was among the first to profit by the amnesties of the Consulate, and his great activity as a philanthropist dates from the period of his return to France. The catalogue of his achievements is a long one, and will be found in most dictionaries of biography. M. Ferdinand-Dreyfus deepens the impression of his goodness by adding many fresh details. Liancourt's zeal on behalf of vaccination, agriculture, good roads, good schools, savings banks, prison reform, Christian morality, and the assistance of the poor gave him a unique place in French society during the Empire and under the Restoration. The present biography, though somewhat heavy in style (according to French standards) is not unworthy of its noble subject.

—One of the most interesting scientific enterprises undertaken of late is that which culminates in the serial publication "Natur und Staat: Beiträge zur naturwissenschaftlichen Gesellschaftslehre" (Jena: Gustav Fischer). On the first of January, 1900, an announcement of a prize contest was published under the famous names of Professors Häckel, Conrad, and Fraas; a sum of 30,000 marks was to be set aside, to be divided among the best essayists on the following theme: "Was lernen wir aus den Prinzipien der Descendenz-theorie in Beziehung auf die innerpolitische Entwickelung und Gesetzgebung der Staaten?" Following this announcement came a series of suggestions as to the general field which it was proposed to have investigated. A trio of judges was named, consisting of Profs. Conrad, Schäfer, and Ziegler, upon whose findings the signatory professors were to pass in awarding the prizes. Manuscripts were due December 1, 1902. In March, 1903, the results were made known. It appears that the competitors for the prizes numbered sixty (of whom two were Americans), and that many noteworthy theses were submitted. The prize essays, together with others of distinctive merit, are now being published under the collective title given above. According to Professor Ziegler's introduction to the series, the projectors of the enterprise were well pleased with the results attained. Some of the essays were faulty, to be sure, or insignificant, or self-excluded by non-adherence to the published conditions; but what pleased the judges most was the variety of conceptions elicited by an appeal which seemed to touch men of all professions. One of the prize-winners, for example, is a director of an agricultural school, another a surgeon, a third a dramatist, and so on. This is what was desired. Professor Ziegler remarks that the theme is so wide-reaching and so intimately related to various fields of science that anything like a complete treatment is clearly out of the power of a single mind. Of peculiar significance, under these circumstances, was the substantial agreement of a strong majority upon certain fundamental phases of the subject. Again, the contest seemed to appeal, in large part, to older men who had long pondered the subject, and were thus led to reduce their scattered observations to order. Hence the prizes and the publication "in our day of agitators and chatterers once again broke the silence of the quiet thinker." The essays were, before they closed, to try "to throw light upon the tendencies of political movements in Germany." Supposably this was to be a practical application of principles which had been evolved in the preceding treatment; but it was, apparently, the least satisfactory part of the total product. Several authors felt an irrelevance, and made no attempt to connect their political remarks with the body of their work; others spun a Dædalian thread of connection. The work is to be printed in ten volumes, and is to be completed by next autumn. The last volume is to contain an index for the whole series.

LONG'S AMERICAN NAVY.

The New American Navy. By John D. Long, Secretary of the Navy, 1897-1902. The Outlook Company. 1903.

The publication of an account of the Navy by a recent Secretary would, under any circumstances, be a notable event in literature, and Mr. Long's 'New American Navy' will profit by this very unusual relation between subject and author, as well as by the widespread interest which that service, its personnel, and recent achievements have aroused throughout the land. That his undertaking was conceived without apparent misgiving augurs a trustful nature. Nevertheless, this work must compel thoughtful persons to speculate upon the purpose and motives of a writer who occupied, at closely succeeding periods, the apparently irreconcilable positions of prominent officer of the International Peace Society and Secretary of the Navy during the war with Spain. In this case the writer and book seem inseparable. Anti-Imperialists,

knowing that he was President McKinley's trusted counsellor, still hold Mr. Long largely responsible for our failure to adjust Cuba's grievances with Spain in an amicable manner and for the wretched Philippine imbroglio, the embers of which our much-discussed medical general is at this moment so vigorously fanning into blaze, and they allege that, had Mr. Long but spoken the right word in season, war would have been averted and the world spared much unnecessary misery.

It is difficult for laymen to understand the peculiar disadvantages under which Mr. Long has labored. Of what the official records contain, no one, of course, can speak with greater authority than a Secretary of the Navy, for all the files of the Department are open to him, and he has only to choose what he shall omit; but as to the public opinion of the service, its aspirations, its grievances, its real *esprit*, he is as ignorant as if he lived in another planet, for he is surrounded by men of his own selection, who are too prudent to utter unwelcome truths. Whatever Mr. Long states as a fact may, therefore, be accepted with little reserve; but when he endeavors to voice the sentiment of the navy as a whole, he is quite as apt to be wrong as right. Nevertheless, Mr. Long has produced a most readable work, written in pleasing, simple, and popular style, which offers an agreeable view of the navy as seen through his own spectacles. It is marked by much generosity of tone towards his predecessors in office, somewhat tempered in the case of Mr. Whitney, the ablest secretary the navy has ever had. As a record of events, it possesses undoubted value, while the connecting thread of comment is generally kind, if not always trustworthy. The tone, which is familiar and chatty, takes the book out of the category of serious histories, and places it rather among the recollections and memoirs.

It is possible to supplement Mr. Long's first chapter by a bit of hitherto unwritten history. In the spring or early summer of 1881, when the navy was at its lowest ebb, Secretary Hunt, having invited Capt. Bancroft Gherardi, U. S. N., to accompany him on a trip up the Hudson River, seized upon the opportunity to unbosom himself to an old acquaintance and fellow-Louisianian on the condition of the service and the humiliation and embarrassment of his own position. "Things are in a horrible state," he said in substance; "the ships are falling to pieces with no prospect of new ones to replace them, while I am ignorant and powerless, although ready to act to the extent of my ability. Tell me, frankly, captain, what would you do in my place?" And the captain modestly replied: "I am not wise enough to tell you what to do, but if I were you I should form a board of our brightest and most thoughtful officers and direct them to consider and report upon our naval wants and to advise me as to the course I should pursue. If you employ the best brains in the navy on this task, you cannot go far astray." This suggestion brought about the first advisory board, with its train of far-reaching consequences. It may, indeed, be said that the late and lamented Rear-Admiral Gherardi planted the seed from which has sprung the mighty tree of the navy of to-day.

The first two chapters, on "The Birth" and "The Building" of the new navy, and the fifth, "Preparing for the War with Spain," chiefly historical in character, contain little which is not accessible elsewhere, except that personal note which makes their reading like listening to a good story-teller who knows his subject and is proud of his share in the occurrences he narrates. It is in his chapters on Organization and Administration that Mr. Long speaks with authority, for these subjects engaged his daily attention. His conclusion, as to the corps of professors of mathematics, that "Congress should provide that no further appointments be made to this corps, as all its work can be procured from civil life, and the anomaly of a pension or retirement for non-military service should be done away with," is no less sound than his pertinent suggestion that it is difficult to see why naval constructors and civil engineers should have military rank or designation. Some day everybody will laugh, as many do now, at the idea of uniformed and titled corps of naval officers who never go to sea, and of admirals who have not tasted salt water. The genesis of the Personnel Law, so called, which amalgamated the line and engineers, is well told. The law itself must shortly be supplemented by another, for while it has done much good it has left untouched weighty problems which, until solved, are bound to shake the navy from truck to keelson.

In a general way, Mr. Long has steered his literary craft with considerable skill, and if he has done more than justice to his non-combatant colleagues in the Navy Department, the error may be attributed to the heart rather than to the head. He thinks that their efforts and value are not sufficiently known to the world at large, and he performs a self-imposed duty in attempting to dispel so widespread an ignorance. Alas! his endeavors are futile; Capt. Clark of the *Oregon* will always be remembered by his countrymen, while Secretary Long and his bureau chiefs will speedily be forgotten. It may not be right, but so it has been and so it will continue to be, until human nature itself changes. The men who remained behind had "soft billets," comfortable duty, power, and, in certain instances, increased pay; while those who went to the front got hard work, a chance to be killed, and, broadly speaking, neither promotion nor thanks. It is not a light matter to adjust the grievances of men.

Mr. Long's course when Congress was clamoring for the erection of a Government armor plant is beyond praise: "It seemed to me unwise for the United States to embark in an industry which was properly the field of individual operation; and, furthermore, the cost of the material turned out under Government conditions was certain to be higher than that turned out by private manufacturers." He fought for time, and was rewarded by having the whole vexed question of the supply of armor for our naval vessels placed unreservedly in his hands. Few persons who know the conditions will agree with him in believing that the Bureaus of Construction and Repair, of Steam Engineering and of Equipment, in the Navy Department should be amalgamated; many will wonder why, thinking so, he did not effect this consolidation while he had the power; more again will inquire why, familiar as he should be with the real trouble of the navy—excessive, preposterous, emasculating centralization and incredible red tape—he neither acted while he could nor refers to it now that the reins have slipped from his hands.

Mr. Long's account of the negotiations preliminary to hostilities is an *ex-parte* defence of Mr. McKinley's nerveless policy at a critical moment in our country's affairs. Spain's proposition to leave the causes of the *Maine's* explosion to an international tribunal is airily dismissed by Mr. Long, in apparent contempt of our loss of prestige through unwillingness to bring our case to trial before the world. The general story of the naval campaign of 1898 follows conventional lines, with here and there a glimpse into the President's council chamber, or a discreet lifting of the veil which still screens Departmental motives. The public will turn instinctively to this book for the reason of Mr. Long's policy on certain points, and for the answers to the many questions which these points provoke. For example, was no one of the sixteen admirals and commodores senior to Captain Sampson available and competent to take the North Atlantic Fleet when Rear-Admiral Sicard fell ill? Why were such men as Rear-Admiral Bunce, who, prior to Sicard, had licked that fleet into splendid shape for Sampson's using, and Commodore Howell, who had been considered in 1897 at the same time with Dewey in connection with the Asiatic Fleet and had been given by Mr. Long the European Squadron because it "was a choice flag command of the navy, and included Spanish waters," and Commodore Watson, Farragut's brave and faithful flag lieutenant during the Civil War, overslaughed and the two latter made to serve under their juniors? Did the result justify the selection? Did the campaign bristle with difficulties which no one of these approved and typical officers could have overcome? Would any of them have committed a greater tactical error than that of bombarding San Juan, P. R.—a repulse, magnified by the Spaniards into a tremendous defeat? Or would worse luck have attended him than befell Sampson, who had as his immediate second in command an officer whom he did not trust, and whom, as a senior in actual rank, he naturally felt great hesitation in properly disciplining; in having foolish assistants to write bombastic dispatches announcing a great victory in terms which disgusted and (unintentionally) deceived the American people, and made Sampson falsely appear, when the truth became known, as covetously snatching the laurels from another's brow; in being embroiled *malgré lui* in a bitter controversy leading to nothing but vexation of spirit and a loss of that advancement which he had so ably won? Says Mr. Long: "For his selection the Department is alone responsible." It was indeed a tribute to Sampson's preëminent standing among his brother officers, but it brought him little save trials and tribulations. Mr. Long would have been kinder to him, personally, had he left him in command of the *Iowa*.

Nothing could be stronger in language or sounder in principle than Mr. Long's exposition of war on Spain by blockade of Cuba. In this connection it is pertinent to ask why the blockade was not originally extended to Sagua la Grande, through which seaport and its railway connections Havana enjoyed uninterrupted communication with the outside world until July 9? In refusing

permission to assault Havana, Mr. Long showed himself wiser than Admiral Sampson and his professional advisers. Without the army to hold the place, to bombard would have been folly itself. A general prohibition against similar useless demonstrations would have spared us, subsequently, the San Juan affair. This appears to have been an instance in which a happy issue attended the Department's determination to control the course of the campaign. The indisputable evidences of this control abound throughout Mr. Long's narrative, and they make a fearsome showing of what we may expect in our next war. The War Board in Washington was useful so long as it kept the Commander-in-chief supplied with information and held up his hands. Whenever the Board and the Secretary dispatched vessels or directed scouts without Sampson's knowledge, or imposed certain movements on him, or advised his sinking a vessel in the mouth of the harbor at Santiago, etc., they hurt rather than helped the public cause. Wars cannot be conducted from a cabinet; yet this is what was attempted by Mr. Long, for no other interpretation can be placed upon such expressions as "Before leaving St. Nicholas Channel to obtain permission to go to Santiago," Sampson did thus and so.

The *Merrimac* episode was a mistake in plan and a blunder in execution. It was a cruel and unjustifiable exercise of power on Sampson's part to take a good sailor out of the command of that vessel, and an inexcusable error to confide so delicate an enterprise as her sinking to untrained and incompetent hands. A sailor might have had his ship destroyed outside the appointed line, but he would never have overshot that line by half a mile, as Hobson did. But Hobson's bungling in no wise dulls the brilliancy of his splendid heroism; this is beyond praise. Since, however, the fundamental idea was itself erroneous, we should be grateful that Sampson selected a landsman who might be trusted to fail, and who did fail. Admiral Sampson's adherents and partisans, who form the vast majority of the naval service, and his friends, who are fewer in number only because his was a self-contained nature and not given to intimacies, will read Mr. Long's "The Battle of Santiago" with a sinking of the heart, for the author's position throughout is apologetic, and the chapter reads like a lawyer's brief in defence of a client. So vigorous a repulse of Sampson's imaginary detractors is surely unnecessary. No one can wrest from him the glory of planning and executing a triumphantly successful campaign, or the credit of an order of battle which stood the crucial test of Cervera's sortie. The very completeness of the latter's ensuing defeat, a completeness without parallel in history, is a tribute to the brains of the American leader.

"Outlying colonies, inadequately defended, are, in time of war, sources of serious weakness to the mother country. . . . The naval strategists saw at a glance that her [Spain's] undoing lay in her possessions in the East and West Indies." Thus does Mr. Long wisely open his description of Dewey's great fight at Manila. Is this axiom of the military art any less true to-day than in 1898? And is the world so enamoured of us that it will permit us to hold the Philippine group, for example, on easier terms than Spain? The services of the navy in "The Philippines, Samoa, and China" are interwoven with diplomatic episodes and expositions of American policy during the troublous years since '98, the whole forming an exceedingly interesting presentment which is more impartial than might have been expected as coming from an attorney of the Administration. Freed from the incubus of the great naval controversy, Mr. Long writes freely and justly of the navy. In his concluding chapter, "Some Personal Reminiscences," wherein a general atmosphere of good fellowship and mutual appreciation prevails, Mr. Long paints himself as well as those of whom he speaks, and we see how kindly he is, how readily he yields to the influences of personal contact, and how implicitly he trusts those immediately about him. There is a touch of Thackeray's shrewd humor in his tales of encounter with the army of women and of Senators, Representatives, and others, who bombarded him continually with requests for Departmental favors. We shall wait long for a more life-like sketch of Mr. Roosevelt than that contained in Mr. Long's few short lines. How the ex-Secretary must have chuckled as he penned them, consoling himself somewhat for the gentle strenuousness with which he was prised out of Mr. Roosevelt's Cabinet! Judging by the outcries of the Administration press, Mr. Long must feel that the account between himself and his former assistant is fairly well-balanced. None of his chapters is so well worth reading as this, not only for the personal interest it arouses, but also for the insight into the maze of misrepresentation, misunderstanding, and selfish demands through which a Cabinet officer has to pick his way.

The publishers have contributed their full share to the attractiveness of this book in excellent paper, large, clear type, wide margins, and numerous illustrations, chiefly photographic portraits.

RECENT NOVELS.

Zut, and Other Parisians. By Guy Wetmore Carryl. Houghton, Mifflin & Co.

Judgment. By Alice Brown. Harper & Brothers.

The Way of the Sea. By Norman Duncan. McClure, Phillips & Co.

Lesley Chilton. By Eliza Orne White. Houghton, Mifflin & Co.

Rebecca of Sunnybrook Farm. By Kate Douglas Wiggin. Houghton, Mifflin & Co.

Hetty Wesley. By A. T. Quiller-Couch. The Macmillan Co.

"The air was full of that mingled odor of wet wood pavements and horse-chestnut blossoms which is the outward, invisible sign of that most wonderful of inward and spiritual combinations—Paris and Spring!"

"Animal low of ceiling! Camel! Gourd! Ancient Senator! Gas-jet! Shut thy mouth or I jump within!"

For atmosphere and for vocabulary these two extracts serve as good examples of the very inward and intimately Parisian manner of Mr. Carryl's little book of stories. The reader is wholly in Paris for the moment, now on one side of the Seine, now on the other, hovering on the border of two great worlds in an appropriate Anglo-Franco alliance of tongues. From Zut the cat to La Trompette of the Butte Montmartre, to the rascally valet, to the student absinthe-victim, to the homesick Breton recruit beating his drum in the Champs-Élysées, everything is, as Mr. Carryl would put it, all that there is of the most Parisian. The way lies devious; it is not given to the reader to be always floating down the Seine or buying eggs in the groceries of respectability. Latin Quarter cafés and the salons of the demi-monde furnish their share of the picture, touched in with as much restraint and refinement as the nature of the subjects permits. The stories are comic, pathetic, melodramatic, tragic; some of them masterpieces, all of them alive with color and movement. To read them is to find one's self at the very pulse of the Parisian machine, with a constant sense that here is a writer who has penetrated several steps farther into his subject than American writers before him. He is quite beyond the stage of exploiting Paris. He is enveloped in it, and breathes out gracefully what he has absorbed naturally. He has very nearly reached the point of concealing his art. If it peeps out sometimes, it is the trifling penalty he pays when he lets himself be more French than the French, more Parisian than Paris.

'Judgment' is a short, beautifully printed, sufficiently absorbing novel, showing that the sword of judgment which belongs to the Hebrew God is a complete misfit to the hand of man. The hardness of John Markham made a great deal of trouble, which the inherited hardness of his daughter Elizabeth compelled him to see, and which the softness of his second wife helped to undo. The brevity of the story is happy, because a certain feverish, hectic quality of subject and form tends to pall on the reader, and would surely exasperate if prolonged. The creepy precautions invented to prevent Rosamond from learning the secret which every one knew she ought to be told, swell to a size ludicrously out of scale to the alleged evil they are meant to avert. This evil could have been early nipped, as early as on the second page, if Helen's judgment had equalled her saintliness. However, this is not the first story that has owed its existence to the absence of good sense, and has for that been none the less readable, nor the less lifelike. The annoyance consists in having the silliness pose as wisdom. The emotions and sentiments of all the parties concerned are spun very fine. We can fancy that they might rasp some stodgy souls with their preciousness; therefore to the stodgy we do not commend it. Even the mere plain man will be glad that no more pages afford space for more hot-house language—for more "broodingly," "compensating meditations," "ardencys," "ancientrys," "deferents"; for "challenges" and "forebodings," that too altruistically do their own duties and those of other words, interchanging like beds by night and chests of drawers by day. The obvious moral of the story is "Judge not"; an inferred moral for the average reader will be, as we fancy, this: If a secret is to be told, tell it at once without waiting for Kent to tell it on his arrival from Africa. His ship may be late. And another corollary will be this: That Kent, who tried to tell Rosamond the secret when first they were betrothed, should have insisted on her listening, even if by so doing he had deprived the world of this interesting story.

Mr. Norman Duncan's ten stories of the Newfoundland coast, reprinted from sundry periodicals, are the very quintessence and ecstasy of the sea in its coldest, harshest, cruellest aspect. If other sea stories are salt, crisp, sparkling, these are icy, bitter, clutching, vengeful, at least so far as the waters themselves are concerned. For the folk who figure in them, there could not be found simpler, sweeter, kinder; poets and dreamers often, unmurmuring always, brutal only when driven mad by the madness of the sea. The stories are wonderful transcriptions of fearsome experiences. It is hard to say whether the writer be more excellent at portraying man or ocean —man at his most primitive, ocean at its most austere. Certainly he has fitted figure and scene marvellously together, for the reading of the pages greatly stirs the blood. The blemish in the performance is the artificial language of the descriptions. Why—in the preface—"time o' night"? Why "plainted"? As for the incessant reiteration of spumy, flare, hiss, thud, and the like, whether it be called a use historical or hysterical will depend on whether the reader shall have been taught to read before or after the day of Stevenson and Bullen.

One of the minor characters in 'Lesley Chilton' says to an objecting daughter to whom she had submitted a letter for comment, "I didn't write it with a view to having it criticised. I read it to you to see if you thought it was all right." This saying is at once a gauge of the delicate humor pervading the story, and a motto for the critic as to the tone to be taken in reviewing this entirely pleasant little book. The greatest obstacle between hero and heroine is a difference of opinion on woman suffrage; the darkest shadow, the death of an aunt. The characters move in the lightness and light of natural good breeding and behavior through ways of peace, and there is no reason for not pronouncing the agreeable volume "all right."

Pleasant reading and full of insight into the magic land of children's thoughts and ways is 'Rebecca of Sunnybrook Farm.' It may be owned that Rebecca the young irrepressible, wearing her best gingham on second-best occasions, and flinging her precious pink parasol into the well as voluntary atonement for wholly unrelated sin, is more diverting than she of the "done-up" hair, the graduation essay, and the fairy prince. The early Rebecca is an inspired piece of portraiture—imaginative portraiture we might say, except that most of us have known just such impossibilities. Some of her youthful poetry may well stand beside Marjorie Fleming's.

Really and truly a book is 'Hetty Wesley.' It stirs the mind and spirit; it shows that the world has improved since the middle of the eighteenth century, as we need from time to time to remember; it gives a grim yet fascinating picture of the Wesley family, grouped and in detail; it weaves into the fabric with exquisite literary skill a single strand of Indian mystery, made relevant by circumstance and satisfying by its very incongruity. Above all, it portrays the wondrous Hetty with a vividness that will not let it be said she is set before us, but among us, a beautiful, living, human presence, made for joy and doomed to the most tragic of all tragedies—the sordid path —whereon with folded wings she walks, atoning. As a history of the Wesleys it may be fanciful; as a biographic appreciation it may be warped; as a study of human nature it is of high worth, and would be so had Samuel Wesley, his sons and his daughters, never been born.

Two Centuries of Costume in America. By Alice Morse Earle. The Macmillan Co. 1903.

The minor antiquities of Colonial life in America are Mrs. Earle's peculiar province. No one could be better equipped for describing the changing fashions of the two centuries that separate Sir Walter Raleigh in stays and a white satin doublet stuck all over with diamonds and pearls from the Marquis de Lafayette, who landed at Castle Garden in the blue broadcloth coat and nankeen trousers of 1824. In those two centuries men no less than women loved all the items of dress. The household accounts of Colonial dames from which Mrs. Earle draws much of her material are hardly more detailed than the Diary of Samuel Pepys. At the court of Charles II. it is natural enough to find the adoption of a new cut of cloak treated with the respect that affairs of state could not command. But George Washington himself, a century later, buys clothes through a London agent for his stepdaughter (aged six years), with an anxious attention to the fashions in silk and lawn and white kid gloves that we are unable to parallel in any modern step-father. The Colonial dames could not run over to Paris to buy clothes, and depended on the men of the family to bring back the latest London fashions. In 1674 Madam Symonds writes from New England to her son in London to send her a lawn whisk—a whisk being a sort of collar; he replies that whisks have gone out, and sends instead the latest style in ruffles.

"Such as goe not with naked necks, wear a black whisk over it. . . . Secondly, you sent for Damson-coloured Spanish leather for Woman's Shoes. But there is noe Spanish leather of that colour, and Turkey Leather is coloured on the grain side only, both of which are out of use for Women's Shoes. . . . As to the feathered fan 'tis grown almost as obsolete as Russets and more rare to be seen than a Yellow Hood."

All this, and more to the same effect, for the benefit of a Puritan lady who lived in an obscure little town in the Massachusetts of the seventeenth century. It was about this time that Pepys, who loved a new fashion as a child loves a new toy, noted at the play that ladies had begun to wear vizards that hid the whole face, "and so to the Exchange to buy a vizard for my wife."

Mrs. Earle often digresses from her chronological arrangement to describe the dress of special sects, such as the Quakers (for which she depends to a great extent on Mrs. Gummere's exhaustive work), or the dressing of women's hair, or the evolution of the pocket. Her aim has been throughout to throw light on the relations of the mother country and the colonies, on those "interesting reciprocities and mutabilities connecting the poor young Infant, New England, with its old Puritan mother and her affairs, which," said Carlyle, "ought to be disentangled, to be made conspicuous by the Infant herself now she has grown big." A discussion of perukes and periwigs, banyans and nightrails, and the like, even in Mrs. Earle's vivacious style, would hardly enchain the reader; what gives life to her book and brings us in touch with the wearers of all this outworn finery, the "changeable suits of apparel, and the mantles, and the wimples, and the crisping pins," is the abundance and charm of her illustrations. The portraits of Van Dyck, Lely, Kneller, and Reynolds, beautiful as they are and well produced, are not the most interesting among Mrs. Earle's collection. Some of the most attractive groups in the book were painted by Copley, Stuart, West, the Peales, and Robert Feke, the Rhode Island artist, whose painting of the rich fabrics of two centuries ago have lost nothing of their richness and lustre.

Mrs. Earle's volumes are a useful book of reference for the student of the fiction, the drama, and the art of 1620-1820. Few people know that the eccentric wrap that drapes the figure of Nicholas Boylston in the fine portrait that hangs in Memorial Hall, at Harvard, is a banyan, one of those Oriental garments which the East India trade brought into fashion; it belongs to the time when you might count on meeting a score of orange-colored turbans at an evening party. Goldsmith's Olivia has her picture painted "in a green joseph," a garment that belongs to the Amazonian period of women's dress. The spencers that women still wear were originally a man's coat,

"invented by Lord Spencer at about the same time (1792) that Lord Sandwich invented a form of food which would be nourishing and could be eaten quickly and conveniently while he was at the gambling-table. An English rhyme ran:

> "The plan was good, as some will say,
> And fitted to console one,
> Because in this poor starving day
> Few can afford a whole one."

Lord Spencer made a bet with Sir E. Chetwynd that he could set a fashion which would be adopted as a ruling mode within six months. This should be a form of dress wholly meaningless and unnecessary. Spencer called for a pair of shears, cut off the entire tails of the long coat he was wearing, put on the unhemmed, unfinished garment, and went out for a stroll. . . . In two weeks all London was wearing the garment; in two months all England, men, women, and children, and in scarcely less time all America."

In the first decade of the nineteenth century, knee-breeches, usually of nankeen, were still *de rigueur* for evening wear; in 1814 the Duke of Wellington was turned from the door of Almack's by an official, who said; "Your Grace cannot be admitted in trousers." The last man in public life in Washington to wear small-clothes and a cocked hat was President Monroe; it was a time when a cocked hat could express a whole political code, and untidy hair was a guarantee of sound Republican opinions.

When one compares the late Georgian portraits in this book with the fashions of to-day, one realizes how unsafe it would be to predict that any mode, however ridiculous, may not be revived. Waistcoats ribbed with straw are said to be becoming, and men may again put it to the proof; women may drop athletics and appear with their heads adorned by a ship of war in full sail made of spun glass, as they did about the time of the American Revolution; or they may refuse to wear any but green shoes. So far, however, they have limited themselves to a revival of the less fantastic modes of Georgian days. The dress in which Mrs. Daniel Webster entertained La-

fayette in 1824 is a model of good taste, and would be perfectly correct to-day. The fur stole that came from Russia to Salem in 1800 is precisely the cut that this year comes from Paris. Mrs. Earle has produced a book that it will be hard to supersede in the matter of picturesqueness and completeness. Only one omission occurs to us—a chapter on perfumes.

The Nature of Man: Studies in Optimistic Philosophy. By Élie Metchnikoff, Professor at the Pasteur Institute. The English Translation edited by P. Chalmers Mitchell, M.A., D.Sc. Oxon., Secretary of the Zoölogical Society of London. G. P. Putnam's Sons. 1903. Pp. xvii., 309.

In the twelve chapters of this book the author has given us a rather brilliant, if not always convincing, exposition of the "disharmonies in the human constitution," physical, intellectual, and moral, which are the chief source of the sorrows of mankind; a picture of human nature in its strength and in its weakness. He tells us of what avail have been the consolations of philosophy and the ministerings of religion in combating disease of body and of mind, and staying the palsy of pessimism that in all ages has seized the heart of man. The "crown of creation" is afflicted with disharmonies of physical organs and of physiological functions, of family and social instincts—even the instinct of self-preservation itself. The human species has come up from the lower animal world without being able thus far to perceive or to establish harmony between the love of life and the conditions of existence. Man, the descendant of the beast, is both good and evil, however, and his hope lies in the possibility of change in his constitution through the results of scientific investigation. The pursuit of happiness must be along the route blazed by exact science, not along the old paths of apprehensive religion or metaphysical philosophy. Man must be thoroughly known in order to be fully saved. He has a large intestine and a very highly developed brain, and consciousness of old age and death has increased with intellectuality. So now the greatest disharmony of the constitution of man consists in this, that "strong will to live is opposed to the infirmities of age and the shortness of life." In the scientific study of old age and death lies the hope of the future.

The problem is largely to reduce the evils arising from the existence of a large intestine, and thereby make the phenomena of old age "physiological rather than pathological." We must not be content to introduce useful microbes into the body; we must keep out the "wild" ones, and "civilize" the savage and barbarous ones that have already succeeded in gaining entrance. Dr. Metchnikoff believes that a science of the prolongation of human life can be built up—in most instances the natural duration of life in man "ought to be more than a hundred years, and only in rare cases ought it to be much less than that term." The acquisition by mankind of the "instinct of natural death" is one of the tasks of the centuries to come. That instinct, Metchnikoff thinks, is now "as rare as the secretion of milk by males." To reach the end of life without being degenerate, morbid, or imbecile, is the great thing; the fear of death will have vanished, and men will "greet the unknown with a cheer." Gerontology and thanatology are the keywords of the future science of man; kalogerontia and euthanasia their sublime gifts to the race. And science will rule the mind and heart of man. The faith by which men shall live will be "faith in the power of science," the only doctor, corporeal and spiritual. Immortality of the human person is a pious dream, long life and happiness are realities still to be achieved by mankind. The pessimism of religions and of philosophies is as nothing before the optimism of science. The sacred writings of the Hebrews tell us that God saw everything and it was good, but became bad; the bible of science, yet unwritten, will declare that all things that were evil have been made good.

This is undoubtedly a great book—in some quarters it has been rather unthinkingly hailed as the greatest since Darwin's famous message to the world—and should be read by all intelligent men and women; but it is a work that can easily be overpraised by reason of the attractiveness of the subject and the interesting way in which it is discussed.

It is very natural that this strong pronouncement of scientific optimism should have been written by a Slav, and its appearance augurs well for the future of science when the author's fellow-countrymen, the most optimistic people in the world, shall make their influence felt to the full in the great mingling of human races and human ideals to be witnessed in the centuries beyond our own. The Slavic core of Metchnikoff's philosophy is seen in his eulogy of sour milk, the already-won basis of a scientific dietary. Does the optimism of the Slav in general rest upon this also?

The Pilgrim's Progress. By John Bunyan. Illustrated with twenty-five drawings on wood, by George Cruikshank, from the collection of Edwin Truman. With Biographical Introduction and Indexes. Henry Frowde. 1903.

When George Cruikshank died in 1878, Mr. Truman was known to be a diligent student and an enviable collector of the great artist's work. It has been noted at various times that he had in preparation an elaborate dictionary of the productions of the Cruikshanks—of that artistic family of which George was the most powerful and also the most popular member, who kept his hand in from early youth to advanced old age, and at no time relaxed in the brilliant and effective practice of his charming art, working at caricature, at broadsides, and popular satirical pamphlets with two or three pictures each, but most of all at book illustration. In that he was unrivalled, and in this way he became almost as popular as he deserved to be, for the true book illustrator is not brought to light every day, nor did the system which had been pursued for a thousand years, before the introduction of photographic reproduction killed it in our own day, produce at any time a more perfect representative of that class of men than George Cruikshank.

All this being so, we had welcomed the statement which is made in this book, on the leaf next after the title-page, that "the drawings for the illustrations . . . were made by George Cruikshank more than forty years ago," and have been in Mr. Truman's possession "for upwards of thirty-three years." They have never been produced before, and, now that we see them, we understand some part of the reasons why they have been held back. They are not attractive. Cruikshank never did a less interesting piece of work. Forty years measured backwards from 1903 will give us 1863, and in 1863 Cruikshank was still in full power, engaged on drawings for wood-engraving and on etchings as well. Of course the work done on metal plates, the drawing made by his own hand on the plate and printed direct and unaltered, is of a different and of a more certainly artistic character. Speaking of the woodcuts alone, let it be said that these illustrations to the Pilgrim's Progress are not to be compared for a moment with the very early illustrations to William Hone's political pamphlets, nor with those which are scattered through the famous 'Universal Songster,' where, though much is by the elder brother, Robert, there are still a score signed G. C., and which must have been drawn and also engraved before 1825; nor with the simple little studies of romantic situation in the 'Italian Tales' (1827); nor with the illustrations made for "John Gilpin" and published in 1828; nor with the realistic and expressive work, in landscape and figure conjoined, of 'The Epping Hunt,' dated 1829. Or, to take the work of later years, consider the really funny and at the same time most expressive and artistic tailpieces of 'Talpa; or the Chronicles of a Clay Farm,' published in the middle of the century, or those in 'The Discovery concerning Ghosts,' of 1864, which show that at seventy, at least, the artist's hand had not weakened nor his creative energy suffered. And so the student turns to the late-coming results of that busy and most interesting career, to the drawings made by the old man of nearer eighty than seventy, the drawings for 'The Brownies,' published in 1870, and finally to the frontispiece etched in 1875 for Mrs. Blewitt's story, 'The Rose and the Lily,' published in 1877, "by George Cruikshank, aged eighty-three." There is a great pleasure in finding so much of the old charm still lingering around the familiar design; there is doubt whether it is well for the world to have the work of the hand that had so far lost its cunning. Equally, in the presence of these Pilgrim's Progress designs, there must be some regret that they have ever been allowed to see the light—actually now first engraved, most of them.

Apart from the illustrations, the book is an admirable edition of Bunyan's famous allegory, printed, as it appears, in close reproduction of the early editions named in the introduction, viz., the second edition of the first part, published in 1678, and the first edition of the second part, published in 1684. The spelling has been modernized, the reason assigned being that the orthography of the original editions was so irregular that "no good end was to be served in retaining an erroneous usage." Admitting the possibility of two opinions on this matter, and wishing, for our own part, that a photographic reproduction of the early pages could have been given also, we yet accept the statement that the text has been followed with religious thoroughness except as to this matter of spelling. The Biographical Introduction (biographi-

cal of Bunyan, not of Cruikshank) occupies thirty pages, and has been written by Canon Venables and "revised by Miss Mabel Peacock." The book forms a handsome volume, bound in gray linen, and is announced as being issued in an edition of one thousand copies.

JUST PUBLISHED:

AN INTRODUCTION TO ECONOMICS

By Prof. HENRY R. SEAGER, of Columbia.
560 pp. 8vo, $2.00 *net.*

This work attempts to present the principles of Economics in vital relation to the facts and problems of contemporary business life. A distinctive feature is the introductory sketch of the rise and progress of modern industry in England and the United States, which is designed to suggest the historical perspective so necessary to the judicial treatment of present-day problems. Distribution receives particular attention. Four chapters are devoted to monopolies.

The Grant and Validity of British Patents for Inventions

By JAMES ROBERTS, M.A., LL.B.
Ex-Scholar, Senior Moderator and Gold Medallist in Experimental Science, Trinity College, Dublin; of The Inner Temple, Barrister-at-Law; Associate of the Institution of Electrical Engineers.

With Numerous Illustrations. 8vo, $8.00 net

The want of a work of this kind is apparent from the fact that, according to the Official Report, over 40 per cent. of patents now granted are invalid. The First Part contains an exposition of the principles and rules governing the validity of patents for inventions, the conditions to be complied with by the inventor in order to obtain a valid patent, and the procedure to be followed, including the practice before the Comptroller-General and Law Officers of the Crown under the Act of 1902. The Second Part contains abstracts of a large number of cases illustrating the application of the rules discussed in the First Part; these are amply illustrated by drawings, most of which have never been collected and published before in any work.

MOORE'S CICERO DE SENECTUTE
$0.80
Edited by FRANK GARDNER MOORE, Ph.D.
Associate Professor of Latin in Dartmouth College

AN important edition of the dialogue on Old Age, embodying much new critical material made available in the last twenty years. The text is supplied with very full footnotes, and is accompanied by a scholarly Introduction, in which the character of Cato is elaborately set forth. This is supplemented by a comparative list of noted old men, and by a poem on Old Age by Leo XIII. The Appendix contains critical and supplementary notes, an Index of Persons, and a General Index to the Notes. References are given to the grammars generally in use.

Four Admirable Books
FOR THE CLASS IN ENGLISH.

A. C. McClurg & Co., the publishers, beg to ask the attention of instructors to four useful and important volumes, prepared by Sherwin Cody, which fill a significant place in the development of the short story and the English essay, and in the consideration of Poe's writings.

The volumes are: **"A Selection from the World's Greatest Short Stories," "A Selection from the Best English Essays," "The Best Tales of Edgar Allan Poe," "The Best Poems and Essays of Edgar Allan Poe,"** *each volume with introductions, analyses, and criticisms.*

The two volumes first published have now found their way into many universities, colleges, and schools. Each occupies a quite important field, and has received unstinted approval from educators who have had an opportunity to test them in actual class work. These books may be taken up independently of other text-books, and yet in conjunction with them, and may be put to use practically at any time during the year.

We invite inquiries concerning the adoption of these books, and shall be glad to send a synopsis of each, together with a list of institutions which have thus far made adoptions, on request.

Four small, compact volumes, $1.00 each; postpaid, $1.08.

THE NOTABLE NEW MACMILLAN BOOKS

PUBLISHED THIS WEEK

A new novel by the author of "Children of the Mist," etc., etc.

Mr. EDEN PHILLPOTTS' The American Prisoner

A powerful story of the time when French and American soldiers and sailors crowded the grim prison on Dartmoor during the War of 1812. There is a thrilling escape in a storm, a love interest whose heroine is a true "maid of Devon," and through it all that indescribable sense of atmosphere which has made "My Devon Year" so restful among recent books. Illustrated. *Cloth, 12mo, $1.50*

Mr. HERBERT W. PAUL'S History of Modern England *Vols. I. and II.*

To be complete in five volumes, cloth, octavo. Volumes I. and II. now ready. $5.00 net.

Its subject is the England of recent years.

Its author is a man of unusual experience, one of the most skilful writers and keenest observers of the present day, who goes clear to the heart of any matter in hand.

Its style is direct and forceful; as refreshing as its matter is illuminating.

Its point of view is that of this generation (of the young man under forty, that is) and neither superficial nor warped by tradition.

ENGLISH LITERATURE AN ILLUSTRATED RECORD

By RICHARD GARNETT, LL.D., *and* EDMUND GOSSE, LL.D.

Now complete in four volumes, imperial octavo, cloth, $24.00 net; half morocco, $40 net.

Illustrated with Colour-plates, Photogravures, Wood Engravings and Many Lithographic Facsimiles; also a Large Number of the Best Accredited Portraits of English Authors, Autographs, Title-pages, Caricatures, Facsimiles, etc.

A new volume of **The Cambridge Modern History** *Just Ready. Vol. II.*

Planned by the late LORD ACTON, LL.D., Regius Professor of Modern History in the University of Cambridge. Edited by A. W. WARD, Litt.D., G. W. PROTHERO, Litt.D., and STANLEY LEATHES, M.A. Contributed to by the leading specialists in historical research.

The work will be complete in twelve volumes, each **$4.00** *net. Those now ready are:*

I. THE RENAISSANCE II. THE REFORMATION III. THE UNITED STATES

JUST READY

ALLCHIN
A Manual of Medicine. Edited by W. H. ALLCHIN, M.D. Lond., F.R.C.P., F.R.S.Ed. Volume V. Diseases of the digestive system, and of the liver, diseases of the peritoneum and of the vessels of the abdomen, diseases of the kidneys, diseases of the ductless glands.
12+687 p. 12mo, illustrated, cloth, $2.00 *net.*

WEYSSE
A Synoptic Text-Book of Zoölogy, for Colleges and Schools. By ARTHUR WISSWALD WEYSSE, A.M., Ph.D. (Harvard), Instructor in Zoölogy at the Massachusetts Institute of Technology.
C. 25+525 p. 8vo, illus., cloth, $4.00 *net.*

SWENSON and FRANKENFIELD
Testing of Electro-Magnetic Machinery and other Apparatus. By BERNARD VICTOR SWENSON, E.E., M.E., of the University of Wisconsin and BUDD FRANKENFIELD, E.E., of the Nernst Lamp Company. Vol. I, Direct Currents.
23+420 p. 8vo., illustrated, cloth, $3.00 *net.*

RIDER
Electric Traction. A Practical Handbook on the Application of Electricity as a Locomotive Power, by JOHN HALL RIDER, Chief Electrical Engineer, London County Council Tramway.
16 x 453 p. 12mo, cloth, $3 00 *net.*

ARMSTRONG
Transitional Eras in Thought with Special Reference to the Present Age. By A. C. ARMSTRONG, Ph.D., Professor of Philosophy in Wesleyan University.
9+347 p. 12mo, cloth, $2.00 *net.*

BEERS
Points at Issue and Some Other Points. By Professor HENRY A. BEERS of Yale College. 7+273 p. 12mo, cloth, $1.50 *net.*

DAY
The Policy and Administration of the Dutch in Java. By CLIVE DAY, Ph.D., Assistant Professor of Economic History in Yale University.
21+434 p. 12mo, cloth, $2.00 *net.*

DEMOSTHENES ON THE CROWN
Edited by WILLIAM WATSON GOODWIN, Hon. LL.D., and D.C.L., Eliot Professor of Greek Literature (Emeritus) in Harvard University. 9+296 p. 12mo, cloth $1.10 *net.*

MOORE
The New Testament in the Christian Church. Eight Lectures. By EDWARD CALDWELL MOORE. Professor of Theology in Harvard University.
12+367 p. 12mo, cloth, $1.50 *net.*

BELL'S MINIATURE SERIES OF MUSICIANS Illustrated
Beethoven. By J. S. SHEDLOCK, B.A.
60 pages, 16mo, leather, $1.00; boards, 50c.
Gounod. By HENRY TOLHURST.
55 pages, 16mo, leather, $1.00; boards, 50c.
Mozart. By EBENEZER PROUT, B.A., Mus.D.
60 pages, 16mo, leather, $1.00; boards, 50c.
Arthur Sullivan. By H. SAXE WYNDHAM, with a Chapter by ERNEST FORD.
79 pages, 16mo, leather, $1.00; boards, 50c.

ENGLISH MEN OF LETTERS
Jeremy Taylor. By EDMUND GOSSE, part author of "An Illustrated Record of English Literature." 12+234 p, Cloth, 75 cents *net.*

BURLINGTON MAGAZINE
The subscription for the "Burlington Magazine" will be $12.00, *net* per annum, and the price for single copies $1.00 *net.* No. X., Volume IV., January, 1904, now ready.

A. E.
The Divine Vision and other Poems. By A. E. 123 p. 12mo, cloth, $1.25 *net.*

HARDY
The Dynasts, A Drama of the Napoleonic Wars, in Three Parts, Nineteen Acts, and One Hundred and Thirty Scenes. By THOMAS HARDY. Part First.
22+234 p. 12mo, cloth, $1.50 *net.*

THE MACMILLAN COMPANY, Publishers, 66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, JANUARY 28, 1904.

The Week.

After the Senate debate of Friday, and again and particularly of Monday, it would need a new algebraical sign to designate what remains of the Lodge-Roosevelt "infinitesimal recess." Certain appointments unconfirmed at the special session were, it will be recalled, renewed by the President in a supposititious recess between sessions. As a matter of fact, there was no recess, and the offices were constructively vacant. Senator Tillman brought up the case, chiefly with the intention of showing that Collector Crum of Charleston is holding office without warrant of law. It was a curious result of the discussion that Senators Spooner, Hale, and Platt of Connecticut all approved the resolution, and all riddled the notion that appointments may be made between twelve and twelve o'clock of the same day. Senator Hale went so far as to say that "no Senator on this side has, whatever may be his partisan feeling, indicated any expression of a recognition of this new proposition that there was a constructive recess when the two sessions merged." It should be said that the President has not expressly committed himself to the doctrine that a fragment of time too brief for physical measurement may be conjured out of the dark backward and abysm. But it is certain that Secretary Shaw has practically endorsed that whimsy; trusting, doubtless, to Senator Lodge's famous elucidation of the theory of infinitesimals. Too fine spun for Senators, it cannot be supposed that the Comptroller of the Treasury, who must deal with time as mortals know it, will pay recess salaries to officials appointed at no ascertainable moment. The case will remain one of the curious aberrations of an Administration over-anxious to "do things."

There were really some very lively ghosts flitting about in the Roosevelt-Lodge "recess." One of them was Gen. Wood. He held a commission as Major-General. But, under the Constitution, and unless there was an interval between twelve and twelve o'clock on December 7, no new commission could be legally issued to him, and he is only a Brigadier-General nominated to be Major-General. When appointments are made in a recess of the Senate, commissions are issued at once, and the incumbent holds office until confirmed or rejected. If the session expires without action on the nomination, it lapses, and the commission with it, and a new appointment has to be made. But on December 7 there was no recess, except in the President's mind, during which a new nomination of Gen. Wood and the others might be sent in. The Senate was in session continuously. Consequently, the nominations were not recess appointments; hence they did not lawfully carry commissions with them; hence Gen. Wood has no right at present to either the rank or the pay of a Major-General. Other perquisites are balanced on the Lodge-Roosevelt pinpoint of a constructive recess. There is the question of mileage for Congressmen. Representative Underwood ruthlessly proposes to strike out an item of $145,000 from the Deficiency Bill, on the ground that Congressmen could not travel to and from Maine and Texas and Oregon in the President's interval of time between 11 hours, 60 minutes, and 12 hours. But metaphysics is a blessed word. For all Mr. Underwood knows, may there not have been a metaphysical flight of Congressmen to their homes and back, in just no time at all? If Puck could put a girdle about the earth in forty minutes, a really able-bodied Congressman might have flown to Seattle and back while Mr. Roosevelt was nominating Gen. Wood. The President's imperceptible instant of time ought to be good enough for all Congressmen whose philosophy is not overborne by a wholly unnecessary desire to be economical and honest.

Senator Spooner made on Tuesday week the astounding suggestion that the President may not have known of the orders of the Assistant Secretary of the Navy, tantamount to a declaration of war upon Colombia, two days before the revolution at Panama. If this is not merely the shift of a lawyer driven into a corner in debate, it is one of the most alarming revelations yet made about Mr. Roosevelt's Administration. Is its war spirit so rampant that every Assistant Secretary thinks himself entitled to begin hostilities without waiting to get the consent of the President? The mere hint by Senator Spooner that such may be the case is enough to redouble the demand for a "safe" President. According to the Senator, any underling might any day declare war over Mr. Roosevelt's head. How do we know that some clerk in the Navy Department is not, at this moment, sending a squadron to bombard Port Arthur? Mr. Spooner's remark is either a mere quibble, unworthy of him, or else a confession of chaos in the Government.

The Senate is urged by the versatile Bunau-Varilla to pass the Panama treaty without amendment, on the ground that it means anything or nothing, or whatever the United States wishes to make it mean. Panama is so much our good friend that she will trust us to read the treaty as we will. It is surprising that no exponent of Senatorial courtesy has risen and asked why, if the treaty means now one thing, now another, the time of an august body has been wasted in its consideration. Surely the Senators who have carefully weighed it clause by clause and tried to make of it an accurate state paper, are left in a very ridiculous position by M. Bunau-Varilla's glib suggestion. Why would it not have been better to ratify mutually the Golden Rule or Poor Richard's Almanack, leaving their application to Isthmian complications within the discretion of President Roosevelt and his successors? To discredit the entire negotiation, it needed only M. Bunau-Varilla's assurance that his foster-fatherland offers us a putty treaty—a palpable convenience for stuffing into any or all chinks, a great improvement upon treaties which cover only a stingily defined patch. In other words, M. Bunau-Varilla reminds us concerning his own treaty that all papers are worthless, or superfluous, betweeen friends. These are the airs of a man who loftily waves aside, or rather jauntily refuses to give, a note of hand for a loan.

But M. Bunau-Varilla has not even the consistency of his impertinence. With one breath he says that the treaty is so flexible that amendments are unnecessary; with the next he declares that if we begin to amend it, the treaty will suddenly become a serious contract, may be subject to counter-amendments by Panama, and, perhaps, imperilled by the delay. Which Philippe are we to regard as "Philip sober?"—the smiling envoy who says, "My Panamans are so amiable that they don't care what Uncle Sam does with the treaty," or the grave diplomat who protests, "My Panamans are so desirous of having that treaty explicit that they will be amending it forever if Uncle Sam is foolish enough to give them the chance"? Clearly, both Philips cannot be right. The Senate will do well to ignore them both, to take its own steady course, and meanwhile leave the Executive Department to tread as it may the twists and turns of the Panama vaudeville. The Senate really has no obligation to notice the fantastic Minister of Panama, nor yet to relieve the American bargainers with him from their embarrassing position before the footlights.

Democratic Senators who say they can make political capital out of the President's lawless course in Panama while at the same time voting to ratify the treaty, are wildly deluded. All of them who

support the treaty will rightly be held to be thereby condoning the abhorrent means by which it was obtained. And as their party in the Senate has the power to defeat the President, it will be unable to say a word against his Panama illegality if the treaty is ratified with the aid of Democratic votes. The retort will be too ready: "If it was so knavish a measure, why didn't you kill it?" The Democratic minority have a great opportunity to serve the country as well as their party by insisting that the Administration find an honorable way out of its wretched Panama mess. If they do otherwise, they will enter the campaign in the highly moral attitude of receivers of stolen goods denouncing the thief.

The President's law for his Panama policy was seriously impugned at the meeting of the State Bar Association last week. But this will not bother Mr. Roosevelt. He will shed this attack as easily as that of the Yale professors. Are they not Democrats—or else that most fearful of all wildfowl, "Democrats in disguise"? It is not a question of the law, but of the man who opens the book and reads it out. Any lawyer or professor of international law who differs with the President is, *ipso facto*, no good man and true, presumptively a Bryanite, and more than probably a weakling. This once established, it is, of course, unnecessary to discuss his arguments. On the other hand, any Senator or editor who sustains the President's course becomes thereby exalted to the rank of a great authority. Of such an advocate the President says, in the language of "mon père Distinguo" in the 'Provincial Letters': "It does not matter where he got his law; it is enough to know that the opinions of great men like that are always convincing of themselves."

Gen. Reyes's correspondence on behalf of Colombia was published on January 19. His explanation of the rejection of the Hay-Herran treaty was manly and straightforward. He reminded Mr. Hay that when the treaty was presented to the State of Colombia, the United States Minister at Bogotá insisted, in offensive terms, that the treaty should be ratified without change. Where the Senate expected to debate a treaty, they were served with an ultimatum. To reject it was an obvious counsel of self-respect. Imagine what our Senate would have done if, when the Hay-Pauncefote treaty was before it, it had learned that Lord Lansdowne was repeatedly telegraphing to the British Ambassador at Washington that the treaty must be ratified without change or delay. That is what Mr. Hay did to our Minister to Colombia, and Commissioner Reyes states only the truth when he says that the demand was derogatory to the national dignity. But we have had for some time Mr. Hay's reply to this complaint of discourteous treatment. It is, stripped of verbiage: Colombia is a minor Power, and has no right to take its dignity and self-respect too seriously. A "Dago" Senate has no use for generous sentiments befitting great Powers only. The interests of civilization required a canal, and, since Colombia is a picayune State, she should have obligingly consented to be blustered into doing the will of her betters. President Roosevelt evidently held the same opinion of the republic of Colombia when he borrowed from the French the awful word "anti-social" to characterize the obstructors of the canal project.

It is stated that Capt. Patrick Garrick, collector of customs at El Paso, has bought 3,000,000 acres of land in Mexico for cattle purposes. This is a good or bad piece of news, according as one happens to be a friend or foe of humanity. Senator Spooner said, the other day, that a sufficient reason for seizing the Isthmus was that American capital was invested there. But that is nothing to the hundreds of millions we have invested in Mexico in railroads, mines, ranches, plantations, and other ways. Certainly, there is no Latin-American country where we have so much at stake financially. The fact that President Diaz is getting on in years must, therefore, be a source of great uneasiness to those who do not take "large" views of things. When he is gone, Mexico may lapse into its former political chaos. Then, of course, there would be no reason why Mexican independence should be respected. It may be an open question whether trade should follow the flag; but there is no doubt at all that the flag should follow trade. The interests of humanity may not require us to take Mexico by eminent domain just at present; but when, after Diaz, we actually want that portion of the earth, the work of starting a revolution will be a mere detail.

While Mr. Williams was baiting the Republicans in the House, the Senate Committee on Navigation was listening to the protests of the cordage manufacturers against the "stand-patters" who propose to restrict the carrying trade of the Philippines to American bottoms. And about the time a good Republican was saying in the House that, while he favored the principle of reciprocity, he was against taking up the question of Canadian reciprocity, the National Board of Trade was unanimously passing a resolution in Washington calling for such a measure. But to make the matter more confusing still, the American Protective Tariff League was engaged on Thursday in denouncing reciprocity *in toto:* there can be no such thing between competitive nations without murdering the "doctrine of protection to all industry and all labor." If there is any truth in the assertion that a calm is the result of conflicting currents striving for the mastery, it can be accepted as a fact that the Republican party will, so far as tariff legislation is concerned, remain like a painted ship upon a painted ocean. To be sure, we hear of its being about to do great things in that line in 1905. But how can it? The tariff must not be disturbed before an election, and business must not be upset by such action after a Republican success. However, President Roosevelt is great at finding expedients. No doubt, when he gets round to it, he can discover a metaphysical interval of time in which it will be safe to revise the tariff.

There is nothing surprising in the assertion that the American Tin Plate Company's warehouses are crowded with tin plate. The fact that the exports of tin plate for the first eleven months of 1903 declined from 3,430,665 pounds to 455,726 pounds explains that. It is worth noting, too, that the November trade statement shows that in that month we imported from Great Britain over 10,500,000 pounds of the commodity (an increase over 1902 of about 1,374,000 pounds), while our total exports were only 73,510 pounds. Evidently the Welsh tin-plate industry is not on its last legs. Just at present, the Steel Trust is instituting rigid economies. It wants all the business it can get, but it wants it at the lowest expense to itself. The increasing prosperity of the Welsh tin-plate makers in the last few years has perhaps frightened the Trust somewhat and caused it to see the wisdom of a compromise. It will keep its tin plate out of the foreign market if the British manufacturers will buy their raw material of the Trust. The British manufacturers can ask nothing better than this, as the Trust is prepared to "dump" the raw material of the tin-plate industry on foreign countries, and as this country is not a serious competitor abroad in tin plate.

Opponents of President Roosevelt within his own party are growing more vociferous. The Chicago *Inter Ocean*, a strong Republican paper of the Middle West, admits that President Roosevelt is almost certain to lose New York next November, and quite possibly New Jersey and Connecticut; and the *Inter Ocean* therefore withdraws from "the irreconcilable conflict" between "the Roosevelt Republicans and the McKinley-Hanna Republicans"; in short, that newspaper does not urge the renomination of Roosevelt. The *Sun*, the recognized organ of the New York sentiment against Roosevelt, came out

on Thursday morning in an editorial ridiculing the idea that failure to support Roosevelt's pretensions is treason to the party, and contending that Hanna, Root, or Taft may properly be considered in connection with the nomination. The *Sun* apparently believes that, as Gibbon didn't understand the difference between himself and the Roman Empire, so Mr. Roosevelt fails to comprehend that he is not the whole Republican party; and it makes the significant announcement, "with the Senator's own authority," that Senator Hanna has never pledged himself to any one ("and especially not to Mr. Roosevelt") that the Senator "will not be a candidate for the Presidency if at any time he shall see fit." If the *Sun* editorial be directly inspired by Hanna, the Roosevelt adherents are wise in deciding that the moment has come to make an active campaign for delegates.

President Roosevelt seems to have given up his motto of *toujours de l'audace*, as respects his own renomination. He declines to accept Senator Foraker's invitation to make the welkin ring in Ohio fighting for Roosevelt delegates. The President, it is explained, cannot allow himself to be "drawn into a factional controversy" of that kind. Yes; but no such consideration swayed him last year, when he took up Senator Hanna's challenge in a sensational telegram, and openly appealed to the Ohio convention to endorse him. That was only a preliminary skirmish—that was merely Las Guásimas, and now the Rough Rider is facing San Juan Hill; does he falter? The contrast between his action last year and this is perhaps the best indication of the loss of prestige that has since befallen him. Then he was carrying everything before him; now he has to face open enemies and secret foes on every hand. Doubtless, he is well advised not to put his fortunes to the proof in a struggle with Mr. Hanna in Ohio. He would be pretty sure to get more hard knocks than glory. But in many other States the work of chilling Roosevelt enthusiasm and undermining the President's political support is going on actively, and one can understand the angry impatience with which his indignant friends are calling upon him to don his "fighting clothes."

That a Liberal candidate should, on January 20, have increased by nearly 300 the majority at Gateshead of that picturesque and powerful Radical, the late Sir William Allan, is certainly of bad omen for the Chamberlainites. Taken in connection with their conclusive defeat recently at Norwich, it merely emphasizes the lesson of the fifteen bye-elections held since Mr. Chamberlain began his campaign for what he calls tariff reform. They were held to fill seats to which in 1900 there had been returned 12 Unionists and 3 Liberals. They resulted in the choice of 9 Unionists, 5 Liberals, and 1 Independent Labor member. Thus the Government lost one out of every four of the seats in question. The replacement of one-fourth of all the Unionist M.P.'s by Liberals would at the next election reduce the total number of the former to 307, and bring the Liberal and Labor total up to 281. In that event, neither of the two British parties could carry on his Majesty's Government a moment longer than it suited the Irish Nationalists to let it. If the Liberal and Labor parties can reach some working understanding, it is not unlikely that they may secure an absolute majority of all the 670 members of the House—something which they have not had since the dissolution of the Parliament chosen in 1880. If a comparison between 1885 and the recent bye-elections be made on the basis of treating as Liberal votes all votes cast at either election for all Liberal or Labor candidates, there has been a Liberal gain of 273, or at the rate of 22 to a constituency. In 1885, 6 Liberal candidates were defeated by majorities of less than 22 each. A gain of 6 seats, as compared with the 1885 totals, would give a Liberal membership of 339, or a majority of 8 over all.

If comparison be made between the result of the bye-elections and those of the general election of 1892, the results indicate an even more hopeful prospect for the present Opposition. Of the seats recently filled, ten were contested in 1892. In these constituencies there was a net Liberal gain, counting the vote cast for the regular Liberal candidates only, of 5,611, or an average of 561 to a constituency. In 1892, 115 Unionists in Great Britain were returned by less than 561 majority each. At that election 273 Liberals were successful. If they gain as compared with that election 115 seats, they will muster 388 in the new Parliament, a clear majority of 106 over all. If the vote cast for Labor candidates be included in the Liberal totals, the gain as compared with 1892 in the ten constituencies in which such comparisons are possible is 11,421, at the rate of 1,142 to each constituency. Such a ratio of gain would give the Liberals about 150 seats more than they had in 1892, or a total membership of 420 or upwards, and a majority of at least 170 over all. No attempt at prophecy is intended. No one knows when the general election will be held. Whether public opinion in Great Britain will, months or years hence, endorse Mr. Chamberlain's programme, no one can now tell with certainty. But the result of the bye-elections since that programme was announced yields very persuasive evidence that at present the nation is not with Chamberlain.

Whitaker Wright's conviction and tragic death end a chapter of unusual interest in British finance. The notorious London and Globe Company was the logical conclusion of the inflated notions of corporation possibilities that filled the British mind a few years ago. When the speculative craze is on him, the average Englishman is capable of leaving his American cousin far behind in a career of recklessness. There are always adventurers ready to take advantage of his outbursts of insanity. Wright's project was not so absurd as some that were launched during the South Sea bubble, but he unquestionably possessed the spirit of that period. He launched his £2,000,000 London and Globe corporation, and made it go by filling the directorate with peers and other eminent personages, headed by the late Marquis of Dufferin. Wright himself acquired 67,650 shares; but when the wind-up came he had only 2,500, high premiums having been quoted in the meanwhile. It was the old story of false prospectuses and fraudulent balance sheets. The English Companies act is very strict as regards false statements; they are a penal offence. Wright had conducted himself with effrontery since criminal proceedings were begun against him, as if the magnitude of his fraudulent promoting robbed it of its heinousness.

The introduction of Chinese labor in the Transvaal seems assured, the law to that effect having passed its second reading in the Legislative Council on January 20. This measure has been bitterly antagonized in all parts of the British Empire, especially in Australia. In fact, if the controversy so excited is a fair illustration of what will happen under Imperial Federation, the fate of the latter will very likely hang in the balance from the start. In the debate in the Transvaal Legislative Council, Sir Percy Fitzgerald criticised the premiers of Australia and New Zealand for having cabled their conviction that Chinese labor should be prohibited in the Rand district. He said these opinions must be based upon profound ignorance of conditions in the Transvaal; that dictation from sister colonies would be disastrous, and that the example of Australia was not always one for emulation. What Sir Percy says is: "Confound your impudence! You can send us troops, but we do not need your advice." But if kindly advice is to be labelled "dictation" and resented, it is time for Mr. Chamberlain to take action. If Australia wants to lay down the law for South Africa in a matter in which its interest is largely academic, and South Africa takes to calling Australia names in consequence, what is likely to happen when a question arises which actually affects the material interests of the different parts of the Empire?

THE CASE OF BUNAU-VARILLA.

One clause of the resolution introduced by Senator Hoar on December 9 requested information of the President "whether the officials negotiating or ratifying the treaty on the part of Panama had any personal or private interest in or relation to the construction of a canal across the Isthmus of Panama." This, of course, looked straight at Monsieur Philippe Bunau-Varilla. He, as Consul Ehrman elegantly put it in his telegram to Secretary Hay, was "the party" named to negotiate the treaty. This he did, moreover, between luncheon and dinner, in his triple capacity of French engineer, Panama Company stockholder, and opéra-bouffe Minister of Panama. It is clear, therefore, that Senator Hoar's inquiry squinted hard at an attitude marked by gross impropriety, to say the least.

But the scandal of M. Bunau-Varilla's connection with the Panama revolution grew much more flagrant as the facts came out. Senator Hoar did not know on December 9 what he learned from the New York *Tribune* of December 21. That pro-Roosevelt, pro-Panama newspaper printed on the date mentioned a letter from a special correspondent at Panama from which we take the following pertinent extract:

> "Doctor Amador's visit to Washington having proved fruitless, and there being no longer any necessity for secrecy, he went to New York and took apartments at the Waldorf-Astoria. There he fell in with M. Philippe Bunau-Varilla, who had resided on the Isthmus as a canal engineer, and with whom he was acquainted. Varilla was then in the States in the interest of the New Panama Canal Company, and, their sentiments being more or less the same, Dr. Amador unfolded to Varilla the plans of the conspirators at Panama. From this point the project progressed rapidly. Dr. Amador returned to the Isthmus early in October, and at a meeting of the seven conspirators, who gathered in the office of the electric-lighting company in Panama, he related the result of his visit to the States. He had received no assurance from any official of support, but communicated to his fellows the fact that Varilla had assured him in the most positive terms that any stroke in favor of independence, having as its primary object the grant to the American Republic of a canal concession, would be supported by the United States Government. So elated was Dr. Amador over Varilla's assurances and so great was his confidence in the French engineer's ability to influence the Government at Washington, that he was unable to see any further difficulties in the way of executing the project."

This statement of fact, which has never been challenged, makes it legitimate to inquire who this man is who pretended to speak, and made the Panameños think he did speak, for the Government of the United States. Until very recently, he has been parading and haranguing the country. He was an honored guest of the Quill Club in this city, of which many clergymen are members. They should be interested in the character of the man they entertained. Boasting the closest relations with President Roosevelt and Secretary Hay, making his own personality as prominent and as offensive as possible, it is of the highest public interest, transcending any merely private likes or dislikes, to find out what this man's reputation has been. We propose, therefore, to translate a few passages from the documents annexed to the report of M. Vallé, formerly Minister of Justice in France, relative to M. Bunau-Varilla.

One of them is an extract from a paper signed by the *procureur-général*, M. Quesnay de Beaurepaire. It reads:

> "M. Philippe Bunau-Varilla, formerly divisional superintendent of the work of the Panama Company, and at the moment director general *ad interim*, got up a company composed of his brother, a financier in Paris, and two promoters, and, while keeping his name concealed, took the lead in securing an important allotment. For him, the price per cubic metre was greatly increased [and that upon a proved overestimate of work done], while a series of contracts, successively combined with skill, enabled that concern to reap extraordinary profits. . . . The Panama Company, besides written agreements, paid over to Bunau, without the corresponding vouchers, sums amounting to 9,500,000 francs."

Further on in the report of the Minister of Justice appears the testimony of M. Martin, formerly secretary-general of the Panama Company. He had resigned, and the reason was that he could not agree to a proposed contract. As to this he declared:

> "I must, indeed, add, to my great regret, this fact, which was, however, well known to many persons, that M. Bunau-Varilla had agreed to pay a rebate of 1.40 francs the cubic metre, on a total of 20,000,000 cubic metres, to Baron de Reinach. I got out, and I do not know if this scheme was carried out."

But the *procureur-général* adds: "Yes, the bargain was executed; the report of the expert shows it; it was even made more flagrant."

One tell-tale extract more, this time from the *Bulletin du Canal Interocéanique:*

> "Contract of Artigue, Sonderegger and Bunau-Varilla:
> "Amount excavated in the Paraiso section, 818,500 cubic metres.
> "Amount paid for, 1,724,536 cubic metres.
> "Percentage of overpayment, 110."

Minister Bunau-Varilla, has, through the *Tribune's* Washington correspondent declared these charges, based on official documents, to be all "calumnies." The newspapers giving them currency, whether in Paris or this country, he said he should not "answer," preferring to "leave them to the mercy of their own consciences" (but he has since called upon the *Evening Post* to retract). He added, with a swaggering touch which he must have learned from some smirched American politician, "Nothing can fill me with more pride than to see myself exposed to their impotent wrath." But we submit that an affair of such gravity cannot be disposed of thus lightly. It touches the dignity of this Government, as whose spokesman M. Bunau-Varilla has posed. It has a vital relation to an important public treaty which was so largely his personal work. Unless Minister Bunau-Varilla can at once and decisively clear away the charges that rest upon his good name, President Roosevelt should intimate to him that his usefulness is at an end in this country. And then there should be apologies all around for having taken a treaty, highly objectionable in itself, from hands that a French Minister of Justice had reported not to be clean.

NEGRO EDUCATION AND THE SOUTH.

The address of welcome to the Northern scholars recently assembled at New Orleans intimated that the discussion of the negro problem has become a disease. If the assertion had been made that the relations with nine millions of black people in the Southern country had produced disorders in the minds of many of the whites, it would have been nearer the truth. Such conditions exist as must provoke constant and keen discussion in regard to remedies and their application. This is a mark of healthy interest, not of disease.

The remedy proposed by Gov. Vardaman of Mississippi, in his inaugural address, for the checking of crime among the blacks will seem to some novel. It has been supposed that education tends to make men both better able to care for themselves and better fitted to be members of society. That has been our theory for more than two hundred and fifty years, and under it nearly twenty-one millions of foreigners have been assimilated in the last fifty years. But now we learn that the blacks are deteriorated by education. Gen. Armstrong, Booker Washington, and the trustees of Atlanta University have been working under a false idea. Their great enterprises and others which have absorbed hundreds of thousands of dollars and stirred the hearts of so many with hopes of great benefit to the blacks, were and are wasted efforts. There are more crimes to-day among the negroes than when they were slaves; therefore, all education is bad for them. This utterance would deserve less notice if the speaker were not the Governor of a State, and had not won his election by making appeals to prejudice and proclaiming contempt of law in dealing with negro criminals.

Gov. Vardaman is simply true to the traditions of the old slavery and to the hopes of the new. But suppose it to be a fact that in the State of Mississippi crime has increased. Are we not justified in asking for a closer connection between the pitiful education that the average colored boy gets in the country schools of the cotton States and crime than appears in this address? What is the precise deteriorating effect of a little reading and writing and arithmetic on the moral nature? If a boy is in school only ten weeks, and for the rest of the year roams in idleness, or,

helping his father on the hired land, hears him profanely denounce the extortions and robberies practised on him by his landlord and merchant-banker, is it the schooling or something else that leads the boy into crime? Three millions of colored children of the school age live in the Southern States. More than half of them are probably not in school any year, and the rest perhaps in school on the average for fifteen weeks. When one reads in a paper published in an enlightened Southern city, in one issue, that one colored boy of nine and another of twelve years were condemned to thirty days' work with the chain gang, and in another issue that four boys of twelve years were at one time sentenced to fifty days in jail, one may feel the pathos of the situation both for the guilty boys and for the State without being sure that school training had made thieves of these boys. Required schooling for all boys and girls thirty weeks in the year for seven years could be called real education. Nothing short of this amount will enable any one to say from the standpoint of the State that education for the blacks is, or is not, a failure. How many years must elapse before the triumph of fairness and candor and reason and enlightened self-interest as to the absolute necessity of so much training will come in these States! It would take annually from seventy-five to eighty millions of dollars to teach the colored children of the South as the children of Massachusetts are taught. At present six millions are spent upon them. It is something, it is much; but, under the present arrangement, often the brightest colored children in the towns are kept at work, and often those least likely to profit by schooling are the ones in regular attendance.

They are as a rule desirous of instruction, or at least they think they are, and the reports show that the colored children walk on the average longer distances than the whites to gain their privileges. But are even the present privileges, limited as they are, to be withheld? Is the negro, driven by competition out of many callings previously open to him, to be deprived of the little schooling he now enjoys? Is he to be condemned to the cottonfield and kept there under conditions so depressing that he cannot get ahead, and are his children to be denied the opportunity of improving their minds a little and winning a little better chance than he had for the unequal race of life? It is well known that the hostility of the poor whites in the neighborhood of the Calhoun settlement when it was first established, was almost unendurable. That same spirit prevails largely in the cotton belt. Of that spirit Gov. Vardaman is to-day the most prominent spokesman, and the danger of backward steps as a result of such utterances by such politicians deserves consideration. Nor must we forget, in estimating the danger, the excitable character of the Southerner—his hasty judgments, his quick resentment of supposed insult, and his intolerance of criticism. The sweeping influence of superficial, intriguing leaders under present conditions is much to be deplored. Nevertheless, it must not be believed that this movement for education can go backward.

The solid institutions of learning, colleges, universities, and normal schools, established in the South, both for blacks and whites, and the attention they are attracting for good work; the really enlightened and candid minds governing public opinion in certain localities; the constant and stimulating communication between these leaders in education; the influence and sympathy and pecuniary support of many noble Northern men, given with true courtesy and charity; the silent leavening of the scattered graduates of the great schools like Tuskegee (not 10 per cent. of whom can be found living in idleness *any part of the year*, Booker Washington assures us); the increasing ownership of land by negroes in some of these States—such influences as these can be expected to prove a great bulwark against the tide rising in the cotton belt for the abolition of education for the blacks. They will surely prevent that tide from destroying or greatly abridging the present opportunity given by the States for negro education. There may be occasional and temporary losses in certain regions, but there is large reason to hope, in spite of the destructive utterances of a few who voice the opposition of many, that the good already gained will in the main be held, and it is certain that if the advance already gained is maintained, it will be the means of greater progress. The position for the Northern friends of the blacks to take is: disregarding all hysteria in Southern expression, to continue to extend generous help to every sound educational enterprise in the South, and to cherish and express unfailing sympathy and warm admiration for those who, in the face of great difficulties, are heroically maintaining the necessity of good schooling for every child without distinction in all these commonwealths.

AN IMPERIALISTIC CHOSEN RACE.

It is a matter of inexhaustible dispute among ethnologists whether we have religious rites because of an antecedent religious feeling, or whether, contrariwise, we have religion because men found it necessary to explain rites which were irrationally established already. Recent events give color to the latter hypothesis. Nations trespass against nations without alleged warrant. Then come the apologists with abundant political and moral arguments for the deed; finally, theology takes a hand, and provides the acceptable sanction of religion. Thus Imperialism, from gross aggression, becomes a high political expediency or moral duty, and at last passes into an article of faith. The Roman augur who asserted that the omens were infallible because they agreed, after the event, with the fact of the repulse of Hannibal, would probably have been mocked at. Our times would have hailed him an accomplished priest of the god of things as they are.

Such a high priest is the cosmopolitan savânt, Mr. M. Houston-Stewart Chamberlain, whose work, 'The Bases of the Nineteenth Century,' is being exhaustively discussed in the *Revue des Deux Mondes*. The book might appropriately be called a compend of Imperialist religion. This 'Summa' of a new St. Thomas is appropriately directed against heathen; and in order that the faithful may be edified and the unbeliever the sooner confounded, an anonymous donor—the Kaiser, it is hinted—has had the tractate put into more than two thousand German libraries. But the vogue of Mr. Chamberlain's book is less notable than its doctrine. He assumes as axiomatic the existence of a chosen people with an irrefragable warrant to go in and possess the lands of all other people—Hebraism this, in its straitest form, although Hebrews are Mr. Chamberlain's pet aversion. And the chosen people is determined by the simple process of observing those who have exercised a successful covetousness towards all that is their neighbors'. Since the fall of the Roman Empire the great invading nations have been the Slavs and Germans, in the wider sense, and the Celts. Why the Celts, is not apparent, except that they have shown a remarkable faculty for amalgamating with their conquerors. By simply taking the three élite racial stocks together, one gets the chosen people, the future wielders of universal empire—namely, the Celto-Slavo-Germans. Only upon reflection does the comprehensiveness of this Imperialistic trinity become apparent. The deity of Celto-Slavo-Germanism not only justifies the vast aggressions of Russia and England in the nineteenth century, but it also sanctions beforehand all that Germany may choose to appropriate during the twentieth.

It is an eminently practical religion, dividing with absolute precision the elect from the non-elect. All that is Celto-Slavo-German is predestined to rule; all that is not, to serve. So all the yellow races are examples of decadence; savage and Latin nations are, on the other hand, pitiful cases of arrested development. The only hope of both classes is to be absorbed by the Celto-Slavo-Germans. So much for the Imperialist religion in its broad outlines. It predicates the further advance of

England, America, and Russia, and it promises that Germany will join in the movement, while it declares the corresponding decline of the rejected races to be written in the stars.

Naturally, the soundest principle encounters awkward cases when it comes to be applied to confused phenomena. For example, Mr. Chamberlain's theology staggers when it is called upon to explain the city of New York. Why should Celts reign supreme, oppressing the native (Germanic) stock and the undeveloped immigrants with celestial impartiality? Here is a conflict of divine essences, and a theoretical flaw in the system. But, generally, Mr. Chamberlain skirts these obstacles with the skill of a born casuist. For example, David, the single great and good King of Israel—how did a monarch of his type spring from the base seed of Abraham? Simply enough. There were in Palestine certain blond interlopers—Hittites, perhaps—in any case, Celto-Slavo-Germans. Of these whatever was really effective in Israel was born.

Naturally, the French reviewer for the *Deux Mondes*, M. Ernest Seillière, is anxious to fix the ethnic position of his own nation. Are the French, who have assuredly a large Celtic and Germanic admixture, Celto-Slavo-Germans, or are they merely backward Latins, and doomed to speedy extinction? Here the oracle speaks with ambiguous voice. When the French peasants rose in 1789 they struck "with the proverbial fury of the German who has too long been patient"; but when in three months or so the representatives of these same peasants, at Versailles, drew up the famous "Declaration of the Rights of Man," it was "the work of the wordiest people of the universe in its wordiest period." Clearly, the French are eligible for either lot. If they successfully rule their arid colonies of Africa and the fever-stricken plains of Tonkin, they may easily become constructive Celto-Slavo-Germans. Should, however, a more voracious Bismarck arise, they may handily be subjugated as the worst of the Latin nations.

How absolutely repugnant to democracy and to Christianity this new religion is need not be remarked. Note merely that it is no more open to a people to acquire Celto-Slavo-Germanism than it is for the Ethiopian to change his skin. Because the British flag girdled the earth, and Russia came to the Pacific in the last century, and Germany is emulous of such achievement in this, the remainder of the human race is doomed to perpetual inferiority. Mr. Chamberlain's dogma could only have been conceived in an age that detests philosophy and has now turned its back on humor. Never in the past have such elaborate pains been taken to prove that whatever is is right. How much more wholesome, nay, how much more humane, than this ethnological claptrap is Machiavelli's conception of the world as one great cockpit, and his tranquil enumeration of the ways in which dominion may be won—"by one's own arms or another's, by luck, or by craft."

OCEANICA'S RESPONSE.

The news from New Zealand does not hang together very well. In one breath we are informed that a new fortnightly steamship service is to be established between Great Britain and the colony, and that this will benefit the trade of the United States. But almost at the same moment comes a long statement from our consul at Auckland regarding the new preferential tariff which New Zealand enacted last November, and which is aimed principally at American goods.

This New Zealand tariff is the first, and so far the only tangible, result of the Chamberlain agitation. From all the facts that can be gathered, there is nothing to show that the colony will gain anything from its hasty procedure. But it is always Premier Seddon's purpose to ride in the "band wagon." He is not built, for instance, like Hon. Alfred Deakin, Prime Minister of the Commonwealth of Australia. This statesman is as noble a Roman as Mr. Seddon. As far back as 1887 he advocated a protectionist tariff for Great Britain, and he believes in preferential duties today. But he is too old a hand to make rash promises. Mr. Chamberlain, he says, wants the British electors to make proposals to the colonies. But he plainly intends to know what those proposals are before committing himself. He has a good deal to say about "a most cordial and generous consideration" of the Chamberlain scheme, and he has splendid visions of the future of Australian wheat and butter; but he also says that, though the mother country has risen up, and the time is ripe for the development of national trade, "it will be no easy task to achieve that object." At heart, the Australian Premier is governed by a cheese-paring policy. But Mr. Seddon is the soul of generosity. He puts it all on the ground of duty. He told the New Zealand Parliament that it was their duty to make a distinction between their own kindred and alien nations; "by so doing they were affirming a great principle." Then came a burst of magnanimity such as has rarely been equalled. He asked for nothing from the mother country in return, he said; he had invariably refused to do so. In fact, he had always left it for the imperial authorities to give something, "if they saw fit."

He has lived up to his principles—after a fashion. He jammed a most astonishing tariff measure through Parliament without allowing time for consideration. The absurdity of the law was so evident that he was forced to admit "that the proposals might not be economically sound, but it was a political necessity." This is going our "friends of protection" better. Under the new law there is an extra duty of 100 per cent. on cement. On the bulk of the imports the "extra" is 50 per cent. of the regular rate; and on a large number of articles previously admitted free there is a charge of 20 per cent. The duty on British-grown tea has been remitted. The Premier mentioned the United States in particular as a country against which it was necessary to take definite action. He showed his regard for us by increasing the duty on boots and shoes 50 per cent., these forming our principal exports to New Zealand. He did the same with our next largest item, hardware; and bicycles, also a leading feature, find themselves in the same box. Among the heaviest imports from the United States have been iron and steel and printing paper. These were formerly on the free list, but must hereafter pay 20 per cent. Evidently, the Premier does not take kindly to the fact that while the colony's total imports since 1893 have increased 64 per cent., those from the United States alone show a gain of 248 per cent.

The Auckland merchants back Mr. Seddon up in his assertion that the tariff is not economically sound. They point out that the New Zealand farmers will have to pay about $10 a ton more for their fencing wire than formerly, for the benefit of the English manufacturers. For some years past, most of the rails used in the colony have come from the United States and Germany; but henceforth the orders will go to the United Kingdom, where the prices have been higher. The same may be said of other commodities. But a good many articles, (such as engines, motor cars, etc.) cannot be obtained in Great Britain, as the English firms have more domestic orders than they can take care of. In short, the passing of the tariff bill means the exclusion of certain American goods and the placing of orders in a market incapable of meeting the demand. But Mr. Seddon is wise in his generation: he has decreed that printing paper imported by newspapers shall be admitted free for three years. And he has taken care to omit from the schedules articles (imported largely from foreign countries) which are indispensable to the colony, such as American axes and other tools and agricultural implements and machinery, as regards which this country is better able to meet the New Zealand requirements than is Great Britain. Kerosene is also omitted.

But no great man can hope to escape calumniation. The leader of the Opposition had the hardihood to tell Mr. Seddon that his speech on the tariff contained a great deal of Jingoism and very little about the subject under discussion. One

reason for the tariff, he thought, was "the Premier's desire for an international advertisement." Some of the New Zealanders have begun to think that you can advance taxes too fast; the revenue per head has gone up from $16.31 in 1896 to $19.86. In seven years the public debt has increased from $215,054,778 to $260,357,850, and the per-capita debt from $292.65 to $320.03. It is well to keep the heavy indebtedness of Australia also in mind. If preferential trade ever comes to a vote of the people, the British taxpayers may be a little frightened at the idea of an alliance with communities which have gone on at such a rapid pace.

HERMANN VON HOLST.

The death of Hermann Eduard von Holst, in Freiburg, Germany, on January 20, brings grief to a circle of former students and associates, who knew the personality of the man; and it is an untimely loss to productive scholarship in American history. In 1881 he was already stricken with the disease of the stomach which limited his activity, and finally put an end to his life. He once said that he thought it was due to the privations of the household of his father, a poor Livonian parson. You would never learn from him that he was most of the time in severe physical pain; nevertheless, the greater part of his intellectual work was done in such a physical condition that many men would have gone to the hospital and comfortably given up the ghost. Disease and suffering often laid him by for long periods together, but if he could sit at his desk at all, he worked with a thoroughness and application which were in themselves a lesson to the student. On the day of his departure from New York for Strassburg he married an American lady, whose strength and serenity of mind and whose intellectual interest made her a power in her husband's life, unusual in a German family. A son and a daughter have grown up in this intellectual atmosphere. Von Holst had an enjoyment in repose which hardly comes out in his books. He had very strong likes and dislikes, and one of the objects of his animadversions was the German, and especially the South German, male habit of spending the evenings, week in and week out, in the Wirtshaus, leaving the family at home.

When one remembers that Von Holst occupied professorships in three different universities, and was twice called to another, it is interesting that he did not enter the academic life till seven years after his academic preparation ended. A student at Dorpat in his native province, where he was born, at Fellin, June 19, 1841, he took his doctor's degree at Heidelberg in 1865, and after a short experience as private tutor came to the United States in 1867. Poor, unknown, friendless, he nevertheless began his literary career by several years of work on the 'Deutsch-Amerikanisches Konversations-Lexikon.' Indirectly this was the beginning of his career as an historian and university professor. After the North German Confederation was formed in 1867, some excellent Bremen merchants looked about for somebody who could expound the workings of universal suffrage in America, and Von Sybel recommended the young Von Holst. He set to work, but found the subject outrunning the plan, and finally announced that he could write a constitutional history of the United States, but not the smaller task that had been laid upon him. He used to say that he always sent the Bremen merchants his volumes as they appeared, but he was sure they did not read them. The first volume of his History appeared in 1873, and by the freshness and vigor of its treatment at once gave him a prominent place among American historians.

In 1872 the way opened up for a continuation of his literary work, through a professorship in the new University of Strassburg, and here he began his academic life at a salary of a thousand thalers; he afterwards averred that his service there was perhaps the happiest period of his life. After two years he was transferred to Freiburg, where he remained for about eighteen years, steadily growing in reputation both as a lecturer and as a writer. He was in much request for public addresses, and became known throughout Germany as a man of power. For a time Von Holst was tutor to the Crown Prince of Baden, and he retained the personal friendship of the Grand Duke, who appointed him a member of the Herrenhaus or upper chamber of the Baden Parliament. Later he sat as member for the University of Freiburg. His legislative services were long and worthy, but he was rather an expert than a representative of the people. In 1890, when Bismarck was pushing matters hard in Germany, Von Holst took the field in a hopeless contest as an anti-Bismarckian for a seat in the Reichstag from his district. Yet he lived to hold a milder view of Bismarck's character. This legislative and practical experience was useful to him, but he never lost sight of the main purpose of his life, which was to complete his Constitutional History.

In his classroom Von Holst always appeared strong and confident. He had a great contempt for the German professor who cannot be heard, or if heard shows himself slipshod in speech. It was his habit to ponder over his writing, and to go into the classroom with his mind full of the subject, and with the succession of topics clearly in memory; and then to speak without note, with a determination and power unusual in German universities. Standing before his class, glowering at them over his desk, he spoke in full, rich, and rounded sentences, always striking hard, always striving to emphasize the great things, and coming back again and again to what he thought essential principles. Notes on his lectures are serviceable rather as revealing the results of his mental processes than as giving a connected body of detail. To him facts came into lectures as illustrations, as incidents significant of tendencies.

He had an unfailing interest in the men of history, treating them not only as leaders, but as types and revealers of human aspirations. In the statesmen of the French Revolution he recognized tremendous social forces, and the Reign of Terror he illustrated with the grim simile of Saturn devouring his own children. Although fluent and accurate in English conversation and possessed of a rousing English style, both in speech and in writing, he never felt so much at home in that language as in German, and for this diffidence he paid dear by refraining from scrutinizing the English translation of his History. It was his practice both in his lectures and in his books to introduce short and vivid quotations, a practice uncommon among German professors, and admirably suited to his incisive and emphatic method. By nature he was endowed with a spark of that mysterious quality called eloquence; behind the exact and formal side of his speech there lay a sense of the springs that move the human heart, and he was at his best when called upon to make a formal address on a theme of human interest.

In 1892 he was called to be head professor of history at the University of Chicago. The prospect was alluring; through his residence when a young man and through several long visits subsequently, he had become acquainted with the country, and understood the possibilities of influence through a great university. Twice called to Johns Hopkins, the second time he declined only for reasons of health. When the Chicago call came he was living happily in Freiburg. He was a man of influence there and throughout the university world, and the completion of his Constitutional History in 1891 left him freer than for twenty years. On the other hand, his great influence and his constituency were both in America, and the opportunities for new work on American history were better over seas; and even the university professor must think of his own future and that of his children.

The transfer was made, but the result was in many respects a disappointment. Accustomed to a university system uniform and well articulated, he was dismayed at the amount of foundation work which had to be done in America, and he complained that his graduate students had not had proper undergraduate training. The academic routine was distasteful to him, and he would know nothing of the records and reports and grades which are the pride of American university administration. A man resolute in facing difficulties, he could have found his way out of this one but for disease. He was physically unable to accept the position of influence in the community which was offered to him by his friends, and especially by the German-Americans; and his class work had to be confined within narrow limits, and was often interrupted by months of illness, while he was unable to carry out plans for literary work. The German university freedom he carried with him to Chicago University, and he sometimes expressed his mind on great public questions with unmistakable clearness and conviction; in the resulting controversies he could always give as hard a blow as he got.

At first Von Holst and his friends hoped that he would come out into a physical condition which would allow him to finish his career, but year after year he lost ground, his public activities ceased; his courses were more and more interrupted. In 1900 he could no longer act as a lecturer, and with regret withdrew from the University of Chicago, but till the day of his death he remained titular professor and loyal adherent of that institution. After he crossed the ocean eastward in 1900, he recognized that his days were numbered. He went to Italy, to Freiburg, and to Switzer-

land, trying to find at least comfort, until the heart which had so valiantly beaten served the brain no longer, and the undreaded end came.

Although distinguished as a teacher and a man of large public influence, Von Holst's life-work was the writing of history, and his future reputation must depend on the impression made by his historical production. By nature he had many of the qualifications of the historian, the first of which was his extraordinary sense of materials. Any one who frequently went in and out of his house, sat at his table, and entered his library can bear testimony to the steady, unwearying use of sources which enabled the historian to come to his own conclusions. The literature of American history has much developed in thirty years, and we do not now realize that Von Holst hewed a path through a forest, nor how many forgotten pamphlets and memoirs and political discussions have been brought to the attention of scholars through his footnotes. His own library was not large, though well selected; but it consisted principally of sources, and he supplemented his own materials by work in the British Museum and in the large collections in America. He was one of the first writers on American history to realize the wealth of fact and contemporary discussion to be found in the records of Congressional debates and in the newspapers; and his patient and persistent labor among those diffuse sources gave him his sureness of grasp on questions of political motive and tendency.

The second characteristic of Von Holst as a literary workman was his habit of meditation. As he came to a new chapter he filled his mind full of materials and then began to consider, often walking silently up and down his library. When the thought had come pat, he would sit down and write a sentence or two in his small, neat, and legible hand. That part of the work was done. He rewrote very little and made few corrections in proof. Every page of his books is the residuum of hard, patient thinking. Throughout his life he made little use of other people; he sometimes said that if he could have collected his material as Bancroft did, through searchers and assistants, he might have made a better history, but it would certainly have been a very different one. Another characteristic of Von Holst's work is his care to give his authorities. Aware of the pitfalls that lie in wait for the most conscientious writer, throughout his History he made liberal quotations in his footnotes; because, he said, people would not accept his conclusions without evidence before them.

Von Holst's style is both concentrated and digressive; he writes with strong, meaty expression, and to leave out a sentence or a word alters the meaning. On the other hand, he uses metaphor too freely, and not always consistently. His conception of constitutional history was that, having given a background of events, he must interrupt the course of the historical narrative to discuss the motives of public men and the principles involved in a controversy. These characteristics make the History close and sometimes hard reading, and it suffers in translation, not only because of the incompetence of the translator, but because of the lack of precise equivalents for many German political terms. For instance, Von Holst felt that injustice had been done to his point of view by the translation of "Souveranität der Gesetzgebung' into "sovereignty of law." The characteristic note of his style is conviction; he hammers at his anvil with staccato blows, which sometimes grow monotonous, but throughout all his writings there is a sense of a message to mankind.

He always had the true historical conception of the truth, the duty of seeking it, the necessity of separating it out of conventions and out of agreements to disregard it, the inevitableness of truth as the sole explanation of history. The truth that he cared most about, to the establishment of which he devoted most of his life, was that slavery was irreconcilable with free government, and therefore the cause of a political disease which could be cured only by the eradication of the poison. In the year 1904 it seems a platitude to say that slavery was the principal question before the American people for thirty years, from 1830 to 1860; that unless slavery could be put in the way of peaceful eradication, it would lead to civil war. The Abolitionists said so, a few writers after the civil war suggested it, but the great service of Von Holst to mankind was to put his training, his historical acumen, his great vitality, to the task of showing it by historical evidence. He loved the intellectual satisfaction of proving his point, and he had also a noble instinctive belief in personal freedom, which made his work seem to him a moral duty.

But his 'Constitutional and Political History of the United States' is not a complete history; it is really after the first volume only a history of the slavery contest. You would not infer from his book that the subjects about which people talked and disputed during thirty years were usually the tariff, the bank, the canals, the Treasury, the navy, squabbles with foreign Powers, Old Hickory, appointments to office, or the last horse race; or that, outside of politics, there was an intellectual and material growth of surprising swiftness. Probably the future historians of the decades from 1880 to 1900 will write of the new commercial and social organization, and will equally leave out most of the things which habitually interest Americans, or at least fill their newspapers. Granting its limitations, the History is a complete, well-rounded work; in method, in materials, and in spirit worthy of a great scholar. It is too long for the general reader, and, since Von Holst began, the field has been traversed by other trained writers; but it remains a sincere contribution to the history of America, a book with which every future student of the period must reckon.

Besides the six large volumes (seven in translation), aggregating 4,000 pages of close print, the result of the conscientious labor of over twenty years, Von Holst put forth two other groups of writings. In 1885 he published his 'Constitutional Law of the United States' as a part of the Marquardsen series of monographs on public law; it was translated in 1887. This admirable book, the fruition of a ripe scholarship, has had less circulation and influence than it deserves. Too brief to compete with the standard text-books on constitutional law, it is really a sketch of the principles of American Government; and he was one of the few writers to understand that State and local governments are a part of the American system. The 'Constitutional Law' follows Story's doctrine, but the book is throughout enlivened and enriched by shrewd and penetrating generalizations as to the unwritten practice which makes such a large part of our real government. Some fugitive writings in the same field appeared from time to time, notably the 'Was ist und wie enststeht Verfassungsrecht.'

An acute critic of questions of government, Von Holst's main interest was always historical. His 'French Revolution Tested by Mirabeau's Career,' published at Chicago in 1894, and based on a cyclus of university lectures, shows many of his characteristics as a writer, especially his interest in the personality of Mirabeau and Danton, who loom out of the mist of that time as Titans, yet as men. Throughout the History we have occasional portraits: a John Tyler, who has no redeeming quality except weakness; a Pierce and Buchanan, who ought not to be admitted to good society; a somewhat slighting view of Seward (a view successfully combated by one of his own pupils, Frederic Bancroft).

Two of these portraits Von Holst chose to delineate in separate frames—Calhoun and John Brown. The 'John Brown,' translated in 1889, is one of the last of Von Holst's systematic writings, and though in a certain sense a preliminary study for a part of the last volume of his History, it stands out as a cameo among his writings. His contention that Brown was not responsible for the Pottawatomie massacre has been disproved by later evidence. Nevertheless, the book seizes upon the real meaning and purpose of Brown's life and death, namely, the desperate proof to the South that there were abolitionists who so hated slavery that they would freely sacrifice their lives to undermine it. As Calhoun is dear to Von Holst, even in the midst of his illogic, so John Brown is dear even in the midst of his reckless violence. The contrast between Brown's methods and the peace and good order of the community, the comparison of Brown with outlaws and bandits, do not trouble Von Holst; for he sees in him the man who dies that others may live, the prophet and forerunner of the civil war.

The 'Calhoun,' first published in 1882, is in many ways Von Holst's masterpiece. It includes the whole doctrine of his History, for in Calhoun he rightly recognizes the typical advocate of slavery. The narrow, gloomy, and prophetic character attracted Von Holst; he made attempts, unfortunately then unsuccessful, to find the Calhoun correspondence, and to get behind the reserve of the man into his private character. In Calhoun he sees no enemy of the Union nor of his country, but a high-minded and patriotic man, overwhelmed by the impossible task of reconciling slavery with progress and with the liberty of the white man. Von Holst calls him the Cassandra of the slavery contest, always foretelling the truth, always unable to convince his friends. In his appreciation of Calhoun Von Holst went as far as his intense nature permitted towards the understanding of the other side, and the style is spirited and effective.

When Von Holst came over to this country in 1867 he hastened to declare his intention to become an American citizen. As a German professor, of course he resumed

his German citizenship; but when he came to Chicago it was with the purpose of identifying himself again with America. Illness drove him away, but when the writer saw him in the fall of 1902, he found him full of interest in what he looked upon as his own country. "Tell my friends in America," said he, "that I was never so good an American as now, that I never loved my country so much. I would go back there now, but I am no longer able to cross the sea. There is something stifling here. Never have I so appreciated America. Never have I so understood the noble aims of the American people."

We cannot close this notice without some mention of Dr. von Holst's relations to the *Nation*. They began during his residence in this city in the autumn of 1869, and passed from review-writing to correspondence on his return to Europe in the seventies. For the next decade he was too much engrossed, but in the early part of his connection with the University of Chicago there was a brief renewal of his service to a journal with which he was ever in sympathy. Among the reviews three of the most brilliant were in the domain of French history, with Gambetta, Thiers, and Napoleon (in Lanfrey's Life) for their themes.

THE MODERN LANGUAGE ASSOCIATION.

DETROIT, January, 1904.

The meeting at Ann Arbor and Detroit was notable for more than one reason. It was the first meeting of the Association at the greatest of the State universities; it was the first joint meeting held in the West; and it was the meeting at which the new constitution was adopted.

The geographical problem is growing in importance, not alone in this society, but in all national societies; and the experiences of the Modern Language Association possess general interest. There was a time, not long ago, when so large a proportion of our institutions of learning were in the East that those west of the Alleghany Mountains could justly be ignored. With the development of the Mississippi valley this changed, and it was found necessary to give some sort of recognition to the Middle-West or North-Central section. The present distribution of the members is, in brief, as follows: Exclusive of half-a-dozen Europeans, the Modern Language Association now has a regular membership of about 630. Of these there are 623 in the United States and seven in Canada. Of the former, 136 live in New England (Massachusetts 79, Connecticut 31, New Hampshire 9, Maine 8, Rhode Island 6, Vermont 3), and 232 in the Middle Atlantic States (New York 109, Pennsylvania 55, Maryland 33, Virginia 15, New Jersey 13, District of Columbia 3, West Virginia 2, Delaware 2). In these two sections, which form what is generally meant by the East, there are thus 368 members, or about 59 per cent. of the whole. The next largest group is that of the Central States, or the upper Mississippi valley, which has 180 members (Illinois 49, Ohio 35, Wisconsin 18, Missouri 16, Michigan 14, Indiana 14, Iowa 12, Kansas 8, Minnesota 5, Nebraska 4, Kentucky 4, North Dakota 1), that is, 29 per cent., or just one-half as large a representation as the East. The two remaining groups are small and their members scattered. The South has 49 (Tennessee 10, North Carolina 9, Georgia 6, Louisiana 6, Texas 5, South Carolina 5, Mississippi 4, Arkansas 3, Alabama 1), or 8 per cent.; the Far West has 26 (California 12, Washington 4, Colorado 4, Oregon 3, Montana 1, Utah 1, New Mexico 1), or 4 per cent.

The first recognition accorded the Middle West consisted in the choosing of a Western city as the place of meeting. But it was found that this resulted in the Eastern men's staying away. As Professor Thomas put it in his charming smoke-talk at Detroit, it is a thousand miles from Chicago to New York, and two thousand miles from New York to Chicago. The next step was the organization of Western societies. These soon found it advisable to merge with the national societies, at least in the matters of fees and publications. Thus arose the Central Division of the Modern Language Association, and the Philological Association of the Pacific Coast. The latter is now organized as the Western Branch of the American Philological Association, but its modern-language element predominates.

These smaller organizations made it possible for men to meet without going to the great expense of a long journey, but at the same time they defeated a part of the object of such meetings. The Western man does not care so much to see other Western men and visit institutions very much like his own. He has a natural desire to see "the big guns," most of whom are stationed along the seaboard, and to become acquainted with the leading institutions of the East and catch something of their local atmosphere. It was in response to some such feeling as this that occasional joint meetings of the national body and the Central Division were proposed. But when a joint meeting was held in the East, there was practically a return to the original state of things. Moreover, it was natural that the affiliated organization should retain some of the features of its independent origin which did not harmonize with its relation to the national society. It therefore occurred to various members of the Association that it was desirable to have a reorganization that would remove the objectionable or inconsistent features of the present *modus vivendi*, and more satisfactorily meet the various difficulties of the geographical problem. The draft of a new constitution was accordingly made and submitted to the officers of the national organization and those of the Central Division, and this was finally submitted to the Association assembled in joint session at Ann Arbor.

According to this constitution, which was received with general favor and adopted with unimportant amendments, there is one Modern Language Association, whose executive council may authorize as many as three Divisions, though there is no immediate prospect of more than one, namely, that already organized. The meetings of the Association, or parent organization, will be held at such place and time as the Executive Council may determine; but as often as once in four years there shall be a union meeting at some central point in the interior of the country. In that year no Division meeting can take place. That three out of four meetings of the Association will be held in the East, anywhere from Cambridge to Charlottesville, is taken for granted. In other words, by the new arrangement, the East has the prestige of retaining the national organization rather than having an Eastern Division, and has practical control of the election of the president in the three years that the meeting is held in the East. The Western men have more material advantages: they are assured a meeting (either of their Division or of the national body) in their own territory every year; they can, if they choose, attend the Eastern meetings with the consciousness of being regular members of the body, and not merely visitors from one Division to another Division; and they do not have to go out of their territory in order to vote on the officers that are elected at a union meeting and hold office until the next union meeting.

The officers of the Association are to be a president, three vice-presidents, a secretary, and a treasurer, who, together with nine other members, constitute the Executive Council. There is also an editorial committee, of which the secretary is the chairman. The president and the vice-presidents are to be elected annually at the meeting of the Association. All other officers will be elected at union meetings only. Vacancies occurring between two union meetings are to be filled by the Executive Council. The officers of a Division shall be a chairman (no longer a president) and a secretary.

In the light of what has just been said, the geographical distribution of those attending the meeting at Ann Arbor is of interest. New England sent 9 delegates (Massachusetts 5, Connecticut 3, Maine 1); the Middle Atlantic States 21 (New York 11, Pennsylvania 4, New Jersey 3, Delaware 1, West Virginia 1, Maryland 1); and Canada 2. There were thus 32 from the East as a whole. The North Central States sent 63 (Ohio 18, Illinois 17, Wisconsin 11, Iowa 6, Kansas 5, Michigan 3, not counting the Ann Arbor men, Indiana 2, Missouri 1). The South sent four (one each from Tennessee, Mississippi, Alabama, and Georgia), and the Far West two (one each from California and Colorado). There were thus 101 that came to Ann Arbor. In other words, while about 60 per cent. of the members of the Association live in the East and but half as many in the Central States, at a union meeting held in the latter territory over 60 per cent. of those present came from that territory and but half as many from the East. From which it may be seen that in matters voted upon at a union meeting, the Western members, though half as numerous as the Eastern men, can easily outvote the Eastern men. The importance of this is obvious when it is considered that amendments to the constitution can be voted upon only at a union meeting, and all union meetings must be held in the West. Certainly, the Western men have no reason to find fault with the new order of things.

The way was prepared for the reorganization a year ago, when, at the sessions at Baltimore and Chicago, it was resolved to meet this year in joint session at Ann Arbor, and Professor Hempl was elected president of both organizations. When, some three months ago, it was announced that the meetings would be held only in part at Ann Arbor and in part in Detroit, there was some surprise and regret. The

arrangement was necessitated by the fact that, through an oversight, the Michigan State Teachers' Association had been invited to Ann Arbor for the same week that the University had invited the Modern Language Association. It was therefore arranged that the latter body begin its session on Monday and leave for Detroit Tuesday evening, just as the one thousand members of the State Association were arriving. It turned out that the arrangement was a happy one in various ways. It is more or less customary for the local members and their colleagues in the faculty to invite to their houses members from afar. This was done in Ann Arbor to an extent quite unparalleled. More than two-thirds of the incoming members were welcomed into the houses of the professors, and thus had an opportunity to get at least a glimpse of the charming social life that prevails at Ann Arbor. There is, however, a disadvantage connected with this private entertainment of guests. On the one hand, the younger and less known men come to the meeting with the expectation of falling in with the more prominent men, the promise of whose presence has been the chief inducement that attracted them to the meeting. But when they congregate at the hotel headquarters, they miss the very persons they most desired to meet. On the other hand, the visitor who is invited to the house of a friend soon finds that he is thereby debarred from meeting in a social way various members of the Association with whom he had anticipated further acquaintance or the revival of old memories. These disadvantages of kind hospitality were removed by the shift from Ann Arbor to Detroit, where all the members met at the Cadillac Hotel, in the beautiful dining hall, in the corridors, and in the classic banquet hall, in which the sessions were held.

The Association was greeted at the opening session at Ann Arbor by President Angell. The high sense of duty that prompted Mr. Angell, in spite of his recent great bereavement, to keep his engagement to welcome to Ann Arbor the two large organizations which were that week the guests of the University, elicited the admiration as well as the sympathy of all. In speaking of Edward Walter, Calvin Thomas, George A. Hench, and the other modern-language men who in times past reflected credit upon the University of Michigan, there was a touch of tender regret, but otherwise the brief address was a clear and ardent plea for the study of literature rather than of philology.

In connection with this position of President Angell, it is significant that, of the nineteen papers read at this meeting, fourteen dealt either with pure literature or with the history of literature, and two with rhetoric; while only three could be classed as philological. As usual, there were more papers on German themes than on others: German 7, English 4, French 4, comparative literature 3, the relations of prose to poetry 1. Most of the papers were more or less technical. By the wise management of the present editorial committee, the distinctly technical papers were not read, but were presented by title, and some others were read in abstract only. The ablest of the regular papers were: that of Professor Gruener on the influence of Hoffmann upon Poe, that of Professor Scott of Michigan on the most essential differentia of prose and poetry, that of Professor Carruth on the religion of Schiller, and that of Professor von Klenze on Goethe's successors in Italy in the nineteenth century. The paper of most general interest was the president's address. Professor Hempl took advantage of the opportunity to speak, in a way, for the Association to the outside world. He showed that the attitude assumed toward the mother tongue by the average teacher of English and by the average educated person is based upon antiquated and erroneous conceptions of the nature of language and of the function of the teacher of English. As a result, much of the time of the teacher is spent in trying to do what cannot be done, namely, to overcome the all-powerful forces that are constantly changing the language and producing varieties of English speech in the different parts of the English-speaking world. Speech is not primarily a matter of books and print, but of the tongue and the ear, one of the resultants of human activity and, consequently, determined by the life that men lead, and varying largely as the conditions of human life vary. In general, the paper was a plea for the rational treatment of what can and must be done in teaching English, and the abandonment of old-time trivial criticism and petty tinkering with the mother tongue.

The hospitality offered the Association has of late become perhaps almost too lavish, and that displayed by the Michigan people could not well be surpassed. Aside from the very general private entertainment of the visitors, the ladies of the faculty, in the name of the University Senate, gave a reception after the president's address on Monday evening and a luncheon on Tuesday noon, both in the attractive parlors of the women's gymnasium. Out of respect for the memory of Mrs. Angell, the reception was informal. On Tuesday evening the gentlemen were invited to the antique rooms that have been constructed out of the old Dutch church at Detroit, and now serve as the home of the University Club. Professor Michels of Jena, who was present as the guest of the Association, made a brief address. But the principal feature of the entertainment was the smoke-talk by Professor Calvin Thomas, out of whose humorous and often truly witty words there spoke a wisdom that soberer talk too often lacks.

For the first time in many years the Association was granted a railway rate of one and one-third fare. This concession was due chiefly to the efforts of the local committee, whose provisions, in general, for the comfort of the visitors were well planned and well carried out. Reports were presented from the various committees—for the Committee on International Correspondence by Professor Magill, and for the Committee on Bibliography by the secretary, in the absence of Professor Todd. President Hempl informed the Association that he had been requested to appoint a committee to meet with like committees from the American Philological Association and the National Educational Association for the purpose of devising a phonetic alphabet intended to serve as a uniform means of representing pronunciation in English dictionaries. The Association voted to sanction the action of the president and to express its hearty approval of the undertaking. Professor Emerson presented a brief report for the Committee on Spelling and a more extended communication from the American Dialect Society, which is now in prosperous condition. The present officers of the Dialect Society were reëlected. Professor Kittredge of Harvard succeeds Professor Hempl as president of the Modern Language Association. The next place of meeting will, in accordance with the new constitution, be determined upon by the Executive Council. Cordial invitations were received from Brown University and the University of Toronto. Professor Hohlfeld of Wisconsin was chosen chairman of the Central Division, which will next meet at the Chicago buildings of Northwestern University.

Correspondence.

WHITE TEACHERS OF NEGROES IN THE SOUTH.

To the Editor of The Nation:

Sir: In your issue of December 10, 1903, you review and comment on a recent publication, 'Negro Education in the South,' by A. A. Gunby. I have not read the book in question, but feel that I cannot let its statements (a) "it has long since been inflexibly decreed by unwritten law that white teachers must not teach negro schools," and (b) the want of "suitable teachers and decent school houses to teach in," go unchallenged.

I was born and reared in Charleston, S. C., and remembered that from my earliest childhood the city public schools for negro children were taught by white teachers entirely, and to my certain knowledge the buildings and equipment are the equal of the public schools for white children. But to be certain that the same conditions exist to-day,—I have been away for eight years—I wrote to the City Superintendent for information, and he writes me that at present there are two city graded schools for negro children, one the Shaw School, with 1,015 pupils and 17 white teachers; the other, the Simonton School, with 1,207 pupils and 20 white teachers. These teachers are graduates of the representative colleges of the State, and are required to stand the same examinations to teach that those in white schools do; and again, promotions are made from one school to the other, *i. e.*, from the negro to the white, or the reverse.

I grant, however, that in the rural districts and in the smaller towns the negro schools are taught almost invariably by negro teachers; but these negro teachers are also required to pass successfully the State examinations for teachers' certificates.

I only make this correction because just such unsubstantiated assertions cause a great deal of the friction between the races and so much of the unfavorable criticism of the South by sections where the negroes are few in number.—Yours truly,

E. B. Fishburne.

Blackstone, Va., January 18, 1904.

[Our correspondent will not object to our reminding our younger readers that his experience has been *post bellum*, and that it was a statutory and lynch-law offence to teach slaves to read before the war. We welcome all evidence of a

humaner and more worldly-wise spirit at the South with reference to the negro in any relation, however sporadic it may be and unsupported by general public opinion. Mr. Gunby's statement (a) should be understood to read, "unwritten *social* law"; for, so far as our observation extends, there is a marked difference in the social status of white teachers at the South according as their pupils are white or black. We have even known this discrimination to affect two white instructors (women) arriving in company in a Southern town, and assigned respectively to a white and a colored school for trained nurses. "The one was taken and the other left" by polite society.—Ed. Nation.]

PROFESSORS' SALARIES.

To the Editor of The Nation:

Sir: Your timely article, "Some College Salaries," in No. 2009 of the *Nation*, would have struck at the root of a crying shame still deeper had you been fully acquainted with the splendid misery of the average professor's life. In honor of the American professor it can, indeed, be said that there are few who are not willing "to renounce money prizes for the larger returns of their calling if only they *have* enough to live in decency and comfort." That many, if not the majority, of them do *not* have this, can easily be verified by addressing a circular letter to their wives. From these unknown martyrs of self-denial and economy it may be learned what it means at the present time to live up to their positions, to dress and educate their children decently even in a small college town, and to fight with the various tradesmen who consider the "unworldly" professor their easy prey.

Nor does the professor's wife see why the college president should be exempt from the willingness of her husband to renounce money prizes for the larger returns of his calling. Is the president a better scholar? Does he buy more books? Does he "entertain" more and better? In a certain Western college it has happened that the president, who gets $12,000 a year, asked his underpaid professors to pay for the crackers and tea with which they were afterwards "refreshed" at his reception.

May these lines meet the eyes of those who are in a position to better conditions which are a disgrace to the profession as well as to the country. Veritas.

January 15, 1904.

Notes.

Houghton, Mifflin & Co. will shortly publish 'The Neighbor: A Study of Race Prejudices,' by Prof. N. S. Shaler; 'Methods of Industrial Peace,' by Nicholas P. Gilman; and a History of New Hampshire, by Frank B. Sanborn.

Prof. George E. Woodberry will furnish the 'Swinburne' in the Contemporary Men of Letters series of McClure, Phillips & Co.

Doubleday, Page & Co. announce 'The Fugitive,' a picture of Russian Jewish life, by Ezra S. Brudno.

A new edition of Prof. W. J. Ashley's 'Tariff Problem,' with five additional chapters calculated to keep the Chamberlain pot boiling, is in the press of P. S. King & Son, London.

The parent 'Who's Who' for 1904 (London: Black; New York: Macmillan) surpasses by some thirty pages its lusty American offspring, as well it may, since it is not confined to British or even English-speaking notabilities. The increase in bulk is greater than appears at first glance, since now the tables in front of the biographies have been wholly eliminated and will form the nucleus of a separate 'Who's Who Year-Book,' thus making two blades of grass grow where one grew before. We need not dwell on a work which has become indispensable for reference.

The fifth volume of the English Bible in the beautiful series of Tudor Translations published in London by David Nutt is occupied with the Apocrypha, and prepares the way for the New Testament. What with the Wisdom of Solomon, Ecclesiasticus, and Baruch, the poetry, typographically displayed as such, cuts a notable figure.

Shakspere is now added to the "Oxford Miniature Poets," and is compressed into three volumes fairly to be called delectable but that the print is for young eyes only, to wit, the Tragedies; the Comedies; the Histories, Poems, and Sonnets. This is what the Oxford India paper can do for hand and pocket. Each play, we remark, has its own pagination, and each volume concludes with a glossary, but has no other apparatus. The three portraits are the Chandos, the Droeshout, and the Stratford bust.

An analysis of Tennyson's 'In Memoriam,' with captions, arguments, and paraphrases, by the late Charles Mansford, published about sixteen years ago for private circulation, is now offered to the public in a small, unpretentious handy volume (London: Sonnenschein; New York; Dutton). The "songs" marked off and numbered in this process are indexed by their first lines. Teachers and classes in literature will probably find their account here.

Canon Hensley Henson, of Westminster, has become prominent lately for his efforts to promote a better feeling between Church and Dissent. In pursuing this aim he has delivered, at his own church of St. Margaret's, a course of lectures now published under the title of 'Studies in English Religion in the Seventeenth Century' (New York: E. P. Dutton & Co.). They discuss the Pre-Laudian Church of England, Sabbatarianism, the Presbyterian Experiment, Erastianism, Casuistry, and Toleration. They pay greater attention than is usual with Anglican writers to the Nonconformist literature of the period covered, but as contributions to ecclesiastical history they are somewhat elementary. Canon Henson's own freedom from Church-and-State conventions may be judged from his declaration that the Act of Uniformity "belongs historically to the statutes of the Caroline Penal Code, of which it is now the solitary survivor; and so long as it remains on the statute-book the National Church is, in certain important directions, unable to advance or develop."

The 'Alphabet of Rhetoric,' by Rossiter Johnson (D. Appleton & Co.), is a convenient handbook and glossary combined. It gives an account of every figure of rhetoric from *anastrophe* to *synchoresis*, numerous little articles on words, and a chapter on elocution. It is intended as a familiar compendium for all who care to speak and write correctly. It also contains a short essay on conversation, in which the author describes well-known types of talkers who make themselves nuisances. The book abounds in good sense, and, though there is here and there some hair-splitting, there is no more, perhaps, than invariably goes with an ear for the niceties of language. We are not ourselves willing to reprobate the use of "bogus" in all cases, nor to put it in the same class with "kick" used in the sense of 'protest.' We agree that "up-to-date" is trite. The author is evidently one of those who think that there is a tendency to decadence in language, as there is in pronunciation and grammar, which needs to be fought against.

'The Metre of Macbeth,' by David Laurance Chambers (Princeton University Press), "attempts to show *when* certain metrical phenomena appeared in Shakspere's work, *why* they appeared (as far as that can be determined), and what stage they had reached in 'Macbeth.'" This promise of the preface seems well carried out in the treatise. It takes up one after the other each of those factors in Shakspere's metrical art which have been used as tests of the relative order of composition of the several plays. Many writers on the metrical tests as applied to this problem weaken the effect of their deductions by an unjustifiable assumption of minute certainty in application, and of finality for their own conclusions. Mr. Chambers remarks that "the operation of all the verse-tests is restricted by certain rules based on common sense." He states frankly that he has been disappointed in his expectation that he should find the *enjambement* test conclusive as chronological evidence. He considers the "weak-ending test" by all odds the most important piece of metrical testimony as to the date of 'Macbeth.' He does not, with most critics, posit a continuous bettering of the poet's metrical genius to the end, but holds that in the versification of his last plays "long familiarity leads him at times to abuse his liberty, and to write measured prose for verse," and that perhaps "the return to Stratford cast upon Shakspere the weight of too much liberty." Rather pretty are the fanciful catchwords Mr. Chambers uses for Shakspere's four periods. "I., The Vanity of Rime. II., The Balance of Power. III., The Discordant Weight of Thought. IV., The License of Weak Endings." The little book is to be recommended as written with judgment and restraint. It seems to help clear up the problems with which it deals. It lacks an index.

In the preface to his 'Pattern Design' (London: B. T. Batsford; New York: Charles Scribner's Sons) Mr. Lewis F. Day states that he has prepared this handbook to replace his former work, 'The Anatomy of Patterns,' which had gone through four editions. The times have changed, he says, "and with them the standpoint of students and teachers of design; and though my point of view has not altered, my outlook has widened with experience." The illustrations are either wholly new or are remade with care, the larger page allowing of better cuts, even of clearer and more effective diagrams. And if it were a question only of a good series of diaper patterns, sowings or *semé* patterns, scroll pat-

terns, waves and frets and spots, foliation and floriation, then the book might be recommended without a second thought, so excellent is the selection of ornament and so clever its presentation. Even the so-called "diagrams" are often of use in furnishing ready-made material. Thus, on page 190, the filling of a narrow upright panel with Renaissance scrollwork and arabesque, exactly as on the front of so many pilasters of the fifteenth century, is so treated that the student can see the development in the mind of the designer from the obvious to the more elaborate treatment. In fact, these "diagrams" serve the same purpose as is served by the excellent photographic picture of a composition in "six-inch tile design to be fixed brickwise" —that is to say, with breaking of joints. As to Mr. Day's avowed purpose to explain how designing is done, the man who will read this book through and note down its assertions and demonstrations with the idea that he is "learning design" will be far astray.

Sadakichi Hartmann has published through L. C. Page & Co., Boston, a little volume on Japanese Art, which is well worthy of careful reading by every one concerned in the study of fine art anywhere, or in the special collecting and comparison of Oriental treasures. It contains 280 pages, and about thirty full-page plates, some in colors, not always well made or quite faultless in reproduction, but extremely well chosen, and hardly ever failing to explain the text, thus serving the true purpose of illustrations. As for the text itself, it is the work of a very careful student, of one who does not make statements rashly or without immediate significance. The first half of the book is devoted to paintings alone, and this study is divided into four chapters, respectively entitled "Early Religious Paintings," "The Feudal Period," "The Renaissance," and "The Realistic Movement." There is one chapter devoted to architecture and sculpture, and one to the ornamental arts, while chapters five and eight deal with the interdependence of Oriental and Western civilization as seen under different lights. That Japanese art pervades all classes of the community, that its monuments are of approximately equal importance, whether small, cheap, slight and perishable, or permanent works of bronze or of architecture on a large scale, is the essential thing which the author never loses sight of for a moment. What he says of European art in comparison with Japanese is not always to be commended—for example, such a phrase as "ladies of fascinating leanness and awkwardness *à la* Chavannes," or the statement that he is "convinced that the pre-Raphaelites have borrowed their method of perspective . . . from the Japanese." To push this comparison still further, and to say that the paintings of Burne-Jones strangely resemble certain Japanese compositions which the author mentions, is to make a fantastical comparison. As for Japanese art, however, we have it well explained to us, and its artistic glory very intelligently set forth in this delightful little volume.

The 'Transfer Tax Law' of New York State is the subject of a conveniently arranged volume of some three hundred pages by Samuel T. Carter, jr. (The Banks Law Publishing Co.). The subject is one of growing importance, as the taxation of inheritances and transfers made in contemplation of death has now become part of the settled policy of many States; it has only been by unusual vigilance that we have thus far escaped a progressive transfer tax. With the law as administered we believe the public has been well enough satisfied, except as to one point. It is held, not only by State courts, but by the United States Supreme Court, that the law applies to United States bonds, which are, however, specially exempted by law from all taxation. The reasoning by which this conclusion is supported is that the tax is laid, not on the bonds, but on the right to inherit the bonds. Some lawyers—and many laymen—still profess to be unable to see the distinction.

Our minister to Cuba gives the most practical information to be found in the much-enlarged Consular Reports for January. It consists in notes upon the commerce, leading industries, and business firms of nine of the cities of the island, with a special list of one hundred and fifty-eight dealers in groceries and produce. The general outlook, on the whole, is hopeful. "There is a magnificent business to be developed between the United States and Cuba." Numerous reports treat of the foreign and colonial trade of Great Britain and the industrial conditions of Germany. Among the signs of returning prosperity in the empire is "the noticeable decrease of unemployed men on the streets and at the employment bureaus in Berlin." The book industry, however, is suffering from overproduction. "The vast majority of the 25,000 new books catalogued during 1902 proved to be a drug on the market." Through the ruinous competition, in the cities of the department store, and in the small towns of the bookbinder, the retail bookstore is passing out of existence.

The propaganda in the German University centres of the "Akademischer Schutzverein," which is a defensive alliance of the book producers and writers against the financial injustice of the new bookdealers' "union" recently organized by the "Sortimenter," or retail bookdealers, is growing. A branch of the society has recently been organized in Berlin. The main speaker in favor of the movement was Professor Paulsen, while the opposition was led by Dietz, Engelmann, and Schmoller. Marked opposition has appeared only in Jena, Strassburg, and Heidelberg, but in these universities two associate societies have been established. The bookdealers themselves have so far been making only a weak defence.

Petermann's Mitteilungen, number eleven, contains a topographical description of the Samoan Islands, by Dr. Reinecke, together with some account of their flora. His main conclusion from the study of the vegetation is that it is of relatively recent growth; that it has no connection with the flora of South America or Australia, but is of Indo-Malay origin. Dr. Saad gives some interesting facts in regard to twenty-three Jewish colonies in Syria and Palestine. The most flourishing is near Jaffa, and each of its seventy families has a house with a vegetable and flower garden, a horse and wagon, as well as a cow and fowls. The principal industry is grape culture and the manufacture of various wines, to which is now being added the growing of olives and almonds. In the closing chapters of "Two Years among the Chukchis," a burial feast and other ceremonies connected with the disposal of their dead are described, and some facts are given relating to the commerce of the coast tribes with Alaska.

The Prussian Government has just published the statistics of the students who in the past fifteen years have, during their university career, changed from one faculty to another—a process known as "Umsatteln." The number is unexpectedly large, averaging for each semester 8.35 per cent. of the whole student body. As a rule, the change in the choice of professions is made in the second or third semester, although it occurs as late as the sixth, seventh, and eighth. The largest gains from this source are credited to the medical faculty, the new recruits coming chiefly from the philosophical and the law departments, and the percentage of increase being 11.46. Rather strangely the Catholic theological is next in attracting students from other faculties, its percentage of gain being 9.34. The smallest number from this source is secured by the Protestant theological faculty, only 4.12 per cent. of its students coming from other departments, the bulk from the faculty of philosophy, and about one-fourth from that of law.

The refusal of the Austrian Government to establish a distinctively Italian university has been met by the organization of "free Italian university lectures," recently begun in Innsbruck. They were opened by Professor Gubernatis of Rome, who delivered a course on Petrarch. Rioting between the German and the Italian students gave the authorities a pretext for temporarily putting a stop to these lectures, which, however, are to be taken up at a more auspicious season. The Salzburg University lecture course, inaugurated during the past fall and directed against a specifically "Catholic" science, are to be continued in 1904, with additional lectures on the natural sciences.

By the purchase of the *Fliegende Blätter*, the famous Munich comic weekly, and its transfer to Berlin by the newspaper publisher August Scherl, the newspaper war that has been carried on for a dozen years between this modern millionaire and the old and equally rich house of Rudolf Mosse, has entered upon a new stage. Scherl, who was at one time in the employ of the Mosse concern, has in the last few years acquired no fewer than seven of the most popular periodicals in Germany, and now issues them all from Berlin, aiming particularly at undermining the advertising business of the Mosse house, and has already compelled the latter to discontinue its once famous 'Berliner Adressbuch' by outrivalling it.

—Mr. Howard Kemble Stokes issues in separate form an essay on 'Chartered Banking in Rhode Island, 1791-1900,' prepared for 'Rhode Island and the Providence Plantations at the End of the Century' (Mason Company). As a colony, Rhode Island had acquired an evil reputation in public finance, and the reputation clung to it, with some reason, after it had become a State. Mr. Stokes takes up the story with the chartering of the Providence Bank, and tells in brief the experiences of banking in the State under the different eco-

nomic influences that controlled its operations. Commerce was the most potent force before the embargo, and agriculture (always apparently ready to borrow and somewhat lax in its ideas of repayment) served as a good second, demanding the creation of "capital" for its particular use. After the embargo and the War of 1812, manufacturing industries took the place of commerce, and, as Mr. Stokes says, levied tribute on the rest of the country to a degree that made the banks of Rhode Island particularly strong. The free bank yields to the bank under State supervision, and the peculiar "bank process" is abolished. Since that transition period the growth of manufactures and the rise of corporations have introduced new methods into banking and the use of credit. In some respects the experience of the Rhode Island banks has been peculiar, and the exceptional situations or influences are well described by Mr. Stokes, who shows great familiarity with his subject and a good knowledge of banking principles.

—It is characteristic of the zealous astronomer that he avails himself of every opportunity to advance his knowledge of things celestial, even under circumstances where no effort of the kind would be expected. Two or three years ago Prof. W. H. Pickering headed an astronomical expedition to Jamaica, and, while there, employed his photographic telescope in taking a number of photographs of the moon, though this was not his main object. These are now published by Doubleday, Page & Co. in a fine quarto volume, with text describing the principal features of lunar scenery. We might lay the book aside with the simple remark that the general reader can here find several complete sets of views of the lunar surface which have the advantage over hand drawings of the accuracy in detail secured by photography. But a statement printed on the wrapper of the book, for which we cannot suppose the author to be responsible, that these are "the most complete and valuable series of moon photographs ever secured," so far transcends the limits both of fact and of credibility that it would seem hardly necessary to warn the reader against accepting it. The pictures vary widely in quality, an unavoidable result of the necessity of taking them in very different states of the atmosphere; but the best are below those taken at the Lick Observatory, not to mention the Paris and other observatories. The drawback under which they labored is partially compensated by there being half a dozen pictures of each portion of the moon, taken under various conditions of illumination by the sun. Round or square pictures, had they been possible, would have been much more satisfactory than the long strips, each more than twice as high as wide, into which the lunar surface is divided. The index maps with alphabetical list of lunar features are well arranged, but we are sorry to see the names of living people put on the moon, seemingly on the author's own responsibility. There is in the text much discussion to which the conservative astronomer would object as being in the nature of unverified speculation—that pertaining to the supposed existence of snow and ice on the moon, for example.

—Mr. and Mrs. Sidney Webb hope to publish before the end of the present year the results of their six years' investigation into the development of English local government between 1700 and 1835. Meanwhile they have issued, for the sake of its immediate practical value, that section which deals with 'The History of Liquor Licensing in England' (Longmans, Green & Co.). This little volume raises high anticipations of the importance of the completed work. The authors have not contented themselves with transcribing the changes in the statute-book, but, by the aid of all kinds of contemporary sources—especially the British Museum collection of provincial newspapers which it was recently proposed to disperse—have described the various local institutions, in structure and function, as vital social tissue. The account here given of the relation of these institutions to the liquor traffic is undoubtedly fuller and more exact than any previously published. Mr. and Mrs. Webb call particular attention to a remarkable episode which seems to have been overlooked by all students of the subject, and which has not been cited by any Parliamentary inquiry from 1817 to 1900—a reform movement beginning with a drastic restriction of licenses in 1786, and including, without compensation to publicans, many measures which are generally discussed to-day as modern and somewhat Utopian devices. Before they made this discovery, the authors had already noted, from their researches into the history of crime, a "lull" in disorderly conduct, rioting, etc., during the period when these acts were in force, and they infer that the advance of the English workingman during the first two decades of the nineteenth century was largely due to the limitation of the opportunities for drinking. They analyze, with much acuteness, the conditions which caused the abandonment of this restrictive policy in spite of the testimony of the country justices of the peace to its "distinct success." The detailed history ends with the Beer Act of 1830, but a chapter is appended recording in outline the attempts at "legislative repentance" since that date. In conclusion, the writers note—without attempting at present to draw any inferences from the fact—that whereas in the middle of the nineteenth century the tendency was to make the regulation of the liquor traffic part of the national administration, as are the Factories and Workshop Acts, the tendency of the last quarter of a century has been to restore it to the sphere of local government.

—'After Worcester Fight,' by Mr. Allan Fea (Lane), is a companion volume to the same author's 'Flight of the King.' In it are brought together the chief contemporary narratives which describe the escape of Charles II. from the field where Cromwell won his final victory. We shall employ a more familiar expression when we say that Mr. Fea has reprinted the Boscobel Tracts, with the sole exception of the 'Prisoner of Chester's Letter.' This collection embraces five items—the narrative which Charles II. dictated to Pepys in 1680, Thomas Blount's 'Boscobel,' 'Mr. Whitgreave's Narrative,' 'Captain Ellesdon's Letter to Lord Chancellor Clarendon,' and the 'Claustrum Regale Reseratum, or the King's Concealment at Trent.' Boscobel, it will be remembered, is the name of the place where Charles hid in the oak, and this whole body of literature goes back to the pamphlet which was published under Blount's name within a few months from the Restoration. The singular fact is that Blount, a Roman Catholic lawyer of the Inner Temple, denied the authorship both in conversation with Lord Oxford and in a letter to his own son. By whatever author, 'Boscobel' ranks among the famous tracts of English history, describing as it does one of the most romantic adventures of the adventurous Stuarts. The loyalty of the Roman Catholic gentry after Worcester is quite comparable with that of the Highlanders after Culloden, although there was no reward of £30,000 on King Charles's head. Like 'The Flight of the King,' this volume is profusely illustrated, and Mr. Fea has added many notes of antiquarian interest.

—One of Charles II.'s companions at Worcester and in the first days of the fight was George Villiers, second Duke of Buckingham, a sketch of whose life by Lady Burghclere is published at the same moment with Mr. Fea's reprint of 'Boscobel' (Dutton). The Merry Monarch and the mercurial Duke had many tastes in common, and both were gifted with a cleverness which might easily have been turned to better uses. Of the two the King possessed the greater stability, and proved the more successful in the conduct of his own affairs; but this statement would apply with equal force to any Englishman of the Duke's generation. The name of George Villiers stands for all that is brilliant, reckless, unstable, and unfortunate. Dryden's character of Zimri, and Pope's description of the squalid deathbed, have left an impression which can never be effaced, and which is historically sound. Lady Burghclere, at least, does little to modify it when she says: "It would seem that at his birth the presiding genius sought to show how futile are all the gifts of intellect and person, if that great quality which Englishmen worship as 'character' be lacking." We shall not pause, however, to moralize upon the lessons of Buckingham's life, or to illustrate the richness of the talents which he scattered to the winds. Lady Burghclere's biography has the merit of drawing its materials from original sources, and is unmarred by the attempt to rehabilitate. "The one selfless aspiration to which through a thousand changes he remained true, was universal Liberty of Conscience." This is not an extravagant claim on behalf of one's subject, especially when it is so well grounded as in the case of Buckingham. Baxter seems willing to go equally far when he observes that though "George Villiers was of no religion, but notoriously and professedly lustful, yet he was of greater wits and parts and sounder principles as to the interest of humanity and common good than most lords in the court." Buckingham's political career, or that part of it which belongs to the larger issues of English history, begins at the Restoration and ends in 1679. Lady Burghclere has written a very good account of his relations with Arlington and the King, but when she reaches the period of the Popish Plot her grasp of events seems somewhat less firm. While recognizing that, after his disgrace, Buckingham exerted "far greater influence in his new character as leader of the Opposition than he had ever achieved as Prime Minister," she does not develop this striking part of his career with sufficient minuteness. Her account of the *Rehearsal* is also marked by some signs of

haste. These slight strictures made, we must state that Lady Burghclere has shown skill in her treatment of an intricate and singular personality.

—An interesting paper on changes in the sea-level, particularly on the shores of Greece, is published in a recent number of the *Revue Universelle des Mines* by Ph. Negris, one of the first Greek geologists of our day, and formerly Greek Minister of Finance. He had shown in a previous work that, at the close of the glacial period, the sea about Greece stood about 600 feet higher in relation to the land than at present, and that its recession was by leaps and bounds. In the present article he shows what had been believed for some time, that during the last 2,000 years the sea has again gained upon the land, having risen about six feet. On the basis of observations made at the time of the recent excavations and dredging for the canal between Leucas and Acarnania, he concludes that when the earlier canal was dug by the Corinthians, 2,500 years ago, the surface of the sea was about nine feet lower than at present. At the depth of fifteen or eighteen feet he found indications of the lowest level of the surface of the Mediterranean at that place, and infers that the rising of the sea level began between 4,000 and 5,000 years ago. The difference in level, together with the wearing away of the rocks, is made by him to explain certain discrepancies between observed facts of today and statements of the geographer Strabo. For example, Negris believes the Strait of Salamis to have been essentially narrower at the time of the naval battle, 480 B. C., than now, and explains the difficulty in the identification of certain islands mentioned by Herodotus and Strabo by the gradual disappearance of these islands. Negris sets the separation of Ægina from the mainland at about 4,500 years ago, and believes that the Bay of Thera was formed and the Lake Tritonitis disappeared at the time of the same "tectonic phenomenon" when the recession of the sea ceased. He believes the ancient Greek traditions of great floods to have been based on the facts of that time, and even thinks that Plato's story in the "Timæus" about great droughts in which the River Nile saved the human race, may have an historical foundation. These later views remind us of the English philologist Paley, who died not many years ago, and who explained certain Pindaric passages by assuming the persistence of a tradition of a glacial period in Peloponnesus and of icebergs at the mouth of the Black Sea; but Paley's views were supported by no expert evidence, and doubtless Negris would regard the traditions as less certain than his geological inferences.

RECENT POETRY.

The faculty that is most clearly seen in Josephine Daskam's (Mrs. Bacon's) volume of 'Poems' (Scribners) is the extremely clever manipulation of poetic diction. At times, as in this stanza from "The Sons of Sleep," we have an effect of great felicity, which, without the cadence, has almost the verbal accent of a classic similitude:

"Like dropping of the sweet and gradual rain,
Full-flooding all the parchèd doors of growth,
The multitudinous lips of all the flowers,
The whispering insistence of dry leaves,
All cool and rill-like flowing falls our sleep."

At other times, more frequent, the use of poetic diction stiffens into mannerism. Words are used as counters, and fail to impress us with a sense of their living rightness. This is especially true of the more ambitious pieces where it goes along with many lapses into humid sentiment. One thing Mrs. Bacon does well, namely, to intimate by melody and image—much as Mr. James Whitcomb Riley used to do it—the glamour that envelops this dusty world in the eyes of a child. We like "The Sleepy Song" best of all her verses:

"As soon as the fire burns red and low
And the house upstairs is still,
She sings me a queer little sleepy song,
Of sheep that go over the hill.

"The good little sheep run quick and soft,
Their colors are gray and white;
They follow their leader nose to tail,
For they must be home by night.

"And one slips over, and one comes next,
And one runs after behind;
The gray one's nose at the white one's tail,
The top of the hill they find.

"And when they get to the top of the hill
They quietly slip away,
But one runs over and one comes next—
Their colors are white and gray.

"And over they go, and over they go,
And over the top of the hill
The good little sheep run quick and soft,
And the house upstairs is still.

"And one slips over and one comes next,
The good little, gray little sheep!
I watch how the fire burns red and low,
And she says that I fall asleep."

Mr. Riley, in his latest volume, 'His Pa's Romance' (Bobbs-Merrill Co.), exhibits the persistence of his old style, but something of the old unction has departed. It lingers, however, in a single stanza of "Twilight Stories," with its gracious Wordsworthian reminiscence:

"The Grandma Twilight Stories!—Still,
A childish listener, I hear
The katydid and whippoorwill,
In deepening atmosphere
Of velvet dusk, blent with the low
Soft music of the voice that sings
And tells me tales of long ago
And old enchanted things."

His sentimental poems have not altogether lost their appeal to the popular taste, but they too often fail to ring true, and they are vulgarized by pictures of bachelors of various ages dreaming of their Dulcineas, while seated in the conventional Morris chair of commerce. The humorous poems, too, fail in gusto, though once, in the account of a hungry little boy with

"His ever-ravenous, marauding eye
Fore-eating everything from soup to pie,"

there is a flash of the old laughter. The best things in the volume are the elegiac poems, wherein sincere and tender sentiments are expressed in Mr. Riley's musical, allusive verse, with a becoming sincerity nowhere better than in these stanzas from "The Paths of Peace," a memorial poem on the death of Maurice Thompson:

"Perchance—with subtler senses than our own
And love exceeding ours—he listens thus
To ever nearer, clearer pipings blown
From out the lost lands of Theocritus;

"Or haply he is beckoned from us here
By knight or yeoman of the bosky wood,
Or, chained in roses, haled a prisoner
Before the blithe immortal, Robin Hood.

"Or, mayhap, Chaucer signals, and with him
And his rare fellows he goes pilgriming;
Or Walton signs him, o'er the morning brim
Of misty waters midst the dales of Spring."

William Reed Huntington's 'Sonnets and a Dream' (Whittaker), after a lapse of five years, has just been reprinted with "additional poems." Dr. Huntington's verse is a by-product from the intellectual work of a scholarly and talented man. The characteristic poetic temperament, with its perturbations, is not largely discernible in his writing, but the mental clarity, the restrained fervor of a perfectly integrated personality, expressed in suave and dignified Eglish verse, make his sonnets upon modern religious moods and upon the issues of affairs excellent specimens of their kind. Among the additional poems there are a few with the finer flavor of poesy. The most memorable piece in the book is one of these, entitled "Midnight on Mansfield Mountain." It is more academic than Dr. Huntington's poems usually are: indeed, it might have been styled as appropriately, "Lines Written after Reading Matthew Arnold"; yet it has the impressiveness of a mood common among educated persons of sensibility, perfectly realized on an American mountain-side, and firmly and sweetly expressed. We give it here without its first stanza of worn classical allusions; for Dr. Huntington shares the curiosly widespread inability of contemporary poets to understand how much the part may be greater than the whole:

"The breeze had died at set of sun,
Deep calm clad all things, flower and star.
Through the dim mists across Champlain
The sleeping mountains loomed afar.
Oh! why not to the soul of man
At such an hour come calm and peace?
Why breathes there not a voice to bid
The restlessness within him cease?

"I know not; only this I know:
A gloom around the heart is curled
Wherever, more than is our wont,
We feel the mystery of the world.
The smouldering of the sunset sky,
The break of waters on the beach,
The murmur of the woods at noon,—
An untold sadness lurks in each.

"We feel because we cannot feel;
We know our helplessness to know;
We ask, but answer cometh not,
Is Nature friend to us, or foe?
O Mother, fair as thou art sad,
O Mother, sad as thou art fair,
Lift the dark curtain's corner once
And show us what thou hidest there!

There was a time when the bland declination of the publisher protected the reviewer of poetry, in some measure, against the assaults of worse than mediocrity. But now that we have a publisher filled with an earnest desire to publish—for a suitable sum in hand—anybody's poetry, however bad, the reviewer's case is indeed parlous. Most of the meagre volumes which have recently been put forth with Mr. Badger's imprint (*nomen est omen*) it is kinder to leave nameless. In view of the glowing "Foreword" wherewith she is introduced, we may select the Muse of Dr. William J. Fischer to acquaint us with the quality of this interesting company. "The poems of William J. Fischer," says Mr. Charles J. O'Malley, "reveal that a new man is about to arrive in the field of American letters." "His voice is a young, glad voice, yet full of power and originality." "Here are songs of nature and songs of home. There are love songs and heart songs and cradle songs, and songs of gladness, and songs of pain." No injustice is done this glad voice in choosing for quotation these lines "To Collette," which we rather take to be one of the heart songs:

"Red are the roses she wears in her cheek,
Red are the soft lips, that gladly enclose
White pearly teeth—the pure portals of prayer—
Through which her white soul's expression sweet flows.

"Bright is the angel-look in her dear face,
Happy is the sunshine gay in her eyes mild—
O, there is nothing in all the wide world
Like the pure innocent heart of a child!"

There are many commendable sentiments expressed in Dr. Fischer's book, but this offering, with its engaging insinuation that Collette prayed through her teeth, is a perfectly fair specimen of his poetic attain-

ment. If any unappreciated poet has $250 which he can comfortably spare for the pleasure of appearing in this company, of seeing his moods precipitated in print, and of distributing fifty copies of his achievement among his friends and cousins, no one has any right to protest.

To pass from the consideration of books of verse to the perusal of blank verse dramas, Mr. Harold Elsdale Goad's "The Blind Prophet" (Rivingtons) is a lyrical drama of the Shelleyan sort. To a partial reader, it will seem a misty composition with a background of intense inanity. It has not a little of the prismatic quality of Shelley's "Prometheus Unbound," whereby the light of the poet's thinking is broken into profuse imagery as if by a dome of many-colored glass. Yet its imperfectly articulated and casual action, its high-flown lyrics and long declamations, are informed by an effective central motive. This is nothing less than the attempt to show how a religion of charity and idealism may prevail at the end over both skepticism and bigotry. In many detached lines such as

"God in all life draws nearer to himself,"

Mr. Goad is very happy in phrasing certain perennial religious conceptions with a turn that is punctually of the hour. It is perhaps on such philosophic, rather than æsthetic, grounds that "The Blind Prophet" is most interesting. Yet we hesitate to apply rigorous æsthetic tests to so thoughtful and fervid a performance, for there is justice in the adjuration of Mr. Goad's prophet to a band of flower-gathering children:

"Scatter your dreams like flowers upon Life's way,
Woe to the man that treads them under foot."

Mr. Goad's lyrical interludes and choruses have an excellent rhythm, but their pinion is too often weighted with unpoetic phrase. His best poetic gift is for narrative blank verse, as may be seen in this brief extract, which, with all its Tennysonian color and cadence, is from a passage that moves the imagination.

"For as we marched in twilight o'er the hills,
With song exultant and great hope at heart,
Sudden we faced the sunrise o'er a ridge,
And there before us on the opposing slope
Stood the wild nations ready, and between
Gloomed a bleak, lonely valley brimmed with mist.
Best had we waited, steadfast on the slope,
Ay, for the foe were many, we were few;
But so the Queen had stirred she could not stay,
And sudden, with one cry from all the host,
As though the sluices of our souls had burst,
We plunged into the twilight of that vale."

The collective title of Miss Harriet Monroe's book of plays, 'The Passing Show' (Houghton, Mifflin & Co.), fails to suggest quite the serious nature of the experiments which it contains. Since the success of her sonorous Columbian Ode ten years ago, Miss Monroe has displayed a poetic reticence which is amply justified in these five modern plays in verse. All the plays are tragic, or, at least, sombrely involved with the problems of free character caught in that intricate web of social and biologic necessity which is the modern equivalent of the simpler Fate of the Greeks. To say this is to say that the vista of the world which opens through Miss Monroe's plays is very similar to that which is seen in Sudermann and his school. Yet the mood of the Germans is not imitated, but realized, and the effect of the dialogue, broken into blank of an excellent cadence and savor, is very different from theirs. Of the interest and suggestiveness of 'The Passing Show' there is no question. The critical problem is to determine whether verse is the most suitable medium of expression for this particular kind of dramatic composition. If there is no legitimate effect in the plays as they stand which might not have been accomplished as readily and successfully in prose, then the medium is æsthetically unfit. The most ambitious attempt in the volume is the initial play, "The Thunderstorm." For purposes of stage presentation before a contemporary audience its story could doubtless be exhibited as effectively in prose, but, for the closeted reader, verse is indispensable to the fullest effect. There is a fine dramatic *élan* in Miss Monroe's writing which consorts well with her very respectable dramaturgic faculty.

A third intelligent essay in the field of dramatic poetry is Mr. Cale Young Rice's "Charles di Tocca" (McClure). Mr. Rice's theme and setting are quite remote enough to meet the old canons of the tragic. The protagonist is a petty tyrant of the Renaissance, and the scene is laid at his castle. Back of the castle are moonlit groves where the earlier action passes amid the ruins of old temples; and the crucial scene takes place in a hall which looks out upon the sea lying bloody in the sunset. Mr. Rice's versification is too often awkward, but this fault is in part redeemed by his phrase, which, despite some Elizabethan tincture, is more fresh and living than is often found in closet drama. Mr. Rice has also taken more advantage than is usual with modern writers of plays in verse, of the rich opportunities of strict dramatic structure. The action of the piece is admirably compact and coherent, and it contains some tragic situations and reversals which will afford pleasure, both to the student of the carpentry of playwriting and to the untechnical reader.

The most astonishing performance in the way of dramatic poetry that has lately been seen is Prof. N. S. Shaler's 'Elizabeth of England' (Houghton), a "dramatic romance" in five volumes, a play to a volume. In these five plays, "The Coronation," "The Rival Queens," "Armada Days," "The Death of Essex," and "The Passing of the Queen," Mr. Shaler has attempted to compass all the spacious times of great Elizabeth. It does not seem necessary to take very seriously Mr. Shaler's modest and ingenious preface, wherein he sets forth that these plays were written to vindicate scientific pursuits against the charge that they tend to sap the poetic imagination. He chooses as his text Darwin's confession that in middle life he ceased to care for imaginative poetry; but this has only slight evidential value, for a similar confession could doubtless be extorted from any nine out of ten men of middle age. In any case Mr. Shaler was a self-confessed versifier in youth, and from the perusal of his scientific and philosophic writings we take him to have been beneath the geologic crust a subterranean poet all his days. This assumption is fully borne out by the quality of the present work. A touch of this quality may be felt in the speech of Elizabeth to Raleigh after the destruction of the Armada, and in his reply:

Eliz.
Welcome, my prophet, you who see afar,
And judge the destinations of our ways;
Whose sword is also sceptre, pointing men
To empires to be won in days to come.
You see in action more than action means
To most hard fighters. Tell me what you saw
In the great arc that overarched the storm,
What rainbow gold to lead us worlds away.

'Tis much to have a knight who poet is,
And yet a poet with good sense of gain.

Raleigh.
My Queen, I looked as all did,—first to you,
And past you to this realm. When swords are out
Men watch their points; but when the fight is o'er
Then come the vistas.
. . . . . .
Think of that realm which waits us past the sea,—
Another England stretched from Pole to Pole.
'Tis yours to take; it is not yours to leave."

The five ample plays are written throughout in this large, unlabored vein, and there is scarcely a dull or a nerveless line to be found. Nevertheless, through the first two volumes the reader is dogged by the sense of dulness. The surface is taking, but the creative impulse has not been sufficient to vitalize the organism. From "Armada Days" onward, however, there is a constant increase of pleasure of an essentially poetic kind. No one of the plays is in any strict sense dramatic, though the "Death of Essex" comes nearest to being a tragedy of character. Mr. Shaler has, rather unhistorically, conceived Essex as a reckless idealist, one who

". . . never took the measure of his time
Or gauged the seas whereon his craft might swim,
But chanced their deeps and shallows with a helm
Set straight to far-off goal."

But the play fails of full tragic impressiveness in that it does not contain the proper *scènes à faire*. The more disastrous actions in which the tragic fault in Essex's character issues are recounted in vigorous narrative, not dramatically exhibited. On the other hand, the structural principle of the dramatic romance as a whole is poetic and effective. It is the conception of Elizabeth as the incarnation of the English national ideal, undergoing, after the dissipation of the Armada, a subtle sea-change into the fountain and origin of English Imperialism. In elaborating this theme, Mr. Shaler has chosen to credit the Queen with more womanly affection than has appeared in the dry light of history. But his plays gain in pathos by this, and it may well be that here again poetry is a truer and more philosophical thing than history. The final picture of the melancholy weeks which preceded the passing of the Queen, full of the same sombre mood towards "the deep" which informed the author's 'Study of Life and Death,' is excellently well done; and the introduction of "A Player," who supports her along her shadowy path with the stay of mellow Shaksperean wisdom, is fine literary art. The best things in the five volumes are some of the long narrative speeches, in which great events are recounted with the vividness of a writer well furnished with memories of men and heroic deeds, and quite poetized by an underrunning spiritual sense of life, articulate in phrase and rhythm. Indeed, we should be glad to see Professor Shaler try his hand at the neglected trade of narrative poetry. That the dramatic form is not necessary to the poetic chronicler admirably appears in Carducci's experiment—a mere fragment, alas—"Il Parlamento."

ANGLO-IRISH FICTION AND CELTIC POETRY.

Irish Life in Irish Fiction: By Horatio Sheafe Krans. New York: Macmillan. (The Columbia University Press.) 1903.

Poets and Dreamers: Studies and Translations from the Irish. By Lady Gregory. New York: Charles Scribner's Sons. 1903.

Now that Mr. Yeats has set us all talking

about Irish literature and weighing the chances of the Celtic movement, we may remind ourselves what the phrase "Irish literature" conveys, or has till lately conveyed, to the Anglo-Saxon reader. Nothing could show more decisively the need of Mr. Yeats to clear the ground for the Celtic Renaissance than the fact that nine people out of ten, if you should ask them about Irish poetry, would think you meant Tom Moore; as for Irish prose, 'Charles O'Malley' and 'Rackrent Castle' are, of course, the classical literary expression of Irish life. Strange that a people should so misunderstand itself, should be so misunderstood, that the trivial Anacreontic verses of a sentimental cockney like Tom Moore have never really failed to pass muster as Irish. Nothing, we repeat, so convinces us that the Gaelic League has a genuine mission, and no easy triumphs before it, as this acceptance of Moore for the poet-laureate of the passionate and brooding Celt. But when you have convinced both Celt and Anglo-Saxon that

"Believe me if all those endearing young charms"

does not express the lyrical emotion of a race of impassioned visionaries, you are still confronted with Lever and Miss Edgeworth and the author of 'Handy Andy.' We are told that Miss Edgeworth's novels inspired Scott to do for Scotland what she had done for Ireland; that her pictures of Irish life so impressed Turgeneff that he hastened to throw as vivid a searchlight on the life of the Russian peasant. Irish fiction does indeed begin with Miss Edgeworth, but you will find no revelation of the spirit of Ireland in those works which made her the lion of a London season. The popularity of Miss Edgeworth, like the popularity of Lever, was due to the fact that she presented with some vivacity and great precision the type of Irishman that regularly appeals to the British public. The openhanded, reckless heroes of Miss Edgeworth, the duelling, drunken squireens of Lever's extravaganzas, are no more Celtic than the roystering English squire of English fiction is Celtic. In all the Irish novels of the Lever type you are in the society of the Anglo-Irishman. The softness and amenity of the Irish air, the soft Irish weather, have worked a real change in the Anglo-Saxon settler; they have taken away his power of resistance, but they never could transform him into a Celt.

"To keep game-cocks, to hunt the fox,
To drink in punch the Solway,
With debts galore, but fun far more—
O, that's the man for Galway."

This is Anglicized Ireland playing the buffoon to amuse an English audience; you must turn to a very different literature if you want to hear Ireland talking to herself.

Mr. Krans deals with the Irish novelists of the first half of the nineteenth century. In those days the life of Ireland, tempered always by English influences, centred in Dublin. The nobility and gentry were, as they are now, for the most part, Protestant, the peasantry, Catholic, clinging to their religion with the ardor that always results from the persecution of a faith. The lawless and overbearing landlord of English extraction, the avaricious factor, the rack-rented peasant, these were the surface of Irish life; the hilarity and pathos of the Lever school of fiction are derived only from the surface. But in the meantime certain novelists of the peasantry were appealing to the same audience, though with very different success. They were all Catholic and all Celtic. There is nothing devil-may-care about the heroes of Carleton's or Banim's novels. There at least you meet the real peasant, who must learn to read and write by stealth or not at all; whose life was a series of evasions of the law, with eviction and emigration for the climax. Yet the dragoon of Lever still holds his ground among the dashing heroes of last century's fiction; the hedge-schoolmaster requires a commentary. The wandering schoolmaster, who, because he was a Catholic, and a Catholic could not educate or be educated, must hide with his pupils under a hedge, played a prominent part in the novels of peasant life that were written from the inside, as Carleton's were written. This fiction never had any real life, and cannot be revived except for the purposes of the student of early Victorian novels; but for the creative genius among Irish novelists, one must look to Carleton rather than to Lever or Edgeworth.

In his essay of 335 pages, Mr. Krans makes an exhaustive survey of Irish fiction up to the middle of the last century. The volume is one of the Studies in Comparative Literature issued under the auspices of Columbia University. There is a good bibliography, and the review of the novels is well done. It is not the fault of Mr. Krans that no one who cares for Ireland to-day can take any interest in Lever and his school.

Even such men as Carleton and Banim, who are as much out of touch with this generation as Lever, had no aim that was peculiarly Irish. An English education, English ideals, for them meant the only chance of success. But about the time—that is, about sixty years ago—when these novels of Irish life were being written for the English, the poet Raftery was writing Irish ballads for the peasants of Galway. It is a question whether Lever so much as heard of him; in any case he could not have read the ballads. For with the poets and dreamers who give the title to Lady Gregory's book, we arrive at last at the Irishman from whom the Englishman can extract neither humor nor pathos, whom he simply does not envisage, the passionate and visionary Celt.

When Lady Charlotte Guest collected and translated the Welsh legends, the prose romances of Wales, she threw a flood of light on Celtic literature, which before that had been hidden from all but students in Geoffrey of Monmouth's twelfth-century chronicle. It would be hard to estimate the influence of that translation, which revealed the Celtic saga to the world, as Lönnrot revealed the Finnish saga by his collection of the 'Kalewala'; the 'Mabinogion' is to Wales what the 'Song of Roland' is to France. Lady Gregory is in some ways more fortunate than Lady Charlotte Guest. The collection that she has made in this volume is not antiquarian; the Cuchullin Saga, one of the two great Celtic epics of Ireland, has long been familiar to English readers, though so far it has been mysteriously neglected by poets and artists. One of the best translations is by Lady Gregory herself, in an earlier volume. But the present studies are a manifesto, a contribution to a movement that has caught the imagination and fired the pride of the whole Irish nation. When Matthew Arnold wrote his essay on Celtic literature, his aim was to justify the Celtic imagination by proving that there is a streak of the Celt in every Anglo-Saxon poet of genius; that the natural magic and mystery of some of the finest passages in English poetry are due to a strain of the Celt in the poet. But Arnold looked only to the past. He thought that an antiquarian revival would reinstate the Celt in the history of comparative literature, and that to found a chair of Celtic at Oxford would go far towards settling the Irish question. He would have been out of sympathy with the aims of Lady Gregory and Mr. Yeats, for he was too thorough an Anglo-Saxon to believe with Mr. Yeats and his friends that the Celt must isolate himself, must make of Ireland a sort of Sparta, must, if he is to be a true Celtic poet, draw his inspiration from the Celtic fountain alone. That is, of course, the ideal of a separatist, such as your true Irishman must always be; the Gaelic movement is a summons to patriotism—that patriotism which, as Mr. Godkin once said, depends so much on the stimulus that the country's history can supply to the imagination of its people. For all the purposes of poetry this isolation has been maintained by the wandering peasant poet who composes in Irish for an Irish peasant audience. What Lady Gregory does in this volume is to give the English reader a chance to estimate the poetic activity of the nineteenth-century Celt.

Raftery died about sixty years ago, but his songs are still sung in Mayo and Galway, Lady Gregory tells us, and exist in copies that were treasured by the country people. Lady Gregory found his famous poem in which he cursed a bush that failed to shelter him from the rain, "in a manuscript book, carefully written in the beautiful Irish character, and the great treasure of a stone-cutter's cottage." Raftery was a blind bard, whose songs were supposed to have a mysterious power to bring the fairies close, so that the mention of one's name in them was not by any means desirable. The passages that are quoted are, in fact, nearly all curses and satires. Like a true wandering rhapsode, he sometimes left a scathing verse on a place where he was not well treated, as, "Oranmore without merriment. A little town in scarce fields—a broken little town, with its back to the water, and with women that have no understanding." Every one will remember Shakspere's rhymes on "Beggarly Broom and drunken Bidford," which have stuck to those little Warwickshire villages as Raftery's satire sticks to Oranmore. But Raftery wrote historical poems too, and, in the days when Irish history was forbidden in the schools, his poems were the textbooks of the hedge schoolmasters. "The music of the world entirely, and Orpheus playing along with it, I'd sooner than all that the Sassenach to be cut down," sang Raftery. The Celtic movement needs a Tyrtæus, especially if it is going to encourage a Spartan isolation; there is a curious lack of the spirit-stirring note in these poets who would like the Sassenach to be rooted out. It is a great mistake to be a pathetic patriot. Raftery, at any rate, could strike as well as any Celt the note of lamentation. His elegy on his friend Daly is the best example. "The swans on the water are nine times blacker than a

blackberry since the man died from us that had pleasantness on the top of his fingers. . . . No flower in any garden, and the leaves of the trees have leave to cry, and they falling on the ground. There is no green flower on the tops of the tufts, since there did a boarded coffin go on Daly." "Raftery couldn't see a stim, and that is why he had such great knowledge," the people say; "and he had a voice that was like the wind." An old woman told Lady Gregory that she had heard Raftery's song "Cilleaden" sung in a tramcar in America. The peasants of Galway still entertain the local poet at their weddings and dances, but the decay of the Irish language has progressed far, and with it the inspiration and the profession of the Irish rhapsode are dying out. Douglas Hyde has published a volume of Connaught lovesongs; Lady Gregory gives in addition some translations of ballads that she collected on the Arran Islands off the Galway coast, "at the edge of the world." They are, curiously enough, devoted to the slight incidents of everyday life, as though the islanders shrank from the burden of legends and dreams that have gathered about every rock in those beautiful and desolate waters. Their eyes are fixed on America, and one that Lady Gregory quotes dwells on the troubles of a Galway woman in a Boston factory. "Do you remember, neighbors, the day I left the white strand? I did not find any one to give me advice, or to tell me not to go. But with the help of God, as I have my health, and the help of the King of Grace, whichever State I will go to I will never turn back again." So begins the sorrowful song of Bridget O'Malley. Lady Gregory supports the statement of George Moore that the people do not care for love songs; that marriage for love is almost unknown. "Marriage is a matter of common-sense arrangement between the heads of families." Only the laments seem to come from the heart, and the deepest note struck is the love of country.

The tradition of classical allusions came into Ireland some centuries ago; it is to be hoped that the influence of the Gaelic league will work against the monotonous references to Juno and Venus that make even Raftery's praise of a country girl sound artificial. Of all the love songs that Lady Gregory quotes there is only one that rings true, and makes one regret that one cannot read the original. It is called "The Grief of a Girl's Heart," and is sung in the south as well as on the Arran Islands.

"It is late last night the dog was speaking of you; the snipe was speaking of you in her deep marsh. . . . It was on Sunday that I gave my love to you; the Sunday that is last before Easter Sunday. And myself on my knees reading the Passion; and my two eyes giving love to you for ever. . . . You have taken the East from me; you have taken the West from me; you have taken what is before me and what is behind me; you have taken the moon, you have taken the sun from me; and my fear is great that you have taken God from me."

Simætha in Theocritus does not express the intensity of passion more perfectly; this is one of the rare flashes of genuine lyric in Lady Gregory's volume.

The future of the Gaelic revival in the history of the literature of this century depends on the answer to the question that occurs to any one who reads these translations: Will the Irish-speaking Celts ever produce poets who will transform these exquisite phrases, these half-articulate yearnings, into lyrics that will make it necessary for the Anglo-Saxon to learn Irish as he must now learn Greek in order not to miss some of the finest poetry in the world? The exquisite form of Mr. Yeats's Anglo-Irish poetry he did not derive from the Celtic fountain to which he would confine the Celtic poets of the future. It remains to be seen whether some poet will arise who will make the ballads of Ireland to such a strain that it will matter little who makes her laws. But it must not be a strain of lamentation; at present the truest expression of the Celtic genius is the "Sorrowful Lament for Ireland," preserved in an old MS. of uncertain date. The translation is Lady Gregory's:

"I do not know of anything under the sky
That is friendly or favorable to the Gael,
But only the sea that our need brings us to,
Or the wind that blows to the harbor
The ship that is bearing us away from Ireland;
And there is reason that these are reconciled with us,
For we increase the sea with our tears,
And the wandering wind with our sighs."

As evidence of the work that is being done by the Dublin Literary Theatre, Lady Gregory translates the first Irish play ever given in a Dublin theatre, "The Twisting of the Rope," which has been acted since 1898 in many places in Ireland; and "The Marriage," also by Dr. Hyde, which was acted last year in Galway, at the Feis, the Irish equivalent of the Welsh Eisteddfod. They are written for the people, and have been acted by the people, in Irish. They never will appeal to an Anglo-Saxon audience. To choose for your hero a blind beggar poet, who comes back from the grave to play a very substantial part; to talk of "the land of fairy" as though it were the next village; to treat men like ghosts and ghosts like men—all this is to put a strain on the Anglo-Saxon imagination such as it has never been able to bear. Shakspere knew this when he confronted the English, easily-bored Hotspur, and that true Celt, Glendower:

"*Hots.* I had rather be a kitten and cry *mew*,
Than one of these same metre ballad-mongers;
. . . sometime he angers me,
With telling me of the moldwarp and the ant,
Of the dreamer Merlin and his prophecies.
. . . . . .
I had rather live
With cheese and garlic in a windmill, far,
Than feed on cates and have him talk to me
In any summer-house in Christendom."

The Voice of the Scholar: With Other Addresses on the Problems of Higher Education. By David Starr Jordan, President of Leland Stanford Junior University. San Francisco: Paul Elder & Co. 1903.

L'Éducation de la Démocratie: Leçons professées à l'École des Hautes-Études Sociales. Par MM. Ernest Lavisse, Alfred Croiset, Ch. Seignobos, P. Malapert, G. Lanson, et J. Hadamard. Paris: Félix Alcan. 1903.

If the two very interesting volumes of addresses before us have any one prominent element in common, it is their saturation with the belief that

"New occasions teach new duties; Time makes ancient good uncouth."

Alfred Croiset, who offers a vigorous plea for the retention of the ancient classics in any scheme of popular education, is scarcely less insistent than Jacques Hadamard, the special advocate of the physical sciences, that the democracy of modern France demands for its well-being ideals and methods in education very different from those of the past. The French educators here represented are rather more definite as to what those ideals and methods should be than is President Jordan, who is, of course, well known as the most unreserved champion of the elective idea today before the public. When the student's freedom of choice is the question under discussion, he will even admit that Latin grammar may be an effective instrument of education, for a boy who takes it of his own free will, works at it in earnest, and has a good teacher; and for President Jordan to admit anything whatever favorable to any part of the old-fashioned college curriculum is a rare and important occurrence.

The thesis of M. Lavisse, who is assigned the place of honor in the course of French addresses before us, is that the education of the past was unrelated to actual life, and hence was a necessary failure. This he essays to prove by a frank relation of his own experience. One must doubt the force of such confessions of failure in education, when the life of the man who makes them is demonstrably no failure at all, but a distinguished success. M. Lavisse is an honored member of the French Academy, and possibly the achievements which placed him there are more nearly related to his early education than he thinks. It sounds ill for a well-developed man to complain that his mother's milk has left a bad taste in his mouth. President Jordan, too, in the present volume, as always, frequently assails the college education of the past as wholly unrelated to life. The country, he thinks, has been made by its educated men, but he curtly excludes its college graduates from the number, "for until within the last twenty-five years college men were not themselves abreast of our own progress." College men educated under the older régime certainly could not have amounted to much, and therefore they did not—is apparently the logical basis for this assertion. A devotee of scientific method should look more closely at the facts. The immense influence of such forces as Harvard, Yale, Princeton, and Brown in the making of the United States is easily enough traced by any one who cares to investigate. We may quote here Senator Hoar's observation in his Autobiography that the Harvard graduate of his early days attained high position much sooner than he does now. The college of the older time had its earnest students and its idlers; we have yet to find the modern college, or university, in which free election and the presentation of studies "related to life" have eliminated the latter class. There is little if any evidence that this class has been relatively lessened. We may thank the leaders of the modern educational movement that the benefits of college training are open to a far wider range of interests than ever before, and that the good student has an incomparably better material equipment for his work than was offered in the past; the happy discovery of some mode of certain assurance that the masses of our college students shall take adequate advantage of these new blessings, is yet to be made. If we were searching for proof that the key does not lie in free election and scientific studies, we should not neglect President Jordan's severe criticism of much that passes for scientific research

in the Doctors' dissertations of the present day.

The strongest feature of his addresses, we think, is to be sought where undue bias against former methods or certain classes of studies cannot enter. We are especially pleased with his vigorous denunciation of the excesses and dishonesties of current college athletics. Better to close the gates of the Athletic Field for ten years, and fumigate, he thinks, than submit to the evils of the professional spirit and methods. His most positive suggestion for reform is to exact hard and successful work from those who would be on the teams. The "ringer" would soon fall by the wayside under that test. Indeed, if President Jordan were to come up to the full measure of his suggestions in managing the institution entrusted to his care, there would be one college in the land where the presence of the idler would not be tolerated either in athletics or in any other department. One can find no fault with him in the matter of strenuosity. The idea of college life as a withdrawal from the turmoil of the outer world, in order to a quiet contemplation of the things of the mind, is about as foreign to his way of thinking as anything could possibly be. It is somewhat unpleasant to deal with the address which gives his volume its title, "The Voice of the Scholar." The strength of its argument for scholastic freedom of speech is weakened in the end by reservations and qualifications which practically undo all the good words that precede them. One might sum it up by saying that the scholar who holds a position in the teaching force of a university must be free, but only to declare scientific truth, free from any admixture of error, partisanship, or other harmful ingredients. But who is to decide? Of course, the door is wide open here for the baleful influence of the actual or prospective donor, the partisan constituency, and various other foes to real freedom. Better the words of M. Croiset in his address on the Needs of the Democracy: "Il est contraire à l'essence de la science de fermer la bouche même à l'erreur." But the recent episode in the South shows that we are making progress, even if the presidents of two great universities have felt constrained, within recent years, to speak in halting tones on the subject. When we recollect how forcibly and frequently President Jordan has freed his mind concerning recent political follies, we can only be thankful that he has not imposed upon himself the restraints which his address suggests.

To recur to the addresses of our French educators, we imagine that most American readers will find in them a greater confidence in the power of "education" as a cure-all for the ills of democracy than is current among us, as a result of our own experience. We have found that all classes of our educational institutions, from the little red school-house to a Harvard or a Yale, may turn out citizens who are utterly careless of their duties and privileges as members of our democracy. We have seen uneducated men by the thousands arrayed on the side of financial sanity against an utterly fallacious and dangerous financial movement led by Bryan, a college graduate, and supported by prominent graduates of perhaps every college in the country. True, the rule is the other way; but our French cousins will fare better than we if they do not find the exceptions so numerous and weighty as to inspire serious doubts of their thesis.

The Nemesis of Froude: A Rejoinder to James Anthony Froude's 'My Relations with Carlyle.' By Alexander Carlyle and Sir James Crichton-Browne. New York: John Lane. 1903.

This volume has perhaps attracted less public attention than any other of the Carlyle-Froude series, but it has merits and an interest of its own which should not be overlooked. It is a compact restatement of the case against Froude, as well as an entertaining rejoinder to the very disagreeable pamphlet called 'My Relations with Carlyle,' which Froude's representatives recently published. Of course the weak point in Froude's armor was inaccuracy. He had a constitutional tendency to be inexact and false. He seems to have had the most implicit confidence in his own recollection of facts, but, as it is put here, his memory was really an organ, not of retention and reproduction, but of transformation. We are not surprised to learn that curious illustrations of this are afforded by his posthumous account of his relations with Carlyle.

For instance, it was his object in that pamphlet to fix indelibly in the mind of the public the impression that he, as a disciple of Carlyle, must have been the last person to desire to misrepresent him. For this purpose he gives us an engaging picture of a youthful Froude in deacon's orders, looking to the Church as his profession, and suddenly detached from the pleasant, easy path by the warning voice of Carlyle. So much as a doubt of the truth of the creed in which he had been brought up had hitherto never crossed his mind.

"It was at this time that Carlyle's books came in my way. They produced on me what evangelicals call 'a conviction of sin.' . . . They taught me that the religion in which I had been reared was but one of many dresses in which spiritual truth had arrayed itself, and that the creed was not literally true, so far as it was a narrative of facts."

Do you think (the implication is) that I could malign him? Unfortunately, according to the authors of the present volume, this is a case of "transformation." It was in 1841 that Carlyle's books were first brought to Froude's notice by John Sterling, and it was not until 1844 that he took deacon's orders; so that he either took deacon's orders three years after his faith had been undermined by Carlyle (to say nothing of his having preached a funeral sermon in St. Mary's Church, Torquay, three years later still, in 1847), or else he is wholly wrong as to the startling effect of Carlyle's books on him in 1841. The fact appears to be that no such sudden conversion through Carlyle's books ever took place. The development of Froude's incredulity was gradual. But to make his relations with Carlyle what they needed to be for the immediate purpose, a sudden conversion was required. Memory, with the aid of imagination, became at once equal to the task.

An appendix contains a searching analysis of Sir James Stephen's vindication of Froude. But this vindication must be regarded rather as the defence of a friend than an impartial opinion. No doubt, for any one who trusted Froude and placed reliance on his statements of facts, a very good case might be made out; his present critics have therefore laid most stress on his utter untrustworthiness, and to our mind, in this respect, they have broken him down completely. It is indeed his Nemesis which has overtaken him. Looking back on the whole controversy, it leaves a painful impression, which will probably deepen with time. Who comes out of it well?

How George Rogers Clark Won the Northwest, and Other Essays in Western History. By Reuben Gold Thwaites. Chicago: A. C. McClurg & Co. 1903. Pp. xx., 378.

The precept, "Gather up the fragments, that nothing be lost," was never so honored in authors' observance as now. With the growth of Carnegie and other libraries present and prospective the demand for books has so grown that it welcomes bibliothecal supplies without hesitation—above all, when a taking title flares in the forehead, as in the case of the Essays before us. "How George Rogers Clark won the Northwest"—so much and no more is printed both on the back and side of a volume more than four-fifths of which has no reference at all to Clark or his exploit But the Clark essay, though not the longest in the book, may well be proud of a facsimile now first published of Clark's summons of Vincennes to "surrender at discretion"—Grant's laconic model, which he varied only by translating an ambiguous and euphemistic French idiom into the unmistakable "unconditional." This summons was the Archimedean fulcrum for moving our trans-Alleghany world out of foreign control. No matter how black the blot on those nine facsimile lines, they are written, as Tom Moore would say, with a pencil of light which illumes a whole volume. They must survive as long as the facsimiles of our national Declaration.

Mr. Thwaites's pearls, though strung at random, make up a bead-roll of beginnings (1) of French missions and settlement on the Great Lakes, (2) of French expulsion from trans-Alleghania, (3) of lead mining, (4) of the Wisconsin agricultural stage, and (5) of the carving of five States out of the Northwest. No less than eleven maps illustrate as many projects for such carvings, which each had stout supporters before mutual delimitations were determined. These maps, crude as blackboard chalkings, are not least instructive. How many readers have not yet to learn that Chicago stands in a State that was to be named Assenisipia? How many know that Washington's intrenchments where he was forced to surrender in 1754 are still in fair preservation, and that current histories of them need corrections which they will now get from Mr. Thwaites's compass and line? Where but in these essays is such an exposure of the black part which the Black Hawk war played in our century of dishonor? Where else is there such a gathering of important data as well as dates regarding our early lead mining? Loving and almost filial are the details respecting Draper and his detecting as with wand of witch-hazel the manuscripts which proved the cornerstone of the State Historical Society, have given it a distinctive superiority to all Westerns of its class, and are now housed

in the most costly building in the United States known as an Historical Library.

A History of Arabic Literature. By Clément Huart, Secretary-Interpreter for Oriental Languages to the French Government, and Professor at the École des Langues Orientales in Paris. New York: D. Appleton & Co. 1903. Pp. viii., 478.

L'Islamismo—Letteratura Araba. Del Dott. Prof. Italo Pizzi della R. Università di Torino. Milan: Ulrico Hoepli. 1903. Pp. viii., 496, and xii., 388.

We have already noticed in the French original M. Huart's sketch, which now appears as one of Mr. Edmund Gosse's "Short Histories of the Literatures of the World." In its English garb it calls for mention, but it cannot be said to compare favorably with the other volumes in that series. It has neither the brilliancy of Dr. Murray's 'Greek Literature,' the unique learning and research of Dr. Giles's 'Chinese Literature' or Mr. Aston's 'Japanese Literature,' nor even the piquancy and originality of Mr. Fitzmaurice-Kelly's 'Spanish Literature.' As is true of so many recent compilations on Arabic subjects, the shadow of Brockelmann's great biblio-biographical farrago is heavy on it, and a wealth of half-digested detail mars the clarity of the presentation. M. Huart might well have borne in mind with Hesiod that the half is often greater than the whole. His book would have been more attractive and readable for the class to which it appeals, if he had sunk in oblivion the greater number of the authors whose names and works he here painfully recites. The student knows where to seek such information—is it not all written in the pages of Brockelmann, Wüstenfeld, and Ibn Khallikan?—and in this wilderness of names the unlearned reader will vainly long for some rememberable and decisive generality. Of the translation, it is enough to say that no reader except the absolutely ignorant of French will ever prefer it to the original. Although it does not display flat errors, the turning of its phrases is loose, and it blunts and dulls that flash and sparkle with which good French can hardly fail to lighten any subject.

The little handbooks by Professor Pizzi are of a very different type. Belonging to the well-known 'Manueli Hoepli,' they, too, are cast in popular form, but their method is entirely other. Names and non-significant details are rigorously suppressed; everything given represents an idea, and a common idea—not simply an isolated fact, valueless except for its own sake. Further, the spirit of the Muslim institutions and of the Arabic literature is illuminated by a long and excellently selected and translated series of illustrative extracts. Too great praise cannot be bestowed on this side of Professor Pizzi's work; by the idea and its execution he has put life into a form of handbook too often stiff and sapless. Also, he has chosen these extracts—so different from the Elegant Extracts of our youth—from easily accessible chrestomathies and texts, and thus made his books of immediate usefulness to the beginner in Arabic.

Of his 'L'Islamismo' the scope is well given thus: "Noi intendiamo di studiar la vita musulmana, descrivendola brevemente, e le manifestazioni sue nelle lettere, nelle arti, nelle scienze, nelle opere della cultura, nel costume, negli usi anche nelle superstizioni e negli errori volgari, si che, per noi, anche un motto, anche un fatto dappoco, anche un tratto qualunque del costume o dell' indole hanno valore assai maggiore che non le guerre e le battaglie, che non gli atti della politica" (p. 27). This has left him free to deal with literature in the narrower sense in his second book, and the two volumes together in their nine hundred compact little pages furnish a singularly complete introduction to the Muslim civilization as a whole.

The Study of Ecclesiastical History. By William Edward Collins, B.D. (Handbooks for the Clergy, edited by A. W. Robinson.) Longmans, Green & Co. 1903.

The significance of this little volume of 150 pages is not at all to be measured by its size. Although specially addressed to working clergymen of the Church of England, it cannot fail to be of value to all students of church history. We venture to use this phrase in spite of the author's insistence on the term "ecclesiastical history" as expressing a something larger than what men are accustomed to call church history. Just what this something is, we are not told; but we are led dangerously near the fantastic notion, by no means uncommon in clerical writers, that "The Church" means everything since Adam in which any resemblance to historical Christianity can be found. We do not think that Mr. Collins really shares this fancy, but rather that he is trying to avoid another error which he rightly believes to have had far more unfortunate results. He insists, from beginning to end of his book, that the Church cannot be studied as a series of phenomena isolated from the main currents of human experience. It is, we think, in this sense that he speaks of a "preparation" of the world for Christ, not in any one line of descent, but in the gradual and regular development of social forces, precisely as one might speak of a preparation for the Discovery of America or for the French Revolution. Yet our author nowhere leaves us in doubt that the importance of the "Incarnation," which he, as an English clergyman accepts, transcends infinitely that of any other crisis in human affairs.

From this intimate and essential relation of church history to all other history it should follow that its method can differ in no respect from that of all historical study, and it is the chief merit of this volume that it lays down this principle without hesitation and without limits. Whatever is good method in any other field of history is equally good in that of church history. Records and documents must be examined with an equally strenuous criticism; every assumption as to chances of human fault and error which the historian of politics would make about his material, must be made by the Church historian about his. Mr. Collins defends with considerable cleverness the claim of history to be a science, and goes on to show how the two sides of every scientific process, the analytical and the synthetical, are to be carried out. He pays his compliments to the historian with a purpose, and to the other, equally dangerous, who presents only a jumble of "facts," without such arrangement or comment as will make them intelligible. His estimate of the argument from silence is judicious, but he curiously neglects to speak of the silence which is merely the taking for granted of things universally known to the author's world.

As to the process of study, Mr. Collins distinctly urges his readers to begin with an investigation in some relatively narrow field rather than with wide reading over the whole ground, but he reminds us in a note that he is speaking to clergymen, of whom a general knowledge of church history may be predicated. Let us hope he is right as to Englishmen; no such assumption could be made for American clergymen. It is refreshing to find an English churchman frankly placing Gibbon at the head of all English historians, and repeatedly commending him to his clerical readers, though at the same time warning them against his obvious tendencies. In the same vein is the disregard, even dislike, of "apologetic" writings, which our author rightly separates from truly historical works, giving them, however, their due place in a final estimate of values. We are glad, again, to find a man who is not afraid to commend old books while not neglecting new ones. It is rather a fine touch when Mr. Collins demands of new books that they shall have something of a prophetic character, bringing a real revelation of truth which shall make them the teachers of to-morrow. He means to contrast these with merely "up-to-date" books, which satisfy some momentary phase of the public thought without laying any foundations for a sounder judgment.

The most valuable chapter is the seventh, in which the author takes up certain special aspects of the study of church history, and gives directions as to how they are to be faced. These are generally eminently sound, as, *e. g.*, when he applies to the study of the Canon Law the rule that "principles precede practices, and practices precede theory." We could only wish a little more certain sound in his rules for interpreting the records of the marvellous. On the one hand he seems a little over hard in relation to legends, for he would reject, not only the legend itself, but also all that goes with it, as invalidated by it. On the other hand, he is not quite equal to the strain of rejecting precisely the same kind of narrative when it falls naturally into the sober record of such a chronicler as Beda. He is ready to say that the marvels so recorded "may have had an objective reality." "They are as much a part of the life of the peoples concerned as their actions are, or their beliefs." Here Mr. Collins passes that line which so few clerical scholars have ever been able to observe. The marvel does not have an objective reality; it is not the marvel which is a part of the life of the peoples, but the belief in the marvel, and the study of the marvellous is a study, not of history, but of psychology. When Mr. Collins goes on to say "that signs (σημεῖα) do occur nowadays is a matter of experience," only that most of us have not the eyes to read them, he is wandering still further into the range of psychology, and pathological psychology at that.

The notices of books are in the main useful, but too meagre to call for criticism. One or two slips should be corrected; as, p. 30, *Monumenta Historiæ Germaniæ* for *M. G. Historica;* p. 31, *Bullarum* for *Bullarium,* and Münich, which is neither English nor German.

America in the China Relief Expedition. By A. S. Daggett. Kansas City: Hudson-Kimberly Publishing Co.

It was well worth while to tell the story of the American soldier in China in 1900, and of the largest expedition ever dispatched by the United States to the Asian continent. The volume is neatly printed, with excellent maps, an index of names, and an appendix containing the more important official documents relating to the subject. The table of contents is very full; the illustrations make up in quantity what they lack in quality; the style is clear and straightforward, and the spirit expressed is eminently judicial. Although the author was a participant and eye-witness, as captain of infantry, and is now a Brigadier-General, retired, he does not mention names of the living in criticism, and rarely does he speak in direct praise. He does not hesitate, however, to point out the defects of our military system, especially such as can be easily remedied. For example, he wonders why such a large number of officers are so extolled in official dispatches and recommended to Congress for brevet, for he takes it for granted that a soldier should always be both brave and faithful. To recommend pretty much everybody in a fight for special honors on account of simple faithfulness to duty, defeats the very object supposed to be gained. He intimates that more cheap and cheaper reputations have been made in the last four years than ever before, and that in all wars with inferior and barbarous races this is likely to be so.

The work does not treat of what went on inside the Legation fortifications, but deals wholly with the movements of the American troops from the time of their receiving orders (when in the Philippines) until, their work being done, they left China. He shows that some of the patent machine guns were found worthless when put to prolonged use, and had to be abandoned or thrown into the river. He praises the spirit and conduct of the Japanese soldiers, but neither he nor any one else has yet enlightened us upon the question why the Japanese, with their superior force and equipment and thorough preparation, were not allowed to press on, immediately after the fall of Tientsin, to Peking, to the immediate rescue of the Legations.

Being a veteran, Gen. Daggett naturally passes just criticism upon those young and "fresh" officers who do not understand the physical possibilities or the temper and spirit of the men on foot. Though he does not say so in so many words, he reveals pretty clearly why there are so many desertions from the United States army. His criticisms of the desire of inexperienced officers to get into action and under fire, and possibly to make cheap reputations quickly, have their illuminating commentary in the fact that, in not a few of the engagements, there was evidently more desire for a fight than knowledge of the ground or the circumstances, though the author never tells us, of course, just who has blundered. "The former [experienced officer], exercising self-restraint, looks to the interest of his Government; the latter [inexperienced officer], impulsive, excited, looks for personal glory; the former, his reputation for personal courage being secure, bends all his energies to the best means of gaining victory; the latter, having no reputation for personal courage, exerts all his energies to gain one." The thrilling episode of the scaling of the high walls by our troops without ladders, and the planting of the stars and stripes by the first of the rescuers on the walls of Peking, is modestly and vividly told (p. 147). Gen. Daggett considers some of the criticisms made on our soldiers by foreigners, and speaks with the authority of a man of experience. Indeed, one is constantly impressed, in reading this really valuable contribution to history, by the coolness and moderation of the judgments expressed, as well as by the accuracy of the facts stated.

NEW FICTION JUST READY

The Adventures of Elizabeth in Rügen

By the Author of "Elizabeth and Her German Garden," "The Solitary Summer," "The Benefactress," etc. *Cloth, 12mo, $1.50*

Through her capital sketches of the sprightly little watering-places of this exquisite island, the author's engaging personality shows itself even more delightfully piquant than in the surroundings of her German Garden.

Mr. EDEN PHILLPOTTS' *New Romance of the West Country*

The American Prisoner

By the Author of "Children of the Mist," "My Devon Year," "The River," etc. Illustrated by CLAUDE A. SHEPPERSON. *Cloth, $1.50*

A powerful story of the time when French and American soldiers and sailors crowded the grim prison on Dartmoor during the War of 1812. There is a thrilling escape in a storm, a love interest whose heroine is a true "maid of Devon," and through it all that indescribable sense of atmosphere which makes "My Devon Year" sorestful.

Mr. HERBERT W. PAUL'S **History of Modern England**

To be complete in five volumes, cloth, octavo. Volumes I. and II., now ready, $5.00 net.

An admirable view of the England of recent years, direct and forceful, neither superficial nor warped by tradition.

For Teachers of French
SYMS'S EASY FIRST FRENCH READER
50 Cents
By L. C. SYMS, Author of "First, Second, and Third Years in French," De Witt Clinton High School, New York City.

This reader contains stories from such well-known writers as Feuillet, Laboulaye, and Félix Gras, so condensed and altered as to render them suitable for elementary reading, but still retaining the characteristic charm of the original narratives. The text progresses from the very simple to the more difficult by a regular gradation. Corresponding to the French text are English exercises to be translated into French. These serve as a test of the pupil's knowledge, and also as a drill in grammar. A table of irregular verbs furnishes aid in connection with this drill. There are both French-English and English-French vocabularies, and footnotes explain the few allusions and idioms which require explanation.

GEORGE FOX:

An Autobiography

Being the Story of his Life as told in Selected Passages from his Journal. Edited, with Notes and an Introduction, by RUFUS M. JONES, M.A., Professor of Philosophy in Haverford College.

Two volumes, 12mo, cloth, gilt top, with maps of his journeys in England and America, and numerous illustrations. Postpaid, $4.00 *net.*

Students' Edition, in one volume, without the illustration. Cloth, postpaid, $1.50 *net.*

Alike to the psychologist and the historian the career of George Fox is of great interest. Yet his own autobiographical narrative is made almost unreadable by being overloaded with theological discussion. In this edition the simple, thrilling story of Fox's life has been retained; the theological disquisitions have been dropped. The essential completeness of the story is in no way affected by this simplification.

As a naïve story of personal experience it is of supreme value. Copious notes enlarge upon this phase of the work. The Introduction is a study of Fox's relation to the religious movements of the Commonwealth, of the root idea of which he was the exponent, and of the unique psychological characteristics of the man himself.

RECOGNITION

The Best Work on the Recognition of the Spanish-American Republics, is

The Independence of the South American Republics

A STUDY IN RECOGNITION AND FOREIGN POLICY

By FREDERIC L. PAXSON, Assistant-Professor of History in the University of Colorado, and sometime Fellow in the University of Pennsylvania. 12mo, cloth, $2.00 *net.*

"If a revolution in the northern part of the republic of Colombia should result in the establishment of a Republic of Panama, at just what moment would precedent warrant the recognition of such a republic? The answer to this or a similar question may be deduced from the facts presented by Mr Frederic L. Paxson in 'The Independence of the South American Republics.'"—*Chicago Tribune*, September 4, 1903.

PENN'S GREENE COUNTRY TOWNE

Pen and Pencil Sketches of Early Philadelphia and Its Prominent Characters

By Rev. S. F. HOTCHKIN. ***12mo, cloth, illustrated, $1.00 net.***

From the Hon. S. W. Pennypacker, Governor of Pennsylvania

DEAR MR. HOTCHKIN: I have read with very great interest and pleasure your work entitled "Penn's Greene Country Towne." It is a venture in a new direction, since it is an effort to give accurate details of events in the history of our State and incidents in the lives of historical persons lightened and elucidated by the play of fancy. In that effort you have well succeeded. You have produced a book both useful and entertaining, and one which ought to have a wide circulation.

HARRISBURG, December 11, 1903.

NEW YORK, THURSDAY, FEBRUARY 4, 1904.

The Week.

Mr. Sulloway's proposed Service Pension bill is practically a plan to reward all survivors of the civil war. It matters nothing whether a soldier served on the Indian frontier or in a fort in Boston harbor—so long as he wore the blue for three months he shall draw $8 a month on reaching the age of sixty-two, precisely as will his brother who helped to beat back Pickett's charge at Gettysburg. He may have belonged to the cowardly regiments which refused to serve in the battle of Bull Run because their enlistment expired the night before—it makes no difference. To plunge his hands into the Treasury every one is invited—"rich man, poor man, beggar man, thief"; nor is the "old soldier's" widow forgotten. She, too, shall have $12 a month where she draws but $8 now, provided her marriage certificate is dated prior to January 1, 1870. But why this discrimination? If there are to be no differences among soldiers, let us have no finical distinctions between widows. The worst of all this is not so much the menace to the Treasury as the fact that it is a leap into the dark, at what price no one knows or can know. It undermines the public morality; it makes of patriotism a commodity to be bartered; it makes the people look upon the Treasury as an institution to be milked, and upon the Government as a money-making institution for their benefit.

The President has let it be known that he favors the Service Pension bill. That it is little short of loot, there are few to deny. The Grand Army has craftily got up the scheme; descends upon the President with it at the psychological moment when even a few veterans' votes—the "cheap numerosity of a stage army"—would come in handy; and the President throws economy and consistency to the dogs and arrays himself with the raiders on the Treasury. This is doubly a betrayal, coming as it does on top of his preachments, in his annual message, about impending deficits in the national finances, and the need of careful scrutiny of every expenditure. Economy and a $60,000,000 largess! With the whole country forced to retrench, the President bids the pension-grabbers help themselves. This is to fail in one of the first duties of his office. Another is that of withstanding the assaults of politicians upon the public service; but in the stress of his campaign for renomination, he is reported to be letting the spoilsmen have their way in too many places. Indeed, in his present nervous and credulous condition, it is not strange that he is the easy prey of designing men.

We think the Republican Senators were quite right on Friday in standing for the President's discretion in publishing diplomatic correspondence. The phrase, "if not incompatible with the public interest," has nearly always been inserted in resolutions calling upon the Executive for information, and should be retained. Diplomacy cannot be conducted by town-meeting. And, of course, it is not to be imagined that Mr. Roosevelt would hold back anything vital; he has, in fact, been ready to give out more than Secretary Hay thought expedient. Still, it is well to have a formal demand made by the Senate. It may lead to a more careful searching of the files. Only the other day, for example, Mr. Hay sent Senator Gorman an important note of his own which he had overlooked. Most important of all is it for the Senate and the country to be informed of the negotiations which the President has been carrying on during the past few weeks in his efforts to make reparation to Colombia. It is an open secret, as Senator Bacon said on Friday, that various plans have been put forward. Mr. Roosevelt is thought to have favored them successively, but his political advisers have warned him that he must do nothing which could be tortured into an "admission." That, however, is to stick in the bark. It is for the Administration to find a satisfactory and honorable way out of the Panama muddle. That should be a condition precedent to ratification of the treaty. The Democrats in the Senate could do no better than adopt the motto of the Rev. Dr. Newman Smyth, "Reparation before ratification."

Senator Foraker's proposed amendment of the Anti-Trust law of 1890 can hardly be said to be in the way of speedy discussion and enactment, even if favored personally by the majority of Congressmen. No party about to enter upon a Presidential campaign would voluntarily incur the charge that it was weakening the safeguards against monopoly; and such a charge, rightly or wrongly, would without doubt be made. That the Anti-Trust law is open to amendment, few people familiar with its origin and history have doubted. Such uneasiness as has been excited in the financial community at large by the litigation under the Act of 1890, has been caused less by the actual cases before the court than by uncertainty as to how much further the law's prohibitions could be carried. This has been particularly true since the sweeping opinion of the United States Circuit Court in the Northern Securities case last April. The value of the law as it stands, in checking the abuses of company amalgamation and stock watering, which had already gone to the most dangerous extreme, is now conceded by all clear thinkers; but the same people acknowledge that the scope of the prohibitory provisions ought to be more plainly defined. The plan embodied in Senator Foraker's amendment—that the penalties of the law be restricted to cases adjudged by the court to be "unreasonable" restraint of trade—has been suggested as a possible solution by Attorney-General Knox himself, who has just given notice that the Senator has not the support of the Administration.

The Senate attempted on Wednesday week to be generous to our nondescript fellow-citizens of Porto Rico and the Philippines, and then thought better of it. A bill conferring the right of naturalization upon the islanders was actually passed, but suspended by Senator Spooner's motion to reconsider. It was pointed out that, as things now stand, aliens are in a better position than our colonial dependents. Foreigners of all sorts, not expressly excepted by treaty, may become American citizens; the inhabitants of our new possessions have no such right. How can we expect loyalty when we deny them the title *civis Americanus?* It is awkward, naturally, to take in too many of the brown and yellow people now ours to govern, but it is an awkwardness that should frankly be grappled with. It lies in the nature of the case. By the recent decision of the Supreme Court our "nationals" have full rights of entry and residence in the United States. We cannot physically exclude them. Why, then, should we not freely grant them political rights? It is a case for generosity, and if the cost of it seem excessive, the remedy is simple. You can always put an end to a benefaction by getting rid of the beneficiary.

Mr. John S. Williams's "stand-pat" speech of January 21 was much more noteworthy than the press dispatches at the time indicated. It stamps the Democratic leader of the House as a debater of remarkably tough fibre, as one who has both his facts and his wits under perfect control. He placed his Republican antagonists in the attitude commonly known as that of a "stuck pig"; having put the knife into them up to the hilt, he proceeded to turn the handle. His purpose was to make his op-

ponents tell him why, if they were "standing pat" on everything, they did not "stand pat" on coal; that is, why they did not give the country another year of the rebate on the duty on coal? Was it because they were afraid to hurt the feelings of the coal magnates, lest they might stop their campaign contributions? Was it because the latter intimated that "they would not rustle at the election unless you showed a nestling disposition before the election?" In a pitiless manner, Mr. Williams read the testimony of one coal dealer after another that the duty on foreign coal was paid, before the repeal last year, by the American purchasers, and, of course, added to the price—they knew it from experience. And in the same irrefutable manner he showed that, on repeal, the price dropped almost commensurately with the duty and a lowering in freight rates that occurred about the same time. It was one of the neatest demonstrations on record that the consumer pays the tax. The "stand-patters" are certainly not standing pat for the industries of New England. But Mr. Williams loves to remind them of a year ago, when "you flinched like cowards, and did what you did not want to do."

Hope springs eternal in the artistic breast, or nobody would be discussing the chances of removing the absurd duty on works of art. In that matter a stand-pat Congress is impervious to conviction. Yet it is an advantage to have Congressman Lovering's bill, though it merely adorn a page of the *Congressional Record* and never escape from committee. It is a compromise measure: all objects of art fifty years old or more are to be put on the free list; more recent works of art are to be taxed under the present schedule. The retention of the duty in the latter case is a concession to dealers who fear a depreciation in the value of paintings upon which duty has already been paid. Artists are almost without exception for putting all works of art on the free list. So we have the curious spectacle of a bill which none of the interested parties oppose, but all commend, suppressed in deference to the general principle of no surrender to tariff reformers. Virtually, Congress tells the artists, "You ought to wish to be protected, and, anyway, you shall be protected." So long as there sits in Washington a Congress firmly convinced that all imports are an evil, and ignorant of the positive benefits of the importation of fine works of art, there will be no change. We agree thoroughly with the eminent painter who despairs of this reform until the tariff is revised as a whole. But we welcome, meanwhile, all agitation that puts the present system so manifestly in the wrong.

The new watchdog of the Treasury is barking unusually loud. He is making as much noise as if he thought the Treasury was actually being burglarized. Possibly, he has the Service Pension jimmy in mind; in any case, the estimates which Chairman Hemenway of the Appropriations Committee presented to the House on January 26 must have been a shock to his party associates. Why, it was not long ago that the Secretary of the Treasury told the country that we should have a deficit of only $23,000,000 at the close of the next fiscal year; but here is Mr. Hemenway rising up and asserting that, if we don't look out, there will be a deficit of $42,000,000. And the worst of it is, he is not indulging in glittering generalities; he puts the items all down, foots them up, and makes you see it all with your own eyes. It would have been bad enough for the Republican party to go into a Presidential campaign with the charge against it of planning for a deficit in 1905 of $23,000,000; but when, on mature deliberation, the party decides to make it almost twice that sum, it begins to look like a case of suicidal mania. To aggravate the situation, Mr. Hemenway shows that the surplus reserve of $224,000,000 is largely hypothetical. If all the money appropriated so far were paid, there would be only $93,000,000 left, the smallest amount since Mr. McKinley's first election. Evidently, if Speaker Cannon was anxious to get the right man for the right place, he made no mistake in selecting Mr. Hemenway to watch over the Treasury. His estimates are a hard saying; but one comforting assurance can be drawn from them—they leave no room for the service-pension looting.

Common sense characterizes Secretary Shaw's interpretation of the $100 clause applying to travellers from Europe. Hitherto, the customs examination has been in the nature of a petty inquisition. Theoretically, at least, trinkets intended for presents were solemnly assessed and taxed, and the allowance of $100 was confined to objects for the passenger's personal use. Of course, there was evasion of the law, but the worst feature of it was the triviality of the entire proceeding. But now "bad Americans" who take money out of the country may fearlessly bring in one hundred dollars' worth of souvenirs of their trip. The restriction is absurd in itself, for the imposition of this small personal tax on travellers exceeding the limit brings no returns commensurate to the cost of collection. But Secretary Shaw should receive the thanks of bad and good Americans alike for making a ridiculous law as little burdensome as possible.

It is hard for Democrats to take advice of any sort from Mr. Bryan. Yet he unquestionably serves his party well when he bids it appeal primarily to the plain people. He is right, too, in urging the old issue of tariff reduction, for nearly all vaguely anti-capitalistic policies—and the air is full of them—reduce themselves in practice to striking at the unfair advantages enjoyed by the protected interests. Had the iron and steel duties been repealed ten years ago, we should have had either no Steel Trust or one capitalized on a rational basis. People are beginning to realize these things, and, besides, the pinch of hard times is a striking reminder that even tariffs are not sure bulwarks of prosperity. The time is opportune to press the issue. Mr. J. S. Williams has already done good service, in Congress, by seizing every occasion to expose the iniquities of the Dingley tariff. In so far, Mr. Bryan speaks as the friend of his party, but when he revives his dear heresy of free coinage of silver at the ratio of 16 to 1, he does an even more valuable service. He shows that he must be cast aside before the party can be restored to health. For he holds this twice discredited *idée fixe* as of equal importance with the central doctrines of Democratic policy. The task for genuine Democrats is no longer to work with him, but to get rid of him once for all.

Naturally, the Yale query concerning the Panama negotiations has called forth a counter petition. We have no desire to weigh the petitions competitively—to determine, for example, the ponderable difference between so many professors of international law and so many professors of art; but we feel constrained to say that it is unlucky that the two petitions are not more definitely antithetic. They do not even cover the same point at issue. The first petition, it will be remembered, made no charge of any sort; it merely raised a doubt as to the propriety of the steps leading to the recognition of the Republic of Panama, and asked for an inquiry. The second petition does not consider any matters antecedent to that recognition, which it merely asserts to be "justifiable." But these preliminaries are the nub of the business. The recognition of Panama was an improper exercise of legal discretion. The real moral issues are: (1) How far was the President's foreknowledge of the coming revolt a legitimate weapon to use against a friendly Power; (2) What right had Bunau-Varilla to represent the President as morally a participator in his plottings; and (3) Does either international law or ordinary morals justify the "fifty-mile order," which prevented Colombia from exercising her right to defend a threatened sovereignty? Not all the professors who ever walked in Chapel Street could make the simple asseveration "justifiable" cover questions of this gravity.

The mild, obliging Panameños will

probably insert in their Constitution a clause to this purport: "Should public peace or Constitutional order be disturbed in any part of the Republic of Panama, the Government of the United States may intervene to restore peace or order." This self-denying ordinance—for disturbing "the Constitutional order" has been one of the favorate recreations of the Isthmus—evinces humility very becoming in so young a nation. Obviously, rather few prerogatives of nationality inhere in a state which delegates a contingent police power to a neighbor some thousand miles away. But these truly republican allies of ours are not without guile. Their admission of our permanent right of intervention is conditioned upon our guaranteeing the independence and sovereignty of "this republic." Our Isthmian wards do not mean that their own treaty shall be read against them, as was that of 1846 against the Colombians. Evidently, the Panameños are shy of a treaty which "runs with the land," and intend that we shall be under contract, not to their acreage, but to themselves. A sardonic feature of the whole negotiation is that the thrifty Isthmians bargain at much better advantage than we, their lords and masters. They get $10,000,000 merely to prove that Mr. Roosevelt and Mr. Hay have played the diplomatic game by the rules; they are likely to secure the most explicit guarantees of their sovereignty, while we assume the embarrassing duties of a protectorate which is in all but name and title a proprietorship.

The unlisting of the securities of the Steel Foundries Company almost simultaneously with the conviction of Whitaker Wright was purely a coincidence, but the occurrence is all the more impressing on that account. The avenging spirit of the whole English-speaking race has been roused against the dishonest promoter. The New York Stock Exchange states that the securities of the American Steel Foundries Company were dropped from the list because of misrepresentations by the company to the Exchange at the time of listing. The company now explains that the cash and cash assets were overstated by $500,000—that is, the balance sheet was padded by that amount. "Window-dressing" was a common occurrence with the Steel Foundries crowd. A part of the same coterie was behind the Shipbuilding Company. Their own evidence at the recent hearings showed that the latter company had falsely stated to the Exchange its earnings, both before and after consolidation; that it had represented its working capital as $1,892,317, whereas it owned nothing at all; and that $1,500,000 of cash had been entered on its books, but that this had been borrowed. The reason why the Exchange has taken no action against the Shipbuilding Company may be that no one is now buying its securities. The Exchange is to be commended for its drastic action against the Steel Foundries Company; but why is it that so many horses have to be stolen before the proper custodians close the barn doors? And why it is that a concern like Steel Foundries is thrown from the list, while an absolutely blind pool like Amalgamated Copper is allowed to retain its footing there?

The British Government's decision to accept three suggestions of the Esher Army Commission, and to put them into practice without waiting for the formal consent of Parliament, bears the aspect of a genuine desire for reform. The changes are directly in line with some of our own recent reforms. For instance, the commander-in-chief, as purely titular and ineffective a chief as our former "commanding general," is to give way to an inspector-general, whose sole function is to be to report upon facts "without expressing opinions on policies." We wish that a similar admirable definition of duty might be impressed upon our talkative generals, General Staff, and obstreperous navy boards. The new British army council is, of course, to be a "general staff" modelled after the German institution, although on totally different lines. Its individual members are to be responsible for different branches, such as ordnance, supply, finance, etc., and stress is laid upon the appointment of military men to this council who shall not have been 'hitherto closely connected with existing methods." Furthermore, the report urges decentralization of the authority which has gradually been accumulated at the Horse Guards, and the complete divorce of the administrative and executive functions in the War Office. It urges that the Secretary of State for War be made as responsible to Parliament as is the First Lord of the Admiralty. Finally, the Commission demands "a complete breach with the past." This is radical enough, and if the Government will carry through all the reforms in earnest and appoint able men to the national-defence committee, as great an advance will have been made in the British service as in our own since 1899.

Parliament met on Tuesday just after the Government loss of another seat, in a bye-election, thanks to Chamberlain. The general conviction that an early dissolution would mean a Conservative defeat, will aid Mr. Balfour in sparring for more time. Many of his following will vote him confidence simply because they know that, if there is an appeal to the country, they will never come back to the Commons. Still, the Premier's prestige has been terribly shattered, and there is no telling what may happen in the reigning confusion of parties. The best judges hold that a dissolution cannot be deferred, at longest, beyond midsummer. Meanwhile, it is every day becoming clearer that the Irish members are likely to hold the balance of power. As it is, they have Mr. Balfour's Government in the hollow of their hand. If he does not pay them their price—we mean it in a good sense; what they want now is a Catholic University for Ireland—out he goes. After a general election, they count upon being even more securely in command. Yet, as T. W. Russell has lately said, it does not follow that the Irish will refuse to deal with Chamberlain. They would insist upon Home Rule as the only cement of the pact; but why, asks Mr. Russell bitterly, "should not Mr. Chamberlain change his mind upon this as he has done upon almost every other question?" He adds his belief that the bargain will be struck. "Before the twentieth century has run its first decade, the Union may be destroyed by the Unionist party. And who is there among the Unionists who will not say that they have been served right?"

If Lieut. Bilse's book, 'From a Small Garrison,' is a pure libel upon the German army, as some would have us believe, the Berlin cable service must be in the hands of his personal friends and adherents. Last week's news, for instance, sounds like a summary of the offending volume. On Tuesday came an account of the killing of a Saxon lieutenant by a brother officer whose family honor had been betrayed—the same reason which recently led another lieutenant in Pirna to fight nine others of his regiment in succession—and not at Forbach! In Dresden on the same day the officer who fought a duel with the well-known novelist, George von Ompteda, was sentenced to six months' imprisonment. He had eloped with the novelist's wife. On Thursday we had the dismissal of a major who, to express his dissatisfaction with the new uniform changes, had ordered green military gloves for himself and a helmet with an electric light on it. A serious loss for the army was the voluntary retirement of Gen. Kolmar von der Goltz, well known to the military world as Von der Goltz Pasha, to whose abilities was due the remarkable showing, in the war with Greece, of the Turkish troops he had reorganized and drilled. An accomplished writer of military history and text-books, and accustomed to speak freely about the reforms he thought necessary, he handed in his application for retirement as soon as he heard of the Emperor's recent remark that he did not wish his officers "to play with pen and ink." Naturally, the French newspapers see in all this the downfall of the German army.

FOR A SILVER TRUST.

A document of formidable size has just issued from the Government Printing-Office, entitled, 'Stability of International Exchange.' Its contents are more than surprising. An introductory chapter was given to the public last October, as a report on the introduction of the "gold-exchange standard" into China and other silver-using countries. It was signed by Hugh H. Hanna, Charles A. Conant, and Jeremiah W. Jenks, commissioners. The new document has a preface by the latter, and contains also the text of the communications which passed between these visiting commissioners and certain foreigners last year. There were also three commissioners from Mexico in the visiting party. In fact, the whole scheme started in Mexico. It was set on foot in Washington by Mr. Enrique C. Creel, a banker of that country, who also held a leading position in the so-called conferences abroad.

The communications of the visiting commissioners to foreign governments were of two kinds: first, for doctoring the monetary system of China; second, for inducing the nations of Europe and America to purchase 96,000,000 ounces of silver yearly, and to consent to the formation of a silver Trust for handling the world's output of that metal. The former project has perhaps received all needful attention in previous articles in this paper. The latter is quite a new revelation, the allusions to it, in the preliminary report of last October, having been so extremely vague that nobody could have imagined what the real facts were. The truth is, that this report supplies William J. Bryan with the material for a fresh campaign in behalf of silver, and commits President Roosevelt to "doing something" for that metal. That is a fair inference from his official request that Congress appropriate $100,000 to carry on the project. We are loath to suppose that he signed this paper without being aware of its contents.

In communicating with foreign governments, the two commissions acted sometimes separately, sometimes jointly, and sometimes by endorsing each other's separate action. Among the papers printed is a document "handed in June 10, 1903," by the Mexican Commission to the British Commissioners, containing suggestions for yearly purchases of silver bullion by the several governments. The allotment to Great Britain is 30,000,000 ounces, mostly for her East Indian possessions; France, 7,000,000 ounces; the United States, 6,000,000 ounces for subsidiary coinage, and 10,000,000 ounces for the Philippines; China, 18,000,000 ounces, and so on, the total being 96,000,000 ounces per year. It was suggested also in this paper that the purchases should be made by the Bank of England, the Bank of France, and such other banks as might be agreed upon, at the rate of 8,000,000 ounces per month at a commission of one per cent., and that the agreement be made for six years. This astonishing proposal is virtually supported by the United States Commissioners in an argument of six pages. They suggest that the sales should be made by a consolidation of four existing combines. "On account of the combination among the smelters and other large sellers at the present time," runs the argument of the United States Commissioners, "four great firms are able to control a large percentage of this 110,000,000 ounces [the amount coming to the London market yearly], and there is every reason to believe that, within a year, practically *this entire amount can be handled, if it seems desirable, by one seller.*" It is evidently the opinion of the signers of the paper that such a combination would be desirable. "There is every reason to believe," however, that it would be in conflict with the Sherman Anti-Trust law.

The British representatives made no reply whatever to the voluminous arguments addressed to them, but on the 18th of June they "handed in" a short paper declaring their belief in the virtues of the gold standard (not the "gold-exchange standard") for silver-using countries, including China, "as soon as practicable." They thought the coinage ratio of such countries should be about 32 to 1, "if there are no further serious changes in the price of silver bullion." The suggestion for joint action in the purchase of silver bullion was rejected, and a few words were added in favor of regularity of purchase by each government for actual coinage purposes, subject to its monetary policy and convenience. To this paper the United States and the Mexican Commissioners attached their names also. The last name in the Mexican list is that of "Edward Brush, Technical Counsellor." Mr. Brush is, we believe, Secretary of the Kansas City Consolidated Smelting and Refining Company, and is doubtless well qualified to manage an international Silver Trust if one should be formed.

The Commission on Stability had even less success in Paris. The committee appointed by the French Minister of Finance to receive the communications made no answer. They did, however, make a report to their own chief. It begins by saying that the meeting at no time bore the character of a *véritable conférence*, and that it was distinctly understood that no report *(procès verbal)* should be drawn up. They then proceed to demolish the positions taken by the American and Mexican Commissioners, on economic grounds, and especially the one in reference to regular purchases of silver by the governments. "In order to maintain the commercial quotations of silver," they say, "the producing countries invite the consuming countries to give regularity to the demand, while they declare themselves unable to give regularity to the supply"—a proposition "the unusual character of which," they add, "it is useless to dwell on." As Messrs. Hanna, Conant, and Jenks tell us that their mission has been "successful even beyond their anticipations," the readers of this report will be more than ever puzzled to know what their real object was, and to ask President Roosevelt and Secretary Hay: "What went ye out for to see?"

TRUST PANACEAS.

President Schurman has just given his endorsement to the plan for curing the evils of Trusts by "publicity." This means, of course, the disclosure of the specific assets against which Trust securities are issued, and the publication of independently audited accounts. In figurative language, it is sometimes described as "turning the searchlight of public opinion upon corporate darkness." The convenient vagueness of this imagery recommends "publicity" to many who delight in a mouth-filling expletive which seems to be self-explanatory, and which commits them to nothing dangerous.

When, however, the few definite schemes of publicity—such as the proposed Companies Act for New York State—are analyzed, their very excellences preclude us from entertaining aught but very modest anticipations of their usefulness. To show how much stock has been issued for cash, how much for property—with a description of the property—and how much for promoter's services, performed or contracted for, is well. So also is the lodgment with the shareholders of a duly audited balance-sheet annually. This is good as far as it goes, and it goes about as far as is good for legitimate corporate interests. But one must be either very simple or very optimistic to believe that this mild rite will exorcise all the demons of Trusts. The ordinary speculator cares little for prescribed prospectuses or audited accounts. Even the bona-fide investor is often more mystified than enlightened by them. He finds it far easier to satisfy himself of the honesty and capacity of a fellow-man than to pronounce upon an accountant's estimate.

The maintenance of effective competition in the field which the Trust seeks to dominate is pronounced by Prof. J. B. Clark to be all but tantamount to a solution of the Trust question. "The key to the solution of the grave problems . . . lies in the fact that the independent producer is the natural protector of all the other threatened interests," is the way he puts the matter. According to him, it is the independent producer whose competition against the Trust assures the consumer of reason-

able prices, the farmer of normal returns for his raw produce, and the laborer of his competitive wage. The independent producer thus becomes the watchdog of the industrial flock.

As is the case with other canines, however, it is not until we examine in some detail the cost of his keep that we begin to have misgivings about his utility. In the first place, we are told that we may not lower or abolish any protective duty, however high, when the Trust's rival depends for his industrial existence upon the duty in question. In such a case, seriously to lower the tariff would not destroy the Trust until it had first destroyed the independent competitor. The watchdog would seem, on this showing, to have become not a guardian, but a fetish, no longer the protector of the lamblike innocence of the consumer, but what the Germans would call a thing or end in itself.

To one who is not convinced of the utility or honesty of protection, it would seem that where both the Trust and its rivals are dependent upon the tariff, they are both alike incumbrances and parasites fattening without right upon the consumer. But, altogether apart from the ethics of protection, the idea of keeping alive "our guardian" by submitting to the burden of protective taxes would seem a singularly expensive method to pursue, when the foreign producer, if only allowed freer access to our markets, is quite willing to undertake the rôle of "guardian" gratis.

But the exactions of the Dingley tariff are not the only item of expense involved. It would appear that in order to keep the independent producer in condition to offer active competition, the community must by law suppress "unfair" competition. The State, it seems, is to undertake to detect and punish local cuts in price which the Trust makes to extirpate its rivals. If grocer A undersells grocer B, we are to rejoice. But let Trust A undersell rival B, and injunctions are in order. The State shall also, it appears, prevent the making of factor's agreements by which retailers, in order to secure certain discounts, agree to handle the Trust's product only. Not to add unduly to the State's burdens, it will be further required merely to prevent railway discrimination. Give the independent producer the conditions aforesaid, and we are told that we may reasonably expect the tooth of monopoly "to be grinded that it bite not too much."

There is, however, some ground to fear that such an anæmic and bottle-fed competitor of the Trust would hardly prove an unfailing reliance. If the Trust's rival does not keep his head above water for the sake of his own profits, he will never do so out of gratitude to his sponsors. In fact, the whole discussion of remedies for Trusts is apt to create the unfounded belief that for all industrial ills there is an absolute cure. It conceals the fact that great financial success, even by a Trust, can be won not only by hidden and abhorrent means, but by transcendent ability and unflagging industry. It is apt, moreover, to engender the delusion that law can "transmute leaden instincts into golden conduct," and that eventually society will evolve a way by which the individual may avoid pocketing unavoidable losses, and will devise a substitute for the old-fashioned virtue of looking out for number one.

MR. ROOT AS SECRETARY OF WAR.

Mr. Elihu Root's retirement on February 1 from the office of Secretary of War marks the end of perhaps the most notable administration of army affairs in the history of the Department in a time of peace. During a large part of his incumbency the retiring Secretary has also had to supervise foreign campaigns —those in the Philippines since August 1, 1899, when he took office, and the Pekin relief expedition of 1900. Important as these have been, they are not significant enough to warrant a comparison of Mr. Root as a war Secretary with Secretary Stanton. But, looked at purely from the administrative point of view, the four and one-half years of Mr. Root's service must ever shine in the annals of the War Department. During this time a new army has been created, with a modern organization and with a new spirit. Vital reforms which the most optimistic officers hardly deemed possible within a lifetime, have been placed upon the statute-books with astonishing ease and despite strong opposition.

It would, of course, be a mistake to credit Mr. Root himself with originating the reforms which have been effected during his administration. Were this to be attempted, he would be the first to protest. One of his last official acts was to publish a valuable work by the late Gen. Emory Upton, one of the most accomplished officers the army has ever known, entitled 'The Military Policy of the United States.' In this treatise, which bears date of 1881, Gen. Upton urged the adoption of a three-battalion regimental system, of the principle of an interchangeable line and staff instead of a permanent staff, and the doing away with the inevitable friction between the Commanding General and Secretary of War. These changes have all been made under Mr. Root. In addition, the General Staff, which Gen. Upton urged, has been created and an act passed for the better discipline and organization of the militia, practically along the lines recommended by Upton. But these and similar reforms were urged upon Mr. Root's predecessors; Mr. Lamont alone appears to have been impressed with their desirability. For the rest, it seemed a sufficient reply to officers eager for the modernization of the service, that the same organization had saved the republic in 1861-1865, and would do so again were the necessity to arise.

Mr. Root brought to his task an open and well-trained mind. The failure of his immediate predecessor and the war with Spain had laid bare the weaknesses of our antiquated system. At once Mr. Root bent himself to the task of creating an efficient machine. For the first time in half a century, officers with ideas became popular at the War Department. He surrounded himself with able officers of the type of Brig.-Gen. W. H. Carter—men who realized that there were better armies and better military methods. With them and through them Mr. Root's work was done; but while he profited by their suggestions, he was ever the leader and the dominant personality. Moreover, he bound these men to him by ties of unusual personal attachment, and their enthusiasm and good service under him were rewarded by advancement. Finally, trained lawyer that he was, Mr. Root was able to write masterly reports, and to appear before Congressional committees with convincing reasons for the changes, which quite overcame the prejudices of ignorant Congressmen and the obsolete and superficial arguments of men like Gen. Miles. Thus it came about that the service was recreated within four years; that, in addition to the already mentioned reforms, examinations for promotion were made effective, a complete system of military education was organized, with the barracks school at the base and the War College at the apex, and much done to coördinate regulars, volunteers, and National Guardsmen. All in all, these changes are fairly revolutionary.

Were a summary of Mr. Root's administration of the War Department to stop here, there would be nothing but commendation for it. But we believe that the future historian will have a less favorable word to say upon other aspects of Mr. Root's career. He will find that the Secretary's great influence was not thrown strongly against the water-cure tortures until the President spoke out in a vigorous order. It will be shown that Mr. Root consented to the stuffing, in 1901, of the army, and particularly the staff departments, with hundreds of political favorites and untrained officers when the enlargement of the service gave the politicians their chance. Mr. Root's defence of Gen. Wood and his assumption of responsibility for the latter's despotic acts in Cuba must always be written down on the debit side of the ledger. Sharing the President's desire to see efficient and vigorous young men in high places, Mr. Root has, in the pursuit of this aim, seriously impaired the morale of the army, which is to-day aghast at the rapid advancement of Wood and Mills and the proposed plac-

ing of Dr. J. C. Ainsworth at the head of the amalgamated Adjutants'-General and Record and Pension bureaus.

President Roosevelt, we know, has made the welkin ring with his praise of Mr. Root as a Cabinet adviser, and he has been largely guided by the latter's opinion in matters relating to the Philippines, Cuba, etc.. In this we think he has often erred. An out-and-out Imperialist, Mr. Root has stood for national aggression, for the doctrine of the chosen, superior race at all times, and has used his great talents to further and solidify the expansion policy, *con amore*. So far as we may judge from Mr. Taft's public utterances and his record in office, a more high-minded adviser is now at Mr. Roosevelt's elbow, as well as an extremely able one, and the change should in this respect be markedly for good. But Mr. Taft takes office much disliked by the officers of the army, who have bitterly, and without good reason, opposed his pacific policy in the Philippines. That he will overcome this prejudice we have no doubt. Meanwhile, he will find that, aside from our colonial questions, there are still military problems and reforms awaiting his attention. Mr. Root did not, of course, clean the slate entirely. We still have far too many staff departments and officers, with the result that the whole service is topheavy. Despite positive assurances, politics has not yet been wholly banished. Officers who did not serve with the Rough Riders and have not been in the entourage of the Secretary need to be assured that they may still hope for some of the rewards of the army. And the General Staff will always require careful supervision lest, swollen by a sense of its own importance, it consider itself invested with the duties of the Secretary and with the legislative functions of Congress.

TAFT ON THE PHILIPPINES.

Governor Taft's valedictory report on the Philippine Government should be read in the light of his four years of devoted service to the cause of pacification. He found the army doggedly making a wilderness, and he has managed to restore what may fairly be called peace. In this work a generous and tactful personality, a delightful gayety in the performance of grave tasks, counted for much; even more important was the firmly held conviction that he was to govern, not to please factions at home or American influences in the islands, but solely to benefit the Filipinos. Governor Taft's own view of his difficult office was very fully expressed in a notable address, never adequately reported, delivered before the Union Reading College of Manila, on December 17, 1903.

Whether Gov. Taft, who vigorously defends the annexation of the Philippines, correctly weighs the motives of the McKinley Administration; whether "the historian will find no episode of our country's history in which the nation has played a higher or nobler part," it is enough for the present to admit that his own motives were as high and noble as his task was arduous. In his conviction that the Philippines were for the Filipinos, he met with constant and bitter opposition from the army and resident Americans, while Congress gave him only inadequate support. The significant and discouraging thing that appears in the present report and in Governor Taft's address is, that the real difficulty has been not the barbarism of the Filipinos, but the myopia of law-makers, the Bourbonism of the army of occupation, and the narrow commercialism of the adventurers. To-day what does the Commission chiefly demand of Congress? The postponement of the iniquitous act making the "coastwise" trade between Manila and San Francisco an American monopoly; the reduction of the tariff on the chief Philippine staples to 25 per cent. of the existing rates. Nobody questions that these measures would be for the good of the islands. A Congress honestly and intelligently working towards that end would pass both measures by unanimous consent. But, as it is, the Filipinos are likely to be forgotten, while the suave Congressional representatives of tariff-fed industries proceed to protect their immediate interests at the expense of ten million distant souls who happen to be at the mercy of Congress.

To a less robust optimism than Mr. Taft's the indifference of Congress and the overt hostility of the Americans in the Philippines would be a strong reason for transferring the custody of the Philippines to some one who understands the natures and the needs of the people. He has evidently felt, on the contrary, merely the exultation of a just strife—a spirit which it is hoped the new Governor-General has inherited. For nothing appears more clearly in the remarkable address which we have already cited, than the fact that Governor Taft has had no bitterer enemies than the army and the commercial exploiters. The causes of this hostility are very natural and most deplorable. The army was embittered by the asperities of the campaign, by the frequent cruelty and treachery of their foe. The merchants and adventurers had enjoyed adventitious flush times through the presence of the army. They had not learned to regard the Filipino as a man, and suddenly, as the army was greatly reduced, they were forced to depend upon him as a customer. With the arrogance of all vicarious conquerors, they refused to solicit Filipino trade; in fact, their previous attitude had disqualified them from bearing any decent human relation to the natives. Accordingly, the whole army of commercial camp followers, instead of studying their situation, demanded the wholesale exploitation of the islands, in order to attract sufficient American customers to maintain trade on the old prosperous war footing. To such proposals Governor Taft set a face of flint. On many occasions he warned disgruntled traders that they knew what the conditions were; that the civil Government was considering primarily the welfare of the Filipinos, and that Americans who found that state of things intolerable might go back, and good riddance. Such expressions won him the very honorable distinction of abuse by the Manila press, while the "practical" men characterized his watchword, "The Philippines for the Filipinos," as a "childish slogan."

Governor Taft accepted this abuse as in the day's work, recognizing fully its seriousness. And, indeed, the whole future of our administration of the islands hangs on this matter. Said Mr. Taft at Manila:

> "Were I assured that the present attitude of the majority of American merchants and the American press would be permanent, and if I did not confidently hope that there must be a great change in the future, I should be very much discouraged in respect to the result of the experiment which the United States is making in these islands. A purely racial hatred is one of the most difficult things possible to overcome, and if it is founded on personal conditions it is almost hopeless to look for its ceasing."

Here we are face to face with the real problem. Governor Taft is hopeful that a chance will come through the American merchants perceiving their own advantage, and the value of the Filipino as a customer. But is not the generous confidence based rather upon Governor Taft's desires than upon the history of American dealings with backward races? Has our great commercial stake in the Indian or the negro so far conduced greatly to the benefit of either? Is the trend of legislation such as to express the principle that political and economic equality between men and nations is the best commercial policy? It seems, then, that the hope of making American malcontents in the Philippines serve the cause of reconciliation is slight. Governor Wright must fight them as Governor Taft did; and if the Philippines are indeed secured for the Filipinos, it will be the result of a curious paradox—a Government steadfastly opposing the prejudice, greed, and ignorance of its own citizens; the fountain rising higher than its source.

At least Mr. Taft's candid and hopeful statement of the difficulty is calculated to break the prevailing indifference as to the Philippine experiment. His words powerfully reinforce Professor Schurman's reminder that the problem is as imminent as ever, and that we are treating it by rule of thumb in disregard of our American ideals. Yet Governor Taft reports certain more defi-

nitely promising symptoms. There more enlightened Filipinos have been won over. They know that the islands are being ruled in their interest. Gradually the labor trouble is working itself out. More than six thousand natives are employed upon public works and are giving satisfaction. So Governor Taft opposes the suggestion of importing coolie labor, believing that time and opportunity will make steady workmen and eventually good citizens also out of unpromising native material. Generally speaking, the Roman Catholic Church has well begun the work of civilization, and to-day the Filipinos seem nearly as apt as the Japanese in assimilating Western culture and adapting themselves to modern industrial conditions.

"Their intense desire for education, their appreciation of European and American improvements in dress and bodily comforts, their artistic ambitions, their quick desire to imitate the good they see and understand, . . . their political aspirations for liberty and popular government, however lacking in a political knowledge of its difficulties and real essence—all these traits . . . . justify an entirely different policy . . . from that which England has found necessary to pursue with Mohammedan and Buddhist peoples having neither sympathy with, nor understanding of, modern European ideals."

Such is Governor Taft's view of the people he has governed for four years. He sees gradual improvement, leading possibly to a voluntary and cheerful acceptance of the present dependent conditions. Skilled observers of the army and navy report, on the contrary, that the Filipinos must indefinitely be kept in strict tutelage—ruled as the Javanese are by the Dutch, or the Hindus by England. The middle view, which we hold, is that, by a tardy act of reparation, Governor Taft has reconstituted that intelligent remnant upon which more than upon any imposed régime the future of the islands depends, and we are confident that our rule must gradually assume the form it should always have sought, of a mere protectorate over an independent nation. A Cuba in the Pacific would bring us a glory only tarnished by the fact that we tried first and nearly succeeded in making a Madagascar.

Whatever the outcome, a peculiar credit will redound to Governor Taft. He went to a land torn by the most cruel warfare, and he persuaded the victims that their enemies might also be, nay, desired to be, their friends. He was the first American to come to the Philippines not only with words of justice on his lips, but with power and will to make them effective.

TEN YEARS OF CHICAGO UNIVERSITY.

In a portly volume, President Harper has summarized the results of his ten years' administration of the University of Chicago. He supplies matter for much debate, for he has conducted fearlessly a vast experimental laboratory of education, the material of which has been the young men and women of the Middle West. How far his experiments have succeeded, how far they must fail, may better be judged at his second decennial than at his first; meanwhile, nobody can fail to admire the energy with which he has shaped the restless life of a great university into the mould preconceived in his own mind.

The University of Chicago was, if ever there was one, a *fiat* academe. It was called into being by the joint enterprise of a versatile scholar and man of affairs, W. R. Harper, and of John D. Rockefeller. Much of its organization betrays the eminently practical sense of these two men. With the *flair* of a great reorganizer, President Harper concentrated his innovations upon the matter of greatest dispute—the undergraduate course. Perceiving the waste of time involved in the traditional summer vacation, he arranged his academic calendar in four quarters, covering the entire year. From this apparently mechanical device the university has largely drawn that notable flexibility which is its chief characteristic. For a continuous session means that students may greatly abridge their term of residence by foregoing vacations, that professors may combine two or more vacations, and so obtain leisure for travel or investigation, that students and professors alike may take their vacation term at the time most convenient to them, that the routine teaching may be constantly freshened up by the introduction, during the absence of the regular incumbents, of famous scholars from other institutions. In these and other ways a régime of liberty has been established which seems very much like Elysium to those who have been stretched or lopped on our older academic beds of Procrustes.

Students have not been slow to take advantage of this flexibility, and President Harper justly maintains that his ready-made university is probably the most individualistic of all. That fact expresses itself clearly in the great diversity of undergraduate careers. In most Eastern colleges students graduate only in the summer term—in a few cases in the mid-year interval also; in Chicago the end of every quarter is a graduation period. Furthermore, a class in an Eastern institution is a fairly compact body. It loses a few members through various adversities, gains a few, and keeps generally a four-year residence, with all the associations therein implied. At the University of Chicago, on the contrary, a class is a fluctuating body, sometimes large, sometimes small, never the same for two successive quarters. Of the students graduated in 1900-1901, for example, only 41 per cent. kept the "normal" course of three quarters a year for four years. A course covering more than twelve quarters was chosen or imposed upon 22 per cent., while 37 per cent. did extra work enough to secure the undergraduate degree in less than twelve quarters.

But the times and seasons of these undergraduates are much less important than what they are being taught and what attitude they are bringing to the world. On the latter head President Harper speaks most confidently. "Steadiness, sturdiness, strength, strong individuality, high ideals, and clear purpose" are universally admitted characteristics of his students. Such raw material as this surely deserves most careful shaping, and in this respect the report of the undergraduate department is not wholly reassuring. The tendency is away from the traditional studies. Thus, in 1902 only 20 per cent. of the male graduates took the degree of A.B., though for this no Greek or Latin need be elected, while 46 per cent. chose the general and linguistic courses leading to the Ph.B., and 33 per cent. qualified for the scientific degree, S.B. Obviously, four-fifths of the entire undergraduate body is following either narrowly scientific courses, or a curriculum that lacks the subjects traditionally held to be of greatest disciplinary value. The "modern" education is in force at Chicago, and it remains to be seen if, either as regards culture or efficiency, the new specialized or miscellaneous courses are as efficacious as the old curriculum. President Harper deserves warm commendation for duly labelling his graduates according to their studies. This is much preferable to spreading the comfortable dignity of the degree in arts over Sanskritist and boiler expert alike. We at least know how the graduates of the University of Chicago have been educated, and in due time may judge their training by its fruits. Evidently, President Harper himself feels that all is not well when he recommends formally that "something should be done to encourage a larger interest in literary work of a creative character." A certain naïveté in the expression of this pious hope will be readily pardoned if Mr. Harper will promptly give his poets the preferment now reserved for his philologers.

A more serious menace to the orderly development of the elective system is the haste to enter professional life. "The student preparing for work in medicine, or in law, if he follows the lines marked out for him with a view to completing both the requirements for the bachelor's degree and that for the professional degree, has practically not a single free elective from his entrance upon the high school to his graduation from the professional school. The work of ten or eleven years, with no excep-

tion worthy of mention, is thus a rigidly prescribed course." Here is very nearly the reduction to the absurd of the elective system. For the ambitious student it results in a course actually more rigid and less liberal than the discredited old curriculum. That at least gave some scraps of all human knowledge; this holds the adolescent mind unsparingly to one narrow section. It is a question if we shall not soon be obliged to supplement miscalled freedom of election by compulsory catholicity of selection.

The chief value of President Harper's fully documented report will be to supply material for thoroughgoing criticism of our collegiate education. The evidence for his own institution, whether favorable or other, is presented with a candor deserving of all praise. One would criticise in a report of this unusual nature chiefly its paucity in general ideas. It is difficult to determine from what is written how far the University of Chicago has made for the culture of its students and community, and what are its purposes for the future. Yet these are surely crucial matters, and should have found a place in this imposing mass of statistical detail and discussion.

THE "INTERNATIONAL" EXHIBITION.

LONDON, January 12, 1904.

British artists have their "secession," though they call it by another name. Certainly, the International Society of Sculptors, Painters, and Gravers represents all that is strongest, most independent, and least Academic in the art of the country, while, with a liberality equal to that of the Paris Salons, it finds a place for all that is most distinguished abroad. It is as international in fact as in name. Its first President was Mr. Whistler, an American; and now, M. Rodin, a Frenchman and the only man who could follow worthily, has been chosen to succeed him. It is this really unprecedented action on the part of a society of artists with headquarters in London, together with the manner in which M. Rodin has accepted the responsibility, as well as the honor, and come to London for the opening ceremonies, that gives the fourth Exhibition a very special interest —though it would be interesting in itself in any case.

The first two exhibitions of the Society were held at Knightsbridge. They were to London a revelation of what a picture show can be; but London is nothing if not conventional, and Knightsbridge was felt to be just too far off the beaten track of picture galleries. The third was given, a little more than a year ago, at the Institute, but the Institute is so heavy-laden with traditions of mediocrity that the International there seemed out of its element. Now the Society has established itself in the new gallery in Regent Street, the most important in London after the Academy; the rooms large enough for pleasure, well proportioned and well lighted, with a central court, where sculpture can be excellently displayed. And it is here that M. Rodin has been received by the Society and has received the Society's guests.

To me the most distinctive features of the present exhibition are the care devoted to the decoration and arrangement of the gallery, and the prominence accorded to black and white—treated almost everywhere as a pariah among the arts—and to sculpture, which, in London anyhow, has never been shown with so much distinction. The wonder is that all artists have not yet realized the importance to their work of a beautiful background. Even a beautiful picture or statue gains by beautiful surroundings—who would think of setting a precious stone or a rare gem in the baser metals?—while the poor performance of a second-rate man borrows dignity from the respect offered to it. The decorations of the International this year have already roused a heated discussion, and I think the question is one that concerns every artist. Two of the rooms have been hung with white. One of these is for the drawings and prints, and with it, as yet, no fault has been found. But the other is for pictures, and some grumbling has been heard—their color is killed, the dissatisfied painters say. But any one who remembers the splendor with which many an old master tells on the plain, whitewashed walls of a convent or monastery need not be assured that color on white—to use the painter's phrase—fairly sings. And sing it does in the large, white-draped room. The margin of white seems to concentrate, to intensify, to bring out the effect of pictures as absolutely different as Matthew Maris's little golden dream of Amsterdam, and Monet's big, realistic interior, "Le Déjeûner," that curious early work, with no suggestion in it of his later, more familiar methods; as M. Anglada's sudden glow and glory of color in a "Gypsy Dance," and the tranquil grays of Mr. Peppercorn's twilight Common. It is extraordinary how fine the effect is, and I am not surprised that M. Rodin and the artists who have come from Paris with him —M. Thaulow, M. Cottet, M. Blanche—are enthusiastic. In the third room there is a green background with no striking value except its neutrality. But it is not only the color of the walls that has received attention. The pictures have been placed and grouped with the right feeling for harmony and balance, every piece of sculpture has been set with a view to the general design; and in the picture rooms the light is tempered by a velarium so nicely adjusted that it would satisfy Whistler, who was, for the modern exhibition, its inventor.

If a first impression counts for anything, it is well that the doors of the gallery open at once into the Sculpture Hall. For, rising in the centre and dominating everything, is M. Rodin's "Grand Penseur," that mighty Titan who sits brooding, his knees drawn up, his body bent in a powerful curve, his chin resting on his hands, lost in the great thoughts that make or mar a world. The statue is well known, but it has never before been seen in London—its being here is the wonder—and one cannot look upon it again without being thrilled anew by the majesty and force of a figure that not even an Italian sculptor in the great days surpassed. And M. Rodin has sent only fine things. He has been content not to puzzle a not over intelligent public (where art is concerned) by that portion of his work that is interesting chiefly as the failure of a great man. At one end of the court is a smaller version in bronze of the "Penseur"; at the other, through an open doorway, one looks to the spirited group of "La Défense," the winged figure splendidly silhouetted against the white walls. And there are also, scattered in the court, that grim, haunting Bellona, the torso of the St. John, the graceful little "Dream," among other things, which I do not stop to describe because they are well known. The novelty is that they should be gathered together in a London exhibition, that M. Rodin should be the President of the society giving this exhibition, and that a sculptor of any nationality should have been invited to preside over a society in which painters are in a decided majority. M. Bartholomé is also represented—for one thing, by the solemn group of the prostrate man, woman, and child from the tomb of Père Lachaise. But of his work, neither, is it necessary to say more, for I have already described it when exhibited in the Salon. Among the English sculptors are two of M. Rodin's disciples, Mr. Tweed and Mr. Derwent Wood; also Mr. Wells, a young man who has taken Millet's peasants as the models for his little bronzes, but who makes such good use of them that I fancy he will be heard from to more original purpose in the future. Mr J. H. Furse is another of the sculptors, and his animals have something of the sinewy grace and movement of Barye's. But in this group with M. Rodin and M. Bartholomé it is Mr. Henry Wilson who makes the finest showing—a sculptor who this year, however, has only metal work and jewelry. A casket he designed for presentation to Mr. Chamberlain by the Constitutional Club is a marvel in its way: a harmony of silver, gold, enamels and precious stones. The work of the modern artist-silversmith in England is, as a rule, full of affectations. He accepts the crudeness of barbaric or peasant jewelry as his standard. But Mr. Wilson believes that methods should be adapted to materials, and that his precious metals and jewels call for exquisite design and workmanship. The casket itself is supported by little figures in silver, each a masterpiece; the encircling band and tiny panels of enamel are as delicate in color as in technique, and each jewel is placed with the knowledge of the painter putting in his rare but eloquent high light. And in his necklaces and brooches, Mr. Wilson again uses his jewels as the painter uses his pigments.

If the new President, M. Rodin, dominates everything in the Sculpture Court, so does the late President, Mr. Whistler, in the picture galleries. Only three of his paintings have been hung, but they could scarcely be more representative. The "Symphony in White," the "Valparaiso," are as familiar now to Mr. Whistler's admirers as they are characteristic of certain phases of his art. But the third has never before been seen in England, nor is it known in America. "Rose et Or: la Tulipe" is its title, and it is described in the catalogue as "unfinished." But though much remained for Whistler to do had he lived (the arms are just brushed in, the hands not more than suggested), it is complete in its color harmony and its design. It is a large, full-length portrait of a tall, graceful woman in long, rose-colored draperies, standing against a background of rose-purple. The hands are clasped behind her—the grace of the attitude is al-

ready in the suggestion—her face is in profile, and the pose has all the elegance and distinction, the color all the subtlety, of which Whistler was the master. In fact, the picture as it is has such charm that one almost wonders whether it needed "finishing." Whistler's influence is felt in a great deal of the work. Even Sir James Guthrie, unquestionably the strongest of the Glasgow group, cannot escape it. He has a fine portrait of a little girl, "Miss Janie Martin." But, as she stands on the canvas, one black-slippered foot well set forward, the hand hanging by her side holding a large feathered felt hat, it is impossible not to think of the memorable "Miss Alexander." And yet nothing could be more unlike than the treatment. The child wears rich red and white, and a rich brown is the color of the background; the head is more solidly modelled—there is none of the flat modelling that gives such an elusive beauty to the lady in "Rose et Or," and Sir James Guthrie seems to have thought less of the exquisiteness of surface than of the depths in his browns, the value of the aërial envelope. Anyway, it is a fine portrait, and not many in the collection can compete with it.

One of the exceptions is a portrait of a Mr. Ross by Mr. Kerr-Lawson, one of the younger Scotchmen, hitherto known only for his decorative rendering of architecture and landscape. But it is really a surprising piece of work; a half-length, of an elderly man, seated, his face in profile—so much again, due, perhaps, to Whistler's influence—his hands folded simply on his lap, with absolutely no accessories. But the dignity of treatment, the solemnity of tone, the calm of the face, the tranquillity of the pose, the decorative value got out of the white collar and cuffs (the despair of the modern portrait-painter) make it a most striking portrait, and I, for one, shall look forward to the next by this artist with much interest. Of the portraits by M. Raffaëlli and M. Blanche, I say nothing, because they have been seen in Paris, if I except a vivid, amusing sketch of Mr. George Moore by M. Blanche. I hardly think Mr. Lavery, the Vice-President of the Society, at his best, though in his "Lady in Pink" he has managed an extremely difficult color scheme with a great deal of dexterity. Mr. Sauter, the secretary, has two family groups that show him absorbed with problems of delicate grays and the strange, indefinable things he has dimly discerned in the faces of his sitters, so that to a portrait of Mother and Child he has given the (in this case) appropriate title, "Fate." And among all others, which I have not space here even to mention, I was especially struck with a vigorous, picturesque, haunting little study of a shepherd by Vierge, and a large arrangement of a "Lady with a Feather," by Mr. C. H. Shannon. I should doubt very much if Mr. Shannon were keen about the actual portrait; his aim seems to have been rather to make a beautiful design simply by the way the seated figure in wide-flounced gown, bending over the feather in her hand, fills the canvas. He has the sense of composition that so often saved the English portrait painters of the eighteenth century from disaster.

Of the quality of the rest of the collection of pictures, I shall be giving an idea when I say that M. Cottet's big "Deuil Marin"—the three solemn, black-robed women in a Breton landscape; M. Zuloaga's Spanish fantasies, reminiscent of Velasquez and Goya; M. Thaulow's brilliant landscapes; M. Anglada's impressions of light and color—all pictures from last summer's New Salon—and also many shown there by the Canadian Morrice and the Americans Maurer and Frieseke, are included. I need say no more than this, since it is not so long since, seeing them in Paris, I wrote about all these things for the *Nation*. Were there space, I should like to linger over the landscapes of Mr. Peppercoun and Mr. Priestman, the charming decorative arrangements of Mr. Shannon, the "Mother" of Mr. Strang. This last, it is true, recalls Millet in composition, types, and sentiment. It is the picture of a woman who, feeding her child, blows upon the spoonful of food to cool it, as in a drawing by Millet, of whom you can not but think at the first glance. But it is painted with genuine dignity and breadth, and is as careful in its technique, as solid in its modelling, and as well realized as anything in the gallery. Mr. Chase and Mr. Childe Hassam are the other Americans; Franz Stuck is among the Germans, Breitner and Witser among the Dutchmen.

The delightful part of the black and white is the way it has been arranged. Usually—and this in Paris as in London—black and white is banished to the cellar or crowded into any odd corner. But here a room has been set apart, and it has been hung as if space were no object; in a word, every possible deference has been shown to it. And the work on the walls is worth the trouble. There is not much, but what there is deserves every consideration. Again, it may be said that the prints of Félicien Rops are well enough known, but not in London, it must be remembered; and here a really representative and impressive series has been got together. It is curious to note that, before the show opened, almost half of these prints had been sold. The aquatints of M. Louis Legrand come also as a surprise in a London gallery, and he has sent those beautiful prints from the New Salon of last summer that prove the artist need not borrow the Madonna from the Primitives, but can go to the mother and child among the world's workers of to-day if he would express the beauty and emotion of maternity. It is in this room also that an amazing study in water-color of a "Silver-Spangled Cock," amazing in drawing and modelling, splendid in color, by Mr. Crawhall, is found; and also the almost tragic impressions of Meissen in pastel by Mr. Muhrman; those vivid pastels by M. Milcendeau and M. Luigini from last summer's salon; the astounding etchings, or aquatints rather, in color by M. Thaulow; the etchings by Pennell, Chahine, Roussel; the illustrations of Vierge, Phil May, E. J. Sullivan, Hartrick—it really is an uncommonly good collection.

The exhibition opened to the public this morning, and I must confess to not a little curiosity as to how the public will accept it, so absolutely unlike is it to the average London picture show. How the critics are taking it I know already. It is amusing to find "the gentleman of the *Times*," after paying Whistler and Rodin and one or two others the tribute it is hardly decent now to withhold, deliberately picking out for praise certain pictures that everyone with a love for art must regret that the Hanging Committee could not see its way to reject. If the International only perseveres on the present lines, even the "gentleman of the *Times*" will have to give in. But perseverance is greatly a question of pounds, shillings, and pence. Will these be supplied in the necessary amount by the artless British public? N. N.

CAGLIOSTRO.

PARIS, January 11, 1904.

There are novels in history, and among them may be cited the life of the famous Cagliostro, who played such an important part in the "affaire du collier" before the French Revolution. M. Henri d'Alméras has published quite recently a biography of this celebrated adventurer. He begins with a long and curious chapter on the documents he has used in his work, and says justly that "there is not, perhaps, in the whole eighteenth century a celebrated man whose biography is more difficult to write than that of Cagliostro. Documents abound, but most of them are devoid of historical precision. The most interesting are the most inexact. There are as many reasons for rejecting them as for admitting them." Cagliostro had a thousand reasons for throwing a veil over many parts of his life, especially the early parts: "In the interrogatories to which he had to submit, during the necklace trial, he almost always lied with an imperturbable serenity, not only because the truth might injure him, but also because lying had become with him, as with many others, an hypertrophy of the imagination." By a sort of auto-suggestion he ended by believing things which he had a hundred times said of himself; he was a born charlatan and deceiver, and in the end deceived himself.

M. Henri d'Alméras used a number of manuscript documents which are kept in our public archives—the reports made on Cagliostro by the police of 1785 and 1786, and the documents relating to the necklace trial. He attaches more importance to these manuscript documents than to the printed pamphlets. In 1791 there was published in Rome a 'Compendio della vita ee delle gesti di Giuseppe Balsamo,' extracted from the documents in the trial of Cagliostro at Rome the year before. A translation of it presently appeared in French, under the title, 'Vie de Joseph Balsamo, connu sous le nom de Comte Cagliostro, extraite de la procédure instruite contre lui à Rome en 1790.' M. d'Alméras cites two pamphlets, relating to Cagliostro's journeys in Germany and Poland. One of these is in German and has never been translated: 'Nachricht von des eerüchtigen Cagliostro Aufenthalt in Mittau,' by Countess Elisa von der Recke (Berlin and Stettin, 1787); the other is anonymous and is entitled: 'Cagliostro démasqué à Varsovie, ou Relation authentique de ses opérations alchimiques et magiques faites dans cette capitale, par un témoin oculaire.' I forbear to mention a number of other documents, besides the legal memoirs composed during the necklace trial, which for some time occupied all France, as the name of Queen Marie Antoinette was unfortunately mixed up with it. Even now, with all that is known, there are still some mysteries in the life of Cagliostro.

Joseph Balsamo was born on the 8th of June, 1743, at Palermo, the child of poor Jews. Shortly after his birth, his father died a bankrupt and left his family in very straitened circumstances. Joseph was brought up by charity in a convent of the Brothers of Mercy, near Palermo, but he soon left school. He led a dissipated and riotous life in Palermo, at the same time giving himself up to the study of occult sciences and of witchcraft. He was obliged to leave Palermo, and went first to Messina. There he made the acquaintance of a Greek adventurer, occupied with occultism and sleight-of-hand, and journeyed with him in Greece and in Egypt, making dupes everywhere with magic operations and quack medicines. At Malta he obtained letters of credit from the Grand Master of the Order of Malta, Don Manoël Pinto d'Alfonseca, who spent all his time in a laboratory, trying to find the philosopher's stone. Balsamo went to Naples with a prince who was also studying chemistry with a view to changing all metals into gold. From Naples he went to Rome, where he made the acquaintance of Lorenza Feliciani, who became the companion of his life. Lorenza's father was a *butadore*, a copper founder. She was fifteen years old, very pretty, and very ignorant.

"She lived," says M. d'Alméras, "through the gravest events without judging or understanding them. Irresponsible because she was unconscious, she obeyed without resistance any will that tried to impose itself upon her. Even in Paris, even in the frivolous society in which she lived, her futility, during the drama of the necklace, seemed excessive and shocking. Incapable of action, of will, and even of thought, a light little creature, inconsistent, with the soul of a doll in the body of a woman, she spent all her life in laughing and talking."

She was profoundly ignorant and had to learn to write long after her marriage, which was celebrated in the month of April, 1769, in a little church in Rome, San Salvatore in Campo. Balsamo had a sort of *officina* of false papers, false bonds. He persuaded his wife "that adultery was no crime when it was inspired solely by interest." He procured for her rich lovers, but husband and wife were soon obliged to leave Rome. They travelled in great style, and, after some disagreements with the police, left for Madrid and Lisbon and, in the month of July, 1771, for England. The vicissitudes of their life in England are only partly known. After having made some dupes, they left for France. I shall not follow them in their complicated movements. In 1777 Cagliostro found means to be admitted to the Masonic order, and to become one of its dignitaries. He was no longer the humble swindler obliged to run from place to place. He had measured the depth of human folly and credulity; he was the *illustrissimo* Count of Cagliostro. When, coming from Germany, he arrived at Strasbourg on the 19th of September, a great crowd awaited on the bridge to Kehl the doctor who could cure all maladies, the apostle of free-masonry, who was a public benefactor.

Louis de Rohan, born in 1734, was, in 1779, appointed Bishop of Strasbourg, and the same year made a Cardinal. He was a Prince of the Holy Empire, Landgrave of Alsace, and Abbé of Saint-Vaast. He had enormous revenues; a palace at Saverne and another in Paris. "Born," says M. d'Alméras, "with a soul as little ecclesiastical as possible, Cardinal Rohan had the brilliant qualities and the fashionable defects which, under the reign of Marie Antoinette, were the attributes of a *grand seigneur*.' This judgment seems to me too indulgent, for I have looked in vain for the qualities of the Cardinal; his defects were only too apparent. One of them was an extraordinary credulity. From 1780 to 1785, Cagliostro extorted from him, on various pretexts, sums amounting to nearly a million of our francs. The Cardinal had him often in his palace, lent him his equipages and his horses, made him constant presents. Baroness Oberkisch tells us in her interesting memoirs that the Cardinal showed her once a magnificent stone, with the arms of Rohan engraved on it, which he wore on one of his fingers.

" 'It is a fine stone, sir, and I had already admired it.' 'Well, Cagliostro made it; he made it for nothing. I saw it done; I was there and witnessed the operation. What do you think of that? People won't say any more that he is deceiving me. The jeweller has valued the stone at twenty-five thousand livres.'

"I remained stupefied. M. de Rohan saw this, and continued: 'That is not all. He makes gold. He made for me five to six thousand livres in gold, upstairs, in the attic of my palace. He will make me the richest prince in Europe."

He made incantations in dark rooms, and showed the Cardinal shadows which were supposed to be the shades of beloved persons.

Cagliostro established himself definitely in Paris in January, 1785, in a hotel which belonged to the Marchioness d'Orvilliers, and which still exists on the Boulevard Beaumarchais. He became the successor of Mesmer, who had for a while been the fashion, and soon had a host of patients, whom he pretended to cure. Lorenza, his mistress, shared his popularity. Nobody could recognize in her the daughter of the *butadore* of Pellegrini Street in Rome.

The details of the necklace trial are well known, and M. d'Alméras could find no new matter on this subject. It is curious enough that when the famous Madame de la Motte heard from the Abbé Maury the news of the arrest of the Cardinal de Rohan, her first word was, "C'est du Cagliostro tout pur." Cagliostro was arrested on the 23d of August, 1785, and imprisoned in the Bastille. He had been inculpated by Madame de la Motte in the affair of the necklace, but his innocence was proved and he was set at liberty on the 12th of May, 1786. He could no longer remain in France, as his character had been thoroughly exposed during the trial, and on the 29th of June he took a boat for England. From London he wrote a "letter addressed to the French people," the full text of which is given for the first time by M. d'Alméras. It was directed chiefly against Baron de Breteuil, the minister who sent him to the Bastille, and against the governor of the prison. His golden days were over; he could not remain long in England, and left for Switzerland and Italy. In Rome he was imprudent enough to organize Masonic lodges; he was arrested and brought before the tribunal of the Holy Office. His trial became in reality the trial of Free Masonry, and in this respect was interesting. The judgment says that "Joseph Balsamo, . . . having incurred the censures and penalties pronounced against formal heretics, dogmatists, heresiarchs, masters and disciples of superstitious sorcery, has incurred the censures and penalties established by the apostolic laws of Clément XII. and Benedict XIV., as well as the edict of the Council of State." Capital punishment was commuted for perpetual imprisonment in a fortress. Cagliostro was sent to the Fort Saint-Leo, in the Duchy of Urbino, after which all trace of him was lost. It is said that he died in 1795, but no particulars of any sort regarding his end are known.

Correspondence.

WHISTLER MEMORIAL EXHIBITION.

To the Editor of The Nation:

Sir: The Whistler memorial exhibition which is to open on February 23 under the auspices of the Copley Society of Boston, bids fair to be the leading art event of the present American season. An announcement just sent out by the management shows that this Copley Hall art display will consist of oil paintings, water colors, pastels, and a representative collection of etchings, lithographs, and drawings, and that it will include, in addition to the most notable examples of Mr. Whistler's art owned in this country, important contributions from London, Paris, Glasgow, and Montreal. It will form by long odds the largest collection of this master's works ever yet exhibited, and it is extremely unlikely, in the nature of things, that so many of his pictures will ever again be brought together. The Copley Society has been warmly seconded by Mr. Whistler's estate, which has specially selected it to arrange this memorial exhibition. Of particular interest, of course, will be the pictures which the estate is to loan from Mr. Whistler's studio in London. These have never yet been shown to the public.

Boston has had the good fortune to get this exhibition largely through the efforts of an energetic committee of the Copley Society, headed by the president of the society, Mr. Holker Abbott, who has personally interested all the collectors of Whistler's works in the Boston undertaking. The precise standing of Mr. Whistler among the artists of the world is, of course, yet to be determined; but beyond question the present art show is likely to give the collectors and critics of the entire country the best opportunity ever afforded, or ever likely to be afforded, of judging the man by the entirety of his production. Mr. Charles L. Freer, of Detroit, who has been perhaps the leading collector of Whistler's paintings in this country, and who has put at the service of the Copley Society the contents of his gallery, has recently predicted that the Copley exhibition will be epoch-making in the history of American art; and a similar opinion has been expressed by Mr. Howard Mansfield of New York, who has especial knowledge of Whistler's black-and-whites.

The exhibition is to be one of really national importance, and it is hoped that it will be so regarded. The list of the members of the honorary committee for the exhibition is impressive, and the more so since most of the members of it have done more than merely allow their names to be used; nearly all have, in fact, rendered ac-

tive assistance in procuring works for the Copley Society's exhibition. Those on the committee are as follows: Gov. Bates, Mayor Collins, Sir Henry Mortimer Durand, ambassador of Great Britain; Mr. J. J. Jusserand, ambassador of the French republic; Hon. John Hay, Secretary of State; Hon. Henry Cabot Lodge; Mr. John Caldwell, Carnegie Institute, Pittsburgh; Mr. Edward H. Coates, president of the Pennsylvania Academy of Fine Arts; Mr. Halsey C. Ives, chief of the department of art, St. Louis Exposition; Mr. F. W. Rhinelander, president of the Metropolitan Museum of Art; Mr. Samuel Dennis Warren, president of the Museum of Fine Arts; Mr. Edwin A. Abbey, London; Mr. R. B. Angus, Montreal; Mr. Samuel P. Avery, New York; Mr. Francis Bartlett, Boston; Miss Rosalind Birnie-Philip, London; Mr. Arthur J. Eddy, Chicago; Hon. George A. Drummond, Montreal; Mr. Charles L. Freer, Detroit; Mrs. John L. Gardner, Boston; Mr. Walter Gay, Paris; Mr. Henry O. Havemeyer, New York; Mr. Charles L. Hutchinson, Chicago; Mr. John G. Johnson, New York; Mr. Bryan Lathrop, Chicago; Mr. Howard Mansfield, New York; Mr. Harrison S. Morris, Philadelphia; Prof. Charles Eliot Norton, Cambridge; Mr. Joseph Pennell, London; Mr. Alfred A. Pope, Farmington; Mr. Edward Robinson, Boston; Mr. Denman W. Ross, Cambridge; Mr. James Ross, Montreal; Mr. Augustus Saint Gaudens, Windsor; Mr. John S. Sargent, London; Mrs. Joshua Montgomery Sears, Boston; Mr. Arthur Studd, London; Mr. George W. Vanderbilt, New York; Mr. Henry Walters, Baltimore; Mrs. Henry Whitman, Boston, and Mr. Harris Whittemore, Naugatuck.

FREDERICK W. COBURN.

BOSTON, January 26, 1904.

PROFESSORS' SALARIES.

TO THE EDITOR OF THE NATION:

SIR: Yes, that memorable article on Professors' Salaries (*Nation*, No. 2009) has struck a responsive chord in all colleges from Maine to California. But how about the instructors? Here is a great and prosperous university where an instructor never gets nor will get more than a thousand dollars a year. He is an instructor. Hath not an instructor wife and children? Hath not an instructor a house to keep up, food and clothes to buy? Does he not need books as a professor does, and travelling for study or rest at home and abroad? Does he not pay to the local tradespeople the same prices as the four-thousand-dollar professor or the millionaire's son, his student? Is he not expected to buy tickets for all charity entertainments as the professor is, subscribe to the student papers, support the athletic associations, the Christian association, the debating association, the toboggan association and wear a Tuxedo? Should an instructor of a great university get a salary of 700 to 1,000 dollars like a clerk in a grocery store? X.

ITHACA, January 30, 1904.

AN INQUIRY.

TO THE EDITOR OF THE NATION:

SIR: Can any student of the colonial period of American history give an earlier instance of an American-born colonist sitting as a member of the English House of Commons than that of Joseph Dudley, Governor for many years of Massachusetts, who was elected a member of Parliament for Newtown in the Isle of Wight in 1701?

Yours truly, N. DARNELL DAVIS.

GEORGETOWN, DEMERARA, BRITISH GUIANA, January 13, 1904.

THE CHEVALIER DE LIMOËLAN.

TO THE EDITOR OF THE NATION:

SIR: Readers of the review of M. Lenotre's researches concerning Limoëlan (*Nation*, No. 2,012) may be interested to learn that Chateaubriand, in the account of his school life at the Collège de Rennes ('Mémoires d' outre-Tombe') mentions Limoëland as his schoolmate, and calls him the "auteur de la machine infernale." Chateaubriand further says:

"He is to-day a priest in America. There exists only one portrait of Lucile, and this ugly miniature was made by Limoëlan, who became a painter during the distress of the Revolution. I must relate a trick which Limoëlan played on the principal who was accustomed, after the signal for retiring, to go through the corridors to see if all was well. The principal was wont to look through a hole made in each door. Limoëlan, Gesril, Saint-Riveul, and I slept in the same room. We were a mischievous lot. Several times we stopped up the hole with paper. The principal pushed the paper through and caught us jumping on our beds and breaking our chairs. One evening Limoëlan, without telling us his plan, persuaded us to put out the light and go to bed. In a quarter of an hour the principal came on tip-toe. Seeing no light his suspicions were aroused, and he rushed into the room crying: 'Who did that?' Limoëlan nearly choked with laughter. Gesril said, in a half-simple, half-jeering tone: 'What is the matter?' Saint-Riveul and I laughed like Limoëlan, and hid under our covers. No one could get anything out of us: we were heroic.

"The four of us were locked up in the cellar. Saint-Riveul dug up the ground under a door that communicated with the stable yard. He stuck his head in this opening—a pig ran up and nearly ate his brains; Gesril let a cask of wine run out; Limoëlan pulled down a wall."

TIMOTHY CLORAN.

NASHVILLE, TENN., January 23, 1904.

Notes.

'Writings on American History, 1902,' is an undertaking of Ernest Cushing Richardson and Anson Ely Morse, which is defined as "an attempt at an exhaustive bibliography of books and periodical articles on United States history published during the year 1902, together with some contributions towards a bibliography of writings on other parts of the Americas for the same year." The work is now in the press, and may be subscribed for at the Library Bookstore of C. Martins, Princeton, N. J. It contains more than a thousand titles of books and pamphlets, and more than five times as many of periodical articles. The book titles are accompanied by "appraisements" extracted from reviews. Each subject is furnished with a brief definition, and there are other features of decided value.

The Clarendon Press has in hand a standard edition of the complete works of Ben Jonson, in nine octavo volumes, uniform with the Oxford editions of Kyd and Lyly, under the editorship of Prof. C. H. Herford and Percy Simpson; and an edition of 'Elizabethan Critical Essays,' edited by G. Gregory Smith, together with an introduction on the origins of literary criticism in England. This work will fill two volumes.

The centennial of the acquisition of the Territory of Louisiana has inevitably brought forth a crop of books dealing with the subject in one way or another. The latest is from the press of Ginn & Co., and is entitled 'The Louisiana Purchase,' by Ripley Hitchcock. The first part, some 91 pages, covers the whole subject of Spanish and French occupation from the final entrance of these peoples into the Mississippi Valley until 1803. From this point political history is almost wholly disregarded, and the remainder of the book, some 250 pages, is devoted to exploration, settlement, and the development of the region included in the Purchase. Nearly one-third of this compilation is taken up with an account of the Lewis and Clark expedition—on the whole, a very good summary of the Journals as "edited" by Biddle. This is followed by sketches of the journeys of Pike, Catlin, Hunt, Wyeth, Prince Maximilian of Wied, Bonneville, Frémont, and others. Finally, part four traces the decline in the fur trade and the rise of other interests, such as mining and the cattle industry, which were important factors in building up the West. The purpose of the book is to tell in a single volume the "story of the West succinctly" in such a way as to "afford a certain comprehensiveness" which will make the volume "of convenience and of value to students." The author appears to have familiarized himself with the best secondary accounts, besides some of the sources, and has given us a clear and accurate sketch of a subject which is for the moment of quite general interest.

A Yale thesis for the doctorate in philosophy, just published by its author, Charles Upson Clark of New Haven, deals in a very thorough way with the text tradition of Ammianus Marcellinus, whose 'Rerum Gestarum Libri' (if that be the true title) is pronounced by the Teuffel-Schwabe 'History of Roman Literature' "the first serious historical work of the higher order after Tacitus, and likewise the last of the kind." Mr. Clark's work was well worth doing, since, as he shows, the first printed edition was made from the very worst of the manuscripts in existence, and all subsequent editions have been vitiated directly or indirectly through its influence. Existing manuscripts, he concludes, unite in a common source in the early Carolingian period, but this manuscript was lost. It was the parent, however, of two copies once belonging respectively to the monasteries of Fulda and Hersfeld. The latter was used by Gelenius in the preparation of his edition (1533), but was subsequently lost, and only six detached sheets have been recovered. The former contains eighteen books, all of Ammianus now known, and is the source, directly or indirectly, of all other existing manuscripts except the fragment just mentioned. Of course, Mr. Clark's work must stand on its own basis, but there is good indication that it has a basis to stand on, in the fact that while his researches were in progress the Prussian Acedemy of Sciences voted him a subvention of 1,500 marks, on motion of the late Professor Mommsen. The settling of the relative merits of the manuscripts naturally paved the way for a complete critical

edition of the text. Dr. Clark has this well under way, and it will appear in the near future, from the press of Weidmann, in Berlin.

Each successive number of 'The Poultry Book' (Doubleday, Page & Co.) sustains the interest of its predecessor. It promises, when completed, to be the most comprehensive treatise of its kind yet printed. Each subject is handled by a writer especially competent and learned. The absence of abstruse technicalities makes the text easily understood by the novice, as well as a suggestive guide to the more experienced. Both classes will profit by the practical and thorough presentation of every phase of poultry-breeding, rearing, and housing. Parts v. to viii. are last to hand.

Four new instalments of Attilio Pagliani's invaluable 'Catalogo Generale della Libreria Italiana, 1847-1899' (Milan: Hoepli; New York: Lemcke & Buechner) complete the second volume (L—O), and make a good start in P. The compiler's own name appears in the list of authors, in connection with a catalogue of periodicals received by the Genoa Library in 1896. The Italian men of science continue to occupy much space with their numerous monographs. Mazzini is still a living classic to his countrymen, and fills two pages. The last edition of Muratori's 'Annali' was in 1870, but his inedited writings have kept his memory burnished. Horace, among the ancients, leads with two and a half pages, to Ovid's one, and Homer's one and a half. Among French writers, Pascal is conspicuous by his absence; Musset is still read in fresh editions, but piecemeal; Michelet's History of the French Revolution was translated anew as recently as 1898. Milton is alive in the Italian press, and Tom Moore's "National Airs" and "Lives of the Angels" were reproduced in 1893 and 1898, a fact to be noted. But Mayne-Reid is foremost, filling one and a quarter columns, and putting in a fresh appearance as late as 1896. John Stuart Mill's 'Liberty' was revived in 1895, but otherwise he seems to be a back number in the peninsula. For the rest, there is a liberal assortment of the graceful Italian *Memoria, Omaggio, Onoranze,* besides *Memorie, Notizie, Osservazione,* and *Parole* galore.

'Völkerkunde,' a posthumous work of Dr. Heinrich Schurtz (Leipzig), forms the sixteenth number of the series "Die Erdkunde." It is a volume of no particular use to the advanced student of the subject, but might render valuable service as an elementary textbook. The physical criteria of race-distinction are briefly enumerated, as are the typical forms of the industrial organization, religion, etc. Upon the basis thus laid, the author attempts a classification of mankind by races, with the usual negative results. Directions for independent work in ethnology close the volume—which has no index. The illustrations are often derived from important originals, but are poorly reproduced. One of the most curious suggestions in the book is to the effect that the hairy, bearded Aino stock of Japan was once a widely spread palæo-Asiatic race, and that it is now represented by not a few Russian types, one of which is Tolstoy himself!

With the January number, the *Burlington Magazine* is transferred to the lengthening list of Macmillan importations. It announces a change in editorial policy, promising a less exclusively antiquarian bias; but the results of the innovations hardly appear in this first issue, which, exceptionally, is delayed. Dr. Lippman, the Berlin curator who did so much to interpret early Italian woodcuts, is the subject of an appreciative obituary. Max Roldit concludes his survey of the little-known collection of the Earl of Normanton at Somerley, Hampshire. Remarkable here is a painting of Rubens of a "Young Lioness at Play." Four excellent works of Aart van der Neer are reported, but not reproduced. Greuze is in force, notably in an affected but still appealing likeness of the cantatrice Sophie Arnould. Mr. Weale returns to the vexed question of Hubert and Jan van Eyck, marshalling old testimony and adding new to prove that many pictures show knowledge of Southern monuments, and that these paintings are all by the mysterious Hubert. Larger interests are broached by Mr. Laurence Binyon in his discussion of "A Chinese Painting of the Fourth Century." He attempts nothing less than the overthrow of the traditional idea that Chinese painting is derivative from the Buddhist art of India—a large and suggestive sermon from so slight a text. The newly associated editor, Mr. A. J. Holmes, treats "Cotman as a Painter in Oils," an article valuable inversely to its brevity, for it suggests that many fine works by Cotman have slipped into the anonymous or misnamed classes. Essays on lace and old Staffordshire salt-glaze remind us that the *Burlington* regards nothing artistic as foreign to itself. The magazine is the only serious art publication in English, and promises to be increasingly valuable.

The story of the organization of northern Nigeria under British rule, told in the *Geographical Journal* for January by its high commissioner, Gen. Sir F. D. Lugard, is most interesting and suggestive. The problem which confronted him was how to bring under administrative control a region half as large again as France, inhabited by untold millions of people tyrannized over by a race of slave-raiders. The main principle upon which he founded his government was to rule through native chiefs, and so successful has he been that in two years and a half the supremacy of Great Britain has been established, the *pax Britannica* prevails, and slave-raiding has become a thing of the past. The main need now is cheap means of transport to the great waterways by which the products of the land, and especially its cotton, can be brought to the world markets. In this connection, Sir Frederick, whose African experience is unexcelled, affirms that the development of the continent would be advanced far more by uniting the Nile and Niger Basins than by the Cape-to-Cairo scheme. Another need is reforestation, to stop the alarming decrease of the Niger. Parts of the river were navigable a few years ago for steamers drawing eight feet of water, where now only vessels of three feet draught can go. The importation of liquor is strictly prohibited, notwithstanding the fact that if it were admitted the administrative expenses could be met by the increased revenue. Gen. Lugard gives an interesting account of the ancient city of Kano, of whose forty-two kings, reigning for a period of 768 years, records remain, and of its dungeon, whose horrors far excelled those of the Black Hole of Calcutta. Apropos of the Tibetan mission, Douglas W. Freshfield describes the routes from India to Lhasa, which, he says, is only eight days' journey, so good are the roads from the frontier. Mr. W. S. Barclay contributes a graphic sketch of three fast-disappearing Fuegan tribes, one of which, the Onas, possesses some remarkably fine traits. They consider it unmanly to show hunger or fatigue. Their affection for their children is wonderful, and twenty years of unscrupulous trading has not conquered their aversion to spirits.

—In the February *Century* John Burroughs again battles against the self-styled "Modern School of Nature Study," this time in a less personal but perhaps more effective way than before. By permission, extracts are given from recent correspondence with President Roosevelt, which place the President not exactly in harmony with either party to the discussion, but clearly much nearer to Mr. Burroughs than to the "Moderns." Mr. Burroughs holds rigidly to his contention that the lower animals come into the world with an instinctive tendency to perform all the important acts of life in the right way and at the right time, and do not have to learn these acts through the medium of conscious instruction by the parent. In the present article he has guarded himself more carefully against the misconceptions and misrepresentations of his own views from which he has suffered in the discussion of the past year. Dr. Roger S. Tracy discusses the important question "How to Live Long." Greater care in eating is the chief point in his solution. Doubtless most well-informed persons will agree with him that reasonable limitation of the amount eaten is a prime necessity, but his gropings for a scientific basis for a *materia alimentaria* do not carry conviction. He starts with the assumption that the period since the introduction of cooked food is so short, as compared with the ages during which primitive man fed himself without the aid of fire, that the real needs of our physical nature, developed by the enforced habits of earlier ages and passed on by inheritance, have not been materially altered by the artificial habit of cooking, a mere temporary fad of only a few thousand years' duration. Hence we are to take it for granted that articles which we now instinctively reject as unpalatable in the raw state, such as beets, potatoes, and probably all kinds of flesh, formed no part of our early food, and are, therefore, to be looked upon with suspicion. Among the lighter topics of the number, Albert Bigelow Paine's "Bric-à-brac Auctions in New York" and Joseph Pennell's "In the Alps on a Motor-Bicycle" are most attractive.

—If Professor Lounsbury's recent articles in *Harper's* have gone to the extreme in asserting the rights of the democracy in determining linguistic usage, Alice Meynell certainly evens the score in the February issue. Rising above the level of those who have water to draw and wood to hew, and hence cannot have time for the finer points of linguistic education, she devotes herself to the thesis that "of two educated ways of pronouncing a word or shaping a phrase, one is a little the more educated." The "trick of education" is instinctively to choose the latter. For

example, you must pronounce the word *girl* with the vowel sound of *care*. Even though you be a poet, you must not construe your poetic license broadly enough to rhyme it with *pearl*, or *churl*, on penalty of outer darkness. Mrs. Meynell's "trick of education" does not make her infallible as to current facts of usage, as, for instance, when she gives Americans high credit for never either writing or speaking "the most uncouth of phrases," *I should like you to come*. The occupant of the Easy Chair wields the stiletto with perhaps more deftness than justice in the remark that biography is more depressing than autobiography "because it does not end well, or, as the friends of ending well prefer to say, it does not end up well." In discussing the recent autobiographies of Stoddard and Trowbridge, the Easy Chair deprecates the tendency of autobiographers to abandon their subject for stories or studies of others; autobiography is like charity in beginning at home, but, unlike charity, it is best when it stays there. Dr. Frederick A. Cook contributes a second paper on his attempts to ascend Mount McKinley. He is not as yet convinced that the ascent is impossible, but in difficulties and disappointments he regards the task as comparable only with the search for the North Pole. His estimate of the slope as an average of 45 degrees for at least 14,000 feet is certainly not very encouraging.

—The February *Scribner's* has the first of three instalments from the private correspondence of Mrs. George Bancroft during the three years of Mr. Bancroft's service as minister to England. The chief interest of the letters is the opportunity which they give to trace the impressions of travel and residence in foreign court circles upon the mind of a home-keeping New England woman of the old type. London dinginess aroused at first sight the New England housewife's aversion to dirt: "Some of the finest houses look to me as though I would like to give them a good scouring." It was but a few days, however, until the real London began to take hold upon her imagination. The air of resignation with which she submits to social customs less strict than those of her home circle—"I do not like dining with bare arms and neck, but I must"—reminds one of the good old Quaker lady in court, when told that she must take an oath: "Well, I suppose if I must I must: ——!" We learn incidentally that Mr. Bancroft gave his spare moments to Tacitus on the way over. A few weeks after he had entered upon the duties of his office, we find the two together studying Whewell's 'History of the Inductive Sciences' as a means of understanding the English mind on the side of its then current scientific bent. T. R. Sullivan gives an account of the Alfieri Centennial at Asti, held on October 8, the anniversary of the poet's death, and Helen Rutherford Ely describes appreciatively "Some Gardens in Spain." Their beauty she finds in their trees, flowers, and running water, without any aid from the architectural features so common in Italian gardens. Russell Sturgis describes, with three illustrations, the new screen-wall and doorways which have been erected in front of the old church of St. Bartholomew, in memory of the younger Cornelius Vanderbilt. In comparing the work with that of the Trinity porch in Boston, he regards the New York effort as "a very serious and manly attempt to utilize modern knowledge and modern facilities in the preparation of sculpture for architectural composition," while the Trinity porch shows a closer study of Romanesque models.

—The February *Atlantic* opens its columns to two separate defences of present tendencies in the financial and commercial world, as against the prevalent distrust and criticism which those tendencies have aroused. The plea of John Graham Brooks is that the public should not confuse with commercialism itself the really small fraction of incompetence, greed, and dishonesty which is found in commerce as well as in all other fields of human activity. One feels, however, that Mr. Brooks, as well as Mr. C. A. Conant, who writes on "Wall Street and the Country," unduly minimizes the seriously objectionable features of the present situation. When men controlling amounts of capital scarcely dreamed of under unified management until within the present decade, are found capable of the most brazen misrepresentations in order to increase their own gains at the expense of the uninformed investor, one cannot be contented with the assertion that there is probably as much abuse in chemistry as in commercialism, in proportion to the mass. Mr. Conant deprecates any attempt to control the matter by legislation, or, apparently, by efforts to enforce legislation already in existence. Clarence A. Poe, a North Carolina editor, contributes a ten-page discussion of lynching. Most of what he says is very encouraging, coming from a Southern point of view, but it is impossible to agree with him in the opinion that delays and uncertainties of the law play any great part as incentives to lynching. Will any one point out the Southern localities in which the courts have shown themselves unwilling or unable to mete out due justice to negro criminals proved by reasonable evidence to be guilty of assaults upon white women? It is wide of the fact, also, to find in aspirations toward social equality a cause of criminal assaults upon white women. Such criminals are almost exclusively from a class too far brutalized to possess aspirations in that or any other direction. Mr. Poe places great hope in the education of the negro, especially his industrial education, and makes short work of the false assertion of Vardaman, and his like, that the census statistics show the educated negro to be more addicted to crime than the illiterate.

—Mr. Thomas E. Watson has written his 'Life and Times of Thomas Jefferson' (Macmillan) with a twofold purpose. He believes that injustice has been done to Jefferson by Northern historians, and that the same historians have done the South less than justice in dwelling upon the minor incidents of Northern, while slighting those of the Southern Revolutionary campaigners. Jefferson, regarded as the father of Democracy, becomes sponsor for all that the Democracy of Mr. Watson accepts as true doctrine. The book is, therefore, a defence of Jefferson and an exposition of modern "Democracy"—shall we say of the Populist stripe? That might be unjust to Mr. Watson, because even Populism has shifted its ground in recent years, tempering its views through defeat From every point of view the result is interesting. We have Jefferson drawn by an ardent admirer, fresh from the study of Jefferson's antagonist, Napoleon; pungent criticism of critics of Jefferson and his policy; an application of Jefferson's views to current politics; and much display of the social and political opinions of Thomas E. Watson. Half a century ago, the book would have been entitled 'Notes in Answer to a Life of Jefferson by ——,' and frankly published as a controversial work. The objects of Mr. Watson's wrath are not of exceeding merit, and writers like Curtis, Fisher, and Lodge do not demand serious examination. Channing is better worth a reply, and Henry Adams is, of course, a writer whom no one has thus far proved capable of answering. Yet Mr. Watson devotes pages to the slips and errors of the lesser three, much less space to Channing, and almost no space to Adams.

—This lack of appreciation of authorities colors the whole book, and is not confined to the criticisms on other writers. Jefferson becomes *the* man of the times, and the South receives more than its due credit. The opponents of Jefferson are unduly wicked, and the friends of Jefferson, like Monroe, Paine, and even Burr, are exalted for that reason. If Northern historians have erred in one direction, Mr. Watson equally errs in the other. In spite of this, his work deserves to be read, for it is very readable, and at no time more so than when Mr. Watson explains his own views. "The guilty men whom all should despise are greedy protectionists who demand the law, and the cowardly politician who gives it to them." "We doubt if even his [Jefferson's] wildest fears could have pictured a situation in which Congress is not allowed to put the income tax upon a millionaire, and when the sympathizer with labor is enjoined from persuasion and peaceful aid." In the chapter on "Political Opinions" few would recognize some of the views as those of Jefferson, while they are properly those of extreme Populism. Intemperate epithets abound, and the praise bestowed on France, Lyon, and Burr is as unbalanced as the dislike shown towards Hamilton, Morris, Wolcott, and Bayard.

—The history of political theory has hitherto been distinctly a German province, but American and English scholars, following the lead of Sir Frederick Pollock, are now rapidly invading it. In 1902 we had Professor Dunning's 'History of Political Theories,' and this year Professor Willoughby's 'Political Theories of the Ancient World.' Two other important works in the same field have now appeared. 'The Development of European Polity' is a posthumous volume of lectures by Henry Sidgwick, late Professor of Moral Philosophy in the University of Cambridge, edited from his notes by his widow, the Principal of Newnham College (Macmillan). It is an historical survey of political development from the dawn of history down to our own day, and is not concerned with the "particulars of history" as such, but only with the "general facts that these exemplify." It thus resembles in method Sir John Seeley's 'Introduction to Political Science,' which was edited and published by Sidgwick in 1896, and it forms an historical companion volume to the 'Elements of Politics,' in which Sidgwick has treated the structure and functions of the modern

state. In this latest work, however, he traces the growth not only of the theories deducible from political facts, but also of purely literary theories in politics. The eighth, twenty-fourth, twenty-fifth, and twenty-sixth lectures contain an analysis of the political thought of Plato, Aristotle, Hobbes, Locke, Montesquieu, and Rousseau, while the views of Bodin, Bossuet, and other writers are noticed, more or less briefly. Of modern scholars, Bluntschli is the one most often criticised. As might be expected, the style is delightfully easy and clear, and the book full of suggestive ideas. Here and there one cannot help noticing gaps which the author, had he lived, would doubtless have filled in, as for instance in his treatment of the Physiocrats. Mrs. Sidgwick has well done her difficult task, and we can only regret her inability to furnish a complete list of her husband's books and authorities.

—'A History of Political Theory, from the Roman Lawyers of the Second Century to the Political Writers of the Ninth,' is the title of a new work by Mr. A. J. Carlyle (Edinburgh: Blackwood; New York: Putnams). It is the first volume of a "History of Mediæval Political Theory," which he is bringing out in collaboration with Mr. R. W. Carlyle. It deals strictly with theory, as found in literature or documents, and not with that which may be inferred from the nature of institutions. Before taking up the doctrines of the Roman lawyers, the author devotes two chapters to the political theories of Cicero and Seneca. After analyzing the theory of the civil law, he considers that of the New Testament and of the Fathers, and lastly treats the political doctrines of Bishop Hincmar of Rheims and of other writers in the century of Charles the Great. His main object, in which he succeeds, is to show that there is no breach of continuity between ancient and modern political thought, and that this kind of speculation did not disappear in the Middle Ages. The difficult subject is ably handled. The notes are full of convenient citations from the original sources, but the labors of foreign scholars in this particular field are scarcely recognized either in the notes or in the text.

SENATOR HOAR'S AUTOBIOGRAPHY.

Autobiography of Seventy Years. By George F. Hoar. With portraits. 2 vols. Charles Scribner's Sons. 1903.

Mr. Hoar's reminiscences must be read in the light of his avowal that he is an optimist. He begins with it at page 3 of his first volume, and closes with it at page 439 of his second volume in the form of a *credo*. He is a pupil in optimism (for it is really a species of faith with him which he applies to God, to Man, to Politics, to himself, and to his friends and acquaintances) of the Rev. Edward Everett Hale, and he has added a chapter on his teacher which gives affecting evidence of his zeal and fidelity. This should have come at the beginning, for it explains a good deal of the book, and tends to disarm one hostile criticism which Mr. Hoar's volumes are likely to provoke in readers who are not avowed optimists—that is, that a calculated optimism is necessarily at war with literary interest. An author who recognizes it as his first duty to find good in everything (we may except, of course, the Democratic party, for there is no evidence in these pages that he sees any hope for that) must inevitably pursue a course which will in the end dull his critical, or judging, faculty. Especially will this be the case with those most precious parts of an autobiography which deal with the author's contemporaries and associates. The book abounds in sketches of this sort, but the portraits are drawn with an optimistic brush; this, by effacing harsh lines and putting in ameliorating touches, often impairs the likeness. For instance, in his account of the late Justice Gray, a strongly marked character, both professionally and individually, Mr. Hoar gives little or no hint of the qualities which gained him dislike; while in dealing with him as a judge, after noticing his passion for precedent, and his learning, Mr. Hoar says: "He was, I think, equally remarkable for the wisdom, good sense, and strength of his judgments." If he was, he was the most remarkable judge who ever sat on the Supreme bench, and in the same class with or even higher than Marshall and Story. Every lawyer knows how great his learning was, but this equalitarian judgment so exalts other qualities for which he was not especially remarkable that it makes the sketch uncharacteristic.

Occasionally the contrast between Mr. Hoar's optimism and his facts produces effects of which he evidently himself does not dream. Thus, President McKinley is said to have had a "lofty and beautiful character"; and "a very high place in history among the best and ablest men of the country" is predicted for him. He was a man of sentiment, too, and felt cruelly the breach which his foreign policy made between himself and the author:

"When I saw President McKinley early in December, 1898, he was, I suppose, committed to the policy to which he adhered. He greeted me with the delightful and affectionate cordiality which I always found in him. He took me by the hand, and said: 'How are you feeling this winter, Mr. Senator?' I was determined there should be no misunderstanding. I replied at once: 'Pretty pugnacious, I confess, Mr. President!' The tears came into his eyes, and he said, grasping my hand again: 'I shall always love you, whatever you do.'" (Vol. 2, p. 315.)

But when we come to inquire into the cause of Mr. Hoar's love and veneration for Mr. McKinley we are a good deal puzzled, for the accounts given of his *acts* are not such as to warrant any such opinion as is here expressed of his political character. His foreign policy is painted as the abomination of desolation, and the chief instrument of it in his management of domestic politics appears to have been wholesale corruption of the Senate:

"He made what was before but an individual and extraordinary instance, a practice. If that practice continues, it will go far, in my judgment, to destroy the independence and dignity of the Senate. That is, the appointment of members of the Senate to distinguished and lucrative places in the public service, in which they are to receive and obey the command of the Executive, and then come back to their seats to carry out as Senators a policy which they have adopted at the command of another power," etc. (Vol. 2, p. 47.)

This is reinforced by what Mr. Hoar says of the Spanish treaty: "The treaty would have been lost, in my opinion, if Senator Gray, one of the commissioners who made it, who earnestly protested against it, but afterwards supported it, *had not been a member of the commission*" (Vol. 2, p. 110). Are these the lineaments of a patriot President who is to occupy a high niche in the temple of fame, and whose beautiful character is to lead him to shed a memorable tear over the thought of the separation of his path of duty from the author's? Of minor characters, the multitude of sketches in which the book abounds sometimes resemble those notices of the deceased printed by clubs, in which the determined effort to be kindly ends in nothing but the commonplace. To take Mr. Hoar's word for it, the world in which he has lived, whether at Worcester or at Washington, has been a world of very remarkable men. But his method is not adapted to convincing us of it.

Every one has looked into this book to see how the author refutes the charge of sacrificing conscience to partisanship, without being much enlightened on the subject. It is evident that Mr. Hoar is a very conscientious public servant. He has represented Massachusetts at Washington so long that he has become the survivor of an earlier period of the republic. He began life under the shadow of Webster and Choate; he shared in the founding of the Republican party; he lived through the Reconstruction period. He has been faithful, zealous, industrious, and honest, and he has never hesitated to denounce the errors of his own party. His denunciation of the corruption of the Grant régime, which he reproduces here, rang through the country; his denunciation of the present colonial policy has been equally trenchant; he fought the Butler movement in Massachusetts without gloves. But he cannot leave the Republican party, and thinks that he has accomplished more by remaining in it than he could have accomplished by leaving it. Perhaps he is right, but he does not seem to perceive that his is an isolated case, and has little bearing on the question of conscience as it presents itself to the rank and file, or to persons holding high office outside the State of Massachusetts. Owing to a variety of circumstances not existing elsewhere, he has been allowed by his State to be a quasi-independent at Washington, but at the price of "regularity." This regularity has meant that he has had systematically to *dissuade* any one from leaving the party. In any other State he would have been turned out of his party and the Senate. But his attitude cannot be imitated by any ordinary voter. The latter has no part to play in the Senate or House; he only has a vote with which to act, and his only way to manifest his dissatisfaction with his party is to stay away from the polls or to vote for the opposing party. In theory, we know, he may go to the primaries, and secure the improvement of his party by action there, but this, in nine-tenths of the country, is mere theory. Consequently, for the ordinary voter, the only way to reprobate Blaine's candidacy was to vote for Cleveland (Mr. Hoar probably had no difficulty here, for he had a high opinion of Blaine), and many people thought in the last election that the most effective way of supporting Mr. Hoar's views was by voting for Bryan. But Mr. Hoar is bound by an unwritten law to dissuade people from doing anything of the kind. He says to the voter: "Look at me. Do I leave the party? Not a bit. I am independent with-

in the party. Go thou and do likewise." To be entirely conscientious, Mr. Hoar should have urged people to vote as their consciences dictated, and welcomed their desertion from a party—even his own—whose policy he denounced. This is what his exemplars, Chatham and Fox, did. They did not throw up their seats in the House of Lords and House of Commons, but, while denouncing George III.'s acts, encouraged his opponents not merely to vote against him, but even to take up arms. Had Mr. Hoar followed in their footsteps, he would been sent home to Worcester long ago. This is the point at which admiration of his good qualities is dampened by the reflection that he has never given the highest proof of disinterestedness. To say that he has a conscience and does not obey it, is a libel. To say that he has a conscience, but obeys it only to a certain point, is true. That this point is just on the line that self-interest also indicates, is always a misfortune for a good man; and so Mr. Hoar has found.

Mr. Hoar's defects as a writer of autobiography are apparent, and they obscure the real merits of a man who has grown gray in the public service. Thirty-eight years is a long time for any man to serve the State, and his honors have all come to him unsolicited. He says with justifiable pride that, in the many cases in which he has taken a position opposed to his party, he has been justified in the end; so that he has good ground for believing that the result will be the same with regard to the Philippines. He occupies to-day a very singular position in being one of the few men left in the Senate who have real convictions, and, above all, the fundamental conviction that it is the duty of a member of a legislative body to declare his honest opinions and be governed by them. He is, in other words, an old-fashioned representative of a State, such as all Senators once were, and neither the paid employee of the Executive nor the agent of a machine, guided by a boss, and looking elsewhere for his conscience and his mind. In his kindly old age he likes to think that the Senate is still a body of representatives such as he knew it to be in his youth; but no one else thinks so. To everybody but himself he is an isolated figure; if any one familiar with Washington as it is wishes to know how isolated, let him read his "fish-ball" letter—the best bit of autobiography in the book—in which he tells a journalistic libeller how he lives and works. Poor, where others have grown corruptly rich; outspoken, where others have profited by a time-serving silence; industrious in old age as in youth; a good deal of egotism and partisanship will be pardoned to him as long as he lives.

Like all partisans, Mr. Hoar is very much disposed to casuistry. Like all lawyers, he is apt to come to a public question as if he held a brief on one side or the other. Like many Republicans who would sixty years ago have been Whigs, he has no very well-defined economical or Constitutional principles. He seems to have been taken in, as so many leading men in Massachusetts were, by "bimetallism," and he has never had in the Senate the weight of lawyers like Edmunds or Fessenden. He avows himself the author of the unfortunate Anti-Trust law falsely attributed to John Sherman, and seems to be proud of it. His skill, mainly dialectical, is frequently employed in making the worse appear the better reason. He comes out very triumphantly on the question of "packing" the Supreme Court to reverse the decision in Hepburn vs. Griswold; but it is to our mind a barren triumph. How could the court have been packed, he asks, to reverse a decision when both Grant and his Attorney-General affirm that they had no knowledge of the decision, or what it would be, before it was announced? This is very effective as a reply to critics who maintained that Messrs. Strong and Bradley were selected for the purpose of *reversing the decision;* but it does not at all affect the fact that, as many have believed, they were selected in great measure because of their known views on the question of the Constitutionality of the Legal-Tender law. This difficulty must have occurred to Mr. Hoar (though he does not say so), for he dwells strongly on the only possible alternative—that the two judges were selected solely because of their professional eminence, and fortifies himself by a declaration that, since Marshall, no judge greater than Justice Bradley has sat on the bench. The impression of those who differ from Mr. Hoar is that Messrs. Bradley and Strong's chief recommendation was not any extraordinary ability or repute, but that they were likely to be "sound" on this question. Of course this is not the same thing as "packing" the Supreme Court to obtain the reversal of a decision already rendered, but we think that the appointment of the two judges was open to criticism as a blow at the independence of the court. Mr. Hoar, having refuted the original charge, winds up with a denial that there was "any evidence" that the appointments were made even because of their "possible effect" on the fate of the Legal-Tender law. But the evidence, if any, consisted in part in the professional standing of the new judges. If it is true that Grant and the Attorney-General saw them to be a Marshall and a Story in embryo, and they really turned out so, there is nothing more to be said. We doubt very much, however, whether a Marshall and a Story would have allowed themselves, under the circumstances, to be parties to a reopening of the case. We may add that, at the time, no one would have imagined that either Mr. E. R. Hoar or Grant was incapable of thinking of the "possible effect" of the appointment of these judges on the fate of the Legal-Tender law.

TURGENEFF AND HIS TRANSLATORS.

The Novels and Stories of Iván Turgénieff. Translated from the Russian by Isabel F. Hapgood, with an introduction by Henry James. In fifteen volumes. Scribners. Vols. i.-vi. 1903.

The Novels of Ivan Turgenev. Translated from the Russian by Constance Garnett. In fifteen volumes. The Macmillan Co. 1894-99.

Among Russian writers, Tolstoy deservedly and almost without dispute holds first place. Of the other Russian novelists only Turgeneff has achieved enduring fame among English readers. Dostoyevski and Gogol are known to comparatively few. Gorky has attained great popularity, but whether his present fame will be lasting is open to grave doubts. But Turgeneff, with no intense moral convictions to appeal to our Puritan instincts, with no novel ideas of social reform to excite popular interest, as in the case of Tolstoy; with no picturesque personal history to arouse our curiosity, as in the case of Gorky, has gained both in England and in America an audience fit and not few, by the purely artistic excellence of his work. Twenty years have now passed since his death, and this audience seems to be still increasing. The appearance of an American edition of his collected novels and stories, so soon after the completion of the version by Mrs. Garnett, is a proof that the publishers have confidence in the good taste of the American public, rather than an additional tribute to Turgeneff's fame.

It is of the utmost importance that so great an author as Turgeneff should be well translated into English. On the one hand he makes relatively small demands on his translator's knowledge of Russian. He uses few baffling popular idioms, little slang, little "dialect." He differs from Gorky much as Goldsmith differs from Kipling. His easy, flowing diction makes his novels suitable text-books for beginners in Russian. On the other hand, a translator of Turgeneff should himself be a master of English style. For Turgeneff, like the French writers whom he admired and from whom he drew inspiration, loved style for its own sake; an artist by nature, he made perfection of æsthetic form an end in itself. No harsh, discordant note offends us in his simple yet poetic prose.

This special grace of Turgeneff, we must freely admit, rarely appears in either of his recent translators. Both Mrs. Garnett and Miss Hapgood know Russian well, and each makes an ordinarily faithful version. Both usually write simple and idiomatic English, but neither produces work of marked literary excellence. The two translations are, then, of essentially the same character. Their differences become evident only on detailed comparison. The present writer has read through 'A Nobleman's Nest' (Miss Hapgood's title; Mrs. Garnett's is 'A House of Gentlefolk') and three sketches from the 'Memoirs of a Sportsman' (or 'A Sportsman's Sketches') in the Russian, and compared the text with both translations wherever the rendering seemed likely to present some difficulty.

Mistakes of the sense are not hard to find in either version. In cases like the following, Mrs. Garnett is apparently misled by a lack of familiarity with Russian customs and scenery:

Hapgood.	Garnett.
—to whom he was related as co-sponsor at a baptism (iv., 56).	—to whom he happened to be godfather (ii., 54).
—the long strips of turf between the cultivated sections (iv., 109).	—the long hedgerows (ii., 109).
—the room for the holy pictures, a tiny chamber, with bare walls and a heavy shrine of images in the corner (iv., 115).	—a picturesque little room, with bare walls, and a heavy case of holy images in the corner (ii., 115).

In the first case Mrs. Garnett may have been led astray by Alexandroff's dictionary. In the second passage, Turgeneff's "boundary-lines" (*mezhi*) may have been either strips of turf or deep furrows; they cannot have been hedgerows. Here Mrs. Garnett transfers the scenery of merry England to the broad, mournful steppes of Russia. In the third citation, aside from any reference to Russian customs, the fan-

tastic quality of Mrs. Garnett's phrase should have attracted her attention.

At other times Mrs. Garnett has made careless slips or has failed to understand the Russian.

Hapgood.	Garnett.
—the old man . . . tossed about for a long time (iv., 228). "But set thy joints! to that end thou art a human being, a man; thou hast no need to borrow energy!" (iv., 144).	—the old man . . . kept muttering a long while (ii., 230). "Well, it's for you to straighten yourself! What's the good of being a man, a male animal?" (ii., 145).

In the first case Mrs. Garnett confuses *vorochalsya* (tossed about) with *vorchal* (muttered). In the second she omits a difficult phrase and mistranslates what she attempts.

Miss Hapgood apparently makes fewer errors of the first class. But we read:

Hapgood.	Garnett.
—a wealthy distiller (iv., 141) —a short, snuff-colored frock-coat, with a sharp-pointed collar (iv., 153).	—a spirit-tax contractor (ii., 142). —a rather short snuff-colored coat with a swallow-tail (ii., 154).

In the first case Mrs. Garnett translates the noun correctly, though "farmer of the spirit tax" would be better; but she carelessly omits the adjective "wealthy." Miss Hapgood's translation of *frak* by "frock-coat" instead of "dress-coat" is repeated in another place (iv., 249), and there Mrs. Garnett (ii., 253) unfortunately falls into the same error.

Mistakes of the second class are not infrequent in Miss Hapgood.

Hapgood.	Garnett.
"She is a modest, modest creature," — she thought—"and exactly like a young girl still" (iv., 257).	"She is humble, very humble," she thought, "but still she is a lioness" (ii., 261-2).
To be young, and be able to do a thing — that can be borne; but to grow old, and not have the power—is painful (iv., 156).	To be young and to fail is bearable; but to be old and not be successful, is hard to bear (ii., 157).
—a dull, but quivering voice (iv., 277).	—a low but startlingly impressive voice (ii., 282).
No one knows, no one has seen, and no one ever will see, how that which is called into life and blossom pours forth and matures grain in the bosom of the earth (iv., 203).	No one knows, no one has seen, nor will ever see, how the grain, destined to life and growth, swells and ripens in the bosom of the earth (ii., 204).

In the first citation Miss Hapgood has read *devitsa* (young girl) instead of *l'vitsa* (lioness), an easy mistake, since "d" and "l" look much alike in the Russian alphabet. In the second case, neither translation is satisfactory, Miss Hapgood's becoming nonsense through the accidental omission of a negative. A better rendering would be: "To be young and not know how is bearable, but to grow old and lack strength is a grievous thing." The concluding quotations from Miss Hapgood are plain mistranslations.

In 'A Nobleman's Nest' and 'A House of Gentlefolk' we have found almost exactly the same number of errors. In the 'Memoirs of a Sportsman,' however, Miss Hapgood's rendering seemed decidedly the more accurate. Perhaps we have said enough to show that while neither translator can lay claim to scientific precision, Miss Hapgood has on the whole a slight advantage over her predecessor.

One should not lay too much stress on these errors of detail. They can be entirely avoided only by the coöperation of several scholars, or by work "with the former translations diligently compared and revised." In the present case the latter method of work would presumably offend against the ethics of authorship, if not against the letter of the copyright law.

We remark, in passing, that Miss Hapgood has at last given us the correct translation of the title of the novel we have been discussing. Lavretsky, the hero, is cursed by his aunt, who foretells that he will never be able to build himself a nest, that he must wander all his life. The novel contains the fulfilment of the prediction. Hence the insufficiency of the titles, 'A House of Gentlefolk,' and 'A Nest of *Nobles*,' as the novel was called by Ralston. But the Russians, by a metaphor which becomes strained and poetic in English, often use *nest* in the sense of *home*.

A comparison of the English style of the two translations yields more definite results. At the first glance a reader notices Miss Hapgood's continual use of *thou* in her conversations. The Russians use the singular of the second personal pronoun in much the same way as the French and Germans, to express affection, familiarity, contempt, condescension. *Thou* had once the same sense in English, but the idiom is now as dead as any idiom can well be; not one among fifty readers of Chaucer or Shakspere notices the delicate shades of meaning expressed by it. *Thou* has a meaning for us only in religious, archaistic, or consciously rhetorical passages. Translators of French or German novels do not ordinarily use *thou* to render the conversational *tu* or *du*, and there is no reason for a different practice in regard to Russian authors. An example will illustrate:

Hapgood.	Garnett.
"Thou sayest that, my good sir, because thou hast never been married thyself" (iv., 10).	"You say that, my good sir, because you have never been married yourself" (ii., 8).

In Russian the singular pronoun helps to express an old lady's contempt for the town gossip. The slur could be reproduced in English only by a stage-direction. Again, one of Lavretsky's passing thoughts becomes grotesque in Miss Hapgood's version:

Hapgood.	Garnett.
"O how charmingly thou standest on my pond!" (iv., 155).	"Oh, how sweet you are, bending over my pond!" (ii., 156).

Aside from this peculiarity, we have noted in our reading of 'A Nobleman's Nest' some forty passages in which Miss Hapgood's rendering seemed less happy than that of her predecessor, and only a dozen in which the reverse was true. The 'Memoirs of a Sportsman' gave evidence pointing in the same direction, though by no means so emphatic. In general, Miss Hapgood's tendency is to translate too literally, foregoing English idioms. Thus:

Hapgood.	Garnett.
—"nothing affects thee any more than water does a goose" (iv., 41). "Well, new-ground, undried noblewoman" (iv., 59).	—it's all like water on a duck's back for you" (ii., 39). "Well, my upstart lady" (ii., 59).
—in the French language of girls' institutes (iv., 154).	—in boarding-school French (ii., 155).
The "system" bewildered the boy, introduced confusion into his head, squeezed it (iv., 71).	The "system" dazed the boy, confused and cramped his intellect (ii., 70-71).
—everybody was making haste to enjoyment, everything was whirling round in a sort of mad whirlwind (iv., 57).	—all the world was hurrying after pleasure, in a giddy whirl of dissipation, and his head had been turned by the black eyes of a bold beauty (ii., 56).

In each of these cases Mrs. Garnett's version is more faithful, though not so literal. In the last quotation, however, Miss Hapgood carelessly omits an important phrase.

On the other hand we have:

Hapgood.	Garnett.
—she lived in constant fear of something, never seemed to have had quite enough to eat (iv., 83).	She was always in a state of nervous agitation, seemed as though she were ill-nourished (ii., 82).

Here Miss Hapgood is more happy in phrasing, as well as more literal, than her English predecessor.

Finally, Mrs. Garnett seems to rise more often than Miss Hapgood to the possibilities of her subject, reproducing in English something of the simple eloquence of the original. Thus, in the following, Miss Hapgood's omission of a phrase is more easily pardoned than her unskilful construction of the whole passage:

Hapgood.	Garnett.
—after that meeting—she could hesitate no longer; she knew that she loved,—and had fallen in love honorably, not jestingly, she had become strongly attached, for her whole life (iv., 237).	—after that meeting, after that kiss—she could hesitate no more: she knew that she loved, and now she loved honestly and seriously, she was bound firmly for all her life, and she did not fear reproaches (ii., 240).

The sumptuous volumes of the American translation will be preferred by those who like specially made paper, fine letterpress, tasteful binding, and artistic illustrations. In preparing these last, Mr. Du Mond is evidently ready to sacrifice local color for the sake of artistic effect. Thus, in the frontispiece to 'A Nobleman's Nest,' he shows us Liza, fishing-rod in hand, standing by the pond, dressed in an extremely low-cut gown. In the frontispiece to 'Rudin' we see Natálya at her farewell meeting with the hero. The scene is a gloomy, solitary lake; the time, morning; yet Natálya wears a similarly low-cut bodice. A Russian girl would as soon walk about a country estate by day in such a costume as an American banker would go golfing in his dress suit.

To her translation Miss Hapgood adds brief explanatory notes. These are well done, and not overdone; they give real help to the reader. Their absence in Mrs. Garnett's version is to be regretted.

Mr. James, in his introduction to the American edition, gives a charming though somewhat sleepy picture of Turgeneff as he appeared to his foreign friends and acquaintances during the later years of his life in Paris. The essay is the more welcome as it approaches Turgeneff from a point of view seldom taken by other critics. Mr. James further characterizes well some artistic peculiarities of Turgeneff's novels. He says nothing of the events of his life, and frankly renounces any attempt to treat of his position in the history of Russian literature, as of the moral and social tendencies which find expression in his stories. This defect Miss Hapgood partially supplies by her introductions to the separate novels. Those in the volumes before us are generally truthful and discreet, though we may quarrel with such a statement as: "Turgénieff was, evidently, of the opinion that there was no place or work for such people as Lavrétzky in Russia" (IV., viii.). Stepniak, in his introduction to Mrs. Gar-

nett's translation (II., v.-xvii.), takes the opposite view, quite correctly, we think. Miss Hapgood's introductions sin most by brevity, and by the assumption of too much knowledge, on the reader's part, of Russian life and thought. Thus (IV., vii.), she refers briefly to "slavyánophilism" (a needless substitution for the ordinary form "Slavophilism"), without explaining the nature of the movement.

It is unfortunate that Turgeneff's critical essays, reminiscences, and correspondence are apparently not to be included in this new edition. They add much to the proper understanding of his work; are, indeed, indispensable to those who wish to study him carefully. Furthermore, his essay on "Hamlet and Don Quixote" is a contribution to the critical literature of the world.

The Ambassadors. By Henry James. Harper & Brothers.

In many of Mr. James's novels Americans abroad are important figures, but it is long since he has permitted his wandering compatriots to occupy the scene so exclusively as they do in 'The Ambassadors.' The superficial differences between Americans and Europeans, so sharply defined in his earlier books, are in his latest one but lightly indicated; yet an enduring fundamental difference of natural outlook and attitude towards life is much more elaborately and profoundly studied. Thus, there is a tacit recognition of a modification of American asperities, or, at least, peculiarities, wrought by a generation of pretty intimate association with peoples whose manners are as good as, perhaps better than, their morals.

The Ambassadors in Paris excite neither curiosity nor surprise by their outward seeming, and something more than mere acquaintance would be necessary for a Parisian to discover the abiding foreignness of the inward breast. What comes out strongly in the earlier books is the effect, the upsetting effect, produced on Europe by Americans, their looks, their ways, and their money; but the great thing in the latest one is the effect of Europe, specifically of Paris, on the Ambassadors—the way Woollett standards of thought, of conduct, even of abstract right and wrong, are, temporarily at least, infected and impaired by actual agreeable contact with the way things are thought and felt and done in Paris.

Chad Newsome, during a prolonged voluntary exile from Woollett, took on a wonderful exotic air. The chief Ambassador, Lambert Strether, meeting Chad at the opera, is amazed at the ease, the grace, the external perfection of one whom he remembered as looking bold and wild. But as soon as Strether penetrates the surface, he recognizes his own; he knows that this dazzling vision is "only Chad," to which incontrovertible fact, sometime, far off perhaps, but surely in the end, Mme. de Vionnet would be sacrificed. The mission of Strether, who has issued forth from Woollett with credentials from an anxious mother, is to investigate Chad, to find out what sinister influences keep him in Paris, deaf to repeated maternal calls for his return. Strether is empowered to remonstrate with Chad, to cajole, to threaten, to bring him, no matter by what means, back to Woollett, to the flourishing industry which he has inherited, and which, with the benefit of his personal attention, is destined to become even more flourishing. The mission of the subsequent Ambassadors, Chad's own sister, Sarah, and her husband, Jim Pocock, is to find out what keeps Strether in Paris, to call him to account for neglect of official duty, for comprehensive failure, both as an ambassador and as a man once thought worthy of Mrs. Newsome's confidence, with whom she had gone so far as to express a willingness to share her declining years and the fortune of the late Mr. Newsome.

Woollett has always supposed that the sinister influence holding Chad in bondage is female—a supposition soon verified by Strether; but the verification, the recognition of some sort of a binding relation between Chad and Mme. de Vionnet doesn't help Strether to do his duty; it only provides him with confusing impressions, with endless contrasting and conflicting thoughts, feelings, and speculations, all serving rather to emphasize the wrongness of Woollett's judgment than the correctness of its gross suspicions. There had probably never been a time when Strether could have shuffled off a moral inheritance with the clever cynicism of his ambiguous cicerone, Miss Gostrey, or the indifference of the all-wise "Little Bilham." No! he could never have said, Evil be thou my good. At all events, the opportunity to deny his fathers' gods came too late. At fifty-five the best and the worst he could get out of Paris was a feast for a starved impressionability, a sensation from a woman of inexpressible charm which lifted her above the censure of Woollett, shamed the purpose of the embassy, and almost cast a halo round the treason of the ambassador. Sarah Pocock let him know that he had been guilty of treason, and made short work of the halo. Chad had tried to divert Sarah from her mission, from his own delinquency and Strether's, by treating the Pocock minatory expedition as if it were a family pleasure party. But though the lady graciously accepted attention, and though Jim succumbed at once, Strether knew in his guilty heart "that treating her handsomely buttered no parsnips; and that in fine there were moments when she felt the fixed eyes of her admirable, absent mother fairly screw into the flat of her back." On the day when the screw touched her marrow, she fell upon Strether. She put it to him straight—all the culpability of his condonation of Chad's hideous conduct; all the weakness of his surrender to Mme. de Vionnet and the blackness of his defence of that person, "when the most distinguished woman we shall either of us have seen in this world [Sarah's admirable mother] sits there insulted in her loneliness by your incredible comparison." Thus did Sarah sweep the cobwebs from Strether's brain, and force him to suspect that Chad's relation with Mme. de Vionnet involved an irreconcilable difference between Woollett and Paris. When he came more clearly to perceive how much he had been caught in a net, how much, perhaps, bamboozled by delicacy and grace conceivable only in the blameless, he understood at least that he was inevitably and by the nature or things committed to Woollett, and that he must go back to its dulness and its decency, its (humanly speaking) ghastly emptiness.

In the course of the story Strether [illegible] "Little Bilham" a pointed question about Chad and the De Vionnets, mother and daughter. "I can only tell you," answers that youthful master of equivocation, "that it's what they pass for. But isn't that enough? What more than a vain appearance does the wisest of us know? I commend you the vain appearance." This answer suggests the substance of what seems to be Mr. James's theory of realistic representation. He strives constantly for the vain appearance. His plan of campaign is to show how an incident or train of incidents appears to one or two or twenty people, what each makes out of the complication, and how his interpretation affects his feeling, judgment, conduct. In life nobody ever knows (except by direct revelation or accident) the truth about anybody else, or exactly understands a situation in which he is not directly involved. But we are all always interested observers of other people, very keen about their affairs, guessing, implying, inferring. By delineating interested observers thus pleasantly engrossed in an interesting situation, Mr. James tries for very extended realistic representation, and very difficult, because part of his task is, through his various readings of the vain appearance, to show the truth, or, at least, to indicate the greater probability. In 'The Ambassadors' he permits an accident to reveal to Strether coldly and hardly a truth about which in the gray afte[illegible] of Woollett he might have contrived [illegible] certain a solacing doubt. We regret [illegible] definite a declaration, not only for poor dear Strether's sake, but also because it somewhat discredits a theory so admirably justified up to that point. After Sarah Pocock's onslaught, all the impressions are recorded, all the evidence is in. Strether and any readers who might still waver about a verdict should, we think, have had the chance. For ourselves, the vain appearance suffices, and we therefore offer for contemplation a possibly grave, certainly new, fault in Mr. James—that of having been too explicit.

The Life and Letters of Margaret Junkin Preston. By Elizabeth Preston Allan. Boston: Houghton, Mifflin & Co. 1903.

Mrs. Preston was known to a former generation of readers of poetry through several small volumes of verse, and a considerable number of contributions to magazines, which showed a more than common depth of feeling and gracefulness of expression. In the comparatively short list of men and women of the South who have deserved literary distinction, she holds an honorable place for poetic talent. But the story of her life which her stepdaughter, Mrs. Allan, presents, will probably interest the larger number of readers on account of its "Journal of the War Times" written in Mrs. Preston's town of Lexington, Virginia, which occupies many pages of this memoir. Mrs. Preston was the daughter of the Rev. George Junkin, for some time President of Lafayette College, Easton, Pennsylvania, who for the thirteen years just preceding the outbreak of the Civil War was at the head of the Washington College (now Washington and Lee University) to which Gen. Robert E. Lee came as President after the downfall of the Confederacy. Her husband, [illegible]om she married in her m[illegible]ia

Military Institute, where "Stonewall" Jackson was teaching mathematics when the family of the Rev. Dr. Junkin arrived in Lexington. It is, then, in that little Lexington world, tributary in so many ways to the fame of the Southern army, that the central interest of the biography lies.

Jackson married Miss Eleanor Junkin who appears to have had much to do in the formation of his severe religious temper, especially in the direction of Sunday keeping, although their married happiness was cut short by Mrs. Jackson's death a little more than a year after their union. The Junkins were descendants of Scotch Covenanters, and, therefore, bred in an austere Calvinism; but Lexington, too, was full of old Scotch-Irish families, so that the germs of his subsequent pious zeal were undoubtedly quite ready to be quickened into overmastering vigor before Jackson met the woman whose influence remained a holy memory to his death. Upon their wedding journey Jackson spent a Sunday afternoon in witnessing a militia drill, and was gently remonstrated with by his wife for secularizing sacred time, whereupon he promised to give a thorough consideration to the Sunday question, with the result of a state of conviction which had, among its many illustrations, this singular instance. When, in the winter of 1861-2, he ordered an expedition for breaking the Chesapeake Canal at Shepardstown, he hastened a special messenger after the expedition to command that a new stock of powder should be secured to replace some which had been necessarily collected by the officers of the party on Sunday.

The few of Jackson's letters here printed are confined simply to domestic matters; but Major (afterwards Lieut.-Col.) Preston, as commandant of the Military Institute, was often ordered to critical points with his cadets, and wrote many impressive accounts of occurrences, perhaps the most important being his narrative of the hanging of John Brown in December, 1859. The story of Brown's imperturbability during the execution will always be read with the deep admiration for the man which Major Preston could not suppress.

"The wagon drove to the foot of the gallows and Brown descended with alacrity and without assistance, and ascended the steep steps to the platform. His manner was free from trepidation, but his countenance was not without concern, and it seemed to me to have a little cast of wildness. He stood upon the scaffold but a short time, giving brief adieus to those about him, when he was properly pinioned, the white cap drawn over his face, the noose adjusted and attached to the hook above, and he was moved blindfold a few steps forward. It was curious to note how the instincts of nature operated to make him careful in putting out his feet, as if afraid he would walk off the scaffold. The man who stood unblenched on the brink of eternity was afraid of falling a few feet to the ground.

"He stood for ten or fifteen minutes blindfold, the rope around his neck, and his feet on the treacherous platform, expecting instantly the fatal act. But he stood for this comparatively long time upright as a soldier in position, and motionless. I was close to him, and watched him narrowly, to see if I could perceive any signs of shrinking or trembling in his person. Once I thought I saw his knees tremble, but it was only the wind blowing his loose trousers. His firmness was subjected to still further trial by hearing Col. Smith announce to the sheriff, 'We are all ready [illegible] Campbell.' The sheriff did not [illegible] comprehend, and in a [illegible] But the culprit still stood steady until the sheriff, descending the flight of steps, with a well-directed blow of a sharp hatchet severed the rope that held up the trap-door.

"In all that array there was not, I suppose, one throb of sympathy for the offender. All felt in the depths of their heart that it was right. On the other hand, there was not one word of exultation or insult. From the beginning to the end all was marked by the most absolute decorum and solemnity."

Although the older heads of Lexington shrank from the possibility of war which some of them, Major Preston among them, felt would end in disaster to the South, yet the College and Institute youth were, many of them, from the hotbeds of secession, and the war spirit inevitably waxed furious. In the early days of 1862, Mrs. Preston's journal records:

"War is destroying and paralyzing all before it. Our schools are closed, all the able-bodied men gone, stores shut up, or only here and there one open. The college has five students, boys too young to enter the army; the Institute is full, 250 cadets being in it. For months we have had no service at night in any church in town, to save lights and fuel. We hesitate about engaging in anything. Is it worth while to have a garden made? We may be flying before an advancing Federal army before many weeks. One thing is a matter of general surprise, the entire quietness and subordination of the negroes. We have slept all winter with the doors of our house, inside and outside, all unlocked; indeed, the back door has not even a hasp upon it and stands open, and some $600 worth of silver, most of it in an unlocked closet, is in the dining-room. There is not, and never has been, a particle of fear of anything like an insurrectionary movement."

With the inflated prices which followed this distress, it is noteworthy that the price of negroes also rose: "A young girl sold on the street the other day for a few dollars short of $2,000. Heard of a not at all likely woman of forty and her two babies selling for $3,000."

Each hour brought tidings of the death in battle of the men of that community, many families had four or five sons in the army, none were exempt from some male contribution, and the atmosphere was of constant fear and sorrow. The long-looked-for Federal invasion did not come till the summer of 1864, but then the Institute was burned and every building which was related to its existence, while houses were ransacked for food or articles tributary to the continuance of the war. Col. Preston's losses left him from comparative affluence a poor man. Yet amid all this tragedy and with eyes too delicate for much use, with, moreover, the cares of a large household pressing upon her with its traditions of hospitality to an extensive family connection, Mrs. Preston snatched some moments for her poetry, although now it was mostly of the sort which moved the patriotic heart of the Confederate soldiers to courage and patience.

After the subsidence of the war tempest, life at last settled down into serene enjoyment not alone of her personal friends, but of those who knew her only through her verses. As an inside view of the ante-bellum condition of cultivated Southern society her story is valuable.

The Journal of Montaigne's Travels. Translated and edited by W. G. Waters. E. P. Dutton & Co. 1903.

The three pretty volumes of this version of Montaigne's impressions of German and Italian travels form a welcome addition to Mr. W. C. Hazlitt's revision of the 'Essays' translated by Cotton, and noticed in these columns some months ago. Comparatively few of the essayist's devotees at the present time know more of his entertaining wanderings than can be gathered from Sainte-Beuve's study in the 'Nouveaux Lundis'; and Mr. Waters is therefore to be congratulated on his reintroduction to current literature of a narrative of singular value to the student of bygone manners, and indispensable to a complete knowledge of the great writer's character. It might be wished that a fair proportion of contemporary translations showed an equal measure of sound knowledge and critical taste; for, in this instance, common difficulties were increased by the fact that about one-half of the work was dictated to an amanuensis, while in much of the remaining part undertaken by Montaigne in person the language used was Italian. To preserve a uniform evenness of tone, and, at the same time, to convey in the English rendering an unobtrusive quaintness of style, is under such conditions no trifling achievement. Examples of the points here noted are to be found in the account of German housekeeping (I., 129), the varied impressions of Rome (II., *passim*), and the very lively sketches of the valetudinarian's life at Bagni di Lucca (III., 37). An accurate introduction, of twenty-four pages, condenses explanation into useful and compact limits.

On Montaigne as a traveller among books our readers assuredly need no commentary; but not many would suspect that in the studious country gentleman there also dwelt the stuff of a genuine tourist, alive to all novelties, catholic in sympathies, infinitely cheery as a companion, and indefatigable in activity. That his reflections are free from the "easy insignificance of thought" that marks the hasty generalizer will surprise no one. In these wanderings of his, which carried him across France to northern Switzerland, through Bavaria to the Tyrol, and by way of the Brenner to Italy, he is incessantly on the alert, taking notes on institutions, customs, persons, and things—in short, on the very life and spirit of the communities he visits; he even does not shirk recording his impressions of local dainties tasted by the way: "[At Lindau] they serve with the meat cooked plums and slices of apples and pears, sometimes putting the roast first and the soup last, and sometimes reversing this order" (I., 108). The German practice of compote with roast is apparently no new thing. Montaigne has a tolerant palate for the uncanny, and harbors no suspicion of foreign cooks

"Who serve up death in soups and fricassees."

Surely, in a middle-aged sufferer on his way to medicinal springs, such generosity of appreciation is, to say the least, uncommon. And the humorous interest with which he accepts changes in rooms or beds is quite in keeping with his prevailing mood:

"In France, indeed, it would be deemed an intolerable nuisance to find nothing wherewith to close the window openings but wooden shutters. With this one exception my bedchamber [at Lucca] was well found, though their beds are wretched little trestles, upon which they place pieces of wood, fashioned according to the length

and breadth of the bed, a palliasse being laid on these, and a mattress over all. Then you may sleep well enough if only you have hangings. . . . They are comfortable to lie in, and you are safe from bugs" (III., 51).

Scenery for its own sake, as might well be expected, occupies a secondary place in Montaigne's observations; still, it is worth while contrasting his sketchy description of the trip over the Brenner with Addison's record, one hundred and twenty years later, of what he calls "Mount Cennis." The French traveller needs no help from Silius Italicus.

In graver mood, the humane philosopher adopts the strain of reflective solemnity of his best days:

"M. de Montaigne affirmed that he could now see nothing more of Rome than the sky under which it lay and the area of its site; that all the knowledge he possessed thereof was of an abstract and contemplative nature, a knowledge in no way to be apprehended by the operation of the senses; that those who affirmed that they might at least behold the ruins of Rome affirmed too much. The ruins of a mechanism of such terrible power suggested to his own mind reverence and respect rather than comprehension. What he saw was nought but a sepulchre. The world, resentful at her long domination, first broke and shattered all the portions of this marvellous whole, and then, horror-stricken at this spectacle of death, ruin, and disfigurement, entombed the ruins themselves. As to these minor indications of her overthrow which yet lie upon her bier, they have been preserved by fate as a testimony to that immeasurable greatness which all these centuries, all these conflagrations, all these repeated alliances of the powers of the world, have failed to destroy entirely" (II., 95).

To read such noble lines as these is to deepen one's reverence for a mind that so truly felt the past, and to be gratified that his thoughts have lost nothing through their passage into another tongue.

Records and Reminiscences. By Lord Ronald Sutherland Gower. Charles Scribner's Sons. 1903. Pp. 624.

There is a certain restaurant in Paris, noted for the cooking of ducks, where the duck is cooked on the table and the carcass squeezed in a press in order to extract a supposititious subtlety of flavor. The traveller who has indulged in this luxury returns to his hotel with a pleasing sense of certainty that he has acquired an intimate knowledge of the best side of Paris life—the inside, as it were. We imagine that Lord Ronald Gower must have dined at this restaurant and there been inspired with the admirable idea of squeezing out the best parts of 'My Reminiscences,' published twenty years ago, and of 'Old Diaries,' published last year, and thereby compounding the present 'Records and Reminiscences.' This looks like an attempt to apply the doctrine of evolution to literature, and, as such, is worth investigation.

In reviewing 'Old Diaries' last year we paid Lord Ronald the compliment of comparing him in certain respects to Horace Walpole, but at the same time we pointed out the fact that he seemed to take no interest whatever in political, social, literary, or economic questions, and that he confined his observations almost entirely to the hotels he lived in and the distinguished people he met. Finding that the present eclectic volume is open to the same objections, we venture to suggest that Lord Ronald hire a competent person to aid him in further and more scientific applications of the Spencerian theory. By this method he might produce a new volume every year, and the present six hundred pages would grow small by degrees and beautifully less in quantity, but constantly gain in quality, until they resolved themselves into a really valuable pamphlet, about the length of the average fashionable sermon.

With this idea in mind, we would hazard a few suggestions for next year's edition. To begin with, Lord Ronald had better omit the account of his mother's beauty, lest some rude person should remind him of Talleyrand's "C'était donc votre père qui n'était pas si bien." He might also omit quotations from Lord Beaconsfield's novels, which can still be obtained from the circulating libraries by those who really need them. Then, again, the family history might be curtailed with much advantage. Lord Ronald should certainly omit the several occasions on which he has been mistaken for a woman, because the note of effeminacy is sufficiently clear without them. Then, the extracts or adaptations from guide-books might be largely cut down, as also the interviews with celebrated people, in regard to which he naïvely remarks that they would be very interesting if he could only remember what the conversations had been about! The adoption of these suggestions would probably reduce the six hundred pages by half, but there would still be plenty of room for the operations of 1905, and we feel confident that Lord Ronald's literary reputation would be enhanced in the direct ratio of the reduction.

BOOKS OF THE WEEK.

Alken, Henry. The National Sports of Great Britain. New ed. D. Appleton & Co. $1.50.
Barrett, Joseph H. Abraham Lincoln and his Presidency. 2 vols. Cincinnati: The Robert Clarke Co. $5 net, postage 38 cents.

TWO GREAT HISTORICAL SERIES

"This admirable and scholarly series."—The Nation.

THE STORY OF THE NATIONS

A series of graphic historical studies presenting to the readers the stories of the different nations that have attained prominence in history.
Every volume is **an original work prepared especially for the series** by a writer acknowledged by scholars to be **an authority on the special subject treated.**
The volumes are printed in good readable type in handsome 12mo form. They are adequately illustrated and furnished with maps and indexes. They are sold separately.

Nos. 1-61, cloth, each $1.50; half leather, each, $1.75. Nos. 62 and following, cloth, net, each, $1.35; half leather, net, each, $1.60 (Postage, 15c.)

"Such a universal history as the series will present us with, on its completion, will be a possession such as no country can boast of."—LONDON CHRONICLE.

By MARY BATESON, Lecturer of Newnham College.

HEROES OF THE NATIONS

A series of biographical studies of the lives and work of representative historical characters, about whom have gathered the great traditions of the nations to which they belonged, and who have been accepted in many instances as types of the several national ideals.
The life of each hero is given in one 12mo volume, handsomely printed in large type and fully illustrated. They are sold separately.

Nos. 1-32, cloth, $1.50; half leather, $1.75. Nos. 33—and following, cloth, net, $1.32; half leather, net, $1.60 (Postage, 15c.)

VOL. LXXVIII—NO. 2015. THURSDAY, FEBRUARY 11, 1904. PRICE TEN CENTS.

Public Library

A Few February Books **SCRIBNERS**

A NEW BOOK BY DR. BRIGGS

NEW LIGHT ON THE LIFE OF JESUS

By CHARLES A. BRIGGS, D.D. $1.20 *net* (Postage 11 cents).

In this volume Dr. Briggs sets forth a new order of the events and teaching in the life of Jesus, in the light of which a large proportion of the disputes as to the harmony of the Gospels disappears. The result is revolutionary so far as modern opinions are concerned; but actually the results are conservative, being in the main a return to ancient opinions. The composition of the various Gospels also becomes much easier of explanation and the entire subject acquires new results. The book is not technical, and it has been so written as to make it useful and interesting to all intelligent persons.

INTRODUCTION TO CLASSICAL LATIN LITERATURE

By Professor William Cranston Lawton, author of "Introduction to Classical Greek Literature." Illustrated, $1.20 *net.*

A new volume of THE LIBRARY OF ART

FRENCH PAINTING IN THE XVI. CENTURY

By L. Dimier. With forty illustrations, including photographs of almost unknown paintings in French Chateaux not heretofore reproduced. $2.00 *net.*

OLD TESTAMENT PROPHECY

By the late A. B. Davidson, D.D., Professor of Hebrew, New College, Edinburgh. Edited by Professor J. A. Paterson, D.D. $3.50 *net.*

Traces the rise, development and gradual extinction of Hebrew Prophecy.

KOREA

By Angus Hamilton. With a newly prepared map and many illustrations. $4.00 *net.*

A special interest attaches to this full and up-to date description of Korea and its people, by reason of the present international situation. The author was for two years the special correspondent of the *Pall Mall Gazette* in the Far East, and during his commission for that journal travelled throughout Korea, visiting the spheres of influence of the powers, treaty ports and concessions, and the country generally. The important facts of the present international complications are here prominently dealt with, as well as the more general facts of the country, its history, arts, customs, scenery and the like. The accompanying map must be regarded as of great importance just now.

THE LIFE OF EDWARD FITZGERALD

By Thomas Wright. 2 volumes, 8vo. $7.50 *net.*

Contains a very large quantity of entirely fresh matter, facts hitherto unknown, and anecdotes hitherto unrecorded. There are 56 illustrations, many of them being from rare prints and photographs and hitherto inaccessible oil paintings.

GODS AND FIGHTING MEN

By Lady Gregory. The story of the Tuatha De Danaan and of the Fianna of Ireland, arranged and put into English, with a preface by W. B. Yeats. $2.00 *net.*

"The translation and arrangement of this book are worthy to be put alongside of 'Cuchulain of Muirthemne.' These are books wherein the work is done supremely well."—W. B. Yeats.

FREEDOM AND RESPONSIBILITY

By ARTHUR TWINING HADLEY. 12mo, $1.00 *net* (postage 11 cents).

The *New York Tribune* says: "President Hadley's discussion of these themes is, throughout, on a high plane, worthy of him and of the great university he represents."

SENATOR HOAR'S AUTOBIOGRAPHY OF SEVENTY YEARS

Now in its Fourth Edition. Two volumes, $7.50 *net* (expressage extra).

GENERAL GORDON'S REMINISCENCES OF THE CIVIL WAR

Fifth Edition now ready. $3.00 *net* (postage 21 cents).

MME. WADDINGTON'S "LETTERS OF A DIPLOMAT'S WIFE"

First impression, May 4.
Second impression, July 27.
Third impression, September 2.
Fourth impression, September 16.
Fifth impression, October 29.
Sixth impression, January 15.

$2.50 net (postage 20 cents)

THE UNITED STATES IN OUR OWN TIME

COVERING THE PERIOD FROM 1870 TO 1903.

By E. Benjamin Andrews. 500 illustrations, large 8vo, $5.00. Minutely indexed.

THE STORY OF THE REVOLUTION

By Henry Cabot Lodge. A new edition in one volume, with all the illustrations (178 in number) of the original two volume edition. 8vo, $3.00.

A Noteworthy Series
REVISED EDITION OF ROLFE'S SHAKESPEARE

This most popular edition of Shakespeare is being thoroughly revised by Dr. Rolfe, and reset in new size. The page is made smaller, to adjust the volumes to pocket use. The Notes have been carefully revised, with some omissions and some additions. Many new helps to the student are included, and the new edition reflects the present state of Shakesperean criticism, as set forth by one of the foremost authorities. Nine volumes are now ready in revised form: ***Hamlet, Macbeth, Othello, King Lear, Julius Caesar, The Tempest, As You Like It, The Merchant of Venice,*** and ***A Midsummer-Night's Dream.*** Others will follow at short intervals.

Price, 56 cents each

Correspondence from those interested is cordially invited, and will receive prompt attention.

AMONG THE NEW MACMILLAN BOOKS ARE

By the Author of "Elizabeth and Her German Garden," "The Solitary Summer," "The Benefactress," etc., etc.

The Adventures of Elizabeth in Rügen

Ready Saturday, Feb. 13
Cloth, 12mo, $1.50

It is a book to delight in, as in the visit of some welcome friend who should relate with bits of capital description, unexpected turns of a sprightly fancy, and a refreshing lightheartedness, the amusing incidents of such a "joyous journey"—a leisurely drive from one to another of the odd little watering places on the island of Rügen.

Mr. EDEN PHILLPOTTS' *new novel*

The American Prisoner

A ROMANCE OF THE WEST COUNTRY.

By the author of "Children of the Mist," "The River," etc. It holds all the characteristic charm of the author's earlier books, is stronger dramatically, and presents a strong appeal in the freshness of its point of view. Its hero is one of the hundreds of American sailors held in the great prison on Dartmoor during the war of 1812.

Ready. Cloth, illustrated, $1.50.

A NOVEL OUT-DOOR BOOK

The Fat of the Land

By JOHN WILLIAM STREETER, M.D.,

who tells in this very readable "Story of an American Farm" exactly how the practice of intensive farming was actually conducted through seven years; and how others may do it on the same common sense business principles. Every word in the book is based on fact. *Ready. Cloth, 12mo, $1.50 net. (Postage 12c.)*

A NEW VOLUME IN THE **"AMERICAN SPORTSMAN'S LIBRARY,"** CASPAR WHITNEY, *Editor.*

The Sporting Dog

By JOSEPH A. GRAHAM

Lively sketches of the special breeds used by Americans in actual sport, with descriptions of notable individual dogs, directions as to training and care, and much good advice as entertaining as it is useful on the selection of shooting dogs. Special chapters deal with the pointer and setter families, hounds, spaniels, terriers, etc. Fully illustrated from photographs. Uniform with ROOSEVELT'S "The Deer Family," etc.

Cloth, gilt tops, 12mo, $2 net. (Postage 15c.)

EIGHT LOWELL LECTURES OF 1903.

The New Testament in the Christian Church

By EDWARD CALDWELL MOORE,
Parkman Professor of Theology, Harvard University.

367 pp. 12mo, cloth, $1.50 net. (Postage 11c.)

There is no other book in English which gives for the general reader the results of recent study of the origin of the literature known as the New Testament, and the growth of the attribution to it of scriptural authority.

Mr. HERBERT PAUL'S

new History of Modern England

To be complete in five volumes, octavo.
I. and II. now ready. Cloth, $5.

A direct and forceful narrative neither superficial nor warped by tradition. The two volumes now ready cover the years from the close of Peel's ministry to the death of Palmerston. They tell in a manner as illuminating as it is refreshingly straightforward the events of the Crimean War, the Indian Mutiny, and England's relations to the Civil War in this country.

By RICHARD GARNETT, LL.D., and EDMUND GOSSE, LL.D.

English Literature

AN ILLUSTRATED RECORD

Now complete in four vols., imperial 8vo.
Cloth, $24.00 net; half morocco, $40 net.

Illustrated with Color-plates, Photogravures, Wood Engravings and many Lithographic Facsimiles; also a large number of the best accredited Portraits of English Authors, Autographs, Title-pages, Caricatures, Facsimiles, etc.

A NEW VOLUME OF

The Cambridge Modern History

JUST READY. VOL. II.

Planned by the late LORD ACTON, LL.D., Regius Professor of Modern History in the University of Cambridge. Contributed to by the leading specialists in historical research.

To be complete in 12 vols., 8vo
each, $4.00 net. Now ready.

I. THE RENAISSANCE
II. THE REFORMATION
VII. THE UNITED STATES

By PETER ROBERTS
Author of "Anthracite Coal Industry."

Anthracite Coal Communities

A Study of the Demography, the Social, Educational and Moral Life of the Anthracite Regions.

387 pp. 8vo, cloth, $3.50 net. (Postage 20c.)

It answers a thousand questions as to the typical social and industrial conditions of the Anthracite coal communities—as to their population, the Slav employees, ways of living, educational apparatus, intellectual and religious life, their means of saving, the criminal element, charity, politics, and the general conclusions to be drawn.

THE MACMILLAN COMPANY, Publishers, 66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, FEBRUARY 11, 1904.

The Week.

The great and epoch-making event of the week has been the opening of active hostilities by Japan without formal declaration of war, but not until she had withdrawn her minister from St. Petersburg. Her justification for breaking off negotiations with Russia must be sought in her belief that that Power was playing for time when she inordinately delayed answering Japan's final note. A similar excuse for attacking the Russian fleet and defences at Port Arthur without warning will be alleged, in view of Russia's steady concentration of troops and ships in the vicinity of the disputed territory of Korea, and of the fleet on its way East via Suez. Of these arguments our readers will judge for themselves, while the origin of this deplorable conflict will be found set forth in our correspondence columns to-day from two widely separated sources. But as war tends to breed war, we must go back, on the one hand, to Japan's inoculation with militarism through her defeat of China in 1895, and, on the other, to Beaconsfield's "dishonest victory" over Russia in 1878, when he shut out her triumphant army from Constantinople and forced her into that Eastern expansion which has just brought her in collision with Japan. If something of contempt for "inferior races" has characterized Russia's bad faith with China and shuffling with Japan, she is likely to pay dear for it. Her staying powers are vast, but she is now fighting at arm's length and with a nimble antagonist thoroughly trained and prepared, with a veteran army and navy. As we go to press, Japan appears to have inflicted serious damage upon her enemy's battleships, and to have begun the rapid occupation of Korea.

M. Delcassé has made it clear that Russia must not count upon France as an ally in this war. And the Anglo-Japanese treaty, if the whole of it has been made public, does not apply. England bound herself to come to the aid of Japan only in case she were attacked by *two* Powers. It should be unnecessary to emphasize the duty of our own Government to be absolutely neutral; yet we cannot ignore the existence of an uneasy feeling at Washington and elsewhere. Only the other day reference was made in the Senate to the fact that counsels of interference—or, at least, of a "demonstration"—in the Far East had been urged upon the Administration. That way folly lies. We have no interest except to see that our treaty rights are safe-guarded during the war and after it.

There has hardly ever been a time when the financial situation was affected, as it is to-day, by so many striking causes at once. The war in the East, the Baltimore fire, the extraordinary results of speculation in cotton, coffee, wheat, and other agricultural products, have all to be taken into account. The effect upon the finances of the world from the war and the fire cannot be estimated; but one thing is clear—these events mean the destruction of hundreds of millions of wealth. With this capital actually wiped out, the lending capacity of the international money market is by so much restricted. This fact has to be faced; there is no getting away from it. The great losses so far taken in cotton are of a different order. No cotton has been wiped out of existence, but paper profits have risen and fallen in a most unusual manner. Wealth has merely changed hands—that is, been distributed on a new basis. The same was true of the stock-market collapse of last year. Temporary inconvenience was caused by the shifting of capital from one quarter to another, but the capital is still in existence, to be used for productive purposes. Taking all the extraordinary occurrences of the last week or two into account, the situation is one which calls for conservative action. For whether capital has actually been burned up, or has simply been redistributed on a wholesale scale, a very large number of persons who have been employing it will have less to spend in the future.

At last the President has won real support for his Panama *coup;* no mealy-mouthed allegation of treaties, no sentimental appeals to the general interests of civilization, but full-blooded sympathy with everything he did to the "dagoes" and vociferous regret that he had not buffeted them more vigorously, according to their deserts. Mr. Clarke, the new Democratic Senator from Arkansas, marvelled at the President's moderation. The wonder is that a man of Mr. Roosevelt's temperament ever for a moment put up with Colombian impudence, or tolerated the absurdity that Colombia had the diplomatic rights of a great Power. Senator Clarke's allusion to Warren Hastings as an instance of moderation under great temptation was not precisely happy. To begin with, it was Clive who said to a Parliamentary examiner: "By God, Mr. Chairman, at this moment I stand astonished at my own moderation"; and, next, the charge was stealing. But this unlucky parallel was hardly a blemish on the fervid eloquence of Senator Clarke. The intention is everything, and Senator Clarke's good intentions were of a sort to warm a far more critical heart than the President's.

Secretary Shaw's announcement that he means soon to call $45,000,000 from the national banks on account of the Panama Canal payments, will excite more serious thought at this time than would ordinarily be given it. It is easy to say that the money will simply be transferred from certain banks to others, and that the effect on the financial situation will be unimportant. Yet the fact is, the banks that are drawn on by the Treasury will conceivably have to call loans, thus hampering their present customers. But the important point is that the Secretary's announcement comes right on top of the most extraordinary increase of New York bank loans on record. In about five weeks the banks have enlarged their loans by about $102,000,000, bringing them up nearly to the billion-dollar mark. The Treasury's withdrawal of the Panama money must be pondered in connection with this fact, and it must also be remembered that this money must eventually leave the country in some form or other. The chances that the payments will fall due on an adverse exchange market have to be considered, of course. The natural tendency will be to draw gold from this country, and thus to impair the reserve capacity of American banks.

Very interesting international questions centre about the tiny archipelago of St. Pierre-Miquelon. These islands are a limited French possession, a bustling centre of smuggling, an almost indispensable station for French and American fishermen off the Newfoundland coast. It has long been certain that England would endeavor by treaty or purchase to extinguish the vexatious French coast rights, and it has generally been assumed that the rearrangement would provide for the ceding of the St. Pierre group to Newfoundland or to Great Britain direct. Such a consummation is brought measurably nearer by the confirmation of the Anglo-French convention for arbitration. Should these islands become British, our fishermen would lose their only sure foothold in Newfoundland waters, and the fisheries question might become again acute. This consideration has led Senator Lodge to ask whether the Monroe Doctrine would not prevent the transfer of these islands to any European Power. We feel that the question is of academic in-

terest only. It would be a rash Administration, indeed, that would regard the amicable cession of these scraps of land from one friendly Power to another as an unfriendly act. Apparently, the Canadians take Senator Lodge's divagations with unnecessary seriousness, not realizing how gratifying a reputation for aggressive patriotism may be acquired by stretching the "Doctrine" till it sings "Hail Columbia."

Whatever else may be said about the choice of Mr. Isidor Rayner as Senator from Maryland, it is very obvious that it vindicates Rear-Admiral Schley. Mr. Rayner conducted the defence of the Rear-Admiral from Maryland so gallantly, in the face of great odds, that the court of inquiry disagreed by a vote of two to one, the majority holding against Admiral Schley. We are certain, therefore, that Rear-Admiral Schley's ardent supporters will promptly see in Mr. Rayner's elevation to the Senate a proper rebuke to the Navy Department and the other "detractors" of his client. To the public at large, the fact that Mr. Rayner is avowedly antagonistic to Senator Gorman will be a matter of greater interest. The influence of that self-appointed "leader" of the Democracy is and always has been for evil. His present scheme to disfranchise the negroes of Maryland in order to entrench his party is but a sample of his political methods. Should Mr. Rayner stand for better things in State and nation, the smashing defeat of Senator Gorman would be a matter for widespread public satisfaction. In Congress and while Attorney-General of Maryland, as by his stand for sound money, Mr. Rayner made himself favorably known.

Rear-Admiral Converse, chief of the Bureau of Equipment, is, according to ex-Secretary Long, one of the best officers of the navy. And Mr. Long adds: "I should not hesitate to say that the presumption is that anything he does is right." Magnanimity could no further go, for this tribute to Rear-Admiral Converse followed on the heels of the announcement that he had debarred Mr. Long's book, 'The New American Navy,' from all the man-of-war libraries. The alleged reason for this discrimination is that the book criticises President Roosevelt's action while Assistant Secretary. Until this is officially confirmed, it must, of course, be accepted with reserve. It may be that the Rear-Admiral feels aggrieved because his picture was omitted from the gallery of naval worthies found in Mr. Long's volume. For our part, we shall attribute no such petty motive to him. We prefer to believe that the Admiral, in keeping with the present tendency of our democracy, has a fine nose for leze-majesty. We all know what evils arise from the license of the press in daring to criticise the President, and how such criticism and the newspaper cartoons encourage anarchists and socialists. But, bad as this is, it is nothing to the offence of an ex-Cabinet officer in remarking unfavorably upon certain incidents in the career of our present Executive. Shall such treasonable matter be put into the hands of our battleship crews? Not while Rear-Admiral Converse is on deck!

We know, of course, that, where the flag goes up, it never, never comes down, and that it brings the blush of shame to the cheek of every American to hear such a thing even hinted at; but, just the same, the starry banner came down in Cuba on Thursday, as our last military detachment withdrew. It came down, too, while words of grateful appreciation were spoken by the President of the Cuban Republic. He did not once reproach us for having lost a splendid business chance, or for having been recreant to the great Imperialist duty of land-grabbing and pledge-breaking. Indeed, even our own Jingoes are swelling with complacency over the honorable and liberty-loving way in which we have conducted ourselves in Cuba. Hauling down the flag hath its victories no less renowned than those of running it up. The experience is valuable. We may be led to seek like glory elsewhere. The acclamations we are receiving from the people of Cuba would be redoubled from the Filipinos if we were to leave them also to work out their own destinies as freemen.

Almost at the time King Edward was making his unprecedented allusion to the cotton situation, in his speech from the throne, the staple was acting in a way to discredit Mr. Sully's recent statement that the high price was not the result of manipulation. When the panic of May 9, 1901, occurred in the stock market, there was no doubt that the real end of the bull movement had been reached. It is too early to make such a prediction regarding the cotton boom, but the drop of 136 points in the market on February 2 was adequate preparation for anything that might occur hereafter. Regarding the real statistical position of cotton, there is still a great deal of uncertainty; but there is no longer a particle of doubt that the astounding rise of the last two months has been due chiefly to speculation. Not legitimate demand, but manipulative effort by professional market operators, has created the present situation. The whole world is now waiting to see if they will be able to convert their paper profits into cash. It is clear that tremendous losses have already been taken in cotton, and that more will have to follow, whether the price go up or down.

The lie direct seems to have passed between the American Steel Foundries Company and its expert accountants. Its securities have been struck from the Stock Exchange list because the statement made to the Exchange at the time of listing overstated the cash assets by $500,000. On Tuesday week the directors of the Steel Foundries Company gave out a statement charging that the expert accountants had misinterpreted a telephone conversation and were responsible for the overstatement. But now come forward Messrs. Jones, Cæsar & Co., the accountants, and state that they were directly authorized by Mr. Max Pam, counsel of the company, to add $500,000 to the working capital which was "to be provided by the vendors." Having made the required change, the amended balance sheet was sent to Mr. Pam. Now that the matter has reached this point, the public may obtain a flood of light on certain phases of Trust-promoting regarding which there has been very little real knowledge in the past. So far as the present discussion has gone, Mr. Max Pam and the Steel Foundries Company have been placed in a most disagreeable position. But Messrs. Jones, Cæsar & Co. have, on their own showing, nothing to be proud of so far as their part in the matter is concerned. They seem to have put down about what the promoters told them. Charging up as an asset capital "to be provided by vendors" is not the kind of bookkeeping that commends itself to the governors of the Stock Exchange.

The language used by the Steel Foundries Company has a striking resemblance to that employed in the Whitaker Wright trial. For instance, "the witness [Wright] added that the accountant had sworn that he had put 'ex-div' instead of 'cum-div.' without authority. It should have been 'cum-div.' A mistake had been made, and he admitted that the £321,000 ought not to have figured in the Globe's accounts." The public are beginning to learn that the liability of "expert accountants" to error is something fearful. Ever since Trust financiering methods began to be legally investigated, some months ago, one insinuation after another of a discreditable nature has been thrown at the experts by persons trying to clear their own skirts. Messrs. Jones, Cæsar & Co. are, however, about the first among the accountants to make formal rejoinder, yet perhaps the case for the experts would have been stronger if they had remained silent. However, it would be unjust to generalize from one case. Instances can be multiplied of a directly opposite nature. Experts have declined to affix their names unless large sums were spent for physical examinations of properties under consideration; and other stringent precautionary measures

have been taken. Still, as every need is apt to create the means of its fulfilment, so it begins to appear that the peculiar methods of our Trust promoters have raised up a sufficient number of "expert accountants" to satisfy the needs of "modern financiering."

In the many expressions of sorrow evoked by Mr. William C. Whitney's death, it is easy to detect one note of especial regret. He did not fulfil his first promise. With such extraordinary talents and aptitude for political life as he early displayed, it was unfortunate that either the Bryan extrusion of ability from his party, or his own taste, took Mr. Whitney out of public life, and led him to devote his uncommon capacity, meant for mankind, to mere money-making. Politically, he will be remembered mainly for his active part in rejuvenating the Democratic party under Mr. Cleveland; for his success in the Navy Department; for his advocacy of civil-service reform and sound public finance; for his brilliant leadership in the Cleveland campaign of 1892. The hearts and hopes of many went out to him. His death serves to make more conspicuous and lamentable the lack in his party of inspiring leaders such as he might have been.

The arguments in favor of the bill to abolish co-education of whites and blacks in Kentucky, when it was still in committee of the House, were sufficiently stale. The State Superintendent of Instruction could only bring forward the old bogie that, "if the Berea idea was carried to its logical conclusion, there would be social equality of the races in Kentucky." A Berea merchant charged Mr. Frost, as pure and high-minded a man as ever lived, with circulating literature of a questionable character, hinted at sensational happenings in the college of which he had no proof, and finally damned Mr. Frost utterly by saying: "Mr. Frost entertains negroes at his home and at the college dormitory, giving them the best that the great facilities at his command can afford." Surely, a capital offence! The enlightened clergy were also in evidence in the person of a Rev. Mr. Oliver, who represents Lynn County in the Legislature. Mr. Oliver said that if he were a member of the committee, "he would not permit President Frost to come before it, no more than he would permit President Roosevelt to eat with his family." The author of the bill explained that it was drawn to "prevent the contamination of the white children of Kentucky!"

The City Treasurer of Richmond, Va., reports some interesting figures which show that the disfranchising laws have had unexpected results in that city. One of the requirements of the new Constitution is the payment by voters of a poll tax. This, it was thought, would bar out some of the negroes who might manage to qualify in spite of the other disfranchising clauses. It now appears that of the 22,000 male adults assessed for taxes in Richmond, only 6,264 have taken the trouble to pay the poll tax and qualify. In addition, there are some 800 Confederate veterans to whom the poll-tax law does not apply. Of the 6,000 colored voters, 5,500 have been deprived of the suffrage, so that the actual voters cannot number one-third of the male taxpayers. So far as local elections go, therefore, Richmond is to be ruled hereafter by a small minority of the whites. What opportunities this situation affords to unscrupulous politicians we need not point out. "The colored people," says their organ, the Richmond *Planet*, in commenting upon this situation, "view with satisfaction the result of the [disfranchising] effort, and when they see white men sitting on the curbstone just as much disfranchised as the most worthless negro, they cannot help smiling. The law has proven a two-edged sword which cuts both ways."

Pennsylvania's unhappy Governor finds that his company on the Supreme Bench is not wanted by the men already there. The Philadelphia *Press* showed that the Governor temporarily filled the vacant Supreme Court justiceship with a Democrat after a respectable Republican lawyer, Lyman D. Gilbert, had declined to become his tool and hold the place during the rest of the unexpired term of the late Justice McCullom. For this service Mr. Gilbert was to be made Attorney-General. In other words, the Governor undertook to bargain in State offices for his own advantage, and that after he had solemnly declared in a campaign speech that, if elected, he would serve out his full term as Governor. The revelation was a little bit too much for the Supreme Court justices, one of whom, Judge Hay Brown, has publicly declared that the Governor's low intrigue is "a menace to the safety of the judiciary." Meanwhile, the Governor is apparently as unconscious of wrongdoing as he was when he published his ridiculous approval of the press "gag" law a year ago. He does not think it worth while to deny his offer to Mr. Gilbert, as he can see nothing wrong in it. Of course, the deal by which Pennypacker is to turn over the Governorship to a low Quay spoilsman, "Oleo" Brown, and obtain the desired election to the Supreme Court bench, is still contemplated. The bosses say he shall have it, and the people can be made to vote the Republican ticket in overwhelming numbers, no matter what the party's offence against decency.

Extraordinary complexity characterizes the Parliamentary situation at Westminster. Mr. John Redmond—faithful to his warning that the Land bill was merely received "on account"—has stormily bidden the Government give Home Rule for Ireland or lose the Irish vote. Mr. Wyndham forthwith denied that the Government would grant a Roman Catholic university in Ireland, apparently refusing the last possible payment on account, and virtually telling the Irish to do what they chose. Under ordinary circumstances, the loss of the Irish vote would mean the prompt downfall of the Cabinet, but the refurbishing of the Home Rule grudge may turn back wavering Liberal Unionists to Mr. Balfour. It certainly bears out Mr. Chamberlain's assertion that the issue is not dead, and gives a certain retrospective justification to his ousting of the Duke of Devonshire from control. The plight of these Liberal Unionists, torn between their horror of Home Rule and their disapproval of the dear loaf, is by no means enviable, and nobody can tell how the balance may swing. Suffice it to say that the Government, with the Irish ready to desert at the drop of the handkerchief, is not likely to be long embarrassed with its "big brute majority."

The recent speech of the Chancellor of the Exchequer in London was disappointing in one important particular. He feared it would not be his happy lot this year to propose those remissions of taxation which it was hoped he would foretell on that occasion. Economy was writ large on every line of his discourse. The country had passed through a series of very prosperous years; there had been a great increase in the revenue; but the expenditures had mounted up about as fast as the revenue. It was pleasant in the abstract to contemplate an increase of £5,000,000 in the last ten years in the post-office estimates, an enlargement of like amount in the charge for national education, and an increase of £4,000,000 in the aid granted to local rates, to say nothing of the still larger increases for army and navy purposes. But there were signs that the next few years would not be quite so prosperous as the last few. In short, the Chancellor of the Exchequer thought the time had come to "watch our expenditure closely." To Americans this seems niggardly. The likelihood of a deficit stares our Treasury in the face, but with us that is only an incentive to added extravagance. The leading feature of Mr. Chamberlain's speech, however, was the assertion that the heavy increase in national and local indebtedness had greatly depreciated the value of public securities. There he stopped; but he might have gone on and told his audience how large a part his father, the late Colonial Secretary, had played in that movement.

A "SAFE" PRESIDENT.

Mr. Root boldly took up the anti-Roosevelt challenge, in his speech at the Union League on February 3. Some may think he unnecessarily advertised the charge that Mr. Roosevelt is not considered "safe." There is such a thing as putting the objections so strongly that your answers to them are forgotten. Dr. Chalmers once stated the argument of the atheist so powerfully that some of his hearers feared he had denied the faith. So it may be that Mr. Root will have insinuated doubt of the President into some minds that had never harbored it before. But this was only a mistake, if a mistake at all, of oratorical tactics. The ex-Secretary's intention was as clear as his courage. Standing at the very centre of opposition to Mr. Roosevelt, he condemned it and defied it: "You say he is an unsafe man. I tell you he really is the great conservator of property and of rights."

The two things dwelt upon by Mr. Root were the President's attitude towards labor unions on the one hand, and towards Trusts on the other. As to both, we think, as we have made it abundantly plain before, that his defence is sound. Mr. Roosevelt, it is true, has displayed a good deal of vacillation in dealing with organized labor. At first he coquetted with it and flattered it; then he told it some wholesome truths; at last, when it came to the demand that Government employment should be "unionized," he issued a flat defiance. With his final position there can be no quarrel. As for the suit which he ordered against the Northern Securities Company to discover if it was violating the law, that was presented to him, primarily, as an official duty which he could not shirk; and, in the result, his action was a public service. It helped check a passion of speculation threatening to mount to absolute mania. It was one of the things which caused conservative bankers and financiers to put a curb-bit on markets running wild, and undoubtedly aided in bringing about that slow financial reaction, which, while bitter in the act to many, was salutary for the country, saving us as it did from the frightful panic which would have been sure to come otherwise.

Thus far, the argument is with Mr. Root. But he did not allude to those other aspects of Mr. Roosevelt's conduct in office which lead many to shake their heads over him. For one thing, the impression has been made that the President has not a nice regard for the law. We have had other Presidents who were not lawyers, but they were careful to take the opinion of skilled legal advisers. Mr. Roosevelt does not appear to do this. He seems to have a light-minded way of snapping his fingers at precedents and statutes. There was in the House, the very day Mr. Root was speaking, a disagreeable reminder of Mr. Roosevelt's rash promise, when Governor of New York, to refuse to deliver up a man involved in a Kentucky murder. That is the kind of thing which gives sober men pause. It helps to give currency to Professor Nelson's definition of Mr. Roosevelt's mind as one "essentially lawless."

A minor illustration is furnished just now by an incident in which Secretary Root's own withers are not unwrung. After long prodding, the Senate has elicited the fact that the President issued recess commissions to Gen. Wood and others on December 7, 1903—when, in fact, there was no recess. In other words, what the Senate was unanimous in considering illegal, what the House by its vote on the mileage resolution showed that it thought to be wholly irregular, that the President did. He impetuously "took the chances." But Americans do not like to have high officials take chances with the law.

It is unquestionably, however, the Panama recklessness which has most shaken faith in the President as a "safe" man. Here we have to do not merely with the deed, but with its defence. Mr. Roosevelt, with an appalling frankness which took away the breath of even the *Sun*, admitted that he had broken with precedent, and had no precise legal warrant for his course, but explained that he had pursued it in the interest of "civilization." Now, that is a perilous form of sealed orders to put into the hands of any man—most of all into the hands of an Executive who talks big navies, and glories in all the phraseology of war. Men could not be blamed for asking what would come next. It could not be imagined that a chivalrous President would venture beyond the law simply because Colombia was helpless before him. As was said in the Senate, the real danger was that he would extend the same principles of action elsewhere, would pluck some mighty Power by the beard and involve us in a war that would shake the earth. Here is the most substantial ground which Mr. Roosevelt has given people for saying that he is not safe. Our foreign relations have become immensely complicated. They require handling at once delicate and firm. The Panama affair has filled many with a painful fear that Mr. Roosevelt is unfitted by both temperament and training for that high function of the Presidency.

Mr. John Morley has lately set forth, with his customary grave eloquence, the necessity of "fixed convictions" in a statesman. There is a great difference between a fixed conviction and a fixed idea. For the latter, with all its implications of headlong haste and unreasoning persistence, Mr. Roosevelt appears to have too great an affinity. But what his position requires is large and fortified conviction, not to be shaken by clamor or moved by impulse, but calmly and surely to be applied to every question that presents itself for decision. Weak in that quality of steady reason, Mr. Roosevelt's activities have been too often of the galvanic—not to say volcanic—order. Hence he has too much laid himself open to the reproach which Mr. Morley addresses to the ruler who "will not remain quiet on the land, and will not venture forth upon the unplumbed ocean with the daring of the navigator, but who invites his party and the country on to neither land nor sea, but to a quaking bog."

THE ATTACK UPON BEREA COLLEGE.

A bill to kill Berea College, one of the notable institutions of the South, has been passed by the lower house of the Kentucky Legislature and is now pending in the Senate. The measure does not specifically attack Berea, but since it forbids the co-education of white and colored youth within the State of Kentucky, it is plain that its real object is the destruction of an institution which for nearly fifty years has kept the torch of learning burning brightly in what is one of the most benighted sections of the United States. President Frost has properly announced that, if the courts uphold this iniquitous law, Berea will cease to exist. There was no other course open to him, for, in the original by-laws of the college, it is stated: "This college shall be under an influence strictly Christian, and, as such, opposed to sectarianism, slaveholding, caste, and every other wrong institution or practice." The men who wrote this into the constitution did so at the risk of their lives. Recreant would their successors be if they calmly submitted to the division of its work in deference to a modern caste spirit as bitter as any with which their predecessors had to contend.

The sum and substance of Berea's offending is that, of its seven hundred students, one hundred and fifty have colored skins, and that blacks and whites have studied side by side without any of the evils which the instigators of race prejudice in the South are constantly predicting as inevitable with social intercourse. There has not been the slightest tendency to intermarriage. There is no social compulsion. No student is compelled to intimacy with any one who is distasteful to him. Colored and white students do not room together. Indeed, President Frost has been able to assert that "this arrangement has never produced a collision or a scandal." "And," he continued, "the relations of the two races are more friendly, pure, and satisfactory in the sphere of Berea's influence than anywhere else in the South."

How great that sphere of influence is may be judged from the fact that Berea does not content itself merely with the education given at the college proper,

but, by means of travelling libraries, horseback lecturers, and tent meetings, carries on a most valuable "extension" work. Five or six thousand persons gather at its commencement, riding in from their rude and poverty-stricken mountain cabins on mules and horses, and clad in the homespun of their great-grandfathers. In the vicinity are nine large counties of Kentucky without a mile of railroad. Their inhabitants are among the purest Anglo-Saxons in this country. Many of their customs—even their songs—have been directly handed down without change from generation to generation since the first settlement of this wild Appalachian region. Such schools as exist are of the poorest; the best are of the kind so well described by John Fox, jr., in his 'Little Shepherd of Kingdom Come.' If it is a population purely American, it is a population singularly backward. The thirty-five mountain counties in Kentucky have an area larger than Massachusetts and Connecticut together, and in this wide territory the influence of Berea College is, educationally speaking, paramount. There are other excellent schools, like the white institution at Jackson, in Breathitt County; but none begins to compare with Berea for usefulness, for extent of territory influenced, or for a standard curriculum.

It is well known that the number of negroes in the territory surrounding Berea is very small. Of the 476,000 residents in the mountain counties in 1900, only 12,000 were negroes, and seventeen per cent. of these live in the few large towns. In no sense, therefore, can the racial situation be compared to the conditions further South. The bogie of the danger to race "purity" cannot be effectively worked here. The white homes of this region are not subject to the dangers existing in some more populous districts. The action of the Kentucky House is, therefore, the merest toadying to the narrowest prejudices of the whites in the other two-thirds of the State, and it would kill the institution which is doing more than any other influence to free the State from the ignorance and lawlessness for which it is notorious throughout the Union, to the detriment of its industrial development and of its law-abiding inhabitants in its richer sections. At best, it is an attempt to say to the mountain negroes that they shall hereafter do without a higher schooling merely because of their color. We repeat, President Frost did well to make it clear that Berea's work cannot be confined or restricted to one part of the mountain population.

The right of a liberal college to admit to its classrooms any students it deems worthy is as sacred as the right of its professors to free speech within their classrooms. The recent great triumph of academic freedom in Trinity College at Durham, N. C., over sectional prejudice was rightly hailed as one of the most notable events in the educational annals of the South. Should the Senate conspire with the House, and the Governor approve, and the courts sustain the wiping out of Berea College because of its 170 colored students, we should have to take note of as grievous a retrogression as the Trinity victory was a notable advance. In 1859 the teaching at Berea was paralyzed by pro-slavery violence. The present method of imposing one's prejudices upon others, if more humane and more difficult to meet, is every whit as great a disgrace to the State, and is all the more amazing in view of the fact that this same Legislature of Kentucky had just indefinitely postponed the proposal to disfranchise the colored voters of the State.

GERMAN TROUBLES IN AFRICA.

The uprising of the inhabitants of her Southwest African colony has brought Germany for the first time face to face with one of the usual experiences of colonizing nations. The stupid natives not only decline to fall down and worship the superior race which intends to exploit them, but have actually taken up arms in the hope of expelling the white invaders with their autocratic semi-military methods of government. Having risen without the slightest previous notice, and at the time of year which for climatic reasons is most unfavorable for Europeans to undertake military movements, they are in a position to cause a great deal of trouble. Already one hundred colonists are reported slain, several settlements are surrounded and in dire need, and the arrival of sufficient reinforcements is still far away.

Speaking in the Reichstag on January 18, Chancellor von Bülow did not conceal the gravity of the situation, news of which had been in the possession of the Colonial Office only for a week, although the revolt began months ago. It affected, he admitted, the most thickly settled portion of the colony, and had even then destroyed the fruits of a decade of industry. The greater part of the settlers had already lost all their possessions, and were fighting for their lives in the stations to which they had fled from their outlying farms. Most serious of all, the outbreak occurred when Gov. Leutwein, with the greater part of the colonial forces, was twenty days' march to the south of the scene of the uprising, endeavoring to subdue the uprising of the Bondelzwarts tribes, and the forces in the colony were therefore greatly reduced. In order to put down the insurrection the Government ordered the cruiser *Habicht* to land all its available men in conjunction with a regular relief force of 135 men which arrived at Swakopmund (Walfisch Bay) on February 3. A battalion of 550 men was dispatched from Hamburg on the 21st of January, and 500 more have since sailed for the scene of hostilities.

Upon the reasons for the uprising the Chancellor could throw no light. There was "no visible cause," he said, in the opinion of experts familiar with the afflicted colony. But light has since been thrown upon this question in some articles contributed to the *Frankfurter Zeitung* by a traveller who had just returned from the affected districts. It is the old sordid story of cruelty and rapacious greed on the part of the civilizers. For years past, it appears, German traders, frequently discharged soldiers, have travelled among the natives, selling unlimited quantities of goods upon credit by such underhand methods that the natives had no conception of the debts they were piling up. Then the traders turned upon them, charging exorbitant prices for the goods sold and demanding usurious rates of interest. Unable to pay these outrageous bills in default, the Hereros have found themselves forced to sacrifice their entire droves of cattle or large tracts of land. As a result, the tribe, numbering 80,000 souls, has become impoverished to such a degree that it has revolted in despair. The truth of this explanation is confirmed by a German colonial newspaper, the *South African Gazette*. As contributory causes may be mentioned the overbearing conduct of the German officers, and the shooting of a native by one of them. But to explain the fury with which the Hereros have attacked their overlords, it is only necessary to cite the misdeeds of the traders.

Gloomy as is this picture of unmasked Imperialism, it is, of course, merely a repetition of what has happened in every other portion of the globe where the white man has settled in order to exploit the natives and steal their lands from them. But the German over-sea experiments afford particularly interesting object-lessons of the benefits of what may be called "hothouse colonies." There was no demand among the German people for the acquisition of foreign territory, least of all for the seizure or purchase of lands from which the stream of immigration persistently turns away. But Bismarck and his successors insisted upon a policy of tropical expansion in the hope of diverting emigrants from foreign nations to lands covered by the German flag. They were, moreover, firmly of the opinion that no nation could be truly great unless it possessed colonies. Hence, they acquired in Africa and the South Seas an area of 1,024,262 square miles, no less than five times the size of Continental Germany. Yet, after years of effort on the part of Government, colonial companies, and societies for the encouragement of emigration, there are now only 5,125 Germans, men,

women, and children, settled in this vast territory. This number includes 1,567 officials and soldiers, 637 traders, 779 artisans and laborers, and 1,010 planters and cultivators.

For the year 1904 the Imperial subsidies for these colonies are reckoned at $3,578,500. In addition, the German taxpayer must foot the bills for the Kiaochau colony, which amount to $3,135,000; for the Colonial Department of the Foreign Office, for the colonial posts and telegraph lines, for the mail subsidies, etc. It is estimated that the various colonial ventures have thus far cost the nation 75 millions of dollars since 1884, with the net result of spreading about 6,000 Germans over the territories mentioned. It is hardly necessary to add that the resulting trade in no way reimburses the mother country. The export and import business of the colonies with the German Customs Union during 1902 amounted only to a little over one-third of their total trade. It is quite in keeping with other imperialistic tendencies the world over, that the German exports consist largely of spirituous liquors and tinned foods. As in the Philippines, beer follows the flag.

Were the question merely one of dollars and cents, the rest of the world might well look on this kind of colonizing with amusement. But it cannot blink the fact that the Teutonic race has once more essayed the management of those inferiors upon whom it ever looks down with supreme contempt and pity, only to fail utterly. The Germans have run nearly the whole gamut. First seize territory, then exploit, plunder, and rob its inhabitants. Next, express surprise when they hate you. When they rise in a hopeless attempt to free themselves, start your punitive expeditions and blot them out for their insolence and their atrocities. As Prince Henry so humanely put it to the departing marines at Kiel: "Germany expects every bullet to find its billet."

A TRANSIT OF IDEALISM.

Columbia University is to lose the services of Professors Woodberry and MacDowell—one a graceful poet and subtle critic, the other one of the greatest lyrical composers of our time. The University can ill afford to lose them. They represented a definitely artistic and creative principle that contrasted sharply with and did something to redeem the pedestrian scholarship and dilettante cleverness which rule at Columbia as elsewhere. It is unlucky, too, that these brother artists should both be leaving because they find the tone of Columbia uncongenial and its conditions unfavorable to their work. In Professor Woodberry's case this is well understood; Professor MacDowell has not hesitated to express dissatisfaction with the whole tendency of the University. Culture and idealism, he asserts, are generally lacking, the administration has been slow in effecting plans for organizing a school of the arts, the students are generally indifferent to artistic matters, and, in this respect, are graduated mere barbarians. So he and Professor Woodberry feel quite justified in quitting the academic ranks and dwelling apart in their idealistic tents.

Evidently there is a larger issue here than in the question whether these gentlemen are justly aggrieved. Nobody will doubt that their analysis of the deficiencies of education at Columbia has truth in it, though the wisdom of their expressions and the necessity for their resignation may be questioned seriously; and it is certain also that the charge of undue disregard of the arts as means of culture lies not only against Columbia, but against practically every university in the land. All our college graduates and many of our university doctors are complete barbarians, if lack of intelligent enthusiasm for the arts is to serve as criterion of barbarism. In nearly all our academic communities the gentlemen who are shaking the sordid Morningside dust from their artistic sandals would find themselves equally strangers, speaking a language hardly understanded of their colleagues. Our colleges, in the elegant idiom of the Middle West, are distinctly not "culture shops," and most of them are uneasy residences for "culture sharps" such as Professors Woodberry and MacDowell, with all respect, undoubtedly are.

Now, the colleges, and possibly the apostles of culture too, are the poorer for this unhappy alienation. The education carried away by our average bachelors belies preposterously their degree in arts, and, furthermore, it ministers only very inadequately to the more refined pleasures of life. But these admitted shortcomings are not wholly the fault of the colleges. Sheer poverty, for example, confines the academic diet to substantials. So many languages, so much science, must be provided, and often are furnished with difficulty. Superior instruction in literature and the fine arts is as little practicable at many of our colleges as beautiful wood-carving in a log-cabin rising against imminent winter. And, of course, we can teach only such students as will come, and man our faculties with such scholars as may be had. To desire that Professor Norton or Professor Woodberry should be infinitely subdivided and distributed impartially to our academic commonwealth, is to wish the excellent, but the impossible. And we cannot so much as be certain that either would really like to be broadcast though culture were the gainer.

And here is approached a delicate question which should be discussed entirely apart from Columbia applications. Our apostles of culture are sometimes "ill to live wi'." Their tastes have removed them far from the average feeling, and in many cases their superiority has resulted in an isolation unfortunate for them and the community. It is hard for one who has dwelt constantly with the ideal to realize that his particular academic ideal, for instance, must wait upon mere dollars and cents. One who is essentially a professor of things in general may very well forget, when his head is in the clouds, that his excursions are crossing the toes of nearly all his academic colleagues. In other words, there must be a certain element of give and take between the idealist and the machinery of which he has voluntarily become a part. Ivory towers are not practical college buildings, nor even appropriate ornaments for busy college greens. Even idealists cannot dispense with the courage of their idealism. They must retain a sufficient affection for the great uncultured academic mass to live with it on terms of amity, and they must maintain something of the confidence of bishops *in partibus*, trusting that the heathen in their charge are susceptible to the workings of artistic grace.

Possibly the way of these missionaries of culture has been made the harder by the abundance of prophets, falsely so-called. "Culture courses" have become a by-word in all our colleges. Lazy and languishing gentlemen have made culture seem an easy if not very entertaining voyage upon an interminable flux of words. Undoubtedly sad experience has made too many college presidents believe that culture means over-paid gush, and that its exponents are sheer luxuries in a university. Yet, in sober fact, the best investment Columbia has made for years was the appointment of men like Woodberry and MacDowell. In the strictest business sense, they have done more to enhance the prestige of the University throughout the world of art and letters than the tenfold capitalization of their salaries could have done in any other way. It is possible that they have magnified the infelicities of their position. We assume that Columbia realizes the extent of its loss and will try to repair it. In fact, President Butler has included in his last appeal for an endowment a project for the building up of a school of the arts. Hence these recent changes are really a new appeal to generous New Yorkers.

It is truly a serious matter to face the fact that so vast an educational mechanism is making very little for culture. The presence of great libraries and museums in New York imposes an especial duty of interpretation upon Columbia University. If such matters are really pondered, the transit of the idealists will bring its prompt compensation; and one cannot grudge any artist his liberty. With a poet and a composer jointly escaped from academic bonds, why

may we not hope for the long-delayed American opera, or at least for another series of deathless songs? As for President Butler, his philosophy will sustain him among his barbarians. He will recall that the two London exquisites whom Du Maurier represents as disputing whether Botticelli be a wine or a cheese, were in all probability Oxford men, and of no mean college.

THE EASTERN CRISIS AND ITS ORIGIN.

TOKYO, January 11, 1904.

An acute crisis now exists in the Orient. The situation is in all respects, save active hostilities, that of war. Urgency measures have been adopted. Strenuous labors are completing all naval and military preparations for war. Every one here regards war as practically inevitable. A huge depression of values on the Stock Exchange reflects the gravity of the situation. Before this can reach you by post, the definitive issue—war or peace—will probably be known. In any event, a summary statement of the events which have shaped the situation will assist a clear understanding of it.

The premises, though widely published in fragmentary form, must be clearly and connectedly grasped in order to understand the nature of the present crisis. Eight years ago Japan waged a successful war against China, for the purpose of ending an intolerable protectorate exercised by China over Korea—acting in this matter very much as the United States did in waging a war of liberation for Cuba. At the end of that war, Japan actually occupied the greater part of Mantchuria as an indemnity for the war; and China in her treaty of peace had definitely ceded the territory to Japan. Russia, alleging that occupation of Mantchuria by Japan was a menace to the peace of the Orient, then secured the coöperation of Germany and France to oust Japan from Mantchuria. The sequel to this was unopposed occupation of Kiao-chau by Germany and of Port Arthur by Russia, and the consequent real and constant peril to the peace of the Far East. Meanwhile, Korea was tacitly and generally recognized to be an exclusive "sphere of influence" of Japan, but open to general trade. The Nishi-Rosen convention of 1898 was intended by Japan to secure, so far as concerned Russia, immunity against aggression in Korea. The necessity of preventing ascendency in Korea of any potential enemy is tradition and a cardinal principle of Japanese diplomacy. Its maintenance is regarded by Japan as even more vital to her than maintenance of the Monroe Doctrine is regarded as vital by the United States.

The next chapter opens with the "Boxer" outbreak in 1900. After that disturbance ended, the several Powers concerned in restoring order in China adopted a definitive treaty of peace, according to which it was agreed to respect, even to maintain, the integrity of China. Russia was a signatory of this treaty. In consonance with the requirements of her treaty obligations, Russia surprised those familiar with her shrewd and unscrupulous aggressive policy by voluntarily fixing a term within which, after ratification of the treaty, she would evacuate Mantchuria; her troops having been meanwhile retained there to guard her railways. When this term expired last April, Russia had neither withdrawn her troops nor evinced any serious intention to do so. In view of special interests involved, Japan pressed Russia with inquiries to ascertain her real purpose concerning Mantchuria. Since both England and the United States were also manifesting great interest in the question, it is probable that Russia was especially inclined to make a satisfactory reply. In any event, Russia then assured Japan that evacuation would be accomplished within a further period of six months. By October 8, the date thus fixed, Russian pledges were still unkept. On the contrary, Russia had in the interim been busy building fortifications, sending out troops and supplies, adding to her Asiatic fleet; had even occupied new posts, and given evidences of an intention, not merely to remain in Mantchuria, but also to extend the scope of her aggressions even to Korea.

Since that time, Japan has patiently, yet with the persistency born of vital motives, pressed Russia in negotiation with a view to arrive at a peaceful settlement of differences, and to obtain a guarantee for the protection of interests which Japan considers vital to herself. Russia has met this surprisingly moderate and conciliatory attitude with a policy of temporizing and evasion, delaying her replies, evading questions, and dragging in irrelevant issues. She has, meanwhile, continued to build fortifications, to forward troops and supplies, to send out every available warship, in every possible way to strengthen her grip on the bone of contention and to perfect her naval and military equipment. Thus, while nominally negotiating with Japan as a friendly Power, she has all the while added irritation and provocation to her insolent disregard of Japan's rights and claims. In the meantime, Japan strictly observed all proprieties, and did not, until the last week of the year, move a single soldier, add a single ship to her navy, or otherwise make a single menacing special preparation.

Actual crisis resulted immediately from steps taken on and after December 28. On that date four important Imperial ordinances were issued. Two of these relate to the superior organization of the army and navy. They are intended primarily (1) to secure efficient coöperation between military and naval arms of the service, and (2) to accord to the chief of each branch of the service equal voice and equal access to the Sovereign in offering advice and considering plans of campaign. (Hitherto, the Chief of the General Staff had a right to consult directly with the Emperor, while the Chief of the Naval Board had not that right.) The other two ordinances provide: (1) for raising funds to meet the "expenses required for the maintenance of the armaments," and (2) for speedy completion of the Seul-Fusan Railway. For the first purpose, the Government is empowered "to raise temporary loans, to draw upon the funds belonging to Special Accounts, and to issue Treasury Notes." The only limitations on this power are: (1) that rates of interest on obligations incurred shall not exceed 6 per cent.; and (2) that the maximum period of redemption shall be for temporary loans two years, and for Treasury Notes five years. The "Funds belonging to Special Accounts" aggregate something over a hundred million yen. In order to expedite construction of the Seul-Fusan Railway, the Government undertakes two obligations: (1) It guarantees principal and interest, not exceeding 6 per cent., on bonds issued by the company within the limit of ten million yen; (2) in view of the fact that haste will increase the cost of constructing the railway, the Government grants to the company a cash subsidy of 1,750,000 yen, with a further contingent grant of 450,000 yen. Loans are authorized to raise the funds for this subsidy. In order to protect itself and to assure the execution of its purposes, the Government reserves the right to appoint three managing directors and to maintain official inspection of the works and the accounts of the company. In event of military occupation of Korea or of military operations in Mantchuria by Japan, the strategic value of this railway would be immense; hence the urgency of its construction at this juncture.

Coincident with the issue of the Imperial ordinances, most extraordinary activity in all military and naval circles began. It was announced that the usual New Year holiday of ten days would be this year contracted to a single day for arsenals, dockyards, and many Government offices. The newspapers published reports that troops of the large garrisons at Sendai and Kumamoto were ordered to be ready for a winter campaign, that active preparations were in progress at all barracks and naval stations, that large orders for a new and specially efficient kind of transport wagon were placed with the Tokyo Arsenal to be filled in the shortest possible time. These reports were credible and were credited, because only one or two of the least important journals in the capital had previously been guilty of Jingoism or sensationalism, while these reports were published by all; and especially because they were confirmed by reports of mercantile establishments which were selling unusual quantities of personal supplies to army and navy men; and by many evidences visible to observant persons. Meanwhile, cable messages reported large purchases by Japan of flour in the United States and of coal both at Norfolk, Va., and in England, as well as of the two cruisers just completed in Italy to the order of Argentina. It was generally known that the Government had been in negotiation with the large state-subsidized mercantile marine company, Nippon Yusen Kaisha, as to terms for using its ships as transports, and had already intimated to bankers that their assistance might be needed to raise funds. Finally, the Government issued, January 5, an order which prohibits journalistic publication of any news relating to the movements of Japanese troops or warships. At the same time, it was rumored that 20,000 troops had moved out from Kumamoto. The extremely serious aspect of affairs had, on the preceding day (the first business day of the year), been signalized by a sudden drop in values, ranging from 10 to 25 per cent. of the last-quoted market price. Since then there has been a very slight recovery, but values continue, under the gravity of the situation, to sag near the recent extraordinary minimum.

Under the circumstances, the laying of the facts before the foreign governments is here regarded as about the last pacific move on the part of Japan.

The utmost secrecy has successfully guarded the proposals and counter-proposals of Russo-Japanese negotiations. Even while presenting the facts to foreign governments, the Japanese Government has refused to take its own people into its confidence, but it is well known that the conference between Ministers and Elder Statesmen on December 16 formulated the "irreducible minimum" of Japan's demands, and that this was the basis of the last Japanese communication transmitted to Russia on December 21. Persistent rumors, emanating apparently from Berlin, represent the return by Russia of another temporizing reply, alleging that Russia neither grants nor rejects all of the Japanese demands, but opens new subjects for negotiation. If so, that way war lies, for Japan is in dead earnest, and she is determined no longer to let Russia temporize while using the time to strengthen her position against Japan. The nation is a unit, and the most conservative papers persistently voice its sentiment, viz., that, in view of the Russian mode of procedure and the moderation of Japan's demands, nothing remains to negotiate. Hence the Russian reply must be reducible to a simple "yes" or "no." Berlin is now the only source of optimism. But the Japanese view of Germany's attitude was aptly hit off by a journalistic caricaturist who represents the Kaiser as the god of wind blowing over Europe "optimistic rumors of Russia's pacific purposes—that never materialize."

E. H. VICKERS.

LAGUÉRIE'S KOREA.

PARIS, January 26, 1904.

There has sprung up, within twenty years, a new sort of French literature—that of distant journeys and explorations. The most energetic of our young men and young officers have found a field for their activity in all parts of the world. This spontaneous movement is perhaps owing to the prolongation of peace in Europe. The names of Col. Marchand, of Prince Henri d'Orléans, of Bonvalot, of Grandidier, etc., have become very popular, and this new sort of popularity has the advantage of being independent of the narrow spirit of partisanship. Recent events have added much to the interest of one of the books characterized above. In the rich collection of "Illustrated Journeys" published by Hachette, I had already noticed a volume on Korea, the country which is at the present moment attracting so much attention and has become a bone of contention between Russia and Japan.

The title of the volume by M. Villetard de Laguérie is almost prophetic: 'La Corée, indépendante, russe, ou japonaise.' Here we have, so to speak, in a nutshell the question now agitating all Governments, and, it may be said, all nations, civilized or half-civilized. M. Villetard de Laguérie resided in the Far East during the late Sino-Japanese war, as special correspondent of the French paper *Le Temps*. He saw clearly the importance of the part Korea was to play in the final solution of a crisis that involved the fate not only of Japan, but also of China.

Korea is a part of the Asiatic continent, but extends between China's seas and the Sea of Japan very much as Italy lies between the Mediterranean and the Adriatic. It is about nine hundred kilometres in length, and two hundred kilometres wide from sea to sea. Seul, the capital of Korea, may be compared to Rome, which is halfway between the north and the south. Korea, however, is but a truncated Italy; in the north it has no valley of the Po, no rich Lombardy and Venetia, albeit it has a sort of equivalent of the Alps in a high mountain barrier reaching from the Sea of Japan to the Yellow Sea, from the port of Vladivostok to Port Arthur. These Mantchurian Alps are covered with woods and snow, and rise to the height of three thousand metres. Italy has always been a battlefield of nations, and has long been subdivided into kingdoms, duchies, principalities. Two races only have established themselves in Korea, the Mongol or Mantchu race, the continental race, and the Malay or Japanese, the island race. Korea has from time immemorial formed a single kingdom, and been inhabited by a single nation, a single race, formed by the union of two races. The continental element has, however, been predominant; politically and religiously, the Korean people has lived under the discipline of China as a vassal State ever since the end of the fourteenth century. It has been a kingdom of mandarins, though it had its own monarch and its autonomy; it had to pay an annual tribute to China and to render annual homage to the suzerain Emperor of China, with all the forms of an old ceremonial. After the war between Japan and China, this state of things was altered. The first article of the treaty of Shimonoseki reads thus:

"China recognizes definitively the entire independence and autonomy of Korea; and, in consequence, the payment of tribute and performance by Korea with regard to China of ceremonies and formalities in derogation of this independence and this autonomy will cease completely in future."

As for Japan, it was careful not to stipulate at the same time its own renunciation of the rights which it pretended to have over Korea. What these rights are worth, I will not examine; if it has been said that for the most civilized nations might is right, it can all the more be said for nations which are only emerging from barbarism.

Korea has but a small population—probably only ten millions of inhabitants; a number which represents about fifty inhabitants per square kilometre. Japan is looking to Korea as an outlet for her ever-increasing population; she has about forty-five millions of inhabitants, and the rate of increase is very great. It is natural that the Japanese should, on account of its proximity and of the character of its population, consider Korea a suitable land for the creation of colonies. Russia, on her part, is now considering Siberia and the Far East as an outlet for her population, already so large, and which will soon attain formidable numbers. The Siberian Railroad, the occupation of Mantchuria, the acquisition of Vladivostok and of Port Arthur on the Japan and Chinese seas, are visible signs of the movement of Russia's expansion; but there is this difference between the Russian colonies and the Japanese: the first may be called military colonies, the second are really colonies of populations given to all the arts of peace. Time may some day transform the military colonies which Russia is creating in Mantchuria; at the present moment, we can look upon them only as we do on the vanguard of an army. The Japanese colonies in Korea have a different character. The land of Japan proper no longer suffices for its inhabitants, and the population increases every year by 400,000 souls. Since 1597 there have been Japanese colonies in Korea; there are at present from twenty to thirty thousand Japanese established there, with their families. This emigration, concentrated at first in the ports, is spreading over the country; and it would rapidly augment if it were not for the deplorable administration and tyranny of the Korean officials.

The difficulties between Japan and Russia now culminating go back to 1897, and, as is often the case, had their primary origin in a conflict of personal interests. Korea had become the field of many enterprising companies; it was thought that its gold mines, its petroleum, its forests, could be used and become attractions for European capital. In 1897 a Russian company obtained the concession of immense forests in the valleys of the Tumen and the Yalu; it was the time when Russia and Japan had signed a protocol which, so to speak, divided Korea between them. When a second protocol was signed, which delivered Korea completely to Japanese enterprise, it was thought that the Russian concession of 1897 would be practically abandoned; but in 1901 a Russian mission was formed, which appeared in 1902 in the valley of the Yalu, marked the trees in the forest, and prepared for their systematic cutting. This mission established itself in a Korean city where foreigners have no right to reside, built a telegraphic line, and made plans for a railway which should unite the Yalu River to the railway lines of Mantchuria. It obtained in August, 1903, the monopoly of the log rafting on the Yalu, and a piece of land at Yongampo.

The Emperor of Korea had not a word to say to all this, but the minister of Japan naturally claimed similar advantages for his own country, and among others the opening of Wiju, the port of the Yalu. A constant struggle for influence began, and the relations of Japan and Russia became more and more tense. The Japanese asked for the opening of all the ports and the cities still shut against foreigners; for railways, telegraphs, administrative reforms. The Russians, on their side, fortified more and more their position in Mantchuria, and looked with more and more eagerness on the land which separated Vladivostok from Port Arthur.

While I am writing these lines, the question of peace or war between Russia and Japan remains undecided; each day brings contradictory news; great preparations are being made on both sides. Japan seems better prepared for immediate hostilities; the length of the Siberian Railroad to Mantchuria is immense, and troops can be carried only slowly on a single-track line, interrupted by Lake Baikal. If the hostilities began on sea, the Russian fleet, in case of a defeat, would have no suitable port of refuge, and its naval unities could be pursued one by one. There is, fortunately, an element which has to be considered seriously by both sides: the expenses of a war are enormous in our day, and neither the Japanese nor the Russian finances are

well prepared to be put to a severe test. It is perhaps idle to estimate now the chances of a conflict which, it is to be hoped, will be averted if there is any wisdom left in those who can control the destinies of nations. It is easy to see what calamities might follow a war in the Far East; it is difficult, if not impossible, to see what could be its advantages.

A SWISS HOLIDAY-HOME.

January, 1904.

The little corner by the railway station at Luzern, where the tram-cars start, was just bubbling over that sunny morning with excited small boys and girls. And they were still swarming in from all directions. Alpine hats with pheasant-feather were cocked with an extra jauntiness, small skirts were swishing, small pig-tails flying straight out behind; all the careful, school-taught high German had vanished on the mountain breezes, and the air was filled instead with the gay chatter of guttural dialect quite unintelligible to my slow ears. What could be the matter? I looked around instinctively for the Pied Piper. Surely only he could be responsible for such a whirl of irrepressible childhood. This must be Hamelin-town instead of hotel-ridden Luzern, and the pell-mell rush of the green Reuss, upon which I had but a moment before been gazing, a mere delusion of my weary brain for the placid sweep of the Weser's waters. But the Pied Piper was not there. Instead of him, the centre of the tumult seemed to be swirling about a calm, paternal figure clad in quiet gray—gray-haired and gray-bearded, too—who smiled gently upon all alike as he stowed them away in the waiting tram-cars headed for Kriens. I knew the good gray man, Father Herzog. He has magic, too, in those kindly eyes, the magic that comes from a heart and a life given to the love and care of children, and especially of those to whom nature has been less kind than to the bright imps who are now swarming around him.

Finally the last clamorous farewells to smiling fathers and mothers and aunts and cousins and less lucky brothers and sisters were with difficulty accomplished, the last parcels (such a miscellaneous menagerie of parcels) were piled in somehow, and the loaded cars gave a final warning clang and rattled away around the corner and up the valley toward Pilatus, while back to our ears came the parting chorus of song in shrill voices lusty with the joy of journeying. Some fifteen minutes of trolley ride, and then two hours of uphill walking, awaited the little wanderers before they could be esconced in their quarters at Eigenthal, to begin the three weeks of happy life in the holiday-home under the bleak shoulder of the great mountain.

Father Herzog, after teaching with loving pains through nine months in the year the feeble-minded children of the commune, gives his whole summer vacation of three months to the care of four successive colonies of these lively guests in Eigenthal. He is assisted by relays of other teachers, usually one man and two women for each colony; and a cook and a housemaid are attached to the service of the house for the entire season. Each colony numbers about fifty boys and as many girls, chosen first of all on application of the parents and recommendation of the teachers, from among the school children of Luzern whom a physician's certificate shows to be, not actually ill, but in especial need of such physical invigoration as can be gained only in the out-of-door life among the hills. The recommendation of the teachers depends upon the studiousness and good conduct of the pupils during the school year, and the reward of the summer outing proves a most powerful incentive to scholarly propriety. No children under ten years of age are received. The Home is especially designed for the help of the poor who are unable to pay anything for their children's outing. For them the three weeks of country life are entirely without charge. Yet those who can contribute something towards the running expenses of the Home are encouraged to do so, be it ever so little. For the last season for which the statistics are as yet available, the total outlay for running expenses for the twelve weeks (the value of gifts of food is not included) was nearly five thousand and three hundred francs, or ninety centimes per day for each child. This was considerably less than the thirty francs for the three weeks which the managing Commission fixes as the standard sum for those who are able and willing to pay a fair amount for their children's board. Out of the three hundred and fifty-seven children cared for in 1902, only seventy-nine paid anything. Of these seventy-nine, only seventeen paid the full amount of thirty francs each; twenty-two others paid various sums, ranging between twenty and thirty francs, thirty-two paid from ten to twenty francs, and eight paid less than ten francs each, the entire sum realized from such contributions being one thousand five hundred and twelve francs. The remainder of the necessary funds for the season's work came for the most part, as in other years, from voluntary contributions, often of small amounts, made by a large number of different associations and persons, and from interest on the gradually accumulating surplus of income over expenditure which careful management and generous contribution have conspired to gather. The City Council appropriated only one thousand francs this year towards the undertaking. The building of the Home itself was also due for the most part to private liberality. The administration of the Home is presided over by a Permanent Commission for Holiday Arrangements of the City of Luzern, composed of representatives of the City Council, of the School Committee, of the school-teachers, of the Association for Municipal Improvements, of the citizens in general, and of the original committee that inaugurated the movement. This Commission solicits contributions through a paid agent, and publishes annually a detailed report and balance-sheet.

"Sind z' Luzärn die Schuele g'schlosse,
Packt mer ii und gohd uf d' Alp;
Müedi Meitli, bleiche Buebe
Machid gern bim Hüüsli Halt."

It was quite in the spirit of these verses from the children's song that some days later we started off in their footsteps to find Eigenthal and the Ferienheim. A well laid-out road can be followed all the way, but we preferred the beaten footpath that first wound through sweet-breathing hayfields, by pious wayside shrines, under the swift, downward sweep of the Hochwald, and then mounted westward, through dark fir-woods, the coolness of which was grateful after the fierce beat of the August sun. Pilatus assumed a new aspect as we thus approached and circled his flank. He was no less grand, and his sharply falling cliffs no less inaccessible, than on the other side; but his gray and stern dignity had somehow a less forbidding manner as he looked out with us over the varied green of tumbling hillocks and fertile valleys toward Bern, than to the eastward, where he faces, frowningly and unafraid, the snowclad majesty of the rival heights of Unterwalden.

At the top of the ridge we came upon the highway again, and left behind us the never-failing beauty of the Lake of the Four Forest Cantons. Here the road made a long sweep to the southward, high above the curving valley, and appeared to be marching straight upon Pilatus himself. But just beyond a picturesque group of fir trees, and a tiny white chapel filled with old and doubly atrocious votive paintings of wonderful escapes from peril by the grace of the Blessed Virgin, we heard shrieks of unrestrained childish laughter, and there, right at our feet, perched on a broad, grassy shelf of the sloping hillside, lay the Ferienheim. Children were in evidence everywhere—a group of them just straggling back, flower-laden, from a hill-climbing expedition, other boys engaged in what our small guide called "doing stunts" in the open-air gymnasium, and bevies of girls playing under the big fir tree which they call "die Grossmutter" some of the games that seem to be much the same all over the world.

The house itself was substantially built for its purpose in the plainest of Swiss fashion, with a square central block, and two spreading wings, under which wood could be stored and the children find play room on rainy days. Behind the house stretched a long tank with frequent jets of cold mountain water, where the youngsters, boys and girls alike, made their rosy faces and brown hands clean o' mornings, and doubtless needed to many times during the day. The front door appeared to be that opening into the kitchen, and there Father Herzog welcomed us with his kindly smile and soft slowness of speech. The interior plan was perfectly simple. The capacious kitchen, with two adjacent pantries, or a pantry and a "butt'ry," occupied the lower floor of the central structure. Over this was an ample dining-room, with solid, clean, wooden tables and benches for the hundred children and the teachers, while to right and left of the dining-room, in the wings, were big dormitories, one for boys, the other for girls, each with its fifty little cot-beds, neatly made up by the occupants themselves, standing side by side in long rows. In one corner of the boys' dormitory a little cubbyhole had been boarded off for the house-father's cot and desk. Nothing could have been more Spartanlike in simplicity, and nothing more neat and charmingly comfortable in aspect. The children were just gathering to their four o'clock *Zobig*, and shortly, after a brief grace, a hundred little mouths and two hundred quick hands were busily stowing away great bowlfuls of the richest milk and best bread in the world. Then they sang part-songs, national and local, with the eager enthusiasm that only American college boys

and Swiss singers seem to feel. And then, at a quiet word from the house-father, they swarmed out for two hours more of tireless play.

Every child on coming into residence is bathed, measured, and weighed. He is again weighed on departure, and (despite the extreme activity of the out-of-door life) the healthful conditions in which he lives and the nourishing food are sure to bring about a substantial increase in weight during the three weeks of residence, the average increase last year being about two and one-half pounds. As one of them, after the official weighing, jubilantly expressed it on an illustrated post-card to his parents,

"Ich bin gesund,
Und kugelrund,
Und 32 Kilo schwer."

He ought to grow globular on four meals a day, with perhaps a morning luncheon thrown in, for milk appears to be unlimited, and although meat is served only two or three times a week, rich soup, with or without vegetables, comes on once, or sometimes twice, a day.

There are no formal lessons, but the teachers accompany the children on their daily walks, and make an especial point of teaching without seeming to teach. Indeed, one of the regulations of the managing Commission reads, "Die Tätigkeit des Hausvaters und der aufsichtführenden Lehrerschaft (Lehrer für die Knaben, Lehrerinnen für die Mädchen) beschränkt sich nicht auf Pflege und leibliches Wohl der Kinder, sondern soll in hervorragendem Masse eine bildend erziehende sein, gemäss den besten und erprobtesten Maximen der Pädagogik." As behooves a pious Swiss community, there is family prayer morning and evening, grace before each meal, and divine service on Sundays, attended by all in the quaint little white chapel with the dreadful pictures, where the children's voices furnish the music.

No longer residence than three weeks for each child can be allowed unless funds are forthcoming for another building. The applications for admission, even with four colonies each summer, are at present nearly double the limits of accommodation. That the institution is abundantly appreciated in Luzern is indicated by the cheerful support it receives; and I, from the practical standpoint of an American, thought I had never seen so little money produce so great an effect in any educational scheme. The influence of only three weeks of such wholesome community training upon the morale of the children is as striking as upon their physique. "That boy," said Father Herzog to me, "came to us not quite three weeks ago, thin, and pale, and bent, and moody, and a bit selfish and quarrelsome. Now he is straight and ruddy and active and cheerful; and yesterday I saw him quietly exchanging his warmer jacket for the thin one in which a younger lad was shivering." And so they all learn lessons of neatness and unselfishness along with their growing health, and these lessons count the most. Best of all, there is not the slightest air of an institution about the place, no red-tape regulations, no schoolmasterish ways; there is as natural and free a manner as there should be in a thoroughly healthy household. Everybody, from the house-father down, seems most simply and perpetually and exuberantly happy. Doubtless the restraining hand has sometimes to be employed—it would be strange if it were not so in a community of a hundred active children from all sorts of families. But there is seldom any discipline needed beyond a quiet word of advice. Doubtless, this ideal state of things is due in chief measure to the admirable personality and wisdom of Herr Herzog himself, but it would seem a pity indeed if all such achievements as his were to be confined to the native land of a Pestalozzi.

We started on our homeward trudge to Luzern through groups of children playing hard to economize the fleeting minutes of their three weeks of happiness, and singing,

"Niene goht's so schön und lustig
Wie bi eus im Elgetal."

I could well believe it. E. T. M.

Correspondence.

HERBERT SPENCER'S AUTOBIOGRAPHY.

To the Editor of The Nation:

Sir: Having been entrusted by the late Mr. Herbert Spencer with the writing of his biography, I shall be greatly obliged to persons who may possess letters from him of interest or value, if they will kindly lend them to me for the purpose of such biography. All letters addressed to Dr. Duncan, care of H. R. Tedder, Esq., Secretary, The Athenæum, Pall Mall, London, S. W., will be carefully preserved and returned in due course to their owners.

Faithfully yours, D. Duncan.

London, January 23, 1904.

WHO COMES WELL OUT OF IT?

To the Editor of The Nation:

Sir: I should like to answer the question with which your reviewer of 'The Nemesis of Froude' ends his article. The answer is, "Thomas Carlyle and Jane Baillie Welsh, his wife." Their case is unique. They had for biographer the worst biographer hitherto discovered. But, after he has done his worst, "the nobility of Carlyle and his wife and the closeness and tenderness of their relations are too clear to be mistaken." This must be the verdict of every one who has patiently reviewed the evidence for himself, and not simply joined in the cries of the marketplace.

Archibald MacMechan.

Dalhousie College, Halifax, N. S., January 30, 1904.

LIFE IN THE UNIVERSE.

To the Editor of The Nation:

Sir: In the *Nation* of January 14 there is a review of Alfred R. Wallace's new book 'Man's Place in the Universe,' in which the author undertakes to show that there are in the universe but few heavenly bodies upon which the necessary conditions for supporting life are fulfilled. This position seems surprising enough, since we are acquainted with such forms of life only as exist here upon the earth and with the conditions necessary for them. What other forms of life may be possible we have no means of knowing. The reviewer therefore very properly points out the non-sequitur.

But there is another point involved in this modern discussion of the plurality of worlds, the neglect of which has often struck me as almost unaccountable. It is the fact that all those discussing the possibility of organic life and intelligent beings upon other planets of our solar system or of any other (so far as I am informed) either tacitly or explicitly have in mind just about such life as we are acquainted with here upon earth. That Mr. Wallace stands upon this same ground is shown by his saying that among the necessary conditions of life are an *atmosphere* formed of a combination of *nitrogen* and *oxygen* in the proper proportion; that *aqueous vapor* must exist in sufficient quantities to produce the right amount of *rain;* that the force of gravity must be about the same as we know it, etc. It does not seem to have occurred to Mr. Wallace that organic life is not necessarily a *carbon-hydrogen-oxygen-nitrogen* life. Verily, it is not carbon alone which will form within certain limits of temperature and pressure an almost endless variety of compounds. We need but turn to carbon's cousin, silicon, and an imposing array of possible compounds suggests itself. It is well known that silicon forms a great number of anhydrous acids by the combination of several molecules of the simple acid and the rejection of the elements of water, and that the natural silicates (found in the minerals) are salts of these poly-acids. Very little is known of the conditions under which the minerals were formed, or the limits of temperature and pressure within which the formation and decomposition of these compounds take place—a *terra incognita.* But the possibility of an almost endless variety of compounds of silicon is well within sight. Now who can say that a *silicon* life may not exist somewhere, instead of a *carbon* life such as we know upon the earth? To deny the possibility upon à priori grounds would be absurd. Among the conditions of such life might be high temperature and high pressure.

Need I say that intelligence is not necessarily confined to brain or nerve substance? The fact that we know no other manifestation of it, is nothing to the question. To insist, upon any à priori grounds or from anything known to man, that upon the sun, for example, there cannot exist intelligent beings, is absurd; and to contend that our vaunted human intelligence is the measure of all intelligence in the world, would be shortsightedness in the extreme, or conceit beyond measure.—Very respectfully,

Werner A. Stille.

Leipzig, Germany, January 28, 1904.

"ALL-RIGHT."

To the Editor of The Nation:

Sir: Colloquial expressions may possibly, at times, serve as indications of the temper of a people, and at present in the Middle West everything is "all-right." A perfect epidemic of this term is upon us, and in all quarters our ears are assailed by it.

It is usually pronounced "awright," but it has numerous variants as to stress; the most popular being a prolongation of the first word, and then a sharp sounding of the second—a peculiarly offensive form, borrowed, I believe from some vaudeville

actor who has, unhappily, touched a sympathetic chord in the crowd.

In spelling, I find a tendency to contract the term into a single word, "alright." It is thus noticeable in the letters of travelling salesmen and country merchants.

In domestic service the use of "all-right" as a response to every query or instruction is peculiarly exasperating and difficult to eradicate. It spreads to the children of one's household, and even the mistress and master find themselves slipping into its use.

The phrase seems to have developed vogue since the "full dinner-pail" came upon us, and reflects, perhaps, the easy, good-natured tolerance born of prosperity—the philosophy of "whatever is, is right."

Yours respectfully,

HENRY LEVERETT CHASE.

ST. LOUIS, January 29, 1904.

Notes.

Macmillan & Co.'s spring list includes a compendious 'History of the United States,' by Henry W. Elson; 'History of the United States since the Civil War,' by William Garrott Brown, the first of two volumes; 'The Opening of the Mississippi,' by Frederic Austin Ogg; 'Roman Society from Nero to Marcus Aurelius,' by Prof. Samuel Dill; 'The Foundations of Modern Europe,' by Dr. Emil Reich; 'Lectures on the French Revolution and on Modern General History,' by the late Lord Acton, and his 'Letters to Mrs. Drew'; 'Representative Modern Preachers,' by Prof. Lewis O. Brastow; 'The Fat of the Land: The Story of an American Farm,' by John W. Streeter, M.D.; 'Old-Time Schools and Schoolbooks,' by Clifton Johnson, with many illustrations; 'The Making of English,' by Henry Bradley, joint editor of the Oxford English Dictionary; 'Naples,' by Mrs. Augustine FitzGerald, with accompanying plates in color by her husband; 'The History of American Art,' by Prof. John C. Van Dyke; 'Whistler as I Knew Him,' by Mortimer Menpes, with 100 full-page plates in color and tint; 'Anthracite Coal Communities,' by Peter Roberts; 'The Present South,' by Edgar Gardner Murphy; and 'Essays in Heredity,' by Prof. Karl Pearson.

'The Citizen: A Study of the Individual and the Government,' by Prof. N. S. Shaler; and 'Napoleon: A Short Biography,' by R. M. Johnston, are announced for the present month by A. S. Barnes & Co.

The Baker & Taylor Company will soon issue 'Moses Brown, Captain U. S. N.,' by Edgar Stanton Maclay, the first of a series entitled "Unknown Heroes of the Navy"; 'How to Get the Best out of Books,' by Richard Le Gallienne; 'Social Progress,' an almanac of sociological and religious statistics, by Josiah Strong; 'The Better New York: A Sociological Baedeker,' by Dr. Tolman and Charles Hemstreet; 'The Congregationalists,' by the Rev. Leonard W. Bacon; and 'Golf for Women,' by Genevieve Hecker.

Harper & Bros. have nearly ready 'In Famine Land,' by the Rev. J. E. Scott, fully illustrated from the author's experience as a missionary in India.

To the Bookman Biographies of James Pott & Co. will be added 'Tennyson,' by G. K. Chesterton and Richard Garnett; 'Browning,' by James Douglas; and 'Thackeray,' by Mrs. Chesterton and Lewis Melville.

Ruskin's Letters to Charles Eliot Norton, filling two volumes, will be issued in the autumn by Houghton, Mifflin & Co., who will shortly have ready 'Louisiana Purchase Papers,' consisting of two as yet inedited, one by Jefferson on the boundaries of the Territory, and the journal of William Dunbar's journey up the Red and Washita Rivers; 'The Neighbor: The Natural History of Human Contacts,' by Prof. N. S. Shaler; and 'William Greenleaf Eliot,' a biography by Charlotte C. Eliot.

A 'Source-book of Roman History,' by Dr. D. C. Munro, is in the press of D. C. Heath & Co., Boston.

Ginn & Co. announce 'Sea Stories for Wonder Eyes,' a book for children, by Mrs. A. S. Hardy, and 'Machiavelli and the Modern State,' three lectures delivered by Louis Dyer at the Royal Institution, London, in April, 1899.

A Life of Dr. William Pepper, by Prof. Francis Newton Thorpe, and 'The Educational Theory of Immanuel Kant,' by Prof. Edward Franklin Buchner of the University of Alabama will shortly appear with the imprint of J. B. Lippincott Co.

The Delegates of the Clarendon Press, Oxford, are preparing a thorough revision of Liddell & Scott's Greek-English Lexicon, under the editorship of Arthur Sidgwick. Corrections or additions are invited from scholars, who may communicate with the secretary of the Delegates. Fairly in sight is the third and concluding volume of C. Raymond Beazley's 'Dawn of Modern Geography'; but Dr. M. Aurel Stein's complete account of the results of his researches in Chinese Turkistan cannot appear before next year. The completion of Prof. Joseph Wright's 'English Dialect Dictionary' is also set down for 1905.

Archibald Constable & Co., London, have in press 'The History of the King's Bodyguard of the Yeomen of the Guard,' by Col. Sir Reginald Hennell, D.S.O., their lieutenant, whose narrative goes back to the creation of the Guard in the fifteenth century. The illustrations will be numerous, many in color, and mostly new.

The series of twentieth-century reprints of nineteenth-century books already noticed as bearing the American imprint of Messrs. Appleton, with their mostly colored plates, goes on with the third part of 'Dr. Syntax's Tour in Search of a Wife' (designs by Rowlandson); Pierce Egan's 'Life in London' (illustrated by the Cruikshanks); 'Handy Andy,' with Lover's own drawings; and 'The National Sports of Great Britain,' with Henry Alken's color scenes, for which he furnishes the text, that is typographically most open and readable of all except Syntax's jingles.

In substance the 'Donatello,' by Alfred Gotthold Meyer, in the Knackfuss "Monographs on Artists," published by Velhagen & Klasing of Leipsic and Bielefeld (New York: Lemcke & Buechner), is excellent, and the illustrations are, as usual in this series, numerous and good, though sometimes on an unfortunately small scale. The translation, on the other hand, is quite incompetent, being not only clumsy and unidiomatic, but disfigured by such blunders as *have* for *half*, *regaled* for *relegated*, and *course* for *coarse*—the latter repeated with a consistency that probably exonerates the compositor from blame. Besides these, there is in one place a confusion of the titles under the illustrations, while a misprint, on page 111, places Donatello's death twenty years too early. The system, or lack of system, of the punctuation is entirely incomprehensible to us, and the way in which commas intrude into the middle of phrases is bewildering. It is a pity that the publishers of this meritorious series cannot find translators, or at least a proofreader, with a reasonable knowledge of English.

'Literary New York,' by Charles Hemstreet (G. P. Putnam's Sons), is a book of "landmarks and associations." It has sixty-five illustrations, and is fuller than most single volumes of its class, as it comes down to date, and gives us the landmarks and associations of the present metropolis. There is not much glamour or romance about these, but they relate to living men more or less well known, and hence possess interest. New York is now known as a "literary headquarters," but it has never been really literary in tone, except so far as Irving and his immediate successors for a time created a literature. We do think of Irving, Paulding, Drake, Halleck as essentially men of New York, while of Cooper, Poe, and Bryant we think rather as Americans; and, at the present time, Mr. Howells belongs to no city or State. New York has gained many things since the "Knickerbocker" days, but it has also lost at least one—that sort of literary solidarity which makes literature seem a genuine growth of the soil, and for which a commercial "world capital" is perhaps ill adapted. And we cannot but think that the sodden government of Tammany Hall makes against good literature. A community which prefers to be governed by liquor sellers in the interest of panders and blackmailers can hardly be said to deserve a literature. It produces after its kind a yellow press, which answers its foul purposes. The blight of Tammany Hall, as any one can see who looks over a book like this, is far worse than it used to be, because its power is far greater. Literature flourishes under the kindly influence of an enlightened government, and the motto of those who love letters here, as of those who love justice and humanity, should be, Tammany *est delenda*.

'The Greeks' Companion,' published by Socrates A. Xanthake, editor of the *Atlantis*, is a guide for Greeks in the United States and Canada, which contains statistics of the States, abstracts of commercial regulations, laws pertaining to immigration, naturalization, marriage, etc.—in brief, all needful information for an intelligent Greek who proposes to settle in this country and become a citizen. The significant feature of this publication is that it is designed for Greeks just entering the country—that is, for an intelligent people who read, transact business, and are capable of understanding laws and contracts. The Greeks at home are among the most literate peoples of Europe; they enjoy a constitutional government, they are as democratic as the Swiss or the French, they are keenly interested in politics—they enjoy the game, perhaps, too keenly. At any rate, they are no strangers to self-government. That they are, in the main, law-abiding was proved during the cotton strike last year in Lowell. Several thousand of

the strikers were Greeks—many of them newcomers; and their presence was at first thought to be as ticklish and incalculable as the vicinity of a powder magazine. Yet there was hardly a symptom of violence, and the issue was a creditable contrast to the ordinary programme of murder and persecution in the mining districts. It is a comforting reflection that this particular stream of immigrants is, as a rule, so well fitted for assimilation with the citizens of a republican government.

Four books on electricity are before us. The first of these, which is intended for the general reader, is incomplete, although already filling three volumes, being the first part and the first division (or a portion of it) of the second part of R. Mullineux Walmsley's 'Modern Practical Electricity.' It is an English book, referring to instruments used in England, and is printed there, though issued by W. T. Keener & Co. of Chicago. It carries no date; nor is there any intimation that it is a second edition of a ten-year-old book. Nor is there any statement as to the number of volumes still to come. On a hasty examination, one might suppose it to be complete. It really has a good deal of merit as being such an account as any intelligent person can understand of those effects of electricity which may come into the experience of non-electricians. We cannot recommend it until we know when it is to be completed. The 'Elementary Treatise on Electricity and Magnetism,' of G. Carey Foster and Alfred W. Porter, is also a second edition; but as it is published by Longmans, Green & Co., we may be sure there is no occasion to cry *Caveat emptor.* It has been extensively revised, yet is hardly so good as an entirely new book might have been. It is a text-book that avoids the calculus.

'Elements of Electromagnetic Theory,' by S. J. Barnett (Macmillan), is a profound and meritorious mathematical work. The author has "tried to present in systematic and definite form a simple, rigorous, and thoroughly modern introduction to the fundamental principles of the subject." He does not seem to us to have succeeded in making the subject quite as perspicuous as he might have made it, nor everywhere to be clearly rigorous; yet he has produced a valuable work. Mr. G. D. Aspinall Parr's 'Electrical Engineering Measuring Instruments' (Van Nostrand Co.) is a good technical book concerning instruments generally in use in England.

An elaborate quarto volume on the 'Climatology of California,' by A. G. McAdie (Weather Bureau Bulletin L, 1903), contains a large amount of useful statistical information; yet an examination of it must convince the reader that the art of treating the climate of a State otherwise than in tabular form is not well developed. Facts of interest and importance are presented in abundance, and many carefully prepared tables of temperature and rainfall are given for various stations; but the descriptive treatment of the problems involved leaves much to be desired. There does not appear to have been in the editor's mind a well-considered scheme in accordance with which the summarized facts should be verbally set forth. Charts of annual rainfall and mean annual temperature, with a table of monthly precipitation for a term of years (no locality given), come under a text-heading, "Pressure Distribution," for no apparent reason. "Topography," a subject of great importance in such work, is treated briefly and unsatisfactorily; and the hot "northers" of the great valley are mentioned here instead of in a subdivision of the section "Winds," which have no separate consideration. The view from Mt. Tamalpais, a Weather Bureau station, must be marvellous, for from it "one looks down on the broad expanse of the Pacific, nearly 20,000,000 square miles of water, to the north, west, and south." Fine plates of fog and clouds, and a discussion of frost, are given in the later pages. The table of contents is placed at the end of the book, and called "Index."

The "colored one-inch map" (one inch to a mile) of England now in course of publication by the Ordnance Survey (London: Stanford) is a vast improvement on the sheets of the earlier series, and is one of the best examples of modern topographic methods. The sheets are of various sizes and shapes, for reasons not easily apparent; their cost is not more than two or three shillings for the largest. They are excellent guides for local excursions, and add greatly to the pleasure of travel. Villages and roads are given in great detail, and the form of the ground is indicated with unusual success. Slopes are shown by well-drawn brown hachures; height by red contours for every hundred feet. The chief highways are in ochre, the water in blue, the parks in green, and the "culture" in black.

Among the maps issued during 1903, the Manchester sheet is remarkable for its density of population, characteristic of modern industrial England since the use of coal and steam withdrew the centre of population from the old agricultural counties. The Lincoln sheet, and the ones north and south of it, exhibit with much delicacy the escarpment of the oolite (limestone); and here one may trace "Ermine Street," of the ancient Roman ways, still generally followed, but sometimes locally abandoned for no apparent reason by the modern road: it has been suggested that this is because the Roman ways became more or less overgrown during the Dark Ages of their least use; and that later, when traffic increased again, the old ways were here and there lost in thickets, around which the newer road wandered. The Snowdon sheet and its neighbors include some notable examples of skeleton mountains, whose body has been gnawed out, in large part by glacial erosion, so as to leave only a narrow and branching backbone or arête: the round-headed cirques from which the glaciated valleys descend are fine examples of their kind. Mountains of this form present interesting contrasts on the one hand with the full-bodied masses of the Adirondacks, whose ample contours are but little indented by ravines; and on the other hand with certain skeleton mountains of North Carolina, whose delicately ramifying dissection is the work, not of clumsy, thick-headed ice-streams, but of slender and agile water-streams.

Two series of maps of Germany are in course of publication: the "Karte des Deutschen Reiches" (1:100,000), and the "Topographische Uebersichts-Karte des Deutschen Reiches" (1:200,000). The former indicates relief by means of black hachures, with numbers here and there showing altitudes in metres. The latter indicates relief by brown contours for every 10 or 20 metres, and is therefore much to be preferred for general use. In such a district as the Schwarzwald the hachured map is too dark, and the names, also in black, are too indistinct for easy consultation. On both maps, water is in blue, and boundaries are tinted in various colors.

A remarkably fine and clearly lettered wall-map of North America comes to us from Carl Flemming in Glogau (New York: Lemcke & Buechner). It is clearly made up from four sheets of the ninth edition of the Sohr-Berghaus Handatlas, and embraces not only the entire continent, with Greenland, Iceland and the Aleutian Islands, Cuba, Hayti, Jamaica and Porto Rico, but also (in side maps) our imperial possessions and sphere of influence in the Pacific (but the Philippines are only minutely in evidence). Points of hostile contact like Colombia and Venezuela are just included on the lower margin, and there is a separate map for the Isthmus of Panama. The water space is thriftily filled with small maps of North America to exhibit meteorology, vegetation, orography, crops, fisheries, etc.

—While scientists such as the president of a noted Western university are fulminating almost continuously against set college courses, and holding up to criticism, if not ridicule, almost everything in the history of college education more than twenty years old, it is at least a welcome break in a situation fast growing monotonous to find an avowed devotee of science, Prof. John J. Stevenson, taking directly opposite ground. In the *Popular Science Monthly* for January he assails with great vigor the present tendencies in college education, and maintains that the real need of the colleges is to get back to the standards in vogue several decades ago. He takes it as almost self-evident that the average student entering college cannot select for himself from the studies offered as wisely as men of age and experience in educational matters can select for him; and, even aside from all that, he regards the discipline of following a set course as an experience which the boy sorely needs, in preparation for the work of after life. The course should not be shortened, nor should colleges resort to the prevalent device of using the senior year to anticipate studies belonging properly to the professional school; thus allowing one year's work to be applied toward both the baccalaureate and the professional degree. Without any such clipping, he thinks, the lawyer or doctor can get before his public fully as early in life as they should be willing to entrust their cases to his hands. Scientists have been primarily responsible for the current bent towards early specialization, and it is a rare thing, at present, to find one on the opposite side of the question. A reaction is due, however, and it will not be surprising if Professor Stevenson finds a goodly number of scientists to stand with him in the idea that it is the proper function of our colleges and universities to make a man first and then a specialist.

—'Quebec under Two Flags' (The Quebec News Company) is the joint production of Dr. A. G. Doughty and Dr. N. E. Dionne, the librarians of the Quebec Legislature. Both writers know their sub-

ject at first-hand, and have published excellent books on Canadian history—Dr. Doughty in his 'Siege of Quebec' and Dr. Dionne in his biographies of Jacques-Cartier and Champlain. The aim of the present volume is highly practical. It is neither to retell a story so often told before, nor to submerge the reader beneath a flood of antiquarian details, but to present in convenient form those facts which throw most light upon the ancient prestige of the town and its modern attractions. The vicissitudes of Quebec furnish a fine theme alike to the historian and to the man of letters. Unfortunately, the subject often suggests a kind of rhetoric which has no historical value, and is too flamboyant to deserve the name of good literature. This book has the merit of being concrete and categorical. It keeps to the region of fact, and leaves the rhapsodical style to those who are less sure of their ground. We call attention particularly to the notices of public buildings, and to the copious supply of that local information which tourists need much more than the conventional outbursts regarding scenery and romance. Certain chapters, like those on the fortifications and the legend of the *Chien d'or*, are particularly interesting from their thorough grasp of the original materials. Other notable features of the volume are the clearness of its style and the beauty of its illustrations. The only mechanical blemish is an undue tightness of binding. We shall sum up by saying that this is much the best handbook on Quebec that exists.

—The 'Color Key to North American Birds,' by Frank M. Chapman and Chester A. Reed (Doubleday, Page & Co.), appears to be largely the work of Mr. Reed, who is favorably known to the public through his bird magazine, *American Ornithology*. The aim of the 'Key' is to enable the amateur student to identify birds without having specimens in hand. Almost every species included is illustrated by a colored drawing. The author has cleverly hit on the plan of making the representations diagrammatic rather than lifelike, and of reproducing only the characteristic coloration that appears when the bird is seen at a distance. Although not so successful with the dull-colored, he brings out with excellent effect the diagnostic specific differences of the brilliant birds, notably in the case of the warblers. An unusual feature of the book is its wide scope. Other authors have produced field keys, but none have heretofore included all the species and sub-species from Panama to the Pole. One may question, however, whether the book might not be of greater use to the ordinary student if it covered a more restricted area with a less confusing list of species and sub-species. Moreover, it must be remembered that although any picture, but especially a colored picture, is a greater help to identification than the best description, still, an extensive and accurate knowledge of species is practically unattainable without the aid either of specimens in hand, or of a teacher who has studied from such material.

—A good part of Mr. Emerson Hough's pleasing book, 'The Way to the West' (Indianapolis: Bobbs-Merrill Co.), has already appeared in a series of magazine articles entitled "The Settlement of the West, a Study in Transportation." The sub-title of this series very fairly describes the present volume. There is not much chronology, not much politics, but a succession of cleverly drawn pictures of the pioneers pressing across the mountains, down the Ohio, up the Missouri, to the Pacific, and, it is suggested, across the Pacific, in constant obedience to the same spirit of enterprise and unrest. Few Americans will read this book without being enlightened as to the history and character of their countrymen and stirred with admiration for them. "It has not been the intention herein," says Mr. Hough, "to write a history of the American people, but a history of the American Man." There are characteristic chapters on "The American Axe," "The American Rifle," "The American Boat," "Boone," "Crockett," "The Santa Fé Trail," "Early Explorers of the Trans-Missouri." The two points which, at the cost of much iteration, Mr. Hough is determined to impress upon the reader are, first, that "in the year 1834 it became no longer profitable to trap the beaver"—hence the trappers had to do something, and accordingly settled California; and, second, that Frémont was not "the Pathfinder," but merely allowed Kit Carson to guide him around a country "which to many a Western man was as familiar as his own dooryard."

—Mr. Hough has a taste for archaisms, such as "shoon" and "weaponry," and a neat hand at epigram, which, like many beneficiaries of that fatal gift, he occasionally employs at the risk of strict accuracy. Yet few and slight are the blemishes of this excellent book. He gives us food for thought in such sentences as these: "The Old World was called upon to furnish us a people to replace the more than half-million dead of as grand a population as the world ever knew, the flower of America, North, South, East, and West. It would have been this splendid army of men that would have settled the West had it not been for the war, which a few years later would have been an impossible thing." "Canada lost one-fifth of her population to the United States. She is regaining much of it to-day, because she still has a West and we have none." "No man of all the future will ever again behold a land like that American West which is now no more. That was indeed a land rich in the bounty of nature, rich in opportunity for humanity. It was a land where a man could indeed be a man; where indeed he might live honestly and cleanly and nobly, unshrinking from his fate in fearing for his own survival, helpful to his neighbor, independent as to himself."

—The well-known author of the standard 'Life of Drake,' Mr. Julian Corbett of Trinity College, Cambridge, has been discoursing at Oxford, in his capacity of this year's Ford lecturer, on the naval policy of Cromwell, which he presents partly as a continuation of that inaugurated in Elizabethan days, and continued under James I. and Charles I., but chiefly as to its extension to the Mediterranean. His study of the motives underlying the dispatch of Admiral Blake to the Mediterranean, of its effects upon the French expedition under the Duc de Guise, sent by Mazarin to seize Naples, of Blake's occupation of the Straits of Gibraltar, his stay at Leghorn and Cagliari, as well as of his memorable bombardment of Tunis, is an absolutely new contribution to the history of naval tactics. The fact that Blake first had the news—false as it proved in the end—that led to his enterprise against Tunis, just after he had narrowly escaped losing his fleet in a storm, was vividly presented at the third Ford lecture. At the same time, it was made plain that the supposed original instructions of Blake to operate against Tunis are quite apocryphal. What Blake's instructions were could, Mr. Corbett maintained, be gathered only from Blake's movements. These show them to have been most vague. Probably they had reference to the French plans against Naples, which appear to have been completely upset by the various moves of the English squadron. The lecturer also examined the common assertion that Blake received from Cromwell a "pardon." This, he contends, was conveyed to him in Cromwell's letter approving after the fact of the bombardment of Tunis, by undertaking which Blake unquestionably risked the safety of the whole English Levantine trade. That would have been wiped out by a declaration of war on the part of the Grand Turk.

—It will not be the fault of the "Young Turks" if they are not set straight with the Western world. For long that world had a comfortable feeling that in Turkey there were Turks and Christians, each much disapproving of the other; that Christianity and reform of necessity and exclusively went together, and that if perchance any Turk were a reformer, he would be found friendly in attitude towards Christians, native and foreign. But it is now plain that there is a powerful Turkish reform party—mostly, it is true, residing abroad, and of unproved sincerity in its reforming protestations—which does not love Christians any more than do the Turks of the old school, perhaps even less. Christians to them are to be feared and hated; to their fathers they were simply to be despised and used. So we are met with the paradox, for us, of a party professing the most correct modern principles and nourishing the strongest racial and religious prejudices, talking largely of liberty and equality, and defending the Armenian massacres of 1895-6. Yet there is one point on which all reformers and revolutionaries, Muslim and Christian, are united—hatred of the present Sultan and his system. As the Padishah of the Ottomans, every Turk, old-fashioned or "young," would live or die for him; as head of an autocratic reign of terror, he has outlawed himself for many, and might legally be deposed by a fetwa given by the Shaykh al-Islam, as were both his immediate predecessors. But the old Turkish system, with its loyalties, prejudices, and weaknesses, is still essentially the ideal of every Turk; they hold by their blood and by the Ottoman line.

—All this stands out very clearly in 'The Life of Midhat Pasha,' by his son, Ali Haydar Midhat (London: John Murray). Midhat Pasha was one of the most distinguished leaders in the little group which attempted in the seventies to bring about constitutional reform in Turkey. His record from the beginning of his official career was that of an able and honest administrator. He had a large part in the deposition of Abd al-Aziz, and, not unnaturally, was suspected

of a part in his death. Through him the ill-fated Murad was enthroned and, thereafter, the present Sultan, in conflict with whom the latter part of his life was to be passed. The story of that conflict is very fully and fairly given here, with large quotations from Midhat Pasha's correspondence. The issue of it—the triumph of Abd al-Hamid over constitutionalism—conditions essentially the present situation, and explains how the Sultan has been able to gather into his own hands all the reins of power. Then follows the trial of Midhat for the alleged murder of Abd al-Aziz, the condemnation, the English intervention, and the commutation of sentence to exile in Arabia, and finally his murder there, as certainly as any state murder can be proved, at the order of the Sultan. Other elements in the perplexed life of the time are brought out with a new clearness—the making away with the constitution, Russian intrigues and influence on the present Sultan, and the immediate causes of the war of 1877-78. Ali Haydar Midhat has done the duty of a son towards his father's memory, and has produced a book which, while it is certainly a "Young Turk" manifesto and a denunciation of Abd al-Hamid, is also a real contribution on many obscure passages of recent history. Yet it is curious to find an educated Muslim quoting traditions (p. 14) as found in the Qur'an. Do young Turks, when they learn to allude to "something rotten in the state of Denmark," give up the study of their own sacred books?

SVEN HEDIN'S EXPLORATIONS IN CENTRAL ASIA.

Central Asia and Tibet: Towards the Sacred City of Lassa. By Sven Hedin. In two volumes. London: Hurst & Blackett; New York: Charles Scribner's Sons.

The name and fame of Dr. Sven Hedin have already become well known to geographers by the explorations he had made in previous years, and described in one earlier book of travel, entitled 'Through Asia.' The present volumes contain the record of journeys undertaken in 1899, 1900, and 1901, in which about 6,000 miles of Inner Asia were covered. The regions traversed were, broadly speaking, the northern part of eastern or Chinese Turkistan, or Mongolia, and the eastern, southern, and southwestern parts of Tibet—regions which, sixty years ago, had remained almost unvisited from the days of Marco Polo downwards, and much of which, even since the journeys of Przhevalsky, Littledale, and the Pandits whom the Government of British India has from time to time sent out across the Himalaya, had continued to be practically unknown. Nearly all of these regions are desert, nearly all their surface lies more than 10,000 feet above sea level; thus they are dry and cold, even in summer, and intensely cold in winter. Human obstacles are not so serious as those which the climate presents to the explorer, for though there are robbers here and there, they seem to have given Dr. Hedin no trouble. But the traditional and unconquerable suspicion of the Lamaist Government of Tibet did interpose great difficulties, and in fact prevented our traveller from reaching one of the principal goals of his journey, the sacred city of Lhasa. No European has been permitted to enter it since the Abbé Huc did so in 1845.

Our author is a first-rate traveller, full of energy, spirit, and resource, and evidently of remarkable physical strength and soundness of constitution. Nothing but a splendid constitution could have survived the hardships which he describes, and which he does not seem in any way to exaggerate. He must also possess in high measure two invaluable gifts. The one is that of finding the way where there are not only no roads, but no tracks, and where the landscape is apt to be darkened by sand storms or snow storms. Only those who have tried to travel in a desert by map and compass solely can realize how great the difficulties are; and how great the risk, when a party is obliged to divide, that its two sections may not meet again. The other gift is that of getting, keeping, and managing good servants. Dr. Hedin travelled with a caravan which was sometimes of twenty men or more, and seldom of less than seven. His men were partly Cossacks in the Russian service, partly persons hired at various places which he passed. There were Musulmans and Buddhists among them, and now and then a Christian. There were Turkmans, Buriats, Mongols, Tibetans, Afghans. That he seems to have found little difficulty in keeping up discipline and getting excellent work out of this motley company speaks well for his firmness, his good temper, and, above all, his skill in selection. The reader becomes quite interested in some of the leading figures in this little party, although the author makes no attempt to embellish his tale. Dr. Hedin likes the Musulmans least. After recounting the peculations and disgrace of one who had for a time discharged his trust with fidelity, he adds:

"The moral of the whole story is—Never trust a Musulman. You would think that after a man had served you faithfully for so many years, and been the recipient of so many favors, you could trust him with untold gold. But not so the Mohammedans; they never forget that they are serving an unbeliever. From the moral point of view, these Central Asiatics stand on a low level; but they must not be judged too severely: their conditions of life are exceptionally hard. The Mongols stand incomparably higher than they do, and when you have the good fortune to be accompanied by an escort of Cossacks, you need only employ Mohammedans for the more laborious tasks." (Vol. II., p. 202.)

Our author's favorites are two Buddhists, a Buriat Cossack from near Lake Baikal, and a Lama from Urga, in Mongolia, who was engaged to accompany him through Tibet. This worthy man, incurring the displeasure of the heads of his religion because he had guided a European who was trying to slip into the Sacred City, ultimately, when the journey was over, settled himself in a Kalmuk Buddhist monastery at Astrakhan. Wide is the world which Buddhism covers!

Regarded as a piece of literature, these volumes are steady-going and businesslike rather than brilliant. There is little attempt at picturesque description, little effort to convey any general impression of the scenes or of the people. The book is, in fact, practically a transcription of the author's diary, in which the incidents of travel are recorded from day to day. One looks in vain for a broad view of the orography and physical structure of Inner Asia. From the occasional mention of the heights of passes we can gather which are the most elevated parts of the great plateau; from the records of temperature (which sometimes went down to —26 degrees Fahrenheit), and of the direction of the winds, one similarly gathers the salient features of the climate; but this is all. The omission is explained by the statement that the scientific results of the expedition are reserved for later volumes. When these are published, it is to be hoped that they will contain not merely a body of detailed statements dealing with mountain heights, lake depths (a matter which was the subject of careful investigation), temperatures, direction and force of winds, rainfall, level of perpetual snow, size of glaciers, etc., but also a general view of the physical character of Mongolia and Tibet, such as may enable that character to be duly apprehended by the reader who has not time to plod through and work out for himself the significance of a mass of details.

Though we regret the absence of such a general picture from these two volumes, because it is probable that the volumes which are to follow will reach only a more limited circle of readers, we do not wish to imply that the daily record of travel here given lacks interest. It is clear, simple, graphic, not deficient in human interest. It sets before us a striking example of tenacity, courage, and skill in the arts of travel. Monotonous in some respects it is, as the author himself admits, and must needs be, considering the extraordinary monotony of most of the country traversed. Wide plains of barren clay or sand, shallow lakes fed by rivers often almost dry in summer; a scanty vegetation which, where it exists, is practically confined to poplars along the watercourses and tamarisks rooted wide in the sand, with a tapering crown of twisted boughs; huge mountains, seldom, it would appear, of bold or noble form, but sometimes austerely grand in their rocky gorges; exquisite colors in the distant views when the weather suffers the distant hills to be visible; but more frequently cruel storms darkening the sky; frightful cold on the heights alternating with oppressive heat, breeding swarms of mosquitoes and gadflies, in the moist depressions—these are the features of Turkistan and Tibet repeated over thousands of miles. A dismal region, but a region apparently more inhospitable now than it once was, for there seems to be in progress a steady process of desiccation which has either narrowed or obliterated most of the lakes, reduced the flow of the streams, and condemned to desolation districts formerly inhabited.

One of the results of Dr. Hedin's journeys which the geographer, and indeed the historian too, will find most interesting is his account of the great lake Lop Nor (which the older maps called Lob Nor), lying north of the main line of the Kuen Lun Mountains, near the extreme southwest corner of the desert of Gobi. He seems to have established that this lake changes its position from time to time, following changes in the course of the principal river which enters it and keeps it in existence. The consequence is that districts where there was formerly a possibility of cultivation or pasture have now become uninhabitable. At one place he saw a new lake in process of formation. A stream had altered its course, and, when it reached a depression, was overflowing the low ground and creating a great sheet of water, where had apparently been none before. The number of these

isolated lake basins in Inner Asia is apparently larger than the older geographers had known. Many are described here, some quite small. Many more have evidently vanished in the process of desiccation—a process, by the way, which is going on in inner North America also. Great Salt Lake, for instance, was at no distant date much more extensive than it is now.

A little north of the old Lop Nor, Dr Hedin made a discovery of some historical importance. He came upon the ruins of a considerable town at a place called Lôu Lan. The extreme dryness of the air had preserved fragments of houses, some bearing wood carvings, as well as domestic utensils, ornaments, and weapons, together with some coins and some wooden tablets and pieces of paper covered with writing. Dr. Hedin, himself disclaiming archæological knowledge, gives reports on these relics from two competent scholars. The writing establishes the fact that the place was the Lôu Lan mentioned in Chinese records, and that there existed a town of some importance here between A. D. 200 and A. D. 300, a town in constant communication with northern China by routes across the Desert. It would seem "to have been destroyed by an inundation or a desert storm, or by both"; and the survivors apparently built another town in the same region, which in its turn perished in the fourteenth century. According to Chinese chronicles, this Lôu Lan was in still earlier times the seat of a principality, which, having been semi-independent, became subject to China shortly before the Christian era. This discovery, together with that of an ancient city (examined by Dr. A. M. Stein), near Khotan, a good way to the southwest of Lôu Lan, throws a certain amount of new light upon the very obscure history of Mongolia. At present there seem to be scarcely any inhabitants all through the vast stretch of country from the neighborhood of Lhasa on the south to the Thian Shan Mountains on the north; and indeed little animal life, save that, in places where water can be had, there occur some wild camels, wild asses, wild yaks, and two or three species of antelopes, as well as wolves and an occasional bear.

Dr. Hedin was only a few days' march from Lhasa when the Tibetan authorities stopped him. He was not illtreated by them—indeed, they behaved with a courtesy which may perhaps have been due to the reports that had reached Lhasa of the vengeance taken in China for the murder at Pekin of a German envoy. Thus foiled, as indeed he half-expected to be, he turned to the west, and marched steadily, escorted part of the way by the Tibetans, through a little known part of southwestern Tibet, keeping a good way to the north of the Himalaya, till he turned sharp to the south, and crossed the range Ladakh, whence he descended into India. As respects scenery, this seems to have been the most interesting part of the whole journey. The book is embellished with a profusion of woodcuts, as well as with several maps. Of the translation it is sufficient to say that it does not read like a translation, but has the freshness and ease of a book composed in English. It is satisfactory to know that so skilful an explorer, being still a comparatively young man, contemplates a further expedition to the region for our knowledge of which he has done so much.

FAHIE'S GALILEO.

Galileo: His Life and Works. By J. J. Fahie. With portraits and illustrations. James Pott & Co. 8vo, pp. 451.

To one whose chief enjoyment of books is in reading them, who hates an *édition de luxe*, or any beauty of type or paper that may adorn a parlor table but incommodes a reader, and for whom, in the case of illustrations in which the artistic element is not the predominant consideration, nothing every way more satisfactory has been invented than good process reproductions of photographs, the dress of this volume will seem worthy of its subject, with its tasteful cover, light weight, paper really better than most of the old linen paper, legible type, graceful and free from every kind of affectation, and with black ink. It is from the Edinburgh Press. In those respects in which Mr. Fahie's 'History of Wireless Telegraphy' made us fear this book might be weak, it turns out to be particularly strong; while in some of those respects in which our expectations ran high, we find ourselves a little disappointed. We are not disappointed, however, in finding very scrupulous care and intelligence in getting the events of Galileo's life accurately recorded in every detail. It is safe to say that the history of the persecution here at last takes substantially its definitive shape. For the first time we feel confident of really understanding that history.

The author acknowledges great aid from Professor Favaro, whose stupendous labors in Galile-ology are so famous; and it would seem, from the notes, that Favaro may perhaps have read and minutely annotated Mr. Fahie's MS. There is certainly no one volume of Favaro's own that gives the unitary conception of Galileo's life that this does. It is necessarily more or less a compilation from Favaro; but there are places where the author successfully maintains somewhat different views. It is on the account of the persecution that he has chiefly laid out his resources, and shows really high literary qualities. He is eminently sane, not flying into a passion with the dead, but painting the crime calmly in its true colors, unglozed by any superficial excuses. He looks upon Galileo, not as if his duty consisted in making him a fine subject for a melodrama, but as what might be called, in theatrical parlance, a "practicable" man, like a door or window that will really open and shut. These are what we call the qualities of literary skill in the book. The reviewer took it up late in the evening, and laid it down at half-past six in the morning.

Unfortunately, so much pains has been expended by the author on this great event and on getting all the little facts of the biography right, that not quite so much energy seems to have been left for accuracy in other directions. One cannot say it is a heinous offence to call Simplicius (the Greek commentator, we mean, not Galileo's personage) a Sicilian; but still it puts a bad mark against the account of accuracy. In a sketch of the history of the Magnet down to and including Gilbert, no mention is made of Petrus Peregrinus, from whom Gilbert stole his best experiments. These are the merest trifles; yet even smaller faults are not altogether without importance when they relate to the subjects of Galileo's discoveries. In noticing the Italian's invention of the telescope, late in August, 1609, near eleven months after Lipperley in Holland received a patent for a similar invention, it might have been worth mention that on February 14, 1610, a letter, of which the original happens to be extant, was written to remind Thomas Harriotts of a former promise to send one of the "perspective cylinders" he was then making to an acquaintance. Galileo's *bilancetta*, which was simply an account of a balance for weighing an object under water, in order to find its specific gravity, was published in 1644. It is here said (no doubt with good reason) that it was invented in 1586, but it would have been well to explain just how that date has been ascertained, and to state that in that very year Simon Stéven published the very same invention in Leyden. Galileo was in all probability right in surmising that the method had been known to Archimedes. We are told that Galileo discovered the principle of virtual velocities. No doubt; just as there were three kings of Chickeraboo. But a good half of the virtue of that principle consists, not in perceiving it in a few simple cases, but in generalizing it into the universal key to dynamics. To say that Galileo knew the parallelogram of forces is not in perfect strictness true; but if that is to be said, it becomes downright misleading to say that "he failed to grasp the fact that that acceleration which in the case of motion under gravity he so closely examined, might be made a means of measuring the magnitude of the force producing the motion." Galileo had perfectly clear conceptions of velocity and acceleration, and of their parallelograms. He had, for example, a perfectly clear conception of what is called "*g*," and never would have been guilty of trying to express it in pounds' weight. He had a tolerable notion of pressure, and, of course, some idea of a force applied to a part of the surface of a solid, etc. But he seems to have had no idea at all of a moving or effective force. He never spoke of gravity as a force; and if he had ever heard anybody so speak, he would probably, at first, have accused him of talking metaphysics. Consequently, his notion of the parallelogram of forces must have been obscure. The truth is, that Mr. Fahie, though he makes a praiseworthy effort to do so, never properly appreciates Galileo's wonderful command of dynamical conceptions, wherein lay his chief greatness, and which formed the warp of his intellectual life. The inevitable consequence is that his portraiture is, with all its merits, hardly more than mediocre. It is true that he quotes what Lagrange says (calling him an Italian, as he might so call Napoleon); but if he had fully understood what it amounted to, he would have erased the ninth and tenth words of his book: "Galileo Galilei, one of the earliest and perhaps *one of* the greatest of experimental philosophers of the modern world," etc.

The principal facts now established as to Galileo's dealings with the Inquisition are these: From 1612 and earlier the storm had been gathering. The Jesuits and the Aristotelians were bent upon crushing him, because he put them into the ridiculous position of refusing to see what was before their eyes. But all the cultivated people, the Grand Duke, Cardinal Maffeo Barberini (afterward Pope Urban VIII.), Cardinal

Federigo Borromeo, and the like warmly supported him. On the 5th of February, 1615, an unsigned denunciation of him was lodged with the Inquisition. Early in December he voluntarily set out for Rome. On the 19th of February the Qualifiers for the Holy Office were called upon for an opinion substantially as to the Copernican proposition. On the 24th they reported it to be heretical. On the 25th, Cardinal Bellarmine was directed "to summon before him the said Galileo and admonish him to abandon the said opinion; and in case of refusal the Commissary [*i. e.*, the most Rev. Michelangelo Seghizzi] is to intimate to him, before a notary and witnesses, a command altogether to abstain from teaching or defending the said opinion, and even from discussing it; and if he do not acquiesce therein, he is to be imprisoned." Note that if he consented to "abandon" the said opinion there was to be no such intimation; and if there was an intimation, it must be executed before a notary and witnesses to be of effect. But Galileo at once agreed to abandon the theory. On March 3 a decree of the Inquisition was published, of which the preamble states that "Galileo Galilei, mathematician, had, in terms of the order of the Holy Congregation, been admonished to abandon the opinion he has hitherto held, and had acquiesced therein." On May 26th Cardinal Bellarmine delivered to Galileo a formal written statement to the effect that "Signor Galileo Galilei has not abjured [but only promised to *abandon*] . . . any opinion or doctrine held by him, . . . but only the declaration made by the Holy Father . . . has been communicated to him . . . that the opinion attributed to Copernicus . . . is contrary to the Holy Scriptures, and therefore cannot be defended or held." This obliged Galileo to abandon his researches and writings; and his health suffered seriously, although he was allowed to use the proposition as a "hypothesis."

Events led to his writing 'Il Saggiatore,' and in October, 1622, it was sent to a member of the Accademia dei Lincei, and was passed from hand to hand, and various corrections were suggested and accepted with a view to rendering it acceptable to the Inquisition. In February, 1623, the Papal imprimatur was attached to it, and later in the year it was published. Meantime, on August 8, Galileo's adherent and admirer, Cardinal Maffeo Barberini, had been elected Pope, taking the name of Urban VIII. In April, 1624, Galileo went to Rome and had six long interviews with this new Pope, endeavoring to have the prohibition of 1616 removed, but to no purpose. The Pope wrote officially to the Grand Duke and expressed his sense of what the world owed to Galileo's discoveries, as well as his great affection for him. Galileo returned to Florence, where he drew up a reply to an attack on the Copernican system. This was handed about in manuscript. The Pope, having been shown some passages, expressed his high commendation, and on another occasion remarked to a cardinal that the Copernican system had never been condemned as heretical, but only as rash. Such things convinced Galileo that he might find means to express himself; and in 1626, he began to write his famous 'Dialogo intorno ai due Massimi Sistemi del Mondo, Tolemaico e Copernicano,' which fully occupied him until May, 1630, when he repaired to Rome in order to find under what conditions it could be published. He had audience with the Pope, who assented to the publication under three conditions: first, the title must not be misleading (Galileo had proposed to call it 'Dialogues on the Tides'); secondly, the subject must be treated from a purely hypothetical standpoint; and thirdly, it must be wound up by the argument that since God is all-powerful, no facts can be a *necessary* proof of any independent facts. Certainly, no logician to-day can withhold his assent to that; and certain it is that this argument was absolutely vital to a good Catholic then, and so remains to this day.

There was nothing for Galileo to do but to make the required alterations of the title, the introduction, and the conclusion. The last was a most difficult task, for he held the Pope's opinion in supreme contempt, and yet it would not do so to treat him. He ought to have seen that this situation forced upon him, what good controversial rhetoric required, the genuine putting of himself in the Pope's attitude of mind, so as really to feel what the reasons were which weighed with the Pope. Otherwise, in attempting to restate that argument, he would give a travesty of it. If he found it impossible to conform to that condition, then the one course open to him was to betake himself to Venice, which republic was ready to receive him with open arms, and to protect him at the risk of an interdict, if necessary.

In the Dialogue, all the arguments (including the Pope's) against Copernicus are put into the mouth of a character called "Simplicius." There was a certain appropriateness in this, since the best arguments of the Aristotelians were drawn from the commentary on the 'De Cœlo' by the real Simplicius. Yet it was bad rhetoric. The manuscript was submitted to the papal censor, who, after causing it to be thoroughly revised by his assistant, all passages being altered that were at all objectionable (as Galileo had desired), finally very carefully examined it himself, and attached his imprimatur for its publication in Rome, with the understanding that an introductory and a concluding passage should be inserted by Galileo, such as the Pope had required. The affair having come to this stage late in June, Galileo returned to Florence.

The prevalence of the plague and a particular death hindered the publication in Rome, and in August Galileo decided to have the book printed in Florence. On communicating with the Roman censor, that dignitary said he must first see the complete book. But the plague had rendered the mails so uncertain that Galileo proposed to send instead only the new preface and conclusion, suggesting that some person in Florence be deputized to reëxamine the body of the work. This proposition was acceded to. The counsellor of the Inquisition in Florence went through the body of it with the minutest attention, and declared there was nothing in it that could give the slightest umbrage to anybody. The Roman censor neglected to attend to the introductory and concluding portions sent to him, until July, 1631, when the Pope personally ordered him to approve those parts at once, with permission to alter the wording in any way Galileo might desire, the substance remaining as it was. After another complete reëxamination in Florence, the final imprimatur was attached, and the book was published toward the end of February, 1632.

During the summer the Jesuits laid their plans deep to bring Galileo to ruin, and, in all that followed, the Pope (having, no doubt, come to believe that Galileo's statement of his argument was ironical and satirical) manifested an intense personal vindictiveness, which was never relaxed as long as Galileo lived, and whose effects were only a little mollified under such circumstances that not even his passion and the inherent littleness of his soul could hide from him the general contempt that he was in danger of bringing upon himself. In August, 1632, further sale of the Dialogue was forbidden, and a papal commission was appointed to examine the book. This commission reported during the next month, and in this report for the first time appears the statement that, in 1616, Galileo had been enjoined from ever holding, teaching, or defending the Copernican doctrine. It appears that the commission, upon looking at the records of the proceedings of 1616, came upon an unsigned *compte rendu* or protocol in the handwriting of the commissary-general of the Holy Office, who then acted as secretary, which failed to say that Galileo had submitted to the admonition of Cardinal Bellarmine; and which stated that the next step had been taken, namely, that said commissary had, before witnesses, enjoined Galileo, under pain of further proceedings, never to hold, teach, or defend the opinion. But nothing is said about a notary, nor are any other witnesses but Cardinal Bellarmine named. He had formally denied that any such thing took place, and was now dead. It has been supposed that this minute was a forgery. Favaro says that it cannot be so; but not being signed, it was without legal value. Nor does the minute, such as it is, represent the injunction to have been executed according to the form prescribed by the Holy Congregation; so that that injunction, if it had been so delivered, would be extra-legal. This document came as a complete surprise to all parties, and Galileo believed it to be a forgery. Pope Urban VIII. himself, who had taken part in the proceedings of 1616, had repeatedly discussed with Galileo the doctrine which that minute represented Galileo to have been forbidden to discuss. There is no doubt, therefore, that the proceedings of 1632 and 1633, basing themselves, as they did, on that minute, were contrary to the law of the Church.

On October 1, Galileo was summoned to appear during that month before the commissary-general of the Inquisition, in Rome. There were various delays, and he did not arrive at the Tuscan embassy in Rome until the 13th of February, where he begged leave to remain; and this was granted for the time being, under restrictions. On April 12 he appeared before the Inquisition. From that day until the end of the month he was held prisoner in the walls of the Inquisition, but was allowed his servant, and was well treated. Owing to the intense malignity displayed by the Pope, Galileo's friends, in fear for his life, advised him simply to admit everything, and to submit to everything. This he did at his second examination of April 28, and on his third appearance of May 10. On June 16

the Pope held a meeting of the Congregation, at which it was decided to make Galileo confess his evil intention under threat of torture, and if that failed, to proceed further—that is, to burn him alive; for that is what it undoubtedly would have come to. Catholics may take such comfort as they can that this did not happen. On June 21 Galileo appeared once more, and, being threatened with torture, replied, "I am here to obey," and acquiesced in everything. He was then imprisoned. On June 22 he was made publicly to confess, and recant upon his knees. On the 6th of July he was allowed to retire to Siena, to the house of Archbishop Piccolomini, where he arrived on the 9th. He remained, however, wherever he was, a prisoner of the Inquisition all the rest of his life.

The Story of a Soldier's Life. By Field Marshal Viscount Wolseley. Charles Scribner's Sons. 1903.

As far as the story goes, the reader will find this an interesting book. It describes a military experience which began in 1852 in the Burmese campaign of that year. Then follow the Crimean war of 1854-56, the Indian mutiny of 1857-59, the China war of 1860, the Red River expedition of 1870, and the Ashantee war of 1873-74; and if more be needed, there is promise of another volume to round out the author's career, and, presumably, to give an account of the fruitless expedition undertaken for the relief of Gordon in 1885. The pictures of military life under these widely differing climates and conditions are admirably drawn, the hair-breadth 'scapes are exciting enough, and it is only occasionally that the superabundance of detail becomes tedious. Apart from purely military events, moreover, we have an account of a shipwreck, of a visit to Japan in 1860, and of a residence of some years in Canada and the United States from 1862 to 1870.

Coming to matters of opinion, we are reminded of the student who endeavored to solve all the problems in mechanics which he could not understand by the action of the common pump, which he had completely mastered. Lord Wolseley's common pump is a belief that war is not what Sherman called it, but, on the contrary, a good and desirable thing in itself. This doctrine is reiterated in some form or other in almost every chapter; and from it flow, naturally enough, certain corollaries, to wit, that Wellington and Napoleon were the greatest men that ever lived; that no civilian should be appointed war minister, and that England should adopt compulsory military service and cultivate glory in order to avoid becoming "a jellyfish." Early in the first volume we meet the common pump: "Surely, war, with all its horrors, exercises a healthy influence on all classes of society. . . . War is the greatest purifier to the race or nation that has reached the verge of overrefinement, of excessive civilization." A curious doctrine, certainly, but one that would appeal more strongly to the lay mind if Lord Wolseley had given a few instances of nations that have reached the verge of overrefinement and excessive civilization. And, to begin with, how does he define excessive civilization? Does any modern nation suffer from such a disease? Is there not, on the contrary, a wide discrepancy between the results actually achieved by civilization and the aspirations and ideals of the wiser and better members of all modern communities? Has it not always been so in the past also? And even if it were otherwise, and nations really suffered from this imaginary disease, can any one who has read history imagine that the situation would be improved by war?

The following quotation gives another frequently recurring outcrop of the main doctrine: "These men die that England should be great, and they die for her without a murmur, and yet it is their valor and their self-sacrifice that enable home tradesmen to make fortunes, live at ease, and to marry their sons and daughters into gentle families." This is, of course, ridiculous claptrap. As a matter of fact, men become soldiers partly from innate love of fighting and partly because they are incapable of success as "home tradesmen," or in any other calling. They die on the field of battle because that is one of the hazards of their business; but it would be safe to say that Tommy Atkins is more interested in beer and tobacco than in anything so abstract and intangible as the greatness of England.

Passing from the main doctrine to the corollaries, there is an interesting statement made about Wellington which acquires additional importance from recent discussions of the vexed question of Waterloo. There is said to be written evidence to show that, some years before his death, when there was danger of war between France and Prussia, the King of Prussia asked him to take command of his army, owing to the dearth of first-class military talent in Berlin. The Duke was willing, but the danger passed, and the war was deferred for a generation. Of Napoleon, Lord Wolseley writes, with curious inconsistency, that impartial men must put him by himself and in front of all human beings; and then adds that "his course of action was absolutely untrammelled by any fixed laws of right or wrong or any consideration for others."

The dreadful results of the unprepared condition in which England entered upon the Crimean war give Lord Wolseley a good opportunity to preach on the folly of allowing a civilian to direct military affairs. He also condemns in strong language the incapacity of the English officers of that period, who acquired their rank under the purchase system and by family influence, without adequate training. The only war minister for whom he has a good word to say is Mr. Cardwell, who abolished the purchase system in 1873, and to whose scheme of an army reserve he gives the credit for England's ability to put 200,000 men in the field during the Boer war. In 1862 Lord Wolseley paid a visit to the Confederacy, and here again he found a notable example of the disastrous results of civilian control. His theory is that if Lee had not been overruled by President Davis the issue of this conflict might have been different. Lord Wolseley's ideas about this country and its inhabitants have evidently undergone considerable change in the past forty years. During the war his sympathies were strongly in favor of the South, and he was much impressed by the feebleness of the Northern generals. Since those days many things have changed, and he has reached the conclusion that the American army, so far as its members go, is the finest in the world. He believes that the future of the world lies between the Chinese and the people of the United States, and in regard to the latter he is good enough to express the following noble sentiments: "Thank heaven they speak English [this is a specially gratifying admission], are governed by an English system of laws, and profess the same regard that we have for what both understand by fair play in all national as well as all private business."

Of wit and humor Lord Wolseley is not prodigal, but he tells a good story of Soyer, the celebrated French cook, who was sent out to the Crimea to give soldiers lessons in the culinary art. It seems that he had had an ill-tempered wife, and when she died he placed over her grave a stone with the simple but significant inscription: "Soyez tranquille." Another bon-mot is the message sent by Lord Clyde's A. D. C. after the relief of Lucknow: "Nunc fortunatus sum," presumably to be rendered, "I am in luck now."

On page 2, volume ii., we are told that Lord Clyde supported the candidature of Sir William Mansfield for command in the China campaign, but at page 5 it is stated that the question was left to Lord Clyde's decision and that he wisely made choice of Sir Hope Grant. We note, also, a few misprints: Guatma for Guatama; Staunton for Stanton; Westpoint for West Point.

Benjamin Disraeli: An Unconventional Biography. By Wilfrid Meynell. With forty illustrations, including two photogravure plates. D. Appleton & Co. 1903.

Mr. Meynell is right in calling his life of Disraeli unconventional. To accord with the conventions of biographical writing, it would need to be rearranged, if not rewritten. To say nothing of the author's style, Disraeli's "last days" come before his "early travels," and we have a hundred and fifty pages of "his talk from youth to old age" before we reach any narrative of his public life. This gives the whole volume a disorderly and disconnected effect, which is the greater pity because it really contains materials for an excellent picture of Disraeli. But Mr. Meynell is altogether too hurried as well as too extravagant and too partisan to do justice to his subject. He speaks of himself in a wild dedication as a "Dizzy-worshipper," and so he is. But worshippers are not necessarily good biographers. For one thing, they are apt to be deficient in a sense of humor, and to our mind no one can possibly write well about Disraeli who has not a very strong sense of the humorous. Nevertheless, Mr. Meynell has, we think, done Disraeli's memory a good turn, for he has given us pretty much everything that he could collect about him, and, now that party rancor is at an end, most that remains of Disraeli is entertaining and amusing, or at least curious.

With every new life of him it is the custom for hostile critics to endeavor to construct some plausible theory to account for his amazing political success in becoming the statesman of the latter-day English Tories, although he was an alien, a complete *novus homo*, an adventurer, and a Jew. Mr. Meynell's theory seems to be that he was really a man of profound political principles, and foresaw before even

Carlyle or Ruskin that the hope of the world (and of the Tories) lay in a democratic humanitarianism applied by a patriot monarch. While the political economists, the Manchester men, the free-traders, were dreaming of a state of society in which liberty of contract should turn the earth into a garden, and the gospel of work should make even street beggars ashamed of being idle, Disraeli was, in 'Sybil,' touching the hearts of men with an appeal for charity, benevolence, philanthropy. His idea of government was always that it should lift up, make whole, strengthen, and support. If, in return, Government should always be supported by those whom it protected, was not this the true gospel? Is there a man with soul so dead that he will not turn with relief from Ricardo's theory of rent to 'Sybil'? Disraeli's novels were really "novels with a purpose," and his career from first to last illustrates what that purpose was.

This idea, that he was a far-sighted statesman with a great end in view, is developed by Mr. Meynell, and fortified with many extracts. To those who, under Gladstone, fought him, there was, of course, nothing in it. A theory much easier to sustain is that Disraeli had no purpose save his own aggrandizement; he certainly disclaimed with considerable vehemence all moral aims in politics.

"Moral means," he told the electors of Bucks, he had seen a good deal of, and, "being naturally of a thoughtful temperament, I have been induced to analyze what moral means are. I will tell you what I have found them to consist of. I have found them to consist of three qualities—enormous lying, inexhaustible boasting, intense selfishness."

In those words the reflective author of 'Contarini Fleming' probably spoke his exact thoughts. We are not surprised to find that Mr. Meynell attributes to that early novel great biographical value. The fact is, that there is just this amount of foundation for Mr. Meynell's theory of Disraeli's early purposes: like most other ambitious men, he liked to think of using power, once attained, for the good of the public, and, like most other men of the world, he looked upon politics as a game, not as a field for self-devotion; like any great sceptic, he was nauseated by professions of morality. For such a man a reconstructed society, with a benevolent despot at its head and a contented and prosperous commonalty benefiting (with the aid of a wise and far-seeing vizier) by his benevolent rule, was a pleasing dream from youth up. He knew, too, how it was to be brought about: first, by humoring the monarch, next by humoring the commonalty—by giving them votes, sanitary drainage, short hours, imperial spectacles; whatever was necessary. He unquestionably foresaw the future very clearly, and how coming events might be used to his own advantage.

Mr. Meynell devotes a good deal of space to the old charge with regard to Disraeli's behavior to Peel, and throws some new light upon it, or at least puts the matter in as good a light for Disraeli as it can be put. Disraeli wrote to Sir Robert Peel in 1841 an almost cringing letter, begging that he might not be left "unrecognized," and that he might be saved "from an intolerable humiliation" by receiving some office from the Ministry. It was a letter of some length, and contained a suggestion that the writer had enrolled himself under the "banner" of Sir Robert "at the instigation" of a member of the latter's Cabinet. Sir Robert, in reply, stated his inability to comply with the request, and emphatically denied the supposed agency of any member of the Cabinet, or any authority from him. The correspondence was hardly one likely to be forgotten on either side. Subsequently Disraeli engaged in the bitterest attacks on Sir Robert Peel, and, in 1846, was brought to book by the latter, who, in a speech in the House of Commons, said that his opponent's views of his (Sir Robert's) character were the more surprising as he had been ready to take office under him, "thereby implying the strongest proof which a public man can give of confidence in the honor and integrity of a Minister of the Crown." Disraeli replied with a categorical denial that he had ever made such an application, and there the matter stands. The theory of the Peelites was that, the letter being a private letter (as it most certainly was), Disraeli felt that he could safely deny it, for Sir Robert Peel was a gentleman and would never produce it to contradict him. Mr. Meynell, on the other hand, says, without giving his authority, that Sir Robert searched for the letter and could not find it; and certainly, if a private letter could be referred to in debate, it could and indeed should, if possible, have been found, and, without being actually made public, have been brought to Disraeli's notice. Had this been done, Disraeli must at least have offered a very humble apology. But what are we to think of his bold denial? The question is left by Mr. Meynell without an answer.

We doubt very much whether the historian of the future will take such episodes as this too seriously. Disraeli himself did not regard either consistency or truth as Sir Robert Peel did, and it is impossible to take up one of his novels nowadays without perceiving the same theatrical temper and tendencies which are so continually illustrated in his political career. In his public utterances he often seems to give what he does a turn for the express purpose of making the serious side of it ridiculous. Thus, on December 20, 1874, he writes to Tennyson offering him a baronetcy, and begins: "Dear Mr. Tennyson: A Government should recognize intellect. It elevates and sustains the spirit of a nation. But it is an office not easy to fulfil," etc. A week later he writes to Carlyle, offering him the order of the Bath, and begins: "Sir: A Government should recognize intellect. It elevates and sustains the tone of a nation. But it is an office which adequately to fulfil," etc. These letters, which in juxtaposition look as if they were filled in upon the skeleton of what lawyers call a "common form," sound also as if, in writing them, Disraeli was saying to himself, "What a farce we three know it to be!" Again, read the following account of his ancestry given by him to the world. After mentioning his grandfather, he says

"his ancestors had dropped their Gothic surname [what this surname was is not mentioned] on their settlement in the Terra Firma, and, grateful to the God of Jacob who had sustained them through unprecedented trials and guarded them through unheard-of perils, they assumed the name of D'Israeli, a name never borne before, or since, by any other family, in order that their race might be forever recognized."

This is as good as anything in 'Codlingsby.'

It is as a wit that Disraeli will no doubt live longest. His wit was not only amusing, but wise; he never said anything in a commonplace way. Mr. Meynell's book is full of his sayings. His summary of the controversy on the position of dogma in the church is one of the best. It was, if we remember right, to Dean Stanley that he said, "After all, no dogmas:—no deans." In his lifetime most of the intellect, enthusiasm, and ardor of England was on the other side. This made his wit and his wisdom both priceless to the Tories.

The United States in Our Own Time: A History from Reconstruction to Expansion. Being an extension of 'The History of the Last Quarter Century.' By E. Benjamin Andrews. New York: Charles Scribner's Sons. 1903. Pp. xxxviii., 961.

While nearly all of our historians have avoided the period since the civil war, Chancellor Andrews has, among other things, given much time and energy to a presentation of the last forty years of United States history. The present volume of nearly a thousand pages begins with a description of the United States in 1870, and ends with a complimentary mention of Mr. J. L. Bristow, leaving one with the feeling that the author must now regret not having waited for the Indian Territory "graft" and Mark Hanna's triumph. Between beginning and end one will find, put down in good order, but with slight inherent connection, a little of everything that has happened in the United States since 1870 calculated to interest the reading public. Facts of all sorts, little and big, from the growth of civil-service reform to the bicycle fad, are treated equally, and the reader with difficulty avoids the conclusion that in history one fact is "as good as another, and sometimes a good deal better." There is little effort to group events according to their inherent relation, and facts are dragged in frequently for no apparent reason. No sustained intellectual effort is required at any point to follow the narration; one is well settled in a consideration of the general excellence of President Cleveland's Administration, only to be suddenly invited to observe the simplicity of his manners and to rejoice with him at his wedding. If this is more or less inevitable, it makes any serious effort at artistic integration of narration or historic subordination of details quite impossible. What we have here is thus not so much a carefully thought-out historical narrative as a sublimation of the newspaper files.

For the student, therefore, a juiceless record of events, like that prepared by the *Political Science Quarterly*, will prove of more service. But to the "general reader" Chancellor Andrews's book will prove not only very good reading, but of essential value, especially if the "general reader" is to include the rank and file of the Republican party. All of the history here presented is so recent as to come within the memory of many readers; some of it is so recent as to come within the memory of all. Most readers will thus have formed opinions (prejudices for the most part) relative to the political side of that history. Now the value of

a book like that of Chancellor Andrews lies in the fact that it will come to such readers with the force of a new idea. They will find that men and measures which they have been accustomed to think of as representing the profoundest wisdom or the height of folly, represent neither the one nor the other; and this truth will be enforced the more readily since the author does not himself discuss or argue, but rather draws moderate and reasonable conclusions from the arguments presented by both parties. Many an admirer of Gen. Grant will be beneficially shocked to learn that the great general was far from being a great President; many a Republican will resent the insinuation that if Mr. Blaine was not an "unprincipled trickster," his record was nevertheless rather shady, and, in any case, the country was to be congratulated on the election of Mr. Cleveland. In dealing with the recent events of the last decade there is less possibility of reflecting sane second thought. In this connection it is interesting to note especially, since the author's position on the silver issue in 1896 is so well known, the high place among American statesmen which Chancellor Andrews gives to President McKinley.

Some 450 illustrations add to the interest of the narrative. The print is large and clear. The paper (conditioned by the illustrations, presumably) is of that particular badness that offends both the eye and the nostrils, and makes a book tiresomely heavy. The index is fair.

The Oxyrhynchus Papyri. Part III. Edited by Bernard P. Grenfell, D. Litt., and Arthur S. Hunt, D. Litt. (Egypt Exploration Fund, Græco-Roman Branch. London: Boston, No. 8 Beacon Street.)

This portion of the Oxyrhynchus Papyri offers an unusual number of small surprises and unexpected revelations, though none are of first-rate importance; the private letters are piquant and interesting, the legal documents, in several instances, highly satisfactory and instructive. With the exception of the theological fragments, they all belong to the second century A. D., and they certainly enable us to reconstruct many features of the social life of that period with great accuracy and vividness. We know almost to satiety about the bargains and contracts of these village people, their wills and marriage contracts; we know the sort of letters they wrote, the kind of plays they delighted in, and the amount of money they spent on such amusements and festivities.

The greatest novelty, perhaps, is offered in the fragments of a farce that evidently belonged to the local or provincial stage. It represents a party of Greeks landed on some barbarian coast near the Indian Ocean, who fall in with a troop of savage women and their king, and escape by intoxicating their captors. The gibberish spoken by these barbarians is probably mere nonsense, though possibly embedding some relic of Pali, or Prakrit. There is a heroine, Charition, who "longs to see her father's face once more," and discourses pious sentiments as she quits the temple where she had taken refuge; there is also a very clownish buffoon who makes merriment with an unmentionable catchword not disdained by Aristophanes. However, the piece has plenty of bustle and stir, and is by no means destitute of literary merit. It shows us the taste of the "provincial" stage of the period, while the plot travels outside of the line of classic tradition in comedy, for the incidents are derived from the old Greek popular romances, and the situation of the heroine appears to be similar to that of Antheia in the romance of Xenophon of Ephesus. The *verso* of the same papyrus is part of a little mime which duplicates the motive of one of the cynical sketches of Herondas—the vengeance of a jealous mistress on the slave who repels her advances. This unpleasant personage also plots the murder of her husband by enticing him for a pretended reconciliation which is to close with dinner and poison—a crime which was repeated in Vermont a few days ago. The counterpart of this mime in real life is indicated in the speech of an advocate (A. D. 130) who defends a certain Hermione from the charge of fraud and poisoning.

But the general impression given by this slice of life cut from the heart of a rustic province is far from gloomy or repulsive or discreditable; it is, on the contrary, rather suggestive of a humane and just reign of somewhat obtrusive law and order. We have, for instance, further record and proof of that perpetual activity and free agency of the women so often noted before. We have a complete marriage contract (A. D. 127), in which, besides many other provisions of perfect equity and equality, it is stipulated that the bride may withdraw her dowry and keep her children if any difference arises with her husband leading to a separation. In a similar Tebtunis contract, the woman had, if anything, the best of the bargain. We have, again, the vivid little picture suggested by a coroner's report (A. D. 182). This tells how a little slave boy, eight years old, leaning out of an upper window late in the afternoon to see the castanet players and the female dancers, fell into the court and was killed. His master prays the Roman Strategus to send his official, the "public physician," to view the body "that it may receive proper laying out and burial." There is something touching and imposing in such a proof of the omnipresent eye of Roman imperial law, condescending to take note of this little sparrow's fall.

The private correspondence is full of vivacity and human nature. There is an invitation to dinner and to a wedding which might be engraved by Tiffany. A charming letter from Cornelius to his "Sweetest son" warns him not to get in anybody's way at home, but to mind his books and study hard "so as to profit by them." A model dunning letter, compact of sweetness and firmness, demands the payment of a sum long overdue, beginning: "My dearest Hatres: . . . I saw you the other day in Paomis and wanted to greet you kindly, but you dodged me because of your guilty conscience." There is a maudlin and passionate epistle from Serenus to his sister (probably also his wife), so perturbed and topsy-turvy that it might have been taken from 'Alice in Wonderland': "Since you departed I have not bathed nor anointed myself for a month. I have been in mourning, weeping by day and lamenting by night," etc. This Oriental effusion is written with phonetic misspelling, and inflections which show that the vulgar language is already far on the road toward Romaic, or modern Greek.

The most important of the new classical fragments contains nearly sixty complete lines of the "Kolax" of Menander, and gives a glimpse of the parasite and the *miles gloriosus* whom Terence borrowed for his "Eunuchus." The brief passage (No. 412) from the "Κεστοί" of Julius Africanus is rather remarkable for the luck with which it settles some moot questions, conveys some new information, and at the same time reveals the author's naïve standards of Homeric criticism.

The Moth Book. A Popular Guide to a Knowledge of the Moths of North America. By W. J. Holland, D.D., etc., Director of the Carnegie Museum, Pittsburgh, Pa., etc. With forty-eight plates in color photography and numerous illustrations in the text, etc. Doubleday, Page & Co. 1903. 4to, pp. xxiv., 479.

This is a companion volume to 'The Butterfly Book' of the same author, and a much better production from both the literary and the scientific standpoint. It is a considerable undertaking to give even a superficial representation of our 6,000 species of moths in a single book, and requires judicious selection. That the book covers the ground so well is the best compliment it can have. Naturally, the groups of smaller moths are least represented, because less known and collected; but even here a very fair general view is given. The limitations of the three-color process appear sharply in the plates: the larger, boldly marked species look natural and characteristic; the small species, with delicate markings and colors, are blurred and indistinct, sometimes unrecognizable. The text figures are of two kinds—very coarse stipple work and half-tone or woodcut blocks largely obtained from the United States Department of Agriculture. The rough paper used is altogether unsuited for the half-tones, and most of those are spoilt; the woodcuts fare a little better, but the presswork is not of a character to do them justice. The stipple work comes out fairly well, but the figures so prepared are mostly sketchy.

As to the text, it bears evidence everywhere of being written with reference to the figures, but for a popular work there is altogether too much quotation. Giving credit to sources of information is always in order; but when so large a percentage of the real information is sheer reproduction, the inference might be that the author himself knows very little about the subject. In the case of the hawk-moths, the author abandons the principles heretofore followed by American entomologists, and adopts a system based upon an exceptional attitude toward specific types. The result is that while the figured species are quite recognizable, they are often under altogether unfamiliar names. It is not likely that this system will be generally adopted by our entomologists, and its first use in a professedly popular work is a distinct misfortune.

The descriptive work is prefaced by an introductory chapter on classification, structure, and methods of preparing the specimens. There are a number of "digressions and quotations" in the work, some original, some quoted, which interrupt agreeably. Finally, the author should be credited with having produced a decidedly useful work, whose influence upon the progress of insect study is bound to be good.

The table of contents, list of illustrations and index are unusually full and well prepared, and add materially to the value of this publication.

JUST PUBLISHED

Mark Anniversary Volume

With portrait and 36 plates.
513 pp., quarto, paper.
$15.00 net; by mail $15.56. (*Circular free*).

This volume commemorates the completion of twenty-five years of service by Professor E. L. Mark as teacher of zoölogy at Harvard University. The volume contains twenty-five original articles contributed by Seitaro Goto, Henry S. Pratt, William A. Locy, Jacob Reighard, Charles A. Kofoid, C. B. Davenport, Gertrude Crotty Davenport, Frank W. Bancroft, Carl H. Eigenmann, Herbert Parlin Johnson, Henry R. Linville, William E. Ritter, R. M. Strong, C. R. Eastman, H. V. Neal, H. S. Jennings, Rolfe Floyd, Robert Mearns Yerkes, W. E. Castle and Glover M. Allen, Porter Edward Sargent, Thomas G. Lee, John H Gerould, G. H. Parker, Ida H. Hyde and Henry B. Ward. These writers were formerly Professor Mark's students at Harvard, and now hold various positions as teachers and investigators in this country and abroad. The articles deal with a wide range of zoölogical subjects, including not only systematic zoölogy, anatomy, and embryology, but also accounts of the field habits and outdoor life of many animals. They are illustrated by 36 full plates, many of which are colored.

THE MAN ROOSEVELT

A PORTRAIT SKETCH. By FRANCIS E. LEUPP, Washington Correspondent of the New York *Evening Post.*

A close personal study of President Roosevelt, by one who has known him intimately for twenty-five years, as a man and friend as well as a politician and a statesman. It is written from the standpoint of a close observer of practical politics, with the candor and fearlessness of a trained newspaper man, is rich in anecdote, and contains many bits of hitherto unwritten history.

Illustrated from photographs, **$1.25 net.** At all booksellers.

WILLIAM PENN

By AUGUSTUS C. BUELL. With many illustrations from prints and photographs. 8vo, cloth, **$2.25 net.** Postage 17 cents additional.

LONGMANS, GREEN, & CO.'S NEW BOOKS

ROUND KANGCHENJUNGA
A Narrative of Mountain Travel and Exploration

By Douglas W. Freshfield, F.R.G.S., lately President of the Alpine Club. Royal 8vo. With Maps and over 40 Illustrations. $6.00 *net*. By mail, $6.28.

"It is a fortunate chance, alike for the author and the public, that this book should appear at the very time when public attention is being turned by the course of events towards the region with which it deals. Mr. Freshfield's book is an excellent piece of literary craftsmanship; it betrays the man of letters on every page."—Sir Martin Conway in the Daily Chronicle, London.

"Mr. Freshfield's book should take rank as one of the classics of mountain travel. His pictures, whether of the snow wastes or of the heavy tropical glens, are done with the insight and fidelity of a true artist and lover of nature."—Spectator, London.

THE GERMAN EMPEROR'S SPEECHES
Being a Selection from the Speeches, Edicts, Letters and Telegrams of the Emperor William II.

Translated by Louis Elkind, M.D. 8vo. $5.00.

PAT McCARTY, FARMER OF ANTRIM:
His Rhymes. By J. Stevenson. Crown 8vo, cloth extra. $2.00, *net*. By mail, $2.12.

"Mr Stevenson has made a very considerable addition to current literature. We quote portions of two pieces from this charming volume, with the observation that those who love the simple humor of the countryside, and the simple pathos of life which is not disquieted with convention, should make with profit to themselves a closer acquaintance with 'Pat McCarty.'"—Liverpool Post.

"These sketches and studies are always interesting and sometimes charming."—New York Sun.

"Altogether the volume . . . is unusually entertaining and wholesome."—New York Evening Post.

"These sketches and studies are always interesting . . . his book should interest all who take an interest in Ireland."—Cleveland Plain Dealer.

NEW BOOK BY BISHOP BRENT

THE CONSOLATIONS OF THE CROSS
Addresses on the Seven Words of the Dying Lord

Given at St Stephen's Church, Boston, on Good Friday, 1902, together with Two Sermons by Rt. Rev. C. H. Brent, D D, Bishop of the Philippine Islands. Author of "With God in the World," etc. 16mo. $0.90 *net*. By mail, $0.96.

LIFE AND LETTERS OF THOMAS THELLUSSON CARTER
Warden of the House of Mercy, Clewer, and Hon. Canon of Christ Church, Oxford

Edited by the Ven. W. H. Hutchings, M.A., Archdeacon of Cleveland. With Portraits and other Illustrations. 8vo. $4.00.

"It need hardly be said that the volume is exceedingly well planned, and written with a reverential reserve. To speak or write about the saintly Warden of Clewer is to tread on hallowed ground, for it is essentially to treat of holy things. There are continual indications in the pages of this *Life* that the biographer realized this in no small degree. . . . It is a book of which it is impossible to speak adequately. But of this we are confident, that it will prove to be *the* religious book of the year; and, what is far more important still, that it will help to make known some of the elements of a beautiful, saintly character and preserve them for the admiration and example of ourselves and those yet unborn. . . . We can wish nothing better than that the *Life and Letters* should be largely circulated amongst all sorts and conditions of churchmen."—Guardian.

PROBLEMS AND PERSONS

By Wilfrid Ward, Author of "The Life and Times of Cardinal Wiseman," etc. $4.60 *net*. By mail, $4.75.

Contents: The Time-Spirit of the Nineteenth Century—The Rigidity of Rome—Unchanging Dogma and Changeful Man—Balfour's "The Foundations of Belief"—Candour in Biography—Tennyson—Thomas Henry Huxley—Two Mottoes of Cardinal Newman—Newman and Renan—Some Aspects of the Life-work of Cardinal Wiseman—The Life of Mrs. Augustus Craven.

"The Faith of Rome has no more reasonable and courteous advocate than Mr. Ward. . . . The author knew well those of whom he writes, and they were some of the most notable men of the last century."—The Spectator.

Harvard Historical Studies—*NEW VOLUME*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 18, 1904.

The Week.

Secretary Hay's note is meeting with a favorable reception in Germany and France, and, presumably, England. Textually it reads:

"You will express to the Minister of Foreign Affairs the earnest desire of the Government of the United States that, in the course of the military operations which have begun between Russia and Japan, the neutrality of China, and in all practicable ways, her administrative entity, shall be respected by both parties, and that the area of hostilities shall be localized and limited as much as possible, so that undue excitement and disturbance of the Chinese people may be prevented and the least possible loss to the commerce and peaceful enterprise of the world may be occasioned."

In other words, what Mr. Hay seeks is to carry out the policy of the Powers that went to the rescue of the legations in Pekin—Russia and Japan being, of course, left out. The avowed aim of that unparalleled military expedition and of the subsequent diplomatic arrangements was to protect China at once from herself and from foreign aggression. An inviolable Chinese Empire, under an international guarantee, was the end and object then, and it is in order to maintain it during and after the war that Mr. Hay is now addressing the chancelleries concerned. The strict neutrality of China was seen to be the surest means of preventing the other Powers from becoming involved in the war.

It cannot be doubted that our Government sincerely desires to keep its hands off. Secretary Moody's speech at the Lincoln dinner last Friday night is regarded as an official confirmation of this country's neutrality. The indications are that France has not the slightest desire to be drawn into active support of Russia. Nor has Great Britain displayed any eagerness to come to the support of her new Oriental ally. And as for Germany, while her sympathies are believed to be with Russia in the present war, she has no motive for taking part in the struggle. In fact, it is to the Kaiser's eagerness to make China maintain a strict neutrality that Secretary Hay's note to the Powers may be traced. The suggestion is said to have come to Washington as a result of a conversation between the Kaiser and our Ambassador at Berlin. It was perceived that no Power was in so good a position to make overtures of this sort as the United States. The great European nations have harbored territorial designs on China, but this country is entirely free from such a suspicion. A proposal of Chinese neutrality from us stood a good chance of meeting a favorable reception, whereas if it were presented by any other nation it might be considered as hiding ulterior designs.

After the war news of the past week is boiled down, there remain but few facts of importance in relation to the contest for the control of the sea. It may be accepted that the damage to Russia's naval power has not been exaggerated. Her mistake in allowing her fleet to be surprised at Port Arthur was no greater than her failure to concentrate all her ships before the beginning of hostilities. The resulting destruction and disablement of her vessels is only a part of the price her navy will have to pay for this fundamental mistake in strategy. As it is, she has now only one small squadron of four ships which can take the offensive. This fleet really appears to be menacing the west coast of Japan. Its operations must be limited to two considerations: (1) the preservation of its base, Vladivostok; and (2) the impossibility of passing through the Korean Strait to reach Port Arthur without encountering a superior Japanese fleet. At present the Japanese would seem to have a three-fold duty, to bottle up the Vladivostok squadron, to cut off the several reinforcements now en route from Indian waters, and to keep the fleet at Port Arthur under constant surveillance. These tasks should neither severally nor jointly be beyond the powers of the Mikado's men-of-war, even though some of them may have received rather rough handling at Port Arthur. Until the Vladivostok squadron is located, the transportation of troops must be attended by very considerable uneasiness and call for the services of a very strong convoy. Upon this point the reader need only remember how Shafter's army was held at Tampa because of the merest rumors of a stray Spanish ship or two.

A striking coincidence, at least, is the outbreak of war in the Far East and the signing of a new treaty between France and Siam, which gives the French more favorable terms than they got by the convention of 1902. Details are lacking, but it may fairly be assumed that the "temporary" occupation of Chatanbun and other towns on the Bangkok side of the Cambodia line is to be indefinitely continued. Probably the French have also obtained exclusive railway concessions for the debatable land between the Menam and the Mekong. These were the chief points at issue in the negotiations, and the result of the new treaty is probably to shut Siam up to the valley of the Menam. The French are fond of the proverb, "Fish in troubled waters," and evidently they are applying to their own interests the *de te fabula*. It is a kind of fishing that interested Powers will not find incompatible with pious wishes that nobody fish at present in the dangerously troubled Chinese waters.

Two great countries, with representative institutions, have strikingly illustrated, during the past week, the fact that war swallows up the largest interests of political life. In England, a Parliamentary debate of the first importance has been going on. Upon it the life of the Ministry might depend. Yet only the most languid interest has been aroused even at home, while the dispatches to foreign newspapers have been all of war and rumors of war. Similarly in this country, the work of the Government, the transactions of Congress, have passed unnoticed, almost unrecorded. In such absorption in the single subject of war, we see the temptation of unscrupulous rulers hard beset in matters of domestic policy. It is the insidious temptation which Seward placed before Lincoln in 1861—only, of course, to have it quietly pushed aside—to "change the subject" before the country by getting up a foreign war.

To the vagaries of the Panama situation is added, by leakage from an Executive session of the Senate, the story of Minister Buchanan's scheme to "square" the Colombians. His plan of buying Colombian bonds at 5 cents on the dollar, and offering them at par as indemnity for the loss of Panama, savors rather of shifty finance than of diplomacy. Yet Mr. Buchanan evidently felt that he was charged with the duty of liquidating a transaction with a feeble but troublesome creditor. With a lawyer-like grasp of the conditions, he sees the chance of buying his creditor's depreciated paper in open market, and of thus absolving the debt for a mere per cent. of its face value. In the present instance, for example, he apparently meant to buy $10,000,000 of Colombian bonds at $500,000, and thus pay the Colombians the sum stipulated by the Hay-Herran Treaty. Certainly, that looked like an excellent settlement, and Secretary Hay, in rejecting the plan with some asperity, has shown the traditional inability of the "literary feller" to come to grips with affairs.

But this ridiculous project of bringing a sovereign State into the note market has its serious side also; for Mr. Buchanan's plan is virtually an admission that the President feels that we have wronged Colombia, and owe her

something by way of *solatium*. It is not to be supposed that Minister Buchanan of his own motion proposed a payment of any kind to Colombia. He must have been under instructions to consider possible means of indemnity, and the discreditable plan which he actually presented is merely the measure of the man. The problem, in short, at the White House seems to be, how to force Colombia to accept something for a quitclaim. We would give her anything, even the $10,000,000 perhaps, if there were any way of doing it without putting us in the wrong. There is no such way; we might buy all the Colombian bonds and burn them in Culebra cut, and still no moral atonement would have been made for the overriding of Colombia's sovereignty. The United States owes Colombia apologies and adequate indemnity. The President feels this in his heart, or he would not be seeking indirect ways of paying money to Colombia. The method of reparation is for future determination. Obviously the Hague Tribunal exists to straighten out precisely such tangles. Direct negotiation might be better. In any case the President has here a case for riding straight. The fewer attorneys of the Buchanan type associated in the matter, the sooner the desired settlement will come.

The date for ratifying the Panama treaty has been finally fixed as February 23. The proceedings could be appropriately varied by the reading of Washington's Farewell Address. Senator Hoar is usually selected to regale the Senate with the lofty morality of that document, and this year he could intersperse extracts from his own speech pointing out how President Roosevelt held Colombia while Panama picked her pocket. Real impressiveness could be added to the roll-call by reciting Washington's exhortation to "observe good faith and justice towards all nations." And when ratification is at last complete —when lawless aggression combined with conspiracy finally insures to the covetous United States the thing that is its neighbor's—the Senate could add an almost religious solemnity to the occasion by chanting in unison these words of Washington: "It will be worthy of a free, enlightened, and great nation to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence."

The Senate has just made a fine exhibition of itself in the debate attending the proposal to pay $200,000 to the ex-Queen of the Hawaiian Islands. The Committee on Pacific Islands had reported a bill for that purpose, which read as follows:

"Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Liliuokalani, formerly Queen of the Kingdom of Hawaii, in full satisfaction and discharge of all claim, legal and equitable, $200,000."

But the scrupulous and legal mind of Senator Platt of Connecticut scented danger. He did not object to the payment, but he dreaded the "admission." So he moved to strike out the words "in full satisfaction and discharge of all claim, legal and equitable." It was intolerable to acknowledge that the ex-Queen had a claim upon the United States for having simply dethroned her. So, said the astute Senator Platt, "we may just as well strike out those words and pay her the $200,000 without stating what we pay it for." Naturally, a moral Senate rose to this, and Mr. Platt's amendment was agreed to, and everybody looked virtuous. But a new difficulty straightway reared its head. To make an appropriation of $200,000 without reason stated seemed to Senator Spooner a queer way to do business. Senators must remember that it was not their own money they were giving away, and if they were unable or ashamed to say why they were voting $200,000 to the ex-Queen, it would be wiser to stick to precedent and vote down the bill. It was, in fact, defeated on Monday by a tie vote; but we presume some way will be found to appropriate the money for the wronged Queen. What Senators were evidently dreading was the creation of a precedent. If we are to pay everybody whom we injure or rob, in our glorious course of Imperialism, the Treasury will need replenishing. There is Colombia next. The President is willing to pay her, provided the act can be made to prove the perfect propriety of his "getting his clutches on the Isthmus," as he elegantly expresses it. The legal obstacles are obvious. Precedent does not exist for appropriations to quiet claims of which we deny the validity. But our Imperialist leaders, we know (for they have told us so), have the talent to meet every crisis as it arises; and we do not doubt that they will soon work out a highly moral formula for paying $10,000,000 to Colombia as a sort of consolation purse.

Chairman Foss of the House Naval Affairs Committee has, according to the press reports, "taken up with vigor the gauntlet thrown down by Senator Gorman in his announced policy of internal improvements in place of naval construction." The "vigor" seems to consist in Mr. Foss's declaration that "if we stopped [building] now we would [*sic*] be left behind the leading countries of the world." There is just about as much logic in this as in most of the navy boomers' arguments. Only the other day it was officially proved that we were now third in naval power among the nations, and were soon likely to be in second place. It would seem, therefore, as if other countries were being left behind, and not the United States. But there is never any ending to this ignoble competition. The big-navy men can always see a goal unattained before them, however many millions they may have squandered. For a time the cry was that we must at least be on a par with Austria and Brazil. Then, we were bound to overtake Germany, Russia, and Italy. Next, it will be England, that the Anglo-Saxons may dominate the world. Later, unless the common sense of the people calls a halt, we shall be told that we must be able to "lick" any two or three nations, etc. Mr. Foss's modest demand in these hard times for only 96 millions of dollars may be good policy, but we are inclined to think the House itself will prune this, at least so far as new construction is concerned. Whether it does or does not, Senator Gorman for once stands on what is not only a sound, but a civilized, high-minded, and essentially Democratic doctrine; Mr. Foss and Secretary Moody to the contrary notwithstanding.

The study of eminent rascality is now deeply engrossing the public mind. The conviction of Whitaker Wright was such a surprise to the average Britisher that he is not likely to get over talking about it for some time, and it has made a good many people ask if something of the same sort could not be done in this country. The general feeling has been that conditions were much more favorable to such a result in Great Britain than here; but the more the Wright episode is studied, the less this appears to be the case. Indeed, there was as strong a presumption in England that Wright could not be convicted in the criminal courts as there has been here that his American counterparts were beyond the law. The fact that the Attorney-General refused to direct prosecution against Wright is sufficient indication of the deep-seated feeling that the law could not touch him. The Solicitor-General actually asked, "Will any one get up and say that a man can be prosecuted for publishing a false balance sheet?" And it was announced that the Government intended to legislate to meet a case for which the criminal law made no provision. The London *Times* remarks that probably nothing more will be heard of the proposed legislation, and adds that it would be only seemly for the Government to repay fully to the private persons who instituted the prosecution, all the costs which they have incurred "in bringing to justice a culprit of a kind that, under our laws, fortune generally favors." In this particular case the British public's sense of justice had been too greatly outraged; it was quickly made clear that not even the greatest rascals are entirely immune.

The Wright verdict has made a good

many Americans feel that what man has done man may do. We have produced as great rascals as he. He could teach certain of our promoters nothing in the way of balance sheets and prospectuses. They were as clever as he in charging up as assets things that never were on land or sea; in the gentle art of gulling they have never been equalled. And they were, and still are, his equals in social standing. For months we have been listening to official accounts of how they did things. We have asked how it was possible that such men could be such cheats, and how the people whom they bled like sheep in a slaughter house could be such fools. But it has not seriously occurred to any one to make an attempt to put them down where they deserve to be. We show no such favors to rascals of lesser degree: short work is made of the green-goods man when caught; the promoter of a bogus Western mine is promptly jailed when sufficient evidence is produced; the man who lives by sponging on hotels and storekeepers is very apt to get his deserts. At the moment, public sentiment is hot against the eminent rascals. In legislative circles there is even talk of investigations. But unless the blow is struck while the iron is hot, it will not be struck at all.

It is inspiring to see a community so terribly afflicted as Baltimore rising up and asserting its ability to take care of itself. Offers of outside aid have been declined, but in no spirit of mere bravado, as the Mayor announces that the city will not hesitate to ask assistance later if necessary. Like Chicago and Boston, Baltimore has entered immediately, and with splendid courage, upon the task of building a better city. Of course, nothing can offset the fact that some $125,000,000 of wealth has been destroyed; the effects of such a loss must necessarily be gradually spread over the whole community. But man does not live by bread alone. Such calamities as the Baltimore fire are not to be welcomed, but it is quite possible that they have a high usefulness in testing the mettle of a people.

President Gompers, on the eve of his departure for Porto Rico to organize locals of the American Federation of Labor, gave us a new commandment. Organized labor, he said, had established the ethical proposition, "Thou shalt not take another man's job." It is a great pity that organized labor has not established still another proposition, namely, "Thou shalt not break another man's head." But, on second thought, such a commandment may be unnecessary; for have we not already been told to do no murder? It may be a good thing for organized labor to add an eleventh commandment to the Decalogue, but the wisdom of giving it preëminence over the sixth is to be doubted. Mr. Gompers's new proposition is, in fact, open to criticism on a number of grounds. What, in an ethical sense, is "another man's job"? Such a question does not have to be asked regarding the sixth and subsequent commandments. The fatal defect of the new labor commandment is that every exercise of it requires an act of mental discrimination. The determining of what is "another man's job" is purely an act of private judgment. We have no divine revelation to guide us in this matter. We have, it is true, the dictum of the labor leaders that "another man's job" means the job of one who belongs to a labor union, but no one of these leaders has yet given evidence of speaking with authority. The "scab," therefore, feels that he has as much right to exercise private judgment as the unionist, and by virtue thereof to accept any job that is offered him.

Mr. Booker Washington, speaking in this city on Friday evening, demolished in a single sentence the theory advanced by the Governor of Mississippi that education makes criminals of the negro. "Not a single graduate of Hampton or Tuskegee," he said, "can be found to-day in any jail or penitentiary." Could as much be said for Harvard or Yale? He added that 90 per cent. of the colored persons in prison to-day are without knowledge of trades, and that 61 per cent. are illiterate. While it was undoubtedly necessary to put on record an elaborate reply to Major Vardaman's demagogy, it is most gratifying to note that the better sentiment of the South, both in and out of the press, is very far from taking any stock in his absurd utterances or sharing his belief that there is no difference between Booker Washington and the negro boy who blacks the Major's boots, when it comes to the ballot. The best men of the South, in and out of its universities, regret such prejudiced utterances as reflections upon their sections of the country. For instance, the Richmond (Va.) *News-Leader* declares that "Gov. Vardaman's declarations are much more sensational than just or sensible," and adds: "Mistaking coincidences for cause and effect is an old and familiar fault of shallow ignorance." The Richmond *Times-Dispatch*, citing the familiar quotation that "ignorance is a remedy for nothing," characterizes Vardaman's doctrine "as utterly illogical, untenable, harsh, and cruel."

They have a high idea of the dignity of labor in South Africa. A correspondent of the London *Times* recalls the fact that, after emancipation, the negroes of Barbadoes came under the system of compulsory labor "through natural laws," thereby escaping the moral degeneracy of the negroes in Jamaica. Therefore, a scheme should be devised for the compulsory labor of those natives of South Africa who may be in no need of working for a subsistence. "Regular work and being obliged to work is a divine law to maintain at least a decent standard of morals," is the way the case is summed up. Compulsory work should be the rule wherever there is any idleness, whether in South Africa or Pall Mall, continues the expounder of this heroic doctrine. This is quite logical, and has come naturally in the fulness of time. In the nineteenth century the missionary was of inestimable service to the trader. He went in advance to the dark places of the earth, and in persuasive ways forced the heathen to stop raging, to put on clothes, and occasionally to do a little work. Then stepped in the trader and preempted their territory. But the missionary, after all, wasted a good deal of time and effort by putting the cart before the horse. A modern captain of industry is worth a hundred sermonizers. He does not confound cause and effect. He does not preach "Be civilized and work," but "Work and be civilized." It should be remembered, however, that the trader's idea of civilization is not exactly the same as the missionary's.

That John Morley's skilfully worded resolution of no confidence should be voted down was inevitable. It took the form of an amendment to the King's speech, and declared that return to protective duties would be injurious. It served very well to expose the vacillation of the Government on the fiscal issue. The final majority of 51, less than half the normal majority, was perfunctory. The Ministry for several days had been explaining that Mr. Balfour's proposed retaliatory schedules had nothing to do with protective duties; Mr. Chamberlain, exceptionally, observed a wise passiveness. Indeed, everything was done to give color to that sophism of the London *Times* which asserts that the fiscal plan is not yet in the Parliamentary stage. Under these circumstances, the majority must be regarded simply as a formal and partisan endorsement of Mr. Balfour. Many were willing to vote approval of the Government in general terms who would as certainly vote the Government down if the Chamberlain plan should come up in a specific form. The defection of the Irish Nationalists was the significant feature of the division. Mr. John Redmond explained that the Irish members had no attitude towards the fiscal question, but welcomed the chance to support a vote of no confidence in the Government. This action was foreshadowed in Mr. Redmond's notable speech of February 3, in which he said, "The colonial question is subservient to the Irish question."

THE REAL ISSUES OF THE WAR.

To say that Russia is fighting merely for ice-free ports on the Pacific, and Japan for an outlet in Korea, would be to make a superficial analysis of a much greater contest. The fight is between Eastern and Western civilization—a strife that is traceable to the very beginnings of recorded history. If Japan wins, the East will have the chance to reassert itself and to develop along national lines. If Russia conquers, the East generally will sink to the position of vassal and customer of the West. The alternative is admitted even by those who perceive it obscurely. Secretary Hay's circular note in behalf of China's "administrative entity" indicates the fear lest Europe, headed by Russia, may absorb China; the *Spectator's* gloomy vaticinations against a domineering Japan are caused by the dread that the East will come to self-consciousness and throw off the European yoke.

Considered from this point of view, the present war is likely to be a turning point in history. Many times before has the immemorial fight between the East and the West reached such a climax, and to-day the Japanese may feel that they are associated with the great defenders of history. They fight to-day as the Greeks fought the Persians, the Franks the Moors, the Magyars the Turks. Since the Turks were stopped at the Danube, the larger history of the world has written the slow conquest of the East by the West. The process has known no stay. It has been subject to no such checks as for a thousand years earlier the great invasions from the East had invariably met. But the aggression of Europe was all the more formidable that it was largely peaceful. Manchester prints and Brummagem ware, articles made in Germany, and American cottons have been much better battle-cries than "The Koran or the sword." And gradually most of Asia has come to live subject to the will of Europe and on condition of buying European goods. All of Asia to-day, except China and Japan, is pretty definitely marked out for ultimate occupation by some European Power. If Japan is humiliated and China partitioned, the process will be completed; the East as a political entity will have been destroyed, the East as a peculiar civilization will have been profoundly impaired.

People with goods to sell and superficial observers generally would welcome this obscuration of the East. To them it would mean the final triumph of our commercialized civilization. Others more altruistically see a providential movement redeeming pagans to Christianity. Nobody seems to regret the probable disappearance of a highly interesting life, of a society very humanely organized, with peculiar aptitudes for the graces of life and for beautiful handicraft. In these essential matters, as the Japanese scholar Okakura has recently said, the East is one against the West. It presents great uniformity and an established social order against the individualism of the West; with this goes a certain fatalism and submissiveness which deprives the universal lot of poverty of its sting, and a real community of ideas which transcends superficial systems of caste and makes a genuine social democracy. Finally, the tradition of leisurely and beautiful craftsmanship, which the West has forgotten, places the reward of labor where it belongs, in the interest of the work itself. These are advantages not to be despised, and only the very unimaginative will marvel at the "preference which many Orientals display, and which most feel at heart, for their own life over the life of Europe."

Of course, the prophets of militant commercialism will condemn this civilization out of hand as inferior, and will entertain a proper contempt for a defence of the East that includes its porcelains and wood carvings. To certain minds, and those minds rule to-day, the destiny of all inferior races is to buy the inferior products of superior races. With such we have no argument, nor do we hope to persuade them that trade does not necessarily imply sovereignty over the customer. We prefer rather to appeal to philosophic observers like Mr. Meredith Townsend, who, in his stimulating book, 'Asia and Europe,' seriously questions if the undoubted blessings of "peace and material prosperity" in British India have not been accompanied by overbalancing evils. He writes:

> "It is no time yet for conclusions, for the work of conquest has but just ended, and that of sowing seed has but just begun; but that decay of varieties of energy, that torpor of the higher intellectual life, that pause in the application of art knowledge, from architecture down to metal work and pottery, which have been synchronous with our rule in India—these are to the philosophic observer melancholy symptoms."

No one can doubt that, with the entire East in vassalage, the world would be distinctly less interesting and the diversity of civilization unhappily narrowed, and it is hard to see any sufficient compensation in the universal dominion of the bagmen of the West. And if this is the feeling of impartial spirits in the West, what must be the emotion of the single Oriental Power that has arrived at national self-consciousness—Japan? Avowedly or not, she is fighting the battle of Asia, and her war cry is "Asia for the Asiatics." A great sympathy cannot but go out to her, for she is setting her new-found strength against a movement with the weight of centuries behind it. Let no one suppose that with Western battleships she has adopted the Western soul. The mournful *Spectator* is right: if Asiatics are to be feared *quâ* Asiatics, Japan is to be feared. But we choose rather to believe that such enterprise and daring are not associated with a congenital unfitness to further the progress of the world. We see in the advance of Japan great hope for the regeneration of China along Asiatic lines, and we are convinced that this would be far more in the interests of civilization than the creation of so many colonies in the present spheres of influence.

MR. HANNA'S PUBLIC CAREER.

It is easy to understand why the late Senator Hanna was so much esteemed personally. A very approachable and affable man, he made friends easily and bound to him multitudes in different walks of life. He had a great stock of native kindliness. In his rise to large wealth he did not lay aside the manners of a man of the people. As an employer he appears to have won, and deserved to win, the confidence and even affection of his men in an unusual degree. He rejoiced in his sobriquet of "Uncle Mark." And if one asks why men of affairs had so genuine a respect for his ability, the answer is that he had a mind at once keen in its perceptions and comprehensive in its grasp. Such results as he achieved come only by due cause. There can be no doubt that Senator Hanna was a man of unusual and versatile capacity. No scandals, further, haunted his private life.

Passing by, however, all those aspects of the man which may fairly be called private and inviolate, it is his public career that challenges comment at this hour. Of what type was he as a political leader? What counsel does his example speak to young men ambitious to do some service to the State? His total influence upon party politics, upon the morals of the political world, upon the nation at large—was it good or bad? Such are the questions to which the passing of Senator Hanna from the scene presses for an honest answer.

We can see pretty clearly now, what will be perfectly distinct to the acute historian in the future, that Mr. Hanna was the full flower of the spirit of commercialism in politics. He was, in this, but the child of his epoch. That was the reason of his success. He best embodied the tendency of the years in which he was militant. It was in Senator Hanna that the grosser and more repulsive policies of his own party beheld themselves as in a mirror. What was everywhere latent, he caught up and flashed forth. The apologies of others became his defiances; what they deprecated, even while profiting by, he gloried in. To invest money in politics as in a mine or railroad, and to look as confidently for the pecuniary return; to appeal for votes on the basis of sheer material advantage; to cry up prosperity as the be-all and end-all of government; to vulgarize politics by making its watchwords the cries of the market and the slang of the gambler; to make of the electoral struggles of a free people an exciting game with huge and

glittering money stakes—in a word, to put mercantile methods in the place of forensic, and to hold the best title to office to be the fact that it has been bought and paid for—this was the great political distinction of Mr. Hanna.

He set about the first election of President McKinley in the spirit, and with many of the devices, of a financier planning a vast combination. In fact, there was an almost ludicrous resemblance between his campaign for the nomination of Mr. McKinley and a skilful reorganization of a bankrupt railway. Mr. Hanna took up a Congressman whose private fortunes were shattered and whose political prestige was broken. That looked like most unpromising material out of which to create a Governor and, later, a President. But Mr. Hanna saw the financial possibilities of the situation. A political reaction was upon the country. After years of depression a promise that the people were to be fed and filled and warmed was sure to be fetching. Mr. Hanna openly dangled that bribe in the nation's face. He set in motion, certainly in 1895, probably as early as 1894, an elaborate and heavily endowed organization to bring Mr. McKinley to the front. Just who furnished the funds, and in what sums, will not be known until Mr. Hanna's private records leap to light, if they ever do; but it was common gossip in advance that such and such men were to have this office and the other for subscriptions received. It is to be said for Mr. McKinley that he honored every obligation of that sort. Financial good faith was kept. So was political. Not one of Mr. Hanna's "original McKinley men" went unrewarded, let clergymen and college professors protest against them as scandalous ill livers if they choose. The whole ante-convention campaign was tinged with the merchandising spirit, and afterwards every note was met as it fell due.

Things fell out luckily for Mr. Hanna after McKinley and Bryan were fairly in the field in 1896. The contest turned into an assault upon the nation's financial credit. The result was to put vast sums at Chairman Hanna's disposal. This seemed necessary at the time, and the sound principle undoubtedly triumphed; but it was at the cost of a frightful extension of commercialism in politics. For this, Mr. Hanna was too much responsible. We have heard men familiar with his methods say that his plan was to block out the contested States into small districts, and coolly figure out how much money it would take to make each safe. All this was bad enough at the time, but the doctrine of no peril without its price, no vote that could not be had for cash in hand, secured a fatal hold and was applied disastrously for years. It rose to its final pitch of vulgar effrontery in the Ohio campaign of last year, which resulted in an attempt to baptize the Republican party anew in the faith of the almighty dollar.

We wish to be entirely fair. Prosperity, rightly conceived and worthily striven for, is a national blessing. We do not doubt that Senator Hanna really wished to see everybody busy and contented. That went with his kindness of heart, as did also, we presume, the efforts to compose labor troubles to which he gave so much time and energy. But it was his misfortune to seem to make meat more than life. He identified his name with lavish and wasteful policies. Politico-financial promoters swarmed about him, as did also the unscrupulous politicians of whom he made use, and by whom he thought it a point of honor to stand in all their detected knaveries. Thus he exactly typified the baser tendencies of his party and his day. We had loud praises from him of the full dinner-pail and the swollen bank account, with money enough in the Treasury for every schemer; but when did he ever speak an echoing word for human liberty, or show that national honor was dearer to him than the jingling of the guinea, or separate himself from the category of those who, in Puritan phrase, "make Religion as twelve and the World as thirteen"? Mr. Hanna was a master of legions of "negro delegates," but real sympathy with the struggles of black men to rise he never betrayed in public. Asked last summer what was the intent of the Ohio plank about negro suffrage in the South, he replied that he was against having the party really take up that issue, and added, in the most matter-of-fact way, "There are 25,000 negroes in Ohio whose votes we want."

Senator Hanna rose as high as such a man could go in this country. It is unavailing for his friends to speak of what might have been had he lived—of disappointed ambitions. Verily, he had his reward. His support by the men who are in politics for the money they can make, and by the grand army of corrupt politicians, was the real and final measure of his success. The judgment of the people is just, in the long run; and it had already given Mr. Hanna his true place. A skilled political manager, yes; but a public man upon whom Americans would delight to bestow their highest honors? Never.

PROMOTION FOR DISTINGUISHED SERVICE.

The new General Staff of the army has prepared a bill to provide rewards for officers of distinguished service, which was duly transmitted to Congress by Secretary Root before his retirement from office. It is an outgrowth of the scandals attending the unwarranted advancement of Gens. Wood, Grant, and Funston, and of the ill-feeling created by the promotion to brigadier-generals of competent but subordinate officers, like Capts. A. L. Mills and J. Franklin Bell, as well as Majors T. H. Bliss and W. A. Kobbé. In most of these cases the excuse for conferring generalcies has been the inability of the President to do anything else. As the law now stands, he can in no way reward an inferior officer of great merit except by making him a brigadier-general—in most cases a reward entirely too great for the service rendered.

In his memorandum of transmittal, Mr. Root dwelt upon this situation, and added: "One very serious evil resulting from the inability of the President to properly reward distinguished service is the lack of incentive to such service which ought to be furnished by suitable rewards." He further endorsed the General Staff's bill by pointing out that the expense involved is but slight compared to the benefit which, in his opinion, will be derived from it, and by stating that it will in no way interfere with or change the present organization of the army. He might well have gone further, and characterized the measure as "a bill to prevent the President from abusing the appointing power so far as relates to the army." This is its real purpose. If our Presidents are to excuse themselves for making generals of doctors and of personal friends, on the ground that there is no other way of rewarding them, the sooner this apology is done away with the better it will be for army and public.

The General Staff evidently believes in limiting the power of the President as much as possible. Its bill, in brief, provides that there shall be a "distinguished-service list," composed of not more than five colonels, six lieutenant-colonels, eighteen majors, ten captains, and five first lieutenants. Any and all of these offices the President may fill when, in his judgment, there are officers who merit special advancement, but only on the "specific recommendation of a board, as near permanent as may be, of five general officers on the active list of the army, which board shall be appointed by the President and sworn in every case to make the recommendation, if at all, without partiality and exclusively on the merit of the officer's services as shown by official records." In other words, for the untrained and easily influenced opinion of the President and the Secretary of War, there is to be substituted the sober judgment of an officer's superiors of sufficiently high rank to be themselves beyond the influence of personal considerations, and who are sworn to put aside all political, social, or personal influences in favor of a candidate for the distinguished-service list. The officers thus specially advanced are to retain their old places and commissions, and will be promoted on the ordinary list without reference to their places on the distinguished list. Officers selected for reward will

receive only one higher grade, save in cases of exceptional achievements.

Had this bill been passed prior to 1898, it would not, of course, have prevented the appointment of a Funston and Grant to the regular army, but it would in all probability have saved the country from the Wood scandal. So far as the promotion of Capt. Albert L. Mills is concerned, that officer would undoubtedly be sufficiently rewarded if he were given the rank of lieutenant-colonel upon the distinguished-service list. This commission would give him the following advantages: (1) The right to append to his signature the words, "lieutenant-colonel, distinguished-service"; (2) the pay and allowances of a lieutenant-colonel of cavalry; and (3) all the other rights, privileges, qualifications, and emoluments of the grade save the right to command troops under his distinguished-service commission. But if specially so assigned by the President, the distinguished-service officer could have the command of troops suitable to his advanced rank just as if he were regularly commissioned. Surely, this should be distinction enough for an officer whose undoubtedly gallantry at Santiago was by no means exceptional. It would certainly right the wrong done him in the matter of unfair promotion in the past, and in any foreign service it would make of an officer thus favored a man of mark among his comrades throughout his life.

There is every indication that this bill will have the unanimous support of the army, if only for the reason that the proposed distinguished-service list can do no officer any harm. Never has the army been so roused as by the rewards given to Wood and his fellow "captain-generals," and this not merely because some unworthy men have been made generals, but because the process has done clear injustice to hundreds of more capable and deserving officers. Distinguished officers will be promoted in regular order under their permanent commissions, and not at the expense of their classmates or of men who were twenty years in service before they were done with knee breeches. When such officers retire from active service, or are promoted to a grade equalling that specially conferred upon them, their places on the distinguished-service list will be vacated —to be filled if there are worthy officers awaiting recognition, or, if this be not the case, to remain unfilled until such time as men have a chance to win honors. That they would at once become the greatest prizes in army life next to the medal of honor, even Congress should see. The measure before it should have prompt approval.

CHAMBERLAIN VS. CHAMBERLAIN.

Mr. Chamberlain's self-esteem is probably proof against the Cobden Club's "Reply" to his tariff speeches. This work asserts that the speeches are open to objection in every part and almost every paragraph, and that the frequent historical references are wholly untrustworthy—that when authorities such as Adam Smith, Cobden, Bright, and Gladstone are quoted, or referred to, opinions the very opposite of what they held are attributed to them. The very title of the work, 'Fact vs. Fiction,' shows what sort of disputant the committee consider Mr. Chamberlain. If the committee had desired to put an apt phrase across the title-page of their work, they would certainly have chosen, "Out of thine own mouth will I judge thee," for that is what, in very large measure, they have done. When they have not discredited him out of his own mouth, they have done so out of the mouths of persons whom he has cited in defence of his position.

There is, in fact, no one against whom the parallel column can be used with such deadly effect as Mr. Chamberlain. Here on the one side are two statements from a Birmingham speech of 1903, and on the other an extract from a speech delivered in 1885, when times were hard and a good many persons were clamoring for protection, under the guise of "fair trade" and "reciprocity":

1903.	1885.
"It is a popular delusion that, during the time of Protection, England was declining, until it had reached a state of unexampled misery and destitution."	"I wonder whether in this vast audience there are any people who have any conception of the state of things which existed forty or fifty years ago, *i. e.*, between 1835 and 1845. At that time the whole of the laborers in the agricultural districts were on the verge of starvation. The Poor Rates were in some districts 20s. in the pound. At the time of which I am speaking the large towns were described by eyewitnesses as bearing the appearance of beleaguered cities, so dreadful were the destitution and the misery which prevailed in them. People walked the streets like gaunt shadows, and not like human beings. There were bread riots in every town. There were rick burnings on all the countrysides. We were on the verge of a revolution when the Corn Laws were abolished."
"Is it true that at the time when Free Trade was introduced and the Corn Laws were repealed, we were in a state of destitution and misery and starvation? Is it true that, under the Protection which prevailed before that, this country was going down in the scale of nations or losing its prosperity and losing its trade? No, absolutely no. The exact reverse was the case."	

The man who now says that England was the reverse of destitute in the days of protection, made still another speech in 1885. In this he referred to "those times when Protection starved the poor." He also quoted some verses of the Corn-Law Rhymer to show how horrible were the sufferings of the people, and then said: "That is not a retrospect which I think would be favorable to any party or any statesman who should have the audacity to propose that we should go back to those times." That is what most persons would think; and yet a statesman with sufficient audacity to propose such a movement has actually come to the front, and his name is Joseph Chamberlain.

Mr. Chamberlain's method of quoting Cobden has led the committee to assert that "never, we believe, in the history of political controversy has a statesman of repute made statements so untrue and so reckless!" But perhaps the most astonishing bit of audacity with which Mr. Chamberlain has surprised the world is his Glasgow statement that if Adam Smith were alive, he would undoubtedly be heart and soul for imperial federation and preferential trade with the colonies. The delightful absurdity of this is shown by a number of citations from the 'Wealth of Nations,' ending with this: "Britain should by all means be made a free port, and there should be no interruptions to foreign trade." Colonial monopoly was odious to Smith; for a little enhancement of price, he says, "the home producers have been burdened with the whole expense of maintaining and defending that empire."

In 1903 Mr. Chamberlain said that in 1846 (the year of the Corn Law repeal) the price of wheat was 54s. 8d. per quarter, and that for ten years after 1846 the average price was 55s. 4d.—or 8d. higher than during the whole year 1846. But he did not point out that, though the repeal was carried in 1846, it did not go into effect until 1849, when the price fell from 50s. 6d. to 44s. 3d., touching 38s. 6d. in 1851. Nor did he state that his ten-year period included the years 1854 to 1856, when, owing to the stoppage of Russian wheat exports on account of the Crimean war, the price rose to famine figures—namely, to 73s. per quarter. Another piece of Chamberlain audacity is the assertion that England's foreign trade prospered greatly under a system of protection. In 1815 the war with France came to an end; in 1842 Sir Robert Peel made his first great effort towards free trade by repealing and reducing a large number of import duties. In the period 1816-20 the exports averaged £40,-315,000; in 1831-45, £40,500,000; in 1836-42, £50,011,000; in 1843-48, £56,-742,000; in 1849-53, £75,245,000; in 1857-59, £98,900,000; and in 1860-64, £132,400,000.

But the arrested development of the British export of manufactures in the last thirty years is what most worries Mr. Chamberlain. The Cobden Club, however, cruelly recalls that in 1881 he was President of the Board of Trade, and that he then talked very differently on this point. It was contended in 1881 that trade was falling off, and that the average exports for 1876-80 were 7 per cent. smaller than those for 1871-75. But Mr. Chamberlain objected to this argument, and said that the reduction was in value only, as there had been a fall in prices "averaging not less than 20 per cent.; the real value of our trade had increased in the interval about 14 per cent." And on top of all this, only last year, Mr. Chamberlain's colleague, Mr. Gerald Balfour, President of the

Board of Trade, in answer to a question in the House of Commons, produced figures showing that the value of British exports for 1902, if based on the prices of 1873, would have been £416,000,000, instead of the £278,000,000 actually reported—that is, an increase over 1873 of 153 per cent., in place of a paltry 23 per cent. What shall be said of a man who juggles facts and figures in a way like this, and who says to-day that "retaliation" is a necessity, in spite of his powerful denunciation of such a policy in 1881?

THE PRESENT SIGNIFICANCE OF KANT.

Immanuel Kant the Königsberg philosopher, and the most influential thinker in the history of German thought, was born April 22, 1724, and died February 12, 1804. The hundred years that have passed since his death have been marked by many very great advances both in science and in the other fields of human activity in which he took especial interest, but Kant still remains a thinker of contemporary interest and of living influence. A prominent German philosophical periodical, the *Kantstudien*, is to-day devoted not only to the interpretation of his thought, but to the discussion of its bearings upon contemporary problems. Pope Leo, in one of his later encyclicals, deplored the wide influence that the Kantian philosophy has been recently exerting upon the teachings of a notable school of philosophers which has sprung up within the Catholic Church. And this particular form of Neo-Kantianism which Leo deplored has flourished, in certain Catholic and clerical circles, in the very country where an uninitiated person might least have expected to find such a movement—namely, in France. In England and in this country nobody seriously studies philosophy without taking careful account of Kant. Courses more or less exclusively devoted to the exposition and criticism of his views are an indispensable feature in a well-developed modern university curriculum. And both within and outside of academic circles the interest in Kant's thought is shared both by theologically disposed students, and by those who are, on the contrary, mainly interested in the examination of the philosophical bases of science. For Kant is a thinker who has his word to say both to the skeptic and to the believer; both to the constructive idealist, and to the empiricist; both to the man who wants to build "beyond Kant," and to the critical doubter who, despairing of the success of cloud-piercing systems, soberly desires to "return to Kant." Whoever refutes Kant, only stimulates his readers to new studies of the original text; whoever condemns Kant, only shows thereby how necessary it still is to take account of him; whoever, as disciple, "returns to Kant," is obliged all the more to interpret the master in the light of modern problems; and whoever attempts to "build beyond Kant," must nevertheless attempt to expound afresh what Kant meant.

In consequence, Kant means a great deal to the thought of the present time, even when this thought seems farthest removed from his formulas. Here is no place to set forth Kant's doctrines in any technical way; but it is worth while to review, very briefly, two of the principal reasons why Kant still keeps so living an influence, and why it is that the coming century of philosophy, like the past, is likely to be very frequently busy with the task of defining its relations to his teachings.

Kant's influence, then, in the first place is that of a very winning and wholesome personality. The world justly admires the man who in difficult tasks keeps his head. Kant never lost his self-possession in presence of the most baffling problems. The world wisely prizes the man who can be mercilessly critical, both of himself and of current dogma, and of the individual caprices of his fellow-men, and who nevertheless is never flippant, never cynical, and always humane. Kant accomplished this difficult union of humanity with critical acumen, and did so with a serenity of temper, a freedom from bias, and a sanity of judgment which in such a union are almost without a parallel. The world honorably pays tribute to unquestionable personal virtues. And of Kant's faithfulness to his own high ideals, of his moral health and devotedness, there can be no doubt. His worst personal faults seem to have been a certain narrowness of emotional experience, a certain lack of sympathy with some of the more romantic aspects of life, and a certain pedantry. These faults, such as they were, were incidents of his frail physical constitution, of the hard-won and unvarying regimen whereby he was able so long to retain his physical hold on life, of his provincial education, of the fact that he never travelled far from his birthplace, and of the conditions of his academic training and career. But no man ever made more than Kant did of such resources as our philosopher's physical weakness and narrow range of personal experience still left open to him. If he could not understand some of the more romantic aspects of life, he was nevertheless sensitive to the influence of Rousseau, and profited greatly thereby. If his rigorism as an ethical teacher often seemed to make him relatively indifferent to the significance of even the noblest sentiment as a practical guide to action, yet his mind was open, so far as keen vision, kindly personal intercourse with other men, and wide reading, could make it, to the effort to appreciate the most various types of mankind and the most wayward forms of human wilfulness. If he was no traveller, yet he was widely read in the literature of travel, and was a loving and tolerant student of the varieties of human nature as they were exhibited by different peoples. His correspondence, as it has lately been reëdited, now shows us, as we never knew before, how various were the sorts of men who appealed to him for sympathy or for guidance, and how much they confided in his humane spirit. As to his pedantry, that was illuminated in his case by a certain delightful humor, which appears little, to be sure, in his best-known and strictly technical works, but which was a prominent feature in certain of his courses of lectures, and a constant resource in his social intercourse.

He stands before us as a lifelong invalid who still never wearies by complaints; a keen critic of human nature who yet is never unkindly; a rigorist in ethics whom people meanwhile loved for his geniality of nature; a man trained in pedantry whose ideas are nevertheless far richer than are the forms in which they are expressed; a great thinker who, for all that, prized nothing so much as his daily duties; a man of narrow experience whose wealth of insight constantly surprised his contemporaries. Although his experience of the fine arts was limited to what his own native city could show him, his theory of the beautiful is the most influential, as it appears to be in many respects the sanest, of all the distinctly philosophical theories of modern æsthetics. Although his philosophical teachings appear at first sight so negative, yet one of his principal interests lay in attempting to give a sound foundation and a definite office in life to religious faith; and his influence has been nowhere more felt than in the recent developments of the philosophy of religion. Theologians and skeptics, students of science and idealists, thus join in finding him a guide.

The manysidedness and the remarkable balance and dignity of Kant's personality constitute one ground for the permanence and the strength of his influence. A second ground, and, of course, a still more important one, lies in his doctrine. This doctrine, namely, unites such various motives, allies itself with such different historical tendencies and influences, and bears upon so many types of modern problems that it stands, so to speak, at the great meeting-place, or at the crossroads, of recent speculation, so that, whatever one's personal decision may be regarding the problems at issue, and whatever the road that one travels, one is sure to be reminded that these problems were Kant's, and that this road leads one through, or at least close to, his system of doctrine.

Surveyed in its connections, this doctrine involves three essential theses: First, the world as it is in itself is unknowable; and only the realm of human experience is the just object of human theoretical science, question, and research. Secondly, every lawful and orderly aspect of human experience is due to the working of our own understanding, so that, apart from our intelligent interpretation of experience, sense shows us only chaos, while what we get out of our study of nature exhibits to us only those types of law which our own understanding has—not capriciously, indeed, but of its own necessity—first thought into nature. Thirdly, our "pure thought," our reason proper, can reveal to us no theoretical demonstrable absolute verities about the nature of things, but can only show us, on the one hand, what our moral duty is, and, on the other hand what, as rational beings, we are bound practically to assume as true, not as a matter of knowledge, but as faith. Thus, as Kant holds, the limits of possible human knowledge, and the sphere of necessary and rational faith, are marked out, justified, and rendered unmistakable.

Our concern here is not with the truth, but with the historical significance, of these philosophical definitions and theses. Their influence has been, as a stimulus, as a challenge to critics and to opponents, enormous. As a defence of the essential rationality of certain admittedly indemonstrable faiths, Kant's theory has become a bulwark of defence to very various defenders of modern forms of religious belief and practice against the assaults of the opponents of all faith. As a criticism of the

limits of human knowledge, his work is the inexhaustible source of new attempts to define the scope to which our human insight is limited. As an analysis of the part which our intellectual processes play in defining our whole conception of phenomenal nature, as an investigation of the dependence of all our knowledge of what we take to be the external world upon the constitution of our own intelligence, Kant's theory at once excites permanent admiration for its ingenuity, and provokes us to constantly renewed analyses of the logic of experience.

The influence of such opinions and of the inquiries which they have provoked has also extended, however, far beyond the range of technical philosophy, and still extends. Such methods of study inspire freedom of opinion, keenness of critical self-examination, an effort to unite conflicting tendencies by higher syntheses, a disposition to be just to various sides of human nature, a union of skepticism with reverence; and these tendencies, in our time, have received application in many regions of activity which seem remote enough from philosophy. Many profit by the spirit of Kant who know little or nothing of his letter. His doctrine, as he stated it, will have henceforth few literal disciples; but whenever and wherever the lovers of their kind are interested in the great task of teaching man how to become, in a conscious and rational sense, without anarchy and yet without fear, the spiritual master of his own world, the memory of Kant will be honored, his guidance will be felt, and his personality will inspire.

GREECE REVISITED.

ATHENS, January 15, 1904.

Returning to Greece after an absence of twenty years one finds many changes. To begin with, the place of landing is different. Twenty years ago there was no Peloponnesian railway, and all travellers from Europe came by sea to the Peiræus. Now almost everybody lands at Patras, where passengers for Athens take the train. By this change the traveller both gains and loses. Some time is saved, which may or may not be important; but the trip round the Peloponnesus by sea and the entrance into the harbor at Peiræus are well worth the extra day's travel. On the other hand, the railway from Patras to Athens offers some of the most beautiful scenery in the world. From Patras to Corinth the road lies along the southern shore of the Gulf of Corinth, and across the blue water one sees clearly the sharply outlined mountains of Ætolia, Acarnania, Locris, Phocis, and Bœotia, among which Parnassus and Cithæron are especially prominent. Soon after passing Corinth, the train crosses the ship-canal that cuts the Isthmus, and skirts the shore of the Saronic Gulf, affording beautiful views of the Peloponnesian mountains and the islands of Salamis and Ægina. The aspect of the Gulf is that of a mountain lake; but no mountains outside of Greece are so sharply outlined against so blue a sky or so beautiful in their violet purple color. Upon closer acquaintance with the Greek mountains, one finds them for the most part bare and gray; but when seen from even a moderate distance they take on a violet hue quite unlike the color of the mountains of other countries.

Upon reaching Athens, one finds one's self in an outlying part of the city near the ancient Colonus, where Sophocles was born; a district which twenty years ago lay quite outside the life of the city. There the stranger is at once surrounded by a horde of screaming and pushing hotel agents and cabmen, through whose midst he has to struggle, unless he resigns himself and his belongings at once to the tender mercies of some one of their number. This ordeal is, if anything, even more trying than the struggle with the boatmen who transfer the passengers from the steamer to the quay at the Peiræus. But the nature of the ordeal is the same. The cabmen are the brothers of the boatmen, merely transferred to dry land.

The city of Athens itself has grown in twenty years to something like twice its former size, and general improvement has kept pace with growth. It is more European than it used to be, and the number of fine buildings has increased greatly. The streets, though still very dusty in summer and muddy after rain, are cleaner than they once were, and there is a greater appearance of thrift, or perhaps one should say a less general aspect of shiftlessness. In the streets of the capital the national costume is far less often seen than in earlier times, and even in the country one sees European clothing much more frequently than in former days. It is said that the increase in the population of Athens is due less to an influx of people from the country than to the increasing number of Greeks from Egypt and other regions who have chosen Athens as their place of abode. At any rate, the villages seem little less populous than formerly, in spite of the comparatively large number of emigrants to America in recent years.

There is a marked difference in the language spoken in the streets. Evidently the teaching of the schools is affecting the speech of the people. Now, as formerly, the spoken language differs materially from the semi-classic written dialect, but even in the spoken language ancient forms are becoming established. The genitive case, which was little used as a separate form, except in pronouns, is now often heard in the mouths of simple folk, and even the dative case occasionally appears. So, too, some ancient verb forms are more commonly employed. Whether the result will be a real improvement or the reverse, remains to be seen. For the present it looks as if the development or deterioration of Greek into an analytic language were arrested. Naturally enough the Greeks look back with veneration and longing to the classic period of Hellenic greatness, and the desire of many among them to restore the ancient language, or, at least, to approximate to it, is easily understood. So far as the exclusion of Turkish and other foreign words is concerned, the attempt to purify the language is neither hopeless nor unjustified, but it is doubtful if success can or should attend the efforts of those who are trying to restore the forms or syntax of the ancient speech.

The language question is not always regarded as a matter merely for calm academic discussion. A few months ago the "Oresteia" of Æschylus was produced at the Royal Theatre, in a translation and adaptation by G. Soteriades, the ephor of antiquities, whose excellent work of excavation on the site of the ancient Thermon is well known. In his translation he made use of words and expressions belonging to the colloquial language, and thereby aroused the indignation of the students at the University. They met at the University building, and decided upon a demonstration to put a stop to the performance. In the evening a large body of students paraded the streets, gathering the mob of the city in their train. The ordinary police could not cope with the disorder, troops were ordered to the scene, and, before the disturbance ended, one man was killed. Compared with some of the riots that have broken out in our American cities at various times, this was a mild affair, but it shows how strongly some of the Greeks feel about the language question. Undoubtedly the desire to embarrass the Ralli ministry led some to encourage the spirit of disorder, and there were also other motives at work; but the fact remains that the trouble was ostensibly due to the production of the "Oresteia." To an American, one of the unpleasant features of the whole affair was the alliance of the students with the mob. Our own students sometimes disgrace themselves, but they do not invite the mob of the city to join in their processions and help them to attain their ends.

Of much more practical importance than the perennial language question is the equally perennial Eastern Question. The Greeks seem to be firmly persuaded that the disorders in Macedonia are not a genuine popular uprising, but are the work of Bulgarians, who are, to be sure, for the most part, inhabitants of Macedonia, but who are assisted by Bulgarians from over the border with the purpose of making Macedonia more and more Bulgarian by terrorizing, driving away, and killing the Macedonians who are not of Bulgarian blood. This is, of course, intended merely as a prelude to the ultimate annexation of Macedonia by Bulgaria. It is evidently difficult to determine the racial affinities of the mixed population of Macedonia so as to assign to each race its proper numerical position. The statistics given in Greek newspapers make the Macedonian Greeks much more numerous than the statistics given by most authorities; but it is not necessary to accept their figures in order to understand the eager interest with which the Greeks follow events in Macedonia. Even accepting the least favorable statistics, one finds the number of Greeks settled in Macedonia so great that the Greeks of the Kingdom of Greece cannot look on with indifference while Bulgarian influence is spreading, especially when it spreads by fire and sword. There seems to be no expectation that the acceptance by the Porte of the Austro-Russian proposals concerning Macedonia will prevent renewed outrages in the spring, and what the end will be no one can foretell. Meanwhile, the Greek Government is urged to take care of its army, that it may make a good showing when the time comes, for the success of the Bulgarians in Macedonia would not only bring disaster upon the Greeks now settled there, but would put an end to all hope of the expansion of the Kingdom of Greece toward the north. Unfortunately, the necessary measures for the improvement of the Greek army after the recent war with Turkey were neglected or badly carried out.

In the last few days the old discussion

about the race of the modern Greeks has again come to the front. The Italian Minister here, Signor Silvestrelli, in a report to his home Government, recounted the many inroads and conquests of foreign races since the classical times, and concluded that the Greeks of to-day are the descendants of various ancestors, but hardly of the ancient Greeks. Of course, the Greeks cannot deny the inroads and conquests, but they point to the continuous use of the Greek language and to the obvious survival of some characteristic traits (and, they might add, some ancient superstitions) as proofs that they are really Greek by descent, not merely by habitat. Just now feeling runs high, and there is a rumor that the Italian Minister may be recalled.

Such matters are of the greatest importance to the Greeks, and cannot fail to arouse some interest even among those foreigners who are here but for a short time. But the foreigner's chief interest is in the things of ancient times; and in respect to these things there have been great changes in twenty years. The Acropolis has been laid bare to the solid rock, and, although the earth has been in part replaced for the sake of an attractive appearance, all important foundations are left uncovered—among them those of the ancient temple which stood close to the site of the later Erechtheum. The Erechtheum itself is now undergoing restoration, and the scaffolding erected for that purpose offers unusual facilities for a careful study of all details of the building. The recent restoration of the Parthenon was limited to strengthening and repairing certain damaged portions of the building which threatened to fall, and the few new stones inserted are inconspicuous. No attempt was made to set up the fallen columns or the other stones of the building which lay, and still lie, scattered over the surface of the Acropolis. With the Erechtheum the case is different. Already all the columns, the epistyle, the frieze blocks, ceiling, cornices, and tympanum of the north porch, are restored to their original positions, new blocks being inserted in a few places where the old ones are missing. For the frieze blocks, blue (upper) Pentelic marble is used, instead of the dark Eleusinian stone, the color of which has so changed in the course of time that it is little, if at all, darker than the blue marble. On the western wall the two northern half-columns once more carry an epistyle, and perhaps the missing parts will be replaced by new stones to such an extent as to restore the western wall to something like what it was in ancient times, before the insertion of the Roman windows. The roof and epistyle over the Caryatides and the Caryatides themselves are still to be strengthened, and the southern wall and the eastern colonnade are probably to be repaired. Some of the details of the work are not yet entirely settled. So far, the work has been done with great care and thoroughness under most competent direction. The Erechtheum was repaired and somewhat altered in Roman times, and, after many vicissitudes, was partially restored in 1838. A sentimental protest against the present restoration is therefore somewhat unreasonable. Certainly the building will be far more beautiful than it has been since 1838, and will give the spectator a better idea of its original appearance. The work is conducted by the Greek Achæological Society, which is also restoring the temple of Apollo at Bassæ.

Other changes in various parts of the city bear witness to the diligent digging of archæologists. A large part of what was the market has disappeared, and in its place one sees the remains of Hadrian's magnificent library, while to the west of the Acropolis, in the hollow between the Areopagus and the Pnyx, a series of ancient streets and houses show how far the modern city is from occupying exactly the site of ancient Athens. This is the place where Professor Dörpfeld finds the sanctuary of Dionysus in the Marshes. Here also are remains of the water-works built by Pisistratus, and in the hill of the Pnyx are many channels and several cisterns and chambers belonging in part to still earlier provisions for water supply. Here it is that Professor Dörpfeld places the famous spring of Callirrhoë, changed by Pisistratus to Enneacrunus.

But the changes in the museums are even greater than those in the city at large or on the Acropolis. All over Greece, excavations have been going on for years with ceaseless activity, and the most important portable objects discovered have, with few exceptions, such as the discoveries of Olympia and Delphi, been brought to Athens. The National Museum, in spite of great additions to its building, is filled to overflowing. The priceless collection of inscriptions is for the most part gathered together in an unroofed courtyard, exposed to all the vicissitudes of weather, and works of sculpture which would be the pride of many a museum in Western Europe are hidden from sight in storerooms where only those who already know of their existence are able to see them. Even on the Acropolis delicately carved architectural fragments are lying exposed to the rain and the dust for lack of room in the museums. To the stranger the chief need of Greece seems to be more museum buildings; but no doubt the native Greek feels more keenly the need of other things. Yet, in spite of lack of room, the museums of Athens offer unparalleled advantages to the students of Greek art and epigraphy. Of the contents of the museums and the changes the past twenty years have wrought therein, only a catalogue (and alas! there is no complete catalogue of anything in Athens except the collection of vases) can speak in detail. Nor is it possible within the limits of a letter even to allude to each of the important works of excavation carried on in the last two decades. The visitor is overwhelmed by the number of sites which should be seen, and at each site the excavations have some special interest. Among them all, the French excavations at Delphi are preëminent, though they may be equalled by the excavations at Delos. It is to be hoped, also, that our own excavations at Corinth, the results of which are already important, may be continued to a satisfactory conclusion.

H. N. F.

Correspondence.

THE WORD "PALATINE" IN AMERICA.

To the Editor of The Nation:

Sir: Lexicographers have paid scant attention to the above word, and Dr. Murray recently informed the writer that his readers had not furnished him with a single American example. Yet, in one way or another, the word has been in use in this country for nearly three centuries; and the facts, both because of some interest in themselves and also because they will correct certain misapprehensions, deserve to be placed on record.

Of the several counties palatine which existed in England in the Middle Ages, but one is mentioned in the early American charters. The rights of the county palatine of Durham were granted as follows: In 1623 to Sir G. Calvert for Avalon, in 1629 to Sir R. Heath for Carolana, in 1632 to Lord Baltimore for Maryland, in 1634 to Sir E. Plowden for New Albion, in 1635 to J. Mason for New Hampshire (but the genuineness of this grant is in doubt), in 1639 to Sir F. Gorges for Maine, and in 1663 and 1665 to the proprietors of Carolina. It is thus seen that several proprietors had palatinate rights, and it would not have been at all surprising had the title "Palatine" been applied to the person or persons to whom the above charters were issued. Nevertheless, except in two instances, there is no proof that Palatine was so applied.

A writer has recently alluded to Sir F. Gorges as "Lord Palatine of Maine" (*Notes and Queries*, July 11, 1903, p. 23). Gorges spoke of himself as "Lord Proprietor and owner of the Province of Maine" or as "Lord of the Province of Maine"; while his grandson, F. Gorges, also spoke of himself as the "Lord Proprietor of the Province of Mayne." Unless evidence to the contrary can be produced, it is safe to conclude that such a title as Lord Palatine was never employed by Gorges.

In the Century Dictionary we read that "the same name [Palatine] is sometimes given to the proprietor of the province of Maryland." Here again the statement may be regarded as erroneous, for the actual title employed by the proprietor of Maryland was "Lord Proprietary," thus corresponding to the "Lord Proprietor" of Maine and to the "Lords Proprietors" of Carolina. Indeed, the word Palatine, with a single exception presently to be mentioned, seems never to have been used in this country as the title of a person before the year 1669. Among the eight original proprietors of Carolina was the famous Earl of Shaftesbury, then (1663) Lord Ashley. In 1666 he made the acquaintance of John Locke, and in 1669 the Fundamental Constitutions of Carolina were drawn up. These are generally attributed to Locke, but the exact share which each had in their preparation seems never to have been determined. In the first and second charters of Carolina, there was a clause in regard to colonial titles of honor; but what was vague in 1663 and 1665 had become specific in 1669, and then for the first time we meet with the titles Palatine, Landgrave, and Cacique.

"The eldest of the lords proprietors shall be palatin, & upon y^e^ decease of y^e^ palatin y^e^ eldest of the seven surviveing proprietors shall always succeed him." 1669, July 21, Fundamental Constitutions, in *Thirty-third An. Rep. of the Dep. Keeper of the Pub. Records* (1872), p. 258.

"The Duke of Albemarle was elected the first Pallatin of Carolina. . . . George Duke of Albemarle the first pallatin of Carolina being dead The Lord Berkeley being the eldest in years of the surviving proprietors succeeded him and was admitted the second pallatin of Carolina. . . .

Whatever passes under the seal of the Palatinate shall be registered in that proprietor's court to which the matter therein contained, belongs." 1669, Oct. 21, 1670, Jan. 20, March 1, *N. Carolina Col. Records*, i. 179, 180, 194.

"I shall next proceed to treat of the Government, as granted by King *Charles* II to the Eight Lords Proprietors aforesaid, who again, by common consent, center'd that Power in Four of them, *viz.* in a Palatine of their own election, and Three more who were impower'd to execute the whole Powers of the Charter, and is call'd a Palatines Court; their Deputies in *Carolina* executing the same, as from their Principals they are directed." 1707, J. Archdale, *Description of Carolina*, p. 12.

"It had been usual with them to appoint a Governor and seven Deputies, called the Council, the first of which (the Governor) represented the Palatine, and the others the rest of the *Lords Proprietors*, respectively, and were called the Upper House of Assembly." 1726, F. Yonge, in B. R. Carroll's *Hist. Colls. of S. Carolina* (1836), ii. 144.

In Carolina the term Palatine was for about half a century in use as the title of a person. Nowhere else in this country do we meet with that exact title. But in a single instance the title "Earl Palatine" was claimed and used. One of the most curious, romantic, and obscure episodes in the history of American colonization was the attempt made by Sir Edmund Plowden to found New Albion. The story, though brief, is too long to give in full here: suffice it to say that in 1632 Plowden petitioned Charles I. for a grant of New Albion, that in 1634 he obtained the grant, that soon an expedition came over, that later Plowden himself arrived here, that he was driven off by the Swedes, and that the attempt proved a failure. Equally futile was the effort made in 1784 to revive the claim by Charles Varlo, who, shortly before the outbreak of the Revolutionary war, bought one-third of the charter, reached Philadelphia in July, 1784, issued the pamphlet quoted below, and employed counsel.

"Whereas our Sovereign Lord King Charles, by his highnesses letters-patent, under the great seal of Ireland, bearing date the one-and-twentieth day of June, 1634, hath granted and confirmed to Us, . . . the said title of Earl Palatine, and office of governor." 1634, Dec. 20, in E. Hazard, *Hist. Colls.* (1792), i. 173.

"Sir *Edmund* our noble Governour and Lord Earl Palatine, . . . is sufficiently instructed of the state of the country. . . . And truly, I beleeve, my Lord of *Baltamore* wil be glad of my Lord Palatines Plantation and assistance against any enemy or bad neighbour." 1641, R. Evelin, in B. Plantagenet's *Description of New Albion* (1838), pp. 21, 23.

"Now there be four other Lord Proprietors that have Palatine jurisdiction granted, and Provinces in the *West-India* Isles, *Florida* and *Maryland*, and as free as the Bishop of *Durham* had, but none have a speciall creation of an Earle Palatine, but ours of *New Albion*." 1648, B. Plantagenet, *do.*, p. 13.

"I, S[r] Edmund Plowden of Wansted in the county of Southton Knight, Lord, Earle Palatine, Governor, and Captain Generall of the Province of New Albion." 1655, July 29, Will of Sir E. Plowden, in *Penns. Mag.* (1883), vii. 51.

"To be lett, in the finest parts of America, . . . the estates of the Earle Palatine of Albion." 1784, Jan. 22, *London Evening Post*, in *Mass. Centinel* (14 Aug.), p. 2-3.

"The Address of the Right Hon. Lord *Earl Palatine* of *Albion*, to the Public. True and lawful heir of Sir Edmund Plowden, created Earl Palatine of *Albion*, to whom the charter was granted, did, in the late war, . . . behold his territories invaded." 1784, C. Varlo, *The Finest Part of America*, p. 29.

The uses of the word Palatine thus far considered long ago became obsolete in this country except historically. There is, however, still another meaning of the word, though apparently not yet in the dictionaries. Explanations differ as to why many Germans emigrated from the Palatinate of the Rhine to England in the first decade of the eighteenth century, but such an exodus did take place in 1708. Of the Palatines who then came to England, some were sent to Ireland, others to Carolina, and still others to New York, while in later years emigrants came to this country in large numbers.

"300 more poor Palatines are arrived, so that the whole number here [London] is about 8000." 1709, July 23, N. Luttrell, *Brief Relation* (1857), vi. 467.

"To the 2[nd] Proposal relating to the poor Palatines that shall be transported into North Carolina, It was resolv'd that their Lordships will not undertake to provide them with all provisions they shall want." 1709, Sept. 3, *N. Car. Col. Records*, i. 718.

"I arrived here [N. York] two days ago. We want still three of the Palatin Ships & those arrived are in a deplorable sickly condition." 1710, June 6, Gov. R. Hunter, in *N. Y. Col. Docs.*, v.165.

"On the 22nd of the last month some . . . Indians . . . began a barbarous Massacre, . . . killing . . . 60 English and upwards of that number of Swiss and palatines." 1711, Oct. 15, A. Spotswood, *Official Letters* (1882), i.116.

"Then a Petition from divers Palatines was read, praying . . . that they might be allowed to purchase Lands in this Province." 1725, Feb. 10, *Penns. Col. Records*, iii. 241.

"*Ran-away on the* 23d *of May last*, . . . a Dutch Palatine Servant Man, named *Jacob Lasant*." 1739, *N. Jersey Archives*, xi. 569.

"In the afternoon I rode to Ballygarrane [Ireland], a town of Palatines, which came over in Queen Ann's time." 1756, June 16, J. Wesley, *Works* (1826), ii. 344.

"There is a colony of Palatines, that have been fixed here [Arbella] above thirty years; there are now fifteen or sixteen families; Colonel Hasset brought them from the county of Limerick." 1780, A. Young, *Tour in Ireland*, ii. 123.

"Indeed, later in the [18th] century when speculation had taken possession of ocean transportation, sickness was so unfailing a concomitant of the journey that ship fever was generally known in Philadelphia as 'Palatine fever.'" 1901, O. Kuhns, *German and Swiss Settlements of Col. Penns.*, p. 71.

It may be added that as a place-name Palatine still survives, there being now towns, villages, or hamlets named Palatine in Illinois, Kansas, New Jersey, New York, and West Virginia. Finally, there is a townland called Palatine in County Carlow, Ireland.

ALBERT MATTHEWS.

Boston, December, 1903.

MEMORIALS OF THE BANCROFTS.

To the Editor of The Nation:

Sir: The publication of the letters of Mrs. George Bancroft in the *Century* may serve as a text for a comment upon one or two facts connected with the family whose name she bore, which are worthy of more than a passing attention, yet which, in the rush of intelligence that overwhelms us in these days, may easily be overlooked.

To-day, when so much has been written and said about the representatives of this country at foreign courts, it is well to recall how distinguished was the place which the Hon. George Bancroft held in Europe at a time when for an American minister to be so highly regarded was almost unique. The letters of Mrs. Bancroft, of course, recall a good many memories of his ministerial career, but more vivid yet must be the impressions furnished by the letters of Mr. Bancroft himself. A selection of these is soon to appear, edited by Mr. M. A. D. Howe, who is preparing the long-delayed authorized biography of the ambassador and historian. The choice of these letters is not an easy matter, for the wealth of interesting and historically valuable correspondence to and from Mr. Bancroft is surprisingly great. This makes for the increased labor of the biographer, but will add exceedingly to the richness of the biography.

Another matter of general interest is the passing of the collections of the late John C. Bancroft (to come down a generation) to the Art Museum of Worcester. This is an event of artistic importance far in excess of the attention it has received. Mr. Bancroft was of artistic temperament of the finest quality; and indeed it is to be questioned whether exquisite fastidiousness of taste may not have had as much to do as delicate health in diverting him from the career as a painter which he seemed likely to follow in the days when he shared the student life in Paris of Whistler, Du Maurier, and the fine Bohemians whose portraits, more or less modified, are to be found in Du Maurier's novels. His appreciation of what was best in art showed itself in many ways, and indeed was a part of the very tissue of his life. No one could come within the sphere of his influence without being attracted by his wonderfully winning personality, and equally was it true that no one could fail to feel how thoroughly artistic was the quality of his mind. The public had no knowledge of the consistency with which he followed a life of artistic pursuit. It was known that Mr. Bancroft had produced some remarkable woodwork, of which an exhibition was held some years ago at the St. Botolph Club in Boston; and his friends were aware that he was for many years a collector of Japanese prints, pottery, and lacquers. The extent and variety of his accumulations were hardly known even to his most immediate circle. Even now, when they are being made available at the Worcester Museum, there is no general knowledge or appreciation of the greatness of the treasure his labor and taste gathered together.

The connection of the Bancroft family with Worcester has been a long one. George Bancroft was born there in 1800, and the roots of the family tree had there struck deep before the close of the eighteenth century. It is eminently fitting that these collections should remain in the Museum of the city as a lasting memorial to the Bancroft name and to the native feeling the Bancrofts have always preserved toward the place. Only an expert could speak critically of Mr. John Bancroft's collections, and I am able to do no more than to mention them. The collection of Japanese prints, which is given outright to the Museum, not only is of superb beauty and worth, but in comparison holds its own as one of the really great collections of the world. Quietly, patiently, with abundant means and with constantly increasing and carefully trained skill, Mr. Bancroft for more than a quarter of a century went on gathering the pictures he thought worthy. He bought unstintedly, but with rare judgment, both in Europe and in Japan, on both sides of the world, sometimes personally and sometimes

through agents. Many times it has been my pleasant fortune to be present when he examined a fresh instalment of prints from Japan, and his intelligent appreciation and his artistic enjoyment were alike a delight to see. The result of his labors is of worth so great that only time can bring its proper and full appreciation. Now that it is available to the student, the collection must attract the attention of experts and connoisseurs, and will undoubtedly become an object of loving pilgrimage.

The lacquers and the pottery are, for the present at least, loaned to the Museum. They by no means include all the works Mr. Bancroft gathered, and indeed not a few of the finest pieces are still in the hands of the family. Even as it is, however, those on exhibition are wonderful in quality, and in themselves are sufficient to confer distinction upon the Museum. The forthcoming biography will revive and keep in memory the distinction of the father, but no less will the art treasures in the Worcester Museum preserve in fragrant remembrance the name of the son. ARLO BATES.

BOSTON, February 9, 1904.

PROFESSORS' SALARIES.

TO THE EDITOR OF THE NATION:

SIR: Mr. X. of Ithaca (*Nation*, No. 2014) laments that an instructor receives no more salary than a clerk in a grocery, $700 to $1,000 a year. Why not form a union and present an ultimatum to the board, announcing that grocers' wages no longer go? Hereafter it must be the plasterers' scale, $11 a day, or we lay down our lead-pencils and walk out.

But is money the only measure in the world? How can we compare the vocation of a grocer's clerk delving in sugar and tea—catering merely to the beast in man—to the life of an instructor training and fortifying the intellect and the soul? The grocer's end is money, but an instructor's remuneration should include something beyond the vile dross of material reward. Let him cultivate plain living and high thinking, let him munch his unbuttered toast without cavil, and cast no covetous eye on the grocer's caviare or Mrs. Grocer's diamonds; the former is but a tickling of the palate, and the latter sheer vanity, always a thing of evil.

The instructor who labors in his vocation at $1,000 in preference to another vocation at $2,000, works for something greater than this difference in pay, and he will not lament. The instructor, however, whose mind is mainly fixed on his pay, should shift himself behind a counter for an increase. For an increase—aye, there's the rub; there's where we find the "trout in his milk." Alas, for such an instructor there is no increase, no shopkeeper standing at his door to hail him in. Ten to one, he has tried to exchange his 1,000-dollar job for a better and failed. There is where the shoe pinches. He works at his 1,000-dollar instructorship a sour pedant, because he has reached his limit, the highest sum at which his services are wanted, as instructor, as genius, or as anything else.

It is difficult to persuade an ordinary mortal that gold dollars need beg for fifty cents. The world clamors for competency, for in the upper realm the population is as thin as the air. A Rockefeller will always get his millions, and a Thoreau his life everlasting. Unfortunately—or perhaps fortunately—the school board and the storekeeper pay for their help the market price. If a great university pays but $1,000 to its instructors, it does so because good instructors are obtainable at that figure. The board cannot hire the instructor below his price; if he considers himself worth $2, he need not work for $1. And would it be good policy or good sense on the part of a school board to pay $2,000 for services that are offered for $1,000? Does our 1,000-dollar instructor himself follow this practice? Does he pay a newsboy two cents for a paper while a bunch of other urchins swarm about him with uplifted arms and shrilly voices, crying, "Here's your paper for a penny"?

A. GROCER.

ILLITERACY OF NEGROES DECREASING.

TO THE EDITOR OF THE NATION:

SIR: On page 2312 of the Report of the Commissioner of Education for 1902, I find that

"The colored enumeration included the negroes, Chinese, Japanese, and the Indians. In 1900, the colored population, ten years of age and over, was 6,698,906, in which number were 2,979,323 illiterates, or 44.5 per cent., as compared with 56.8 in 1890, 70 in 1880, and 79.9 in 1870."

This is an encouraging report, and the ratio of decrease promises well for the future.—Yours truly, C. E. W.

BUFFALO, N. Y., February 10, 1904.

THE ARUNDEL CLUB.

TO THE EDITOR OF THE NATION:

SIR: Sir W. M. Conway has just started a society called the Arundel Club, to distribute among the members about twenty photographs annually of pictures in private British collections. The value of such an association will doubtless be appreciated in this country; and libraries and persons wishing to subscribe (one guinea a year) are requested to communicate with Sir W. M. Conway, The Red House, Hornton Street, London, W.—Yours faithfully,

B. BERENSON.

WASHINGTON, D. C., February 15, 1904.

Notes.

'Evidence for a Future Life,' from the French of Gabriel Delanne, by Miss Helen Dallas, is in the press of G. P. Putnam's Sons.

Professor Woodberry, it is announced by McClure, Phillips & Co., is to have editorial direction of "McClure's Universal Library," a thousand volumes of English and American classics, and "all the vital literature of the world, both ancient and modern." A complete text with only explicatory notes, and a brief critical and biographical introduction for each volume, are some of the features of this ambitious undertaking.

During the present season Macmillan will bring out the first two volumes of 'The American Colonies in the Seventeenth Century,' by Prof. Herbert L. Osgood of Columbia, and in the fall, 'Modern Methods of Charity,' by Prof. Charles Richmond Henderson and Dr. E. Münsterberg, Director of Poor Relief in Berlin.

'Points at Issue, and Some Other Points,' by Prof. Henry A. Beers of Yale (Macmillan), is a collection of essays mainly reprinted from magazines. Some of the subjects are "Literature and the Colleges," "Literature and the Civil War," "Emerson's Transcendentalism," and "The Modern Feeling for Nature." The essay on Emerson is a painstaking attempt to trace his Transcendentalism to its source in German philosophy.

'The Mirrour of Justices' has been added by John Byrne & Co. (Washington) to their "Legal Classic Series." The text used is that followed by William Hughes, and there is an introduction by William C. Robinson. 'The Mirrour of Justices' is of no value as a law book, and of much less interest in every way than the very entertaining essay by Prof. F. W. Maitland with which the Selden Society reintroduced it to the world in 1893. No one has ever made out what it is, or who wrote it, or why it was written, and it is safe to say that no one except legal antiquarians very much cares. If the book was meant to be copied and read, "it was a miserable failure"; the text is so corrupt that to get at the original a good editor of the 'Mirrour' "ought to know what mediæval French would sound like when spoken by a mediæval Englishman and listened to by a sleepy clerk." Mr. Maitland calls it a "fantasia" and a "variety entertainment," though certainly not of a lively kind, and denounces the author as a "liar" because he makes statements as to the law which seem to have been intentionally false. But there is no more reason to suppose that Andrew Horn, or whoever composed the 'Mirrour,' meant to deceive than to impute such a design to the author of the 'Comic Blackstone.' It is, we believe, held to be conceivable that he was a humorist; but if so, the book is in that respect also a failure. There is no evidence that the author's joke, or irony, or whatever it was, was ever taken. The vogue of the work is that of a legal *lusus naturæ*, and as such it certainly stands by itself.

What answers for a preface to 'The Hundred Best Pictures' (Charles Letts & Co.) is mainly concerned with the obvious reasons why the book should have been called something else. That any selection of one hundred pictures should be "the best" is absurd, but in this case such more rational titles as 'One Hundred Masterpieces' or 'One Hundred Great Paintings' would be almost equally undeserved; for while many of the pictures engraved are famous, many others are merely popular—a very different thing. It is therefore scarce worth while to criticise the selection of works from any very serious point of view, but an idea of the tastes appealed to may be formed from the fact that, of the artists represented, twenty-seven are put down as of the English School (though we must contest the right of that school to claim Whistler or even Sargent) against sixteen of the French School and only ten of the Italian, and still smaller numbers of the other great schools. The painters chosen for illustration are seventy-four in number, of whom thirty-nine, or more than half, may be rated as of the past century, and these thirty-nine artists painted forty-eight of the one hundred pictures. What the book is, then, is a collection of one hundred popular pictures reproduced in photogravure, and for the most part very well reproduced, with a bit of let-

terpress opposite each picture. These snippets of text are of the least possible value, either biographical or critical, and might as well have been omitted. It is as a picture-book pure and simple that the work must be considered, and as such it will doubtless give much pleasure. "The pictures are so inserted that, if desired, they can be removed and framed or placed in an album." There are a couple of pages of "signatures of artists," at the end, which contain an extraordinary mixture of picture signatures and autographs; and two of these signatures are of artists other than those represented in the plates—Giacomo Tintoretto instead of Jacopo, and Solomon Ruysdael instead of Jacob.

Methuen & Co. have issued 'John Bull's Adventures in the Fiscal Wonderland,' by Charles Geake and F. Carruthers Gould. This is a close imitation of 'Alice in Wonderland' both in story and in the illustrations, which are cleverly adapted to meet the incidents and scene-shiftings of the present controversy. The fiscal tournament ends in the complete discomfiture of the Mad Hatter (Chamberlain), who, in the character of the Knave of Spades, is then put on trial for stealing loaves. Recent bye-elections seem to justify this prognostication of the eventual outcome, but perhaps the resources of "pushfulness" have not yet been fully tested.

'The Care of Animals,' by the veterinary surgeon and teacher Dr. Nelson S. Mayo (Macmillan), treats of animals both in disease and in health. It takes up surgery, medicine, and obstetrics in relation to farm animals, and admirably translates the technical into the simple and intelligible. Dr. Mayo not only has had wide practical experience, but has at his finger tips the references to the latest articles in his science. Perhaps, however, in certain cases one might call his prognoses too optimistic. Many stockmen are to a large extent their own veterinarians, and all stockmen must hold towards their sick animals the relation of the trained nurse to her patient. This book shows how to supplement by intelligent coöperation the services of the skilled veterinarian, and gives invaluable help in cases where such services are not at hand. It also contains directions concerning the general care and the quarters of farm animals, the care of pets, and the judging, handling, and shoeing of horses. The text on sanitary quarters, etc., needs more illustrations. On the whole, the book must prove a treasure to every owner of stock.

In Mrs. Roger A. Pryor's 'The Mother of Washington and her Times' (Macmillan) there is little of Mary Washington that can be regarded as historical. The facts that she was born, married, and bore an illustrious son can hardly be expanded into a volume of size without much padding, and so Mrs. Pryor draws a full "picture" of Virginia life in colonial times, through colored glasses. Superlatives abound, and an aristocratic society is described that certainly never existed in Virginia. Every man is superb and splendid, and every woman rarely beautiful and accomplished. In such surroundings Mary Washington naturally receives little attention, for her nature was "gloomy" and severe. Washington's own letters about his mother are ignored, and a challenge thrown down to every one who questions Custis's gossip. "I should doubt," adds Mrs. Pryor, "the authenticity of any letter tending to lower our estimation of Washington's character" —something entirely beyond the real question involved. It is difficult to see how such a book serves a useful end, for it gives a distorted view of men and things, and, while professing to use manuscript records, in reality depends more upon Lossing, Custis, and like authorities. The colored illustrations are good, but the portraits are neither good nor novel.

Miss Adelaide R. Hasse has found two interesting pieces of early New York printing, which have been reproduced in facsimile (Dodd, Mead & Co.). One is 'A Narrative of an Attempt Made by the French of Canada upon the Mohaque's Country,' first printed by Bradford in 1693, and now believed to have been the first book printed in New York. It is a short but spirited account of a dash against the French intruders, with some curious papers illustrating the relations of the English to the Indians. The second issue is the Journal of the New York House of Representatives, printed by Bradford in 1695. It is not only an early issue of Bradford's press, but the first printed legislative proceedings among the colonies. The nine numbers are said to be complete, although No. 4 is missing, of which Miss Hasse gives no explanation. The reprint does not make so handsome a volume as that of the Massachusetts Journals for 1715, nor does it contain an index. It is much to be wished that the series be continued, so as to place at the service of students these invaluable early records. The same house has issued Brereton's 'Relation,' Hariot's 'Virginia,' and the 1637 edition of Milton's 'Comus,' as they were published in the *Bibliographer*. The mechanical execution is excellent, and should have been followed in the reissue of Eliot's 'Logic Primer,' edited by Wilberforce Eames (Cleveland: Burrows Bros.). In its present form all the distinctive flavor and appearance of this curious compilation for the instruction of Indians are wanting.

Dr. Samuel A. Green prints a third series of 'Ten Facsimile Reproductions,' which again shows an interesting collection of rarities and careful study of them. The collection of Mather portraits is alone of high value, and is made all the more valuable for the connection of the earliest portrait with John Foster, the first engraver in New England. From the rude woodcut of Richard Mather to the mezzotint of Cotton Mather, the first mezzotint engraving executed in America, a great advance is shown. The chapter on the Boston *News-Letter* contains much curious information on this earliest of American newspapers. Why there should have been two editions of the first issue is a problem which even Dr. Green is unable to solve. The early examples of "flying posts" are taken from unique examples, and the reproductions are unusually good. The practice of attempting to reprint old newspapers from type has many disadvantages. Yet, as every collector knows, copies of such reprints are frequently offered under the mistaken belief that they are originals. Paul Revere's own account of the signals for his ride, a panorama of Boston in 1775, and Romans's "Battle of Charlestown," are of local interest, while the "crossed swords" of Prescott and Linzee offer a text for peace. The larger part of the various objects reproduced in this volume are in the Massachusetts Historical Society, in which Dr. Green has done such efficient service.

The Roman *Minerva* of January 24 throws interesting light on the educational shortcomings of Italian recruits. The recruits in question did not come from remote country districts, but from the thickly populated provinces of Verona and Vicenza, where elementary education is quite general. Fourteen per cent. of those examined could not name the capital of Italy, while 55 per cent. did not know the principal city of Lombardy. Fifty per cent. did not know the largest river in Italy, while one answered the Jordan, and another the Nile. But, most surprising of all, nearly one-third of these young men had never heard of Garibaldi; one of them described him as *un garibaldino*, and another as *un homo poco religioso*. The editor of *Minerva* finds these results discouraging, but takes some comfort from a recent examination of French recruits at Orléans, where 50 per cent. had never heard of Joan of Arc, and two-thirds knew nothing of the Franco-Prussian war of 1870; but in the latter case, "where ignorance is bliss, etc."

A writer, signing himself "O. B.," in the *Beilage* of the Munich *Allgemeine Zeitung*, No. 266, delivers a sharp critique of the literary output of Germany, which in the last few years has passed the 25,000 line. Germany is generally credited not only with publishing the greatest number of books, but also the largest proportion of solid works. The article in question declares that the great bulk of this literary crop is trash, it being the rule of the German book trade to publish many books, with a chief care for outward good appearance. He calls for a new policy, namely, fewer books, but better books. He declares it to be a mystery what becomes of the immense annual mass of books, for the Germans are not book-buyers, preferring to make use of the circulating libraries. Dr. Carl Trübner, the Strassburg publisher, in a recent brochure, 'Wissenschaft und Buchhandel,' states that an inquiry made by him of the leading book publishers of Germany has shown that, out of every ten manuscripts offered for publication, only one is printed. Germany might, accordingly, have a literary output of 250,000 volumes each year.

In a brief account of the final establishment of the boundary between Burma and China, in *Petermann's Mitteilungen* number twelve, Dr. Emil Schlagintweit calls attention to the fact that now England is able to reach Yunnan and the valley of the Yangtze before either the French or the Germans. The Chinese frontier officials not only are friendly to the British, but are improving the roads and bridges to accommodate the increasing Burmese traffic caused by the extension of the railway system to the frontier. Among the other contents is a census schedule of questions prepared by the International Institute for Statistics for the use of persons making ethnographic or sociological investigations among savage or half-civilized peoples. The editor, Dr. Supan, concludes a summary of the scientific results of the German Antarctic expedition with the remark that "we cannot conceal from ourselves the fact that this first great Antarctic undertaking of our nation is a torso." Failure was whol-

ly from lack of funds, not from the inefficient equipment of the ship nor from lack of zeal in its commander.

According to the reports published by Smyrna papers, Professor Dörpfeld has unearthed, in the course of his archæological excavations in ancient Pergamum, a magnificent hall of columns fully sixty metres in length, which apparently was a grand portico. Among the finds made here was a life-size woman's head in marble, also the inscribed base of a statue of Æsculapius, a large vase with the figure of Apollo, and, more noteworthy, four marble slabs covered with a hieroglyphic style of script, and pictures of various theatrical scenes and actors, men, women, and girls. Two other marble heads were found, one being that of Bacchus, the other probably that of the Empress Faustina, the wife of Marcus Aurelius.

The activity of the Germans in excavating in Babylonia and Assyria seems to be exerting a reflex influence on other countries. The British Museum has resumed excavations at the mound of Kuyunjik, the site of ancient Nineveh, with the especial object of finding additional remains of the famous library of Ashurbanipal. In this country, also, a new organization has been formed, the Oriental Exploration Fund of the University of Chicago, under the general directorship of President Harper, for the purpose of conducting excavations in Babylonia and Assyria, in Egypt, Syria, and Palestine, the same field occupied by the German Orient-Gesellschaft. This organization has already commenced excavations at Bismya, a ruin site near Nippur in Babylonia, commonly supposed to be the remains of the city of Isin, a place of great importance in the third millennium B. C. The field director of these excavations is Dr. Edgar J. Banks, formerly American consul at Bagdad.

—The leading article in the January number of the Chicago University's *Journal of Sociology* is timely. It treats of the first German Municipal Exposition which, after four years of ripening, gathered its harvest last year in Dresden. It was a convention representing by object-lessons and otherwise what has been doing during recent decades in 124 German cities, none of less population than 25,000. The purpose of the writer (H. Woodhead, of the University) was to present the results of his own studies at the show in departments concerned with (1) traffic, including the laying-out of streets, pavements—whether asphalt or tallow-tree—lighting, street cars, railway stations, bridges, harbors, docks; (2) expansion, endogenous as in Stuttgart, and the more usual exogenous; (3) charities; (4) employment bureaus; (5) sanitation; (6) education; (7) art; (8) finance. The five and twenty pages cover only the first two topics, but they abound in fresh facts worth American pondering. They have an æsthetic illustration in a fine view of the long-famous Brühl Terrace, with its wharf, and they thicken other proofs which had already demonstrated to our economics that the effete Old World has lessons to teach, at least in municipal advancement, which our New World has yet to learn. Among our jottings we find that houses are made for streets, not streets for houses —no spite fences, no great-toe buildings where one of the "basest, poorest, thrusts itself foremost." Strassburg has doubled its area since 1875. Schoenberg, a suburb of Berlin, of 500 people in 1800, has come up to 114,000. Cities, notably Hamburg, have done much in tearing down slum houses and putting up in their stead no hotbeds of disease, vice, and crime. Thanks to mammoth flats, a bequest of Krupp secures good lodging to all Essen operatives, and one still larger in Leipzig will soon become as humanitarian there. In general, trolleys are overhead. Gas for both heat and light is too cheap to be soon ousted by electrics. Though no river is large, one Munich bridge cost a million marks. Had German police inspection even without domiciliary visits existed in Chicago, the Iroquois holocaust would have been impossible.

—'The Religious Sense in Its Scientific Aspect,' by Greville Macdonald, M.D., (A. C. Armstrong & Son), is made up of three lectures delivered in King's College, London. If all the matter here was used, each lecture must have been several hours long. A good deal of time is wasted in eloquent protestation. The book invites us to a line of thought which is parallel with that of the late Henry Drummond's 'Natural Law in the Spiritual World,' without, however, a resolve to force an orthodox confession from the lower and the lowest evolutionary forms. There is here every appearance of a sincere search for truth and not for a mere confirmation of preconceived opinions, but many particulars are conceived too curiously to have a convincing character. The endeavor is to show that the roots of religion as service and as renunciation are to be discovered in animal and vegetable forms. It has perhaps never occurred to any one before to use the sponge as typical of the "Religion of Service." When a man is called a sponge, it is commonly with a view to his depreciation; but Dr. Macdonald finds the growing sponge to be full of indications of a germinal religion of service. Each individual part is unconsciously intent upon the welfare of the whole. A second lecture, "The Religion of Renunciation," aims to show that Keats's teaching, "Beauty is truth, truth beauty," is confirmed by animal and vegetable forms. The third lecture reminds us of the wise child's saying, "Flowers can't *not* be good." A man is shown to be better than a sponge or guelder-rose because his is the "Religion of Freedom," while they are in the bondage of necessity. The prosperity of this book will depend much on the individual reader. One may approve its leading thought—the involution of the highest in the lowest—and still find the expression vague and wearisome.

—Several years ago Mr. Beckles Willson wrote a history of the Hudson's Bay Company. In 'Ledger and Sword' (Longmans) he takes up the annals of a still greater corporation, the East India Company. His point of view is an interesting one. Instead of writing chiefly about Clive, Hastings, and those later servants of the company who built up the Indian Empire, he makes his narrative centre in Leadenhall Street. For one reason, the company transacted a large amount of business outside of India; for another, Mr. Willson thinks that it has been treated rather badly by historians in being made wholly subordinate to the political careers of its own agents. As a popular sketch of its rise, prosperity, and extinction, these two volumes are the first in the field. Mr. Willson is not, apparently, a special student of Eastern affairs, but he has had good materials to draw from, and he takes up his subject at the right end. In several important respects the work is open to criticism. While better proportioned than the author's book on the Hudson's Bay Company, it is crowded with minor names and details, suggesting too much the process of abridgment from monographs. It is marred by signs of national prejudice and by *obiter dicta* like the reference (vol. i., p. 380) to the Presidency of the United States. It contains remarkable slips, like the statement (vol. ii., p. 402) that Disraeli was premier in 1858. Yet, despite conspicuous shortcomings, it has the merit of sticking to the main point. The development of the corporation is kept in full view and steadfastly set forth as the main subject. There are books enough and to spare about the Indian Empire, but the aims and methods of the Company itself have received hitherto less than their due share of attention. While we cannot admit that Mr. Willson has made the most of his fine theme, we recognize the difficulties of the task, and are glad that he has reduced so much important information to a convenient form.

—The last quarterly statement of the Palestine Exploration Fund contains the sixth report of the English excavations at Gezer (August 16—Nov. 16, 1903). Nothing of any great importance has been discovered since the issuance of the last report, and indeed, as a whole, the excavations have been very disappointing in their failure to yield inscribed material. The principal work of the last quarter has been the excavation of a huge rock-cut cistern, capable of containing four million gallons of water, which, from the objects found within it, Mr. Macalister ascribes to the Maccabæan period. To an earlier time belong a number of "Astarte plaques." Still earlier was "an *adult* human foundation sacrifice" of a woman, the first found on this site. It will be remembered that Mr. Macalister discovered in 1902 burnings and burials of the very early inhabitants of Gezer in caves beneath the later ruins. He now reports the discovery of the necropolis of the Seleucid period, on the hillside to the north of the town. But here, as elsewhere, the tombs or graves of the Hebrew period remain as yet undiscovered. Sir Charles Wilson concludes in this number a series of articles on the site of the Holy Sepulchre. His conclusion is that, while "there is no decisive reason, historical, traditional, or topographical, for placing Golgotha and the Tomb where they are now shown"—that is, at the present Church of the Holy Sepulchre in Jerusalem—on the other hand, "no objection urged against the sites is of such a convincing nature that it need disturb the minds of those who accept, in all good faith, the authenticity of places which are hallowed by the prayers of countless pilgrims since the days of Constantine."

—The Archæological Report of the Egypt Exploration Fund for the year 1902-1903 gives an account of the excavations conducted by Messrs. Grenfell and Hunt on behalf of the Greco-Roman Branch of the Fund, and contains the usual summaries of progress during the year in the various de-

partments of Egyptology. The excavations at Hîbeh, begun the previous year, were brought to completion, yielding some papyrus cartonnage from Ptolemaic rock-tombs, which had, however, been rifled in ancient times. The mounds in the town itself proved to be of little value for papyrus, being much affected by dampness. At Cynopolis, little papyrus was found, but persons interested in ancient (and modern) superstitions will find their account in the numerous burials there of "Osiris figures." These "were made of grain wrapped up in cloth and roughly shaped like an Osiris, and placed inside a bricked-up recess at the side of the tomb; sometimes in small pottery coffins, sometimes in wooden coffins in the form of a hawk-mummy, sometimes without any coffin at all. . . . These Osiris figures were buried at the ploughing season, and were offerings to the corn-god." The last part of the season was spent at the old site of Oxyrhynchus, and the rich returns in papyrus of the excavations there, yielding among other things six new Sayings of Jesus, and part of a new and historically important Epitome of Livy, as well as many Greek classical fragments, some previously unknown, have already been mentioned in these columns. From the report of progress may be mentioned the distressing account of threatened ruin of the Temple of Philæ by the winter flooding of the island, and an article by Gain on mummy wheat and barley, which seems to do away with the popular belief about grain being raised from such seed. The writer points out that such grains from Egyptian tombs, however fair and fresh in appearance, are always of a brownish color and incapable of germination, and that a single century of age is sufficient to produce its "fossilization."

—Picard's "Collection de Textes," so long a series of the highest quality, is still further enriched by a new edition of Philippe de Commynes (Paris: Picard & Fils). The editor, M. de Mandrot, has published at intervals since 1886 a number of excellent studies relating to the period of Louis XI. Several of these will be familiar to readers of the *Revue Historique*, and others have appeared as separate monographs. No work in the historical literature of France is more justly famous than the 'Memoirs' of Commynes. Despite some recent attacks upon its good faith, it stands pretty much where it has always stood since the early years of the sixteenth century—in other words, since it was first printed. That it should already have been honored by 123 editions is not surprising, when we consider how important was the political rôle of Commynes and how interesting is his style. But while the 'Memoirs' have been praised by French critics from Montaigne to Sainte-Beuve, a good many obstacles stand in the way of a satisfactory text. The original manuscript has been lost, and the variations in the different copies are extremely numerous. Moreover, most of the existing manuscripts fail to contain Books VII. and VIII., which deal with the reign of Charles VIII. Down to 1880, when M. Léopold Delisle published his 'Mélanges de Paléographie et de Bibliographie,' it was, indeed, supposed that no manuscript extant embraced this portion of the work. Accordingly, there was no basis for collation with the printed page of the sixteenth century. M. Delisle announced the discovery of a manuscript which, in the words of M. de Mandrot, is "the most complete and the least incorrect that we possess." It also has a remarkable pedigree, since it belonged to Anne de Polignac, Countess of La Rochefoucauld, and a niece of Hélène de Chambes, the wife of Commynes himself. Though described by M. Delisle, the new manuscript has not been published until now, when M. de Mandrot puts it forward as a substitute for all other texts. The value of the present edition, however, does not depend alone upon the facts which have just been recited. The introduction contains a long and critical account of Commynes's life, together with a discriminating appreciation of his 'Memoirs.' Certain gaps in the record of the historian's career, M. de Mandrot, like his predecessors, is unable to fill up. For example, he offers no fresh information concerning the circumstances under which Commynes left the service of Charles the Bold and entered that of Louis XI. On the other hand, he gives a full account of the litigation between Commynes and the family of La Trémoille over the Châteaux of Argenton, Talmont, and Château-Gaultier. It is with regret that we find ourselves unable to compare the present edition with those of Mlle. Dupont and M. Chantelauze, or to discuss the leading points in the character of the 'Memoirs' which M. de Mandrot raises. We must be content to say that his preliminary essay is one of great learning, and that his notes, besides being numerous, are drawn from a wide range of sources.

BRADLEY'S "CANADA."

Canada in the Twentieth Century. By A. G. Bradley, author of 'The Fight with France for North America,' 'Wolfe,' 'The Conquest of Canada' (in Cambridge Modern History), etc. Illustrated. London: A. & C. Constable; New York: E. P. Dutton & Co. 1903. Pp. xii, 428.

Mr. Bradley read, he tells us, in a Southern paper an account of the military force of Canada as seen by an eyewitness, who deposed that there were in the Dominion half a million of dead-shots, all under secret orders for a prompt invasion of the United States in case of war. Every man of the half million was able to hit the bull's-eye without failing at five hundred yards. The entire population was absorbed in rifle shooting, and men took their position in life from the number of consecutive bull's-eyes they could make. Matches could not be completed because all the marksmen went on scoring bull's-eyes till sunset. The whole force was ready to be hurled in a moment on the ill-prepared people of the United States. We must accept Mr. Bradley's assurance for the fact that the writer was serious.

On the other hand, Canadians are liable, if not to ignorance so ridiculous as this, to serious ignorance of the people of the United States. Many of them, at least if we may judge from the utterances of their press, fancy that our eyes are always turned towards them with sinister intent, and that we are a standing conspiracy against their independence. Their self-esteem would perhaps be hurt as much as their fear would be relieved if they knew how very little is usually thought or said about them on this side of the line. An Englishman who has been conversant for many years with people of all classes and parties in the United States, has declared that he never heard a single expression of hostility to Canada or of desire for her forcible annexation. She was naturally, though perhaps not deservedly, involved, as a dependency of Great Britain, in the resentment caused by the conduct of the British oligarchy and its organs towards the United States in the day of their peril. She thereby lost the Reciprocity Treaty. But that would have been the time when the people of the United States, with a victorious army and a large fleet on foot, if they had cherished any designs against Canada, might have been tempted to carry them into execution. Not a thought of the kind was entertained. Persistent efforts on the part of British and Canadian Jingoism combined to inoculate Canada with anti-American feeling and create in the north of the continent a power antagonistic to the United States, may possibly some day breed mischief; but in the meantime Canada may rely upon it that, far from having an enemy, she has rather a dormant ally in the American Republic. So long as she remains quiet and keeps clear of European quarrels, the United States, as the great interest of this continent, will not allow it to be invaded by European war.

Mutual information, therefore, is welcome. Mr. Bradley gives us information about Canada fully, pleasantly, and, so far as we can see, fairly. There is, at all events, no appearance of bias, though on some subjects—politics and society, for instance—there is apparently a prudent reserve. As to politics, recent reports of the action of the party machine in Ontario seem to show that there is a good deal to be desired.

What we most desiderate, in forming a judgment on the Canadian question, present and future, is a map showing the real configuration and limits of habitable and cultivable Canada, with the territorial relations of the different provinces to the adjoining States of the Union. Canada is not, as it is conventionally painted, a solid mass of country, comprising all between the boundary of the United States and the North Pole, but a straggling row of provinces broken by great wastes, or by great barriers of nature such as Lake Superior and the triple range of the Rocky Mountains; and for the most part not very deep, though the depth of the Northwestern Territory is as yet unascertained. In this consists the practical problem of those who have undertaken to weld the scattered members of the Dominion into a permanent State separate from the adjoining portions of the Union towards which each of them seems naturally drawn. In the debate on Canadian confederation a speaker, having used the familiar image of the sticks gaining strength by being bound up together, was asked whether the same thing can be said of seven fishing-rods tied together by the ends. Mr. Bradley shows in a passage of his text that he is not unconscious of the fact; but the map at the beginning of his book rather suggests the other idea.

Mr. Bradley gives us a good picture of French Canada, which, instead of fulfilling Durham's forecast by being absorbed in the British element, is, if possible, more intensely national, and more disposed to assert its nationality, than ever. Over official buildings flies the British flag; else-

where flies the French. The connection of Quebec with Old France, however, is not close. French Canada is a little nation of itself; not an outlying member of the French Republic, but a relic of the France before the Revolution, only that the power once divided among the King, the aristocracy, and the priesthood now centres in the priesthood, with a little reserved for the notary. Intercourse with the Republic which is closing religious schools and expelling religious orders, is not likely to be fostered by the Catholic priesthood, which retains its ascendency in French Canada and moulds the people in accordance with its own ideas. There is, however, an anti-clerical party called the Rouge, and the hold of the curé has been somewhat loosened by railways and other facilities of communication which break up rural seclusion; by the advance, though slow, of popular education; and, most of all, by intercourse with the manufacturing States of the Union, to which the overflowing population of Quebec goes for employment, many returning and bringing back republican notions in their trunks. Marriage and remarriage are enjoined by the clergy; the offspring are very numerous; and, besides spilling into New England, the French are gaining on the British population in Canada itself, have ousted the British from the townships south of the St. Lawrence, and are advancing in eastern Ontario and along the line of the Canadian Pacific Railway.

The fact, indeed, is, that though the British in Canada are the dominant race, they are not the majority; the majority being made up of French, Celtic and Catholic Irish, and various nationalities. The French, though perfectly content with British institutions, are far from being British, still farther from being Imperialist, in sentiment. They would at once repel Imperial Federation, or any scheme by which their nationality was threatened. Of this their leader, Sir Wilfrid Laurier, shows himself thoroughly aware. It was not love of Great Britain, but hatred of the New England Puritan, who had threatened their religion, that led them to side with England against the insurgent colonies. It was not love of Great Britain, but hatred of the French Revolution animating their priesthood, that led them to side with England against Napoleon. Mr. Bradley says they told him they would fight for Great Britain against the Americans. He probably put a leading question which they answered with characteristic courtesy. Mingling as they now are with the Americans, they can hardly dream of them as foes.

There were about a hundred French Canadians, as Mr. Bradley is informed, in the South African Contingent. That number of rovers or mercenaries might be picked up in any country. It has been stated, on the authority of Sir John Macdonald, that there were forty thousand Canadian enlistments in the American army in the course of the Civil War. Only attachment to a Premier of their own race led the French Canadians to acquiesce in the sending of the Contingent. Mr. Bradley is probably right in saying that Sir Wilfrid Laurier's own feeling was "negative," and that his motive for acquiescence was fear of ruining his position. This Mr. Bradley calls "sensible opportunism." Opportunism is a polite name for that which our rude ancestors called "time-serving." It is difficult, we should say, to imagine anything more criminal or meaner than the conduct of a Minister who commits a nation to an unjust war from fear of impairing his own position.

In his chapter on Ontario, Mr. Bradley gives useful information and advice to Englishmen who think of taking to farming there. They must be prepared to work as no English tenant farmer works, and generally to face a pretty hard life. Probably they had better stay where they are. Land must now be cheap in England, where, mainly through the scarcity of farm hands, farming has been depressed and large areas have gone back from arable into pasture. Of those who emigrate for a living, the only one who is likely to find it in Ontario is the farm hand or the man who is willing to become one. For them there is a great demand. Clerks, teachers, and members of the less manual callings generally come only to starve on the street. We heard the other day of a man of this class who was fain to earn his bread as a common laborer. The manufacturers of late have been inviting artisans, probably in consequence of the strikes. Ontario does not now raise much wheat for exportation, and would not be captured by an offer of preferential duties for grain. Her exports to England are cattle, pork, and dairy produce.

Mr. Bradley does justice to the attractions of Toronto, which, with its villa suburbs of Rosedale and the island, is a beautiful city, though to the eyes of the visitor coming to it on the lake it is apt to be shrouded in factory smoke. Muddy Little York, as it used to be called in its infancy, has been growing of late at a pace which a few years ago hurried it into a "boom," with the usual wreck of boomers. It is the heart of the British element, and consequently of Toryism, loyalty, imperialism, sense of superiority to Yankees, and all ultra-British sentiments and aspirations. Representatives of the American press and observers generally who take it for the type of Canada, may carry away misleading ideas.

The point of most interest at present is the Northwest, with its immense fertility and its extent as yet undefined. Of this Mr. Bradley gives a good account, with remarks of practical value to young Englishmen, especially young English gentlemen, who are thinking of coming out to settle. Of the young English gentlemen not a few, it is said, went away with the Contingent; others have drifted from the farm to the ranch, or into the Mounted Police. Their habits are better suited for the ranch than for the farm. The Canadian Government has been importing a variety of waifs from Europe—Mennonites, Icelanders, Galicians, and Dukhobors. Some of these, the Mennonites especially, have made good farmers of a rather troglodytic kind, but they do not readily make citizens; nor even as farmers can they vie with the American who is native to the prairie and used to machine culture. American the Northwest was apparently destined to be as soon as the population of Minnesota and Dakota overflowed, and American it is rapidly becoming. The American settlers will no doubt be good citizens under institutions radically resembling their own. As to that, Canada need have no fear. But it is not likely that an American settler in the Northwest will imbibe British megalomania, or desire to share with the imperialist of the Toronto Club the glorious expense and liabilities of Britain's future wars. As the Northwest fills up, supposing the Dominion to remain on its present footing, the centre of power will probably be drawn westward and the councils of the Confederation will change. There is still a struggle between the fertility of the soil and the severity of the sub-arctic climate. But the early frosts, which were the terror of the farmer, seem to have been somewhat mitigated by cultivation. It might have been supposed that the region was intended by nature for large farms, but experiments of that kind have failed, owing to the expense of maintaining the staff through the winter.

The treatment of the Indians by the Canadian Government has been very good, and has offered the unfortunate race every chance of salvation, but apparently in vain. Mr. Bradley is mistaken, we believe, in thinking that there was danger of a general uprising of the Indians at the time of the Riel rebellion. Poundmaker, when he was attacked by a Canadian corps, was resting peacefully on his Reserve. Nor does Mr. Bradley seem to be perfectly well informed with regard to the insurrection of the French Half-breeds. Those poor people had a grievance. The good Archbishop Taché had warned the Government, but his warning was pigeon-holed, and the Half-breeds, receiving no response, at last rose in despair. Two thousand is an overestimate of the number of their fighting men, which probably did not exceed seven hundred, while many of them were poorly armed. They made a gallant defence of the hamlet, which was their country as well as their home. French Canada showed the feeling of race on the occasion. Two French battalions of volunteers were called out, but were not sent to the front, and the colonels of both left their commands. Sir Wilfrid Laurier vehemently pleaded the cause of the insurgents and protested against the execution of Riel.

Most disastrous has been the conduct of the United States towards Canada. The authors of the Revolution began by fatally estranging the French Canadians, the toleration of whose religion they made a count in their indictment of the imperial country. Afterwards they fawned on them, of course without effect. Then they invaded them, were repulsed, and left lasting hatred behind. By the blunder, at once disgraceful and fatal, of refusing amnesty to the vanquished after a civil war and driving the Loyalists into exile, they planted in British Canada a hostile nationality on their northern frontier. Still, intercourse, trade, and some blending of population had considerably improved relations when, fired by Clay and his War Hawks, the people of the United States again invaded Canada and were again repulsed. The war of 1812 forms the heroic history of British Canadians, who are never tired of recalling its minutest incidents. It left a lasting impression on their feelings towards the invader. In 1837 the American Government might, by throwing its force on the side of the revolutionists, have given them a victory which would not improbably have been followed by annexation. But it allowed just enough filibustering to irritate and revive enmity. Of late years its policy has been, by hostile tariffs, to force Canada to

produce for Europe, turning her face generally, as was natural, to the same quarter with her trade. Another crisis in the Canadian question has now been brought on by Chamberlain's agitation; and if the influences which at present rule our Senate continue to prevail, we may look forward to seeing another fiasco added to the long line.

RECENT FICTION.

Mr. Salt. By Will Payne. Houghton, Mifflin & Co.

The Forerunner. By Neith Boyce. Fox, Duffield & Co.

Jewel: A Chapter in her Life. By Clara Louise Burnham. Houghton, Mifflin & Co.

The Congressman's Wife. By John D. Barry. The Smart Set Publishing Co.

In Old Plantation Days. By Paul Laurence Dunbar. Dodd, Mead & Co.

Tennessee Todd. By G. W. Odgen. A. S. Barnes & Co.

Sally of Missouri. By R. E. Young. McClure, Phillips & Co.

Panics, the World's Fair, domestic scenes at Cora, Wisconsin, fill in the pages of 'Mr. Salt,' and there is a sketch of life at the coal-mines which is the most dignified part of the book. Morals and manners, as it would be easy to show by extracts, are second-rate, and the merits of the novel are those of a faithful transcript of themes outside the literary pale, but in these days striving hard to come in. They must live, doubtless, with other modern improvements; but it is time that publishers specialized so that the reader, though a fool, may not err, but may know whether he is to read a story or enter a machine shop or wrangle in the Stock Exchange. He who reads does not always feel like running. He may even cherish the hope of a literary hour when he draws his armchair up to the fire. Surely it is his right to know whether his book is to be a book, or journalism or journalisticism, or photography of the man in the street, the girl at the telephone, the clerk in the lunchroom. The photographs may be lifelike—in the case of 'Mr. Salt' they are cleverly so. Literature they are not, and novels they should not be called any longer.

'The Forerunner' opens as if it were to belong to this same turbulent variety of book, beginning as it does with a land boom and an auction in Los Angeles. It is, however, much more than a manifestation of modern commotion, even though booms and mines and railways surround and to some extent supply its theme. The hero is an incarnation of fighting initiative in all modern and commercial enterprises. His projects take him from Illinois to California, to Boston, to New York, to Wyoming. Wedged into his chief propensity is a marked though limited stratum of human nature which lends material for the personal interest. This is complemented by the equally limited human-nature side of his wife, a hard and pleasure-grasping person, of stony propriety and no real stability under real temptation. The book suffers from lack of condensation of its minor characters. They are well drawn, but evaporate into regions beyond the story, injuring its unity though not intrinsically uninteresting. In other words, the raw forces of the story need marshalling, weeding out, and drilling into active service. If, for the lack of this procedure, firmness of structure is to some extent lost, the same accusation cannot be brought against the writer's manner, which is consistent, steady, and to the point. A gift for detail is somewhat over-exercised, yet not to the point of fatigue, while a gift of observation finds expression in such phrases as "The great cause, sign, and conservator of middle-age—the love of work"; and again, "Nicholas had the instinct of solvency highly developed; it was necessary to him to satisfy any reasonable claim upon him, even when a good deal of boredom to himself was involved." In fine, while the book is not unusually large, it is neither small nor usual, conveying a sense of power and of training in all ways except the precise handling of that power. There are sundry loose threads left hanging at the last, too important for such treatment. To embark on a story about mines and railroads, about wives rebelling against their husbands' absorption in business, entitles us to know whether the stockholder's faith was ultimately justified, and what the wife did with her tragically earned freedom. It may be that a sequel volume will tie up these floating threads. It is hard on any other theory to account for the title of the story.

Mrs. Burnham's 'Jewel,' again, which its publishers announce to be "not a juvenile in any sense of the word, but a novel," might well be differentiated from the novel. Considered as a piece of writing, it might take its place among Christian Science documents. Like its author's preceding book, we should suppose that it might receive the "endorsement of Mrs. Eddy and all the leading Scientists." In a busy and much-be-booked world a sub-classification of this sort of literature would be time-saving to readers and librarians. A cross-reference might further relegate this particular volume to the department on the reformation of adults by children. Jewel is a very nice little girl by nature, but by art out of drawing and by Science a charming monstrosity.

'A Congressman's Wife' is a singularly thin story of American politics. No fault is to be found with its morals or its morale. A Congressman misuses his political influence in the interest of his own purse, prompted thereto by a bad man who not only leads him thus astray, but tries to make love to his wife. A woman reporter publishes the story; the Congressman is defeated when trying for reëlection; he sees the error of his ways, returns temporarily to his law practice, and promises to be good when he shall resume political life. A few so-called characters skip and scamper through the mazes of this labyrinth, notably a very modern Fanny and her sweetheart Guy, who say "h'm m'm" for "yes."

Mr. Dunbar, in his book of sketches, speaks of the "romances of the old South that still shed their light among the shadows of slavery." The phrase applied to the negro life of ante-war times with the "big house" element used only as a background, aptly describes the atmosphere of the volume. The romances are episodes of negro love, mischief, religion, superstition. They are of slaves and of mainly kind, protecting masters; scenes from slavery in its least tragic aspect, although the separation of husbands and wives who belong to different plantations plays a part. The tone of the narration is admirable; pure picture-making, the humor unforced, with no superfluous ornament and no *hæc fabula docet.* The illustrations, by B. Martin Justice, are in sympathy with the text; the cover, by George Wharton Edwards, a cleverly executed drawing of an old mammy in firelit tints. The printing is clear, but the eye is annoyed by a palpable unevenness of spacing, which the curious investigator will find is caused by repeated changing from one to another number of lines on the page.

Mr. Ogden calls his book "a novel of the Great River." It deals with the end of steamboating on the Mississippi, and the building of the St. Louis and Gulf Railway not long after the war. The writer shows familiarity with the technical phases of his subject, but has not limited himself to dry machinery and mechanics. He has used a veritable epoch in American annals as a basis not only for the epic of boat and car, but for a varied human drama which, opening in commercial interests, broadens and multiplies till it embraces all human passions—love, hatred, envy, revenge. The river accompanies but does not monopolize. The writer has shown a fine art in blending the intensely local with the humanly universal; he has spent little time in analyzing his characters, but has let them speak and act and unfold themselves. The story is largely one of episode, but the links are sufficient if not always logical necessities. In the art of avoiding the obvious and hackneyed and keeping to the side of nature and nature's ironies without a sacrifice of form, he has displayed a masterly control of his pen and his material. The book is very well worth reading.

A good pendant to it is 'Sally of Missouri,' showing how different a sort of book may spring from the same soil. This, like that, breathes palpably of Missouri and the lore of Missouri, but more consciously, from the standpoint of the scion of an exiled race returning and falling under the spell of his ancestral hills. Mr. Ogden's book is Missouri. Mr. Young's is a rhapsody about Missouri woven round a story of mines, promoters, and crazy testators. 'Tennessee Todd' is an elemental young savage, none too picturesque; Sally, a Missouri girl who has been to Vassar and has all the accomplishments and charms of all heroines of fiction; a golden-brown houri who says "huh." The book opens supremely well. The departure of the hero from New York to seek his fortune in zinc mining is brisk reading, while his entrance into Missouri life, his ride across country, his meeting with the old St. Louis Frenchman and the tramp boy, are really idyllic, rousing fond hopes of a piece of work hardly less than great. If it does not remain on that level throughout, it is still an uncommon book for breezy charm of person and place, and for admirable lightness and grace of phrase. The improbability of the old cousin's *post-obit* revenge may be accepted uncomplainingly. Who shall call anything testamentary improbable? The slight disappointment awaiting the reader arises rather from the more than mortal capacity for sentiment ascribed to the tramp boy, and to the falling off of that most promising

Frenchman, Old Bernique, whose career is hardly more than a birth and a forgetting.

The Expansion of Russia, 1815-1900. By Francis Henry Skrine. Cambridge (England) University Press; New York: Macmillan. 1903.

The Russian Advance. By Albert J. Beveridge. Harpers. 1903.

As a result of the present war between Russia and Japan we shall doubtless soon be flooded with hastily compiled works about the Far East of even less value than most of those we already possess. For the same cause recent books describing either combatant are likely to have an increased circulation, owing to their timeliness. The two we have here before us are of very different character, as well as of different degrees of merit. The 'Expansion of Russia,' by Mr. Skrine, offers us an excellent summary of the political history of the country between 1815 and 1900. The author may not be very profound, but at least he has written a clear, succinct narrative which conveys a good idea of the main events he undertakes to describe. His work is careful and scholarly; his attitude sympathetic, and at the same time judicial. If he passes over many subjects very hurriedly, the fault is not so much his as it is that of the limitations of space to which he was obliged to conform. His title has the advantage of indicating what we need not expect to find, namely, a study of internal conditions; otherwise, it is misleading, as it seems to imply that Russian expansion has taken place chiefly in the period indicated, whereas in reality most of this growth occurred considerably earlier. Such as it is, the book can be thoroughly recommended to the general public. It ends with a good short bibliography, including works in Russian as well as in Western languages.

Senator Beveridge's stouter volume deals much less with the past, about which he is little informed, than it does with the present and with the future, where he evidently feels quite at home. In the course of his travels he has been through Siberia and up and down Mantchuria, has seen a good deal, and has questioned indefatigably through an interpreter. Of course we must make the same allowance for him that we should make for a Russian who had acquired his information about the United States in a similar fashion. His errors of one kind or another are indeed too numerous to be pointed out in detail. Let us note only that of his maps the one on "The Historical Russian Advance" is absurdly wrong, as it represents the Russians in 1648 as not having crossed the Urals, when in reality they had reached Bering Strait. On the other hand, the conquest of Central Asia (apart from Khiva and Bokhara) is shown as having occurred before 1809, instead of more than half a century later. The second map, "Russia and the Remainder of Europe and Asia," thanks to being on Mercator's projection, immensely exaggerates the relative size of Russia compared with that of the "remainder." It is needless to take up here the many mistakes in the text.

And yet Senator Beveridge's book has interest and even value. It is the result of the effort of an intelligent, if untutored, mind to appreciate a number of very important facts. If the writer takes a great deal on hearsay evidence, he nevertheless shows considerable judgment, and his conclusions, when stripped of rhetoric, are often both fair and sane. The freshness of his impressions, as well as the pleasing confidence that what he is communicating is quite new, lend at times a certain charm to the style, and he is generous in his estimates of people whose whole manner of thought is at the opposite pole from his own. He has undoubtedly learned much from his travels, and therefore many of his readers may in their turn learn not a little from him, even if the information thus acquired will now and then be far from exact.

Japanese Physical Training. By H. Irving Hancock. New York: G. P. Putnam's Sons.

The appearance of this engaging work suggests the resources and reserve powers of Japanese civilization. The very existence of this system of physical culture (*jū-jutsu*), which has grown up during a thousand years or more, has until recently been unnoticed, indeed, hardly suspected, even by foreigners long resident in the country. True, it has often seemed a mystery to onlookers how it could happen that a little Japanese policeman—"a monkey," as a Russian sailor would playfully call him—could tackle three or four of the Czar's subjects from the ships, especially when full of vodka, and not only lay them flat, but bring them all into the station house. Yet every one of the Mikado's policemen in these days, even as every samurai of old feudal days, holds the secret. It is a method by which Jack overcomes the Giant.

Jū-jutsu is not even referred to in Chamberlain's 'Things Japanese,' nor in Rein's encyclopædic book. Hepburn's Dictionary defines it as "the art of wrestling or throwing others by sleight." Nor must we be led away by the colloquial of the lower classes. Hepburn defines the pure Japanese term *yawara* as a "sleight, trick, or knack." Yet jū-jutsu, which is a Sinico-Japanese term, means literally muscle-science, not "muscle breaking." It is neither boxing nor wrestling. It seems curious that even the author, who has photographed and described accurately and thoroughly, withal interestingly, the thing itself, in writing *jiu-jitsu* has not spelled the word, nor has he defined it, correctly. Jutsu, both in the Chinese ideograph and as written in the Japanese *kana*, and as used in the spoken language, is the common word for art, science, rules, artifice, etc. So, also, the term jū or jiu means the cords of the body or muscles.

It is probably the close secrecy with which this fine art has been guarded that has led the vulgar to suppose it was trickery as against fair play, rather than science and training as opposed to brute force and clumsiness. It was seen and examined into in March, 1871, as described in 'The Mikado's Empire' (p. 433), though the term is not used in that text, the author having been in the country only a few days. As he writes, the exhibitions "bore a frightful resemblance to real choking, dislocation of arm, wringing of the neck, etc." As the text shows, the jū-jutsu came after the regular wrestlings and throwings. The "unearthly yells and exclamations" of the vanquished correspond to the humiliating cry "Enough" of our pugilistic ring, saving the worsted from agony and death.

Apart from Mr. Hancock's references to history, which are not those of a critical scholar, and his pardonable admiration of the Japanese, who, in the author's eyes, are "at present the strongest and healthiest race in the world," he writes with full understanding of his subject, for he studied under native masters in Japan during seven years. He has thus made a real addition to the literature of physical training. Beside the fine art of jū-jutsu our football seems rather the butting of bulls or the hunting of tigers. The Japanese system is one which requires first of all a healthy stomach as the basis of all strength, the development and maintenance of the heart, lungs, arms, and legs in their best condition, the cultivation of an even temper, and the constant and plentiful use of pure water and good air. After ninety-six pages very properly devoted to the groundwork of his subject (which the hasty and foolish reader will probably skip) the author passes on to preliminary feats of attack and defence. He then proceeds to show the various tricks of offence and defence. The standard illustration of the "crazy-bone" enables one to get an idea of the general rationale and methods of jū-jutsu. Whether the osteopath knows it or not, there are certain points in the muscles of the limbs and of the body which, when pinched, pressed hard, or struck quickly, produce either paralysis, or excessive pain that amounts to the same thing. Conversely, by exercise and hardening, these tender places can be made fairly immune against thrust, blow, or pressure.

Most of the movements of the art may be learned in a few months, but there are secrets and special lines of expertness which only the masters know. Dr. Inazo Nitobe, in his 'Bushido: The Soul of Japan' (Philadelphia, 1900), says (pp. 60-62): "Jū-jutsu may be briefly defined as an application of anatomical knowledge to the purpose of offence and defence. It differs from wrestling in that it does not depend upon muscular strength." It uses no weapon. Its object is not to kill, but to incapacitate one for action during the time being. Several of the blows, even some that are backhanded, may cause death, as, for example, by breaking the neck; while the solar plexus may, for self-defence, be so hardened as to stand a heavy blow, or, in the case of an enemy, may be reached by either knee or fist.

It is not necessary to go into further detail. Probably, as in any other art, the hundred per cent. of actual possession means one of theory and ninety-nine of practice. The reader will enjoy and the student will master this clear and thorough presentation of an art that has helped to make the little brown men of Japan such superb soldiers and such wonderful policemen. The Japanese people may not—even though the city of Tokio alone has *nine hundred* public bathhouses, and rheumatism is nearly unknown in the empire—be, as the author asserts, "the calmest, coolest, happiest, bravest, and strongest people in the world." Nevertheless, now that the common people have entered into their inheritance of all that was once the monopoly of the noble and the gentleman during feudalism, it is quite possible, since science has

eliminated the old diseases, that, as a race, the Japanese may be equal in physique to any in the world. The question is certainly worthy of serious examination why the American people suffer from neuræsthenia, while in Japan nervous prostration is hardly more than known.

Since we have adopted hara-kiri, jinriki-sha, kimono, and other Japanese words into the language, if so be that the Japanese of jū-jutsu is coming to reform our athletic ways, let us get the word correctly expressed in writing and speech, as well as the thing in happy practice.

A Reader's History of American Literature. By Thomas Wentworth Higginson and Henry Walcott Boynton. Boston: Houghton, Mifflin & Co. 1903.

This summary—it is intended, and very well adapted, for use as a text-book—is based on a course of Lowell lectures delivered in January, 1903, in Boston, by Mr. Higginson. The essential feature of the book is that it concentrates the reader's (or student's) attention upon leading figures. The assistance of Mr. Boynton was employed for the purpose of revision. The personal reminiscences introduced are Mr. Higginson's, and the book seems essentially his. Its arrangement is simple and clear, and it gives a comprehensive survey of the subject in a small compass. The plan selected is that of groups, schools, and periods, of which eight or nine are given. Anne Bradstreet, Cotton Mather, and Jonathan Edwards were Puritan writers. Secular writers, *i. e.*, the non-Puritan writers of the earlier colonial days, include Fisher Ames, Freneau, and Samuel Sewall (it will be seen that the periods overlap one another); Franklin's writings belong to the Philadelphia period, an era for which justification is found not only in Franklin, but in Charles Brockden Brown, and in the *Portfolio*, the Pennsylvania forerunner of the *Atlantic Monthly*. The New York period follows, with Irving and Cooper, to say nothing of their Knickerbocker followers, who (the late John Richard Dennett is quoted here as saying, in an article published in the *Nation*) "did something towards fertilizing the soil." Then we have the New England period, which includes the Cambridge group (Longfellow, Whittier, Holmes, and Lowell), and the Concord group (Emerson, Margaret Fuller, Alcott, Hawthorne, and Thoreau). The Southern influence (Whitman, Hayne, Timrod, Poe, and others) would bring us to the end but for the Western influence (*e. g.*, Mark Twain, Bret Harte, and last, not least, Howells).

A good deal of this is rather arbitrary. Hawthorne's name, for instance, is associated in an important way with Concord, but the influences which produced Thoreau and Alcott left Hawthorne, so far as the visible results go, almost untouched. So, Howells is unquestionably a Western man, but he has long had an Eastern habitat, and his Americans are not "sectional." Henry James is mentioned only incidentally, and as if his cosmopolitanism had made Mr. Higginson almost doubt his right to be included in a list of American authors.

The book ends with a forecast, which, however, contains nothing that is new. After all, one may say, in closing such a compendium, why do these Americans trouble themselves so much about the future? They have made an American literature in a hundred years, and the world resounds with their names. If they have not, as Mr. Higginson says, produced a Shakspere, or a Voltaire, or a Goethe, a Schiller or a Heine, they have done far more than any one expected them to do, and have certainly given the lie to the theory that the materialism of the country was so gross as to preclude all literary growth, or that science would kill literature, or that puritanism would congeal it. What the future has in store for us we cannot say; but of one thing we may be sure, that all good literature, here as elsewhere, will be produced by those who keep the traditions of good literature alive, and aim, not at Americanism, but excellence. We are surprised, by the way, at the slighting praise given here to 'Uncle Tom's Cabin,' and the suggestion that the Northern reader finds it hard "to understand the enthusiasm with which it was received, both here and abroad."

The Mysteries of Mithra. By Franz Cumont. Translated by T. J. McCormack. Chicago: The Open Court Publishing Co. 1903.

In the history of the encounters of the two continents there has been more than one moment when Asia and the ideas of Asia threatened to submerge Europe and obliterate the structure of Greek and Roman civilization. In such a crisis, about the middle of the third Christian century, it seemed possible that Mithraism would triumph over its rival, Christianity, and that the Persian mysteries, which had long been encouraged by the Roman legions, would be accepted by the whole Roman world. Mithraism was a form of sun-worship, though Mithra was not originally identified with the sun-god. By the time that Aurelian, in 273 A. D., founded, by the side of the Mithraic mysteries, a public religion in honor of the *Sol invictus*, the distinction had ceased to be emphasized. Diocletian, like Aurelian, encouraged, for political reasons, a sect that, unlike Christianity, was ready to conciliate the interests of the state. The followers of Mithra were eager to compromise; their aim was a sort of vague synthesis of the gods of Greece and Rome with their own bull-slaying Persian deity; they were willing to carry the weight of the whole past of Paganism. That was the secret, firstly of their success in making converts among the legionaries at the Eastern outposts, and secondly of the favor shown to them by the Roman authorities. Christianity allowed no such compromise. Mithraism supported the pretensions of the Cæsars, who, recognizing that the Oriental zeal for apotheosis could be turned to account, accepted the sun's epithet of *invictus* and adopted his radiate crown as the symbol of their sovereignty. The conversion of Constantine reversed this policy. Under his successor, Constantius, "no one longer dared to look at the rising or setting sun; even farmers and sailors refrained from observing the stars."

In the fourth century the apostasy of the Emperor Julian renewed the worship of Mithra. He believed that he had a peculiar calling to follow in the sun's train, and the identification of deities, Hellenic, Roman, and Eastern, which had been going on for centuries, reached its climax in his elaborate effort to conciliate theism and polytheism in his conception of Mithra. He contrived that all the gods of paganism should play their parts as manifestations of the power and beneficence of the sun-god; the result was a monotheistic worship which his devotion to the teaching of Plato had rendered inevitable. Julian's death put an end to this artificial reaction, and the temples of Mithra were again ravaged and his altars desecrated. Thus ended the most powerful rival of the Christian doctrine and ritual; but not till it had left indelible traces of its beliefs in the traditions of the Christian church.

M. Cumont points out that the extent to which Mithraism was imitated by Christianity can be gathered most easily from the remains of Mithraic sculpture. The Christian marble-cutters reproduced from the Mithraic monuments the symbols of the older faith. The resemblances of Mithraism and Christianity are as striking as their differences are essential.

"Both religions placed a flood at the beginning of history; both assigned a primitive revelation as the source of their traditions; both believed in baptism, held Sunday sacred, and celebrated the birth of their gods on Christmas Day; both practised the rites of communion; and both believed in the immortality of the soul, in a last judgment, and in the resurrection of the dead."

Women were not admitted to the mysteries of Mithra, a blunder in tactics which was avoided by the Christians. The religion that made no other concessions, triumphed at last after several centuries; but the Mithraic monuments are spread from the borders of Scotland to the farthest limits of Persia, and are found alike in the mountains of Hungary and the deserts of Africa. M. Cumont has reproduced the remains of the Mithraic temples and monuments, and presents in the present work a collection of evidence and a careful discussion of Mithraism such as has not hitherto existed for the student of the history of religions. That the story of the predominance of Mithraism has been so neglected is strange when one considers that to underrate its importance is to obscure the history of the struggles of Christianity with the most powerful of its rivals. The translation of M. Cumont's work by Mr. McCormack is careful and accurate, and the illustrations are well reproduced.

An Agnostic's Apology, and Other Essays. By Sir Leslie Stephen. Second edition. G. P. Putnam's Sons. 1903.

The essays other than that which gives this book its title were originally magazine articles, but are now, as appears from a note prefixed to the present edition, made into chapters of one consecutive whole. As 'An Agnostic's Apology' was first published twenty-five or thirty years ago, we take it that the new form in which it is given to the world is put forward by the author in solemn reaffirmation of his creed. As such it will no doubt attract some attention, but little discussion. For a variety of reasons the creed of Huxley (for Huxley was the leading early expounder of it) has not become avowedly widespread. The faith of Gnostics, as Sir Leslie Stephen calls the great body of believers, has been little shaken by it. Agnostics do not, as a rule, care to proselyte; indeed, a propaganda of skepticism is almost inconceivable. To

convert the world, there would have to be agnostic protagonists and martyrs, to say nothing of an agnostic church, which is a contradiction in terms. Even persecution of agnostics as such by gnostics is difficult to imagine, for most real skeptics have a constitutional aversion to the stake. Skepticism cuts very deep, and among the things which it is apt to undermine is the belief that it is wrong to conform. Huxley, if we remember right, conformed to the practices of the religious world about him, and recommended others to do the same. Besides all this, the foundations of belief and dogma have in the last fifty years been so thoroughly analyzed that even the gnostics now recognize a difference in kind between scientific and theological belief, and it was really a deep-seated confusion between the two which led to all the trouble in the past. Consequently, though there is no external warfare or crusade, agnosticism may be spreading all the time; there are no statistics.

What Sir Leslie Stephen has written on the subject is well worth reading. Logically, there is no reply to his position. The great question is whether agnosticism marks out the direction in which human thought is inevitably moving, or whether it is an attitude so alien to the human heart that it must always be the creed of a select coterie of philosophers. Some persons shudder at the idea of a world filled with agnostics; but for them there should be some consolation in the reflection that, in parting with religion, we should also say good-bye, if we possessed any self-respect, to metaphysics.

Animal Education: An Experimental Study on the Psychical Development of the White Rat, Correlated with the Growth of its Nervous System. By John B. Watson, Ph.D. The University of Chicago Press. 1903.

Dr. Watson takes his departure from the studies of Flechsig on the development of the fibrous connections of the association centres of the human cerebral cortex. Flechsig teaches that the cerebral cortex is divisible into two great areas: (1) the "sensory spheres," embracing all of the regions of the cortex bound to the lower nervous centres by projection fibres, and forming the greatest reflex apparatus of the nervous system presiding "over the animal life"; (2) the regions of the cortex lacking projection fibres, but connected with the sensory spheres by association fibres (fibres which, unlike the projection fibres, do not leave the cortex, but unite the various portions of the cortex to one another). These regions are known as "centres of association."

The sensory spheres are found in all animals possessing a functional cerebral cortex, but the centres of association are found only in man and the higher mammals. "It is in these centres of association that psychical activity finds the elements of all our intellectual life. In these centres is the substratum of all human experience, knowledge, language, sentiments, and morals." Flechsig has studied the development in the human infant of the medullary sheaths of the projection fibres which connect the sensory spheres with lower nervous centres, and of the association fibres which connect the centres of association with the sensory spheres and with each other; and, on the assumption that these fibre tracts do not begin to function until their insulating medullary sheaths are developed, he has constructed an elaborate theory of the correlation of the mental and cerebral development.

Mr. Watson writes: "My purpose in undertaking the present work was to see how far the theory of Flechsig would hold in the case of the white rat, and to attempt, if possible, a correlation between the increasing complexity of the psychical life of this animal and the increasing number of medullated fibres in its central nervous system." He finds that the white rat is capable of learning very complicated tricks which involve the formation of associations similar to those involved in dogs and other higher mammals, and probably fundamentally similar to some of the simpler human associations. In this he confirms the previous careful experimental work of Small, and deems it impossible to harmonize this with the statement that association centres are absent in animals as lowly organized as the rodents, provided such centres are necessary for these mental processes, as Flechsig believes. He also devised a series of tricks of increasing complexity, from the simplest possible reaction (such as finding the way back to the mother when separated a short distance) to the opening of a box containing food by means of a complicated latch which could be sprung only by a movement of an inclined plane on the opposite side of the box. A litter of new-born rats was set apart for experimentation, to determine at what age each of these tricks could be learned. These tests, when completed, gave an approximate measure of the psychical development of the white rat. They revealed, for instance, no evidence of memory in rats under ten days old, while the rat is "psychically mature" at about twenty-three days old—that is, the rat can perform the most complicated test used in the experiments.

The details of these experiments are very interesting. In most cases a test box made of wire netting was used with food inside, and the process by which the rats learned to get in to reach the food was accurately observed and closely timed. The entrance varied from a mere hole in the bottom covered with sawdust to a complicated labyrinth with blind passages and various obstacles, or the box was closed by latches of various degrees of intricacy. With young rats a single successful solution of the problem was sufficient to fix the whole process in memory in the case of some of the simpler tests, but in the most elaborate test box it took fifty successful repetitions to complete the learning of the trick so that it was performed rapidly and accurately.

Having discovered the stages in the psychical development of the young rats, so far as measurable by such laboratory tests, the author proceeded to prepare microscopical sections of the brains and spinal cords of young rats of corresponding stages from birth to maturity. The special problem here was to test the validity of Flechsig's conclusions as to the functional significance of the development of medullary sheaths on the nerve fibres. He finds no medullated nerve fibres in the nervous system, either central or peripheral, of the white rat at birth, nor for a day or two thereafter. Yet these rats are sensitive at birth, and exhibit numerous well-defined reflexes. Clearly, the spinal cord and reflex nervous system can function while the nerve fibres involved are still unmedullated. At from ten to thirteen days after birth, the previous experiments gave clear evidence of memory, particularly for olfactory stimuli; but at these ages the olfactory tract is entirely unmedullated, showing clearly that medullated fibres are not necessary for the transmission of nerve impulses involved in conscious processes. Finally, at twenty-four days, when the animal is regarded as "psychically mature"—that is, capable of learning anything that an adult rat can learn—the number of medullated fibres in the cerebral cortex is only about one-fifth the number in the adult rat.

It is therefore concluded that (1) medullated fibres are not a *conditio sine qua non* of the rat's forming and retaining definite associations; and (2) the complexity of the psychical life increases much more rapidly than does the medullation process in the cortex—psychical maturity being reached when approximately only one-fifth of the total number in the cortex are medullated. These results may seem pitifully meagre when set over against the great philosophical problems involved. Yet they do represent a definite step in the advance of our knowledge of the correlation between cerebral structure and psychic function—a step which clearly opens up the way in several directions for further research; and one positive fact is worth volumes of à priori theorizing, for both science and philosophy.

"The best single help to the study of Parsifal

with which I am acquainted . . . for its purposes, *the book has no adequate fellow.*"—H. E. KREHBIEL *in the introduction to* KUFFERATH'S WAGNER'S

PARSIFAL

With illustrations of the New York production, the music of the motifs, discussions of Wagner's PARSIFAL (its origin, composition, the drama, the music, Bayreuth), Chrétien de Troies' PERCEVAL and Wolfram Von Eschenbach's PARZIVAL. xviii +300 pp, 12mo, $1.50 (by mail $1.61). *Circular free.*

Henry Holt & Co.,
29 W. 23D ST., NEW YORK.

G. Stanley Hall
COMMEMORATIVE VOLUME
(American Journal of Psychology, July-Oct., 1903)

Published on the occasion of the 25th anniversary of President Hall's attainment of the Doctorate in Philosophy.

A collection of twenty-five contributions by American and European psychologists, including the following colleagues and former pupils: Beaunis, Kirschmann, Hyslop, Bentley, Washburn, Jastrow, A. Meyer, Patrick, Burnham, Leuba, Chamberlain, Edgell, Titchener, M. Meyer, Kuelpe, Ellis, Bergström, Pillsbury, Whipple, Cattell, Motora, Bolton, Dresslar, Sanford, Buchner; together with a Bibliography of Dr. Hall's published writings by Louis N. Wilson.

The twenty-five articles cover the whole field of psychological interest, from college football to the subconscious, and from musical æsthetics to retroactive amnesia.

Price, in buckram, $3.00. Paper, $2.50

LOUIS N. WILSON, Publisher, Worcester, Mass.

HOW TO LIVE LONG!

Practical Advice from a Man of 82

DIET IN RELATION TO AGE AND ACTIVITY

With hints concerning habits conducive to longevity. By Sir Henry Thompson, F.R.C.S. (London), Etc. 12mo, $1.00.

A BOOK THAT YOU OUGHT TO READ.

"Probably a more practical, as it is certainly a more suggestive, health manual than any of the numerous ambitious volumes that have been issued on this subject."—[The Independent, N. Y.

The Code of Hammurabi

KING OF BABYLON ABOUT 2250 B. C.

The Oldest Collection of Laws in Existence

A volume containing the Translation, Transliteration, an Autographed Text, Map, and Glossary

Edited by ROBERT FRANCIS HARPER, Professor of the Semitic Languages and Literatures in the University of Chicago.

The discovery of this monument and the work of making the text available to students in general mark a most important epoch in the world's history, especially in connection with the study of historical jurisprudence. The following extracts from the translation are of interest as bearing upon present day municipal and social problems:

§ 143.

If she have not been a careful mistress, have gadded about, have neglected her house and have belittled her husband, they shall throw that woman into the water.

§ 229.

If a builder build a house for a man and do not make its construction firm, and the house which he has built collapse and cause the death of the owner of the house, that builder shall be put to death.

Ready during the last days of February.

Large 8vo, 104 plates and about 220 pages, cloth, gilt top. Price, $4.00, *net;* postpaid, $4.25.

Lectures on Commerce

Delivered before the College of Commerce and Administration of the University of Chicago

Edited by HENRY RAND HATFIELD

A volume, published in the interests of Higher Commercial Education, embodying the life experience of many successful business men and containing an introduction on the general subject by J. Laurence Laughlin, Head of the Department of Political Economy of the University of Chicago.

The list of contributors given below is an evidence of the practical value of the book:

Railroads

WORKS BY LESLIE STEPHEN

Hours in a Library. Literary Essays. New and cheaper edition. Three series complete. 3 vols., 12mo, in box (sold in sets only), *net* $4.50.

"There is little critical writing in the English language that can be compared with these essays for keenness and breadth of view. . . . One may search far and wide before finding estimates more discriminating, penetrating, and withal judicial. . . . His essays are most instructive and delightful."—*Boston Literary World.*

Studies of a Biographer. 2 vols., 12mo, (in box), *net* $4.00.

"Stephen is one of the soundest of our critics. . . . His cool, shrewd judgment is refreshing in its contrast to the tall talk which has been only too common with modern biographers."—*The Athenæum.*

Studies of a Biographer. *Second Series.* 2 vols., 12mo, *net* $4.00.

"Learning, sense, human urbanity and critical insight, these are only a few of the qualities Mr. Stephen displays. . . . It is only when we pause to reflect at the end of a paragraph or essay that we recognize how smoothly and delightfully we have been carried along."—*Daily Chronicle.*

History of English Thought in the Eighteenth Century. *Third edition.* 2 vols., 8vo, gilt tops (in box), *net* $8.00.

"A work of exceptional learning, set forth with much skill and force. It is a remarkable testimony to its merit that dealing as it does with many philosophical and religious writers, it should during a term of a quarter of a century have run so successfully the gauntlet of criticism."—*The Athenæum.*

The English Utilitarians. (A Sequel to the "History of English Thought in the Eighteenth Century.") 3 vols., 8vo, gilt tops (in box), *net* $10.00.

"Mr. Stephen is never dull. He is always incisive in speech. He has read much and pondered long over the subjects which crop up in these volumes; there is a rich reflective vein underneath cynicism and persiflage; and we have rarest merit of all in a book dealing with great subjects—the remarks of a man of ability about men of ability."—*London Times.*

An Agnostic's Apology, and Other Essays. *New Edition.* 8vo, pp. 380, *net* $2.50.

"This book is pregnant throughout with ideas admirably expressed. It does not contain a dull page and it is informed with the spirit of the practised logician."—*Daily Chronicle.*

"The sceptical position has never been better, more strongly, yet more temperately put."—*National Observer.*

English Literature and Society in the 18th Century. 12mo, *net* $2.00. *Ready this Week.*

Stephen (Sir James Fitz-James). Life. By his brother, Leslie Stephen. Two portraits. 8vo, pp. x. + 504, $4.50.

"Among the half-dozen biographies of the first order which have appeared in the last twenty years, this volume deserves a place. It is a real biography; a work of art as well as of fraternal affection; a lifelike picture of a remarkable man."—*London Times.*

THE EXPANSION OF RUSSIA

Problems of the East and Problems of the Far East.

By ALFRED RAMBAUD.

Since the overthrow of the Tartar yoke Russia has steadily advanced into Western Europe, the Balkans, Siberia, and now presses on Persia, India, and China. Her policy is the key to the Far Eastern question. M. Rambaud enables the reader to realize the probable destiny of Russia.

1 vol., Small Octavo. Net $1.00.

SURBRUG 204 Broadway, N.Y. Agent.

NOTABLE BOOKS ISSUED IN FEBRUARY

By the Author of "Elizabeth and Her German Garden," "The Solitary Summer," "The Benefactress," etc., etc. Published February 13. Second Edition. Cloth, $1.50.

The Adventures of Elizabeth in Rügen

It is a book to delight in, as in the visit of some welcome friend who should relate, with bits of capital description unexpected turns of a sprightly fancy, and a refreshing lightheartedness, the amusing incidents of such a "joyous journey"—a leisurely drive from one to another of the odd little watering-places on the island of Rügen.

Mr. CYRUS TOWNSEND BRADY'S

new novel

A Little Traitor to the South

is "a war-time comedy with a tragic interlude," of the days when an attempt to torpedo a warship needed vastly more courage than in these days of modern submarines.

Illustrated in colors, with decorations by C. E. Hooper. Cloth, 12mo, $1.50.

Mr. EDEN PHILLPOTTS'

new novel

The American Prisoner

A Romance of the West Country.

"Intensely readable . . . perfectly admirable in its elemental humor and racy turns of speech."—*The Spectator* (London).

Third Edition in press. Illustrated, Cloth, 12mo, $1.50.

Mr. ISRAEL ZANGWILL'S

new novel, recently dramatized,

Merely Mary Ann

This is the basis of Miss Eleanor Robson's latest success. "For a study of elemental ideal womanhood, for a living, real bit of life, this play stands alone amid the season's offerings," say the critics.

Paper, illustrated with scenes from the play, 50 cents.

By LEWIS O. BRASTOW, D.D.

Professor of Practical Theology, Yale University.

Representative Modern Preachers

Careful and critical estimates of different preachers who have been leaders of various schools of preaching during the last century. *Cloth, crown 8vo, $1.50 net. (Postage 13c.)*

By PETER ROBERTS

Author of "Anthracite Coal Industry."

Anthracite Coal Communities

A Study of the Demography, the Social, Educational, and Moral Life of the Anthracite Regions.

387 pp. 8vo, cloth, $3.50 net. (Postage 20c.)

It answers a thousand questions as to the typical social and industrial conditions of the Anthracite coal communities—as to their population, the Slav employees, ways of living, educational apparatus, intellectual and religious life, their means of saving, the criminal element, charity, politics, and the general conclusions to be drawn as to the future.

Mrs. SARA ANDREW SHAFER'S

new novel

The Day Before Yesterday

is a deliciously genuine picture of a village of the time of "the day before yesterday," whose people had not yet learned to hurry through life, and where friendliness was leisurely and genial. It is a restful, irresistibly amusing story of child life.

Cloth, 12mo, $1.50.

Dr. JOHN WILLIAM STREETER'S

novel out-door book

The Fat of the Land

tells with practical exactness the facts of how in four years he made a run-down farm into a beautiful home and a paying investment. *Cloth, 12mo, $1.50.*

"A delightful book . . . with an originality and a fine flavor of humor that should make it popular."—*New York Sun.*

Mr. JACK LONDON'S

latest book in a cheaper edition

The People of the Abyss

"The underworld of London has been pictured many times before . . . But Mr. London alone has made it real and present to us."—*Independent.*

New Edition, cloth, $1.50 net.

By PAUL H. HANUS

Professor of the History and Art of Teaching, Harvard University.

A Modern School

A book for the general reader interested, as every one must be, in the results of modern education, as well as for the teacher whose professional interest is in its methods. *Cloth, 12mo, $1.25*

Mr. HERBERT PAUL'S *new work*

A History of Modern England

To be complete in five volumes, octavo. Vols. I. and II. now ready, Cloth, $5.

The two volumes now ready cover the years from the close of Peel's ministry to the death of Palmerston. They tell in a manner as illuminating as it is refreshingly straightforward the events of the Crimean War, the Indian Mutiny, and England's relations to the Civil War in this country.

On NET books ordered from the publishers, carriage is uniformly an extra charge

THE MACMILLAN COMPANY, Publishers, 66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, FEBRUARY 25, 1904.

The Week.

It is not alone the fact that the ratification of the Panama treaty had long been foregone which accounts for its very subdued reception. The thing leaves too bad a taste in the mouths of too many. As Mr. Root admitted on Monday, the whole affair has "troubled" our best and most thoughtful citizens. Senator Hoar, in his finest *enfant-terrible* manner, said on the same day that he had feared the treaty was reproducing a "condition like that which preceded the first and second elections of Mr. Cleveland—a condition of fancied security at Washington, and a condition of well-founded alarm among Republicans in the places where elections are decided." No wonder that jubilation is wanting. No wonder, either, that people are rubbing their eyes as they read of the dispatch of troops to the Isthmus, and the introduction of a bill to set up a government of our own over the canal strip. It is, they now see, an annexation which has been effected. Of course, the canal will be built and the world will benefit; but no good can come to the men who have used abhorrent means to bring this work about. The historic record will show that, as Senator Hoar declared in the Senate on December 17, President Roosevelt committed a lawless act of war against a friendly but defenceless nation, and then "proceeded to secure the pocketbook [the canal] of the victim." If this be glory, make the most of it.

Senator Hanna's death can have no sadder result than the resignation of Perry Heath from the secretaryship of the Republican National Committee, which was announced on Sunday. Mr. Heath affirms that his retirement is due simply and solely to the loss of the great leader whom he had served so faithfully and whom he had so recently nominated for the Presidency. How the Committee and the great Republican party can recover from such a blow as this we cannot imagine. It was undoubtedly rather to Mr. Heath—according to Mr. Heath's point of view—than to Mr. Hanna that the last Republican successes were due. It must be admitted, even by his political opponents, that Mr. Heath was a rare man to have at the helm in stirring campaign times. His skin was ever tough. Conscience was a word unknown to him, however frequently it might come from the lips of the silkstockings in politics. For him any and all methods were justified by the end to be achieved. What mattered it to him that men accused him of misconduct in high office, so long as there was a statute of limitations?

Mr. Cleveland's summons to his party to unite for a vigorous campaign is an appeal for courage and conviction from a man who has proved his possession of both. It sounds also the note of hope. The ex-President, whose political sagacity has been shown on more than one occasion, believes that the skies are bright with promise for the Democrats. But he plainly warns them that they will spoil all unless they give over their wanderings in bye and forbidden paths. A stout reaffirmation and reapplication of old principles is what the time demands, not a fatuous pursuit of new follies. On the Panama matter, Mr. Cleveland speaks with no uncertain sound, proclaiming our disregard of "the territorial rights of another nation," and the suspicion cast upon our "national good faith." But all this only heightens the demonstration of incapacity on the part of the Democratic Senators. They had it in their power to defeat the policy which they condemn; but half of them weakly decided to be content with denouncing the means by which the treaty was obtained, and then to vote for it.

Why these sudden warnings, in Republican Clubs and elsewhere, against a third term in the Presidency? Can it be that the orators really fear another nomination of Mr. Cleveland? In his case it certainly seems as if the cry of "Cæsarism" would be a little too absurd. The prejudice against a third term is founded on the dread lest an unscrupulous President plot to keep himself continuously in power, and gradually break down free institutions. But a Cæsar who spends first four years, and then eight, between terms of office, as a modest private citizen, with no retainers and no guards about him, cannot be a very imminent peril to our liberties. So clear is that that we think the effort to raise the third-term cry against Mr. Cleveland would only provoke laughter. Should he be again nominated, it would take more than that argument to beat him. Indeed, its early production by Republican speakers seems to argue a suspicion that they would find it difficult to beat him at all.

We cannot find words properly to characterize the ingratitude of the Porto Ricans. Not content with having a delegate in Congress of equal powers with the representatives of New Mexico and our other Territories, and with having the right to enter and leave the United States freely, these miserable "dagoes" and "half-breeds" actually demand Statehood or freedom. Such impudence is really unheard of. Did we not free them from the harshest kind of tyranny? Have we not given them many new schools, up-to-date municipal charters, electric railways, a Porto Rican regiment, and numerous other favors? Within a week or two our courts have even held them to be "nationals" of the United States, and yet, on Saturday, by a vote of 60 to 15, the Federal Assembly demanded self-government as a separate country, or the right to enter the Union. This is Americanization with vigor and with entirely too much Yankee "hustle." Is it possible that the Porto Ricans have not been reading the *Tribune's* editorials? If they had but garnered that wisdom, they would have known how hopeless it is for them to demand either Statehood or independence. The former might debase our nation; for the latter they are, of course, totally unfit. Under the circumstances, they must be content to remain colonial subjects for ever and a day. Had they but a spark of gratitude they would thank God for this privilege and put away their idle dreams of liberty, of the right to control their destinies, or even to say for themselves when and how they shall be taxed.

Pending official accounts of what our men-of-war have been doing in San Domingo, we must refrain from comment on that part of the case; but in what a strange flutter the Administration appears to be about the whole subject! Why all the reported timidity? While the dispatches continue to assert that President Roosevelt is determined to teach the Dominicans "a lesson," he is reported much vexed that any one should think he wants to take their territory. "Annexation is not thought of by the Administration," is the announcement by authority. Perhaps Mr. Roosevelt recalls Gen. Grant's misfortunes in connection with the attempt to annex San Domingo in the seventies. But it is the very innocence of statecraft to suppose that we can enter a sovereign nation, give all hands a good trouncing, and then come away as if nothing had happened. The boy who goes skating on thin ice may protest that he never contemplated a ducking, but he gets wet just the same. We may disclaim intending annexation or worse evils, but if we go blindly ahead to do the things from which they inevitably result, our excuse is no better than the boy's.

It is probably good strategy to start the three Mantchurian consuls towards

their posts, if only as a reminder that we are sincerely anxious to be represented at the new treaty ports. To have these gentlemen on the spot and ready to hoist their flags whenever conditions permit it, may be advantageous. But certainly it would be foolish to press Russia for *exequaturs* at ports in which no business is likely to be done, and which may actually be the seat of military operations. It is understood that Russia will make no objection to receiving the consuls at Antung and Mukden. That would sufficiently establish both Secretary Hay's principle of the open door and the machinery for effecting that policy. To insist on the installation of Consul Morgan at Dalny would be inexpedient. Dalny becomes, through stress of circumstances, nothing more than a great military post. To thrust a civil officer upon such a community at such a time might be to give needless embarrassment to a friendly Power.

Our consul at Niu-Chwang informs the State Department that a study of conditions in Vladivostok, Harbin, and other districts is not particularly encouraging to the idea of extension of American trade in Mantchuria in any line where Russia is prepared to compete. The earnest intention of the Russo-Chinese Bank to press the sale of Russian goods, the determination of the Russian railways to find a market for the products of Russia, and the interest displayed in developing resources along their lines for Russians and Chinese only, taken in connection with the natural wealth of the country, do not favor the hope that under a Russian régime our trade in Mantchuria will be as large as it was before. Similarly a Port Arthur correspondent of the *North China Herald* writes that it is surprising to what extent the Americans have got hold of the trade in Eastern Siberia and Mantchuria. "What will lessen the surprise will be the disappearance of the Americans, one by one. The American Trading Company has closed its branches here and in Vladivostok, and I suppose by and by only one American firm will be left—indeed, I am not sure but that only one is left now." Thus, says the *North China Herald*, will be closed that chapter of Siberian history which tells of American enterprise exerted in the opening up of the country. It is, indeed, beyond doubt that Russia is putting every obstacle in the way of our trade in Mantchuria and eastern Siberia, but there is no likelihood that she can permanently oust us from those markets. Her methods of excluding our products are costing her an enormous amount in cash, and eventually the burden must become too heavy for her to bear.

From vague and conflicting dispatches from the Far East may be safely gathered only that neither Russia nor Japan has crossed the Yalu in force, and that the "withdrawal" of Viceroy Alexieff to Harbin does not at all imply the abandonment of Port Arthur. On this point there has been abundant misconception. Harbin, at the junction of the railway with Vladivostok, 300 miles southeast, and Port Arthur, 400 miles southwest, is the natural military headquarters. From this base the reinforcements may be rapidly massed in either direction, and a Japanese advance to either the north or south promptly met. On the other hand, the very unlikely event of the taking of Harbin would completely cripple the Russian communications. It is natural, then, that the viceroy commanding should select this city for his headquarters in spite of its remoteness from the probable points of contact between the armies. There is not the slightest evidence that as much as a battalion has been withdrawn from Port Arthur or Niu-Chwang. It may be assumed, on the contrary, that the Japanese will meet the stoutest opposition at this vital point. They may even be exposed, as unconfirmed rumors suggest, to an attack from this direction.

A remarkable instance of political prophecy is reported by Dr. E. J. Dillon in the *Contemporary Review*. A Russian named Levitoff published recently at Port Arthur a pamphlet urging that the Russians do everything possible to gain time, and that they withdraw the fleet as an encumbrance, and depend upon their numerical superiority on land. With great clearness he pointed out the perils of meeting Japan on the sea. "The yellow Bosphorus" (the Straits of Korea) "is a trap into which the Japs at England's instigation, are trying to entice us. So long as we steer clear of a sea fight," he continues, "the command of the sea and the Anglo-Japanese alliance are not worth a sucked egg. If we resolve to keep out of an engagement on the water, and if we are further prepared to do without our fleet, not only by refusing to increase it, but by getting rid of it wholly and without reserve, then the Japanese doctrine, Asia for Asiatics, becomes meaningless, and we have a free field in which to continue our work of culture in that part of the globe." It is needless to say that this prediction has received striking confirmation in the past few days. It has been shown that the Russian fleet is merely a source of weakness, and it probably would have been better strategy to lay the ships up and mount their guns in the shore batteries, or, better yet, to send the fleet back to European waters. The Russian discomfiture is a striking demonstration of the sheer relativity of sea power. Germany, for example, might do better to study recent events in the Far East rather than to trust unreservedly in Capt. Mahan's teaching. Certainly Levitoff was right when he maintained that a second track on the Trans-Siberian would be more valuable now than all the ships that Russia has built or hopes to build.

The General Staff has rendered a signal service to the army by vetoing the proposal to promote "by selection" officers below the rank of general. An officer is promoted in due order because of seniority only. That is, he cannot become a captain until every first lieutenant above him has been advanced. In his first message, President Roosevelt came out for the promotion of a certain percentage of officers out of order if they merited it because of special aptitude and fitness. The present system he characterized as one which put every indolent officer upon the same footing with the men who graduated first in their classes at the post-graduate schools, and who have ceaselessly acquired professional knowledge. The President thought that some system could be worked out by which bright men could be promoted rapidly by a board of officers sworn to pay no attention to anything except military merit. He overlooked the fact that no such procedure can be safeguarded from political influences or from social wire-pulling. He also ignored the bitter resentment which would be aroused in the breast of every overslaughed officer, and the deadening effect every such irregular advancement would have upon those left behind. After the General Staff had considered this question, it evidently came to the conclusion that these arguments were unanswerable, and that the Presidential logic was at fault, for it unanimously refused to consider any scheme for advancement by selection.

Gov. Montague of Virginia is entitled to the thanks of law-abiding citizens the country over. Owing to his precautions, last week's trial in Roanoke of the negro who assaulted a white woman passed off in accordance with law and without the slightest disturbance. Escorted by troops, the negro was taken to the courthouse. A jury was then empanelled, and the criminal tried and sentenced within a few hours. Afterwards the negro was taken to Lynchburg, whence he will be brought back to be hung on March 18—just six weeks after committing the crime. All this does more than reflect very great credit upon Gov. Montague and his State. It will take out of the mouths of those benighted persons who defend lynchings, or "palliate them," some of their choicest phrases. There is, for example, the Protestant Episcopal Bishop of Arkansas, the Rt. Rev. William M. Brown. How can he say hereafter, "I extenuate the offence of lynching, for it is the only remedy

for attacks on women"? How can he now reaffirm his opinion that "the South is obliged to lynch because women could not appear in court," or that "lynchers are justified in the sight of God, because lynching is a form of self-protection"?

The bill to abolish Berea College which has been before the Kentucky House of Representatives, has now been repassed in an amended but still very objectionable form. By a vote of 75 to 5, it was decreed that after July 15 there shall be no coeducation of the races in Kentucky. A white and a negro school may, however, be managed by the same institution provided that they are twenty-five miles apart. This is race prejudice rendered ridiculous by its own friends. We shall look to Kentucky hereafter to explain to the wondering just why twenty-five miles constitutes the dead line in the intercourse of the races. Are we to believe, for instance, that a negro and a white school within five miles of each other are a menace to the superior race? And if so, is the danger one-half as great if the schools are ten miles apart? And does all possibility of moral or physical contagion cease precisely at the twenty-fifth milestone or at twenty-four and one-half miles? Doubtless Kentucky's legislative psychologists would give us an exact explanation of all this—there is no form of racial prejudice for which the South would not produce ample justification as well as a moral law. But to a benighted Northerner aware only that Berea's great work for whites and blacks has never been tarnished by any scandal or intermarriage, it would seem as if, to be logical, the Kentucky Solons should now pass a law forbidding any colored family to read books within twenty-five miles of any white family. If the superior race is to be protected, let the protection be thorough.

There is growing indignation at the action of the Pullman Car Company in refusing seats and berths on their cars to colored people. We are informed that the withdrawal of accommodations, which originally began in Tennessee, is now spreading through the South, and that soon the only way in which a respectable colored man or woman can travel North will be by sitting up in a Jim Crow car, or by engaging an entire sleeper. The latter method was resorted to by Bishop Arnett and other colored dignitaries of the Methodist Church in going to the council of bishops held in Mobile. In other words, these Christian gentlemen were compelled to go deep into their pockets to ride in ordinary comfort on what is considered a sacred mission. Such action as has been taken by the company has been apparently kept very quiet. It has published no new rules and issued no orders which have found their way into print. But all sorts of stratagems are resorted to: "The cars are full." "The seats have been engaged ahead from stations further on." These are some of the commonest subterfuges, along with blank ignoring of the dusky face at the ticket-office window, and they are resorted to without regard to the status of the applicant, whether he be well-dressed or dirty, orderly or disorderly, young or old, sick or well. Before long, the courts will be called upon to decide whether there is no legal remedy under the Interstate Commerce law for this outrage upon a race.

Mayor McClellan's veto of the ordinance giving certain street-crossing privileges in the Bronx to the New York, Westchester and Boston Railway Company cannot be too strongly commended. It was the action of an official who has the interests of the city at heart, and is unwilling that valuable rights belonging to the people shall be voted away without compensation. Upon this solid ground his veto is unassailable. His readiness to go counter to the scheme of the strongest element in his party is a most gratifying sign of independence. The Westchester franchise was a Sullivan measure, and was enthusiastically supported by him and his henchmen without regard to the legal difficulties before the company. So confident were some of the promoters of the company of the Mayor's approval that they spoke of beginning actual work within six weeks. But they reckoned without their host. Well aware of the Tammany influences behind the ordinance, the Mayor gave both sides a hearing, and then decided against the measure purely upon its own demerits, and without regard to any effect it might have upon his own party relations. More than that, in his memorandum of disapproval he laid down certain principles governing the bestowal of street privileges upon transportation companies which could hardly be bettered.

The Mayor's relations to Tammany Hall have reached a very interesting stage. The rank and file of the organization are already disturbed at the absence of any sign of "letting up" on the lawless elements. Mr. Jerome's statement at Albany last week that he had the full coöperation of Commissioner McAdoo in his efforts to suppress gambling, is not calculated to encourage Tammanyites who looked for a "wide-open" town. A certain amount of "keeping-on of the lid" they will consent to, but Fourteenth Street can hardly look favorably upon a Mayor who vetoes one of its pet measures and then writes a memorandum which reads precisely as if he were a silk-stockinged reformer. What is to happen to our poor, poverty-stricken Aldermen if they cannot guarantee a delivery of the "goods"? What excuse has a Mayor to prattle about the "rights of the city and its citizens" unless he really wishes to become "a disturber of traffic," and to unsettle legitimate business? These are questions the Mayor had better ponder very carefully lest he find himself rising hopelessly in the good opinion of non-partisan reformers, independents, and other voters without a party.

The Turkish note of protest has called out from the Bulgarian agent at Paris a response in which loyalty to the reform plan, sympathy for Russia, and a firm intention to keep the peace are emphasized. We believe that these professions may be taken at their face value, and that the military preparations of Bulgaria are merely of a precautionary nature. Last year the partisan fighting actually passed her frontiers, and though wholly unprepared she was nearly driven into war with Turkey. To-day she is ready, but does not mean to precipitate a conflict to the embarrassment of Russia. This is Bulgaria's reason for wishing to see the Mürzsteg reforms seriously tried in the four vilayets. But this is only a pious wish. Turkey has served notice that the reforms shall go into effect only in crippled form. Gen. Georgis is to be subordinate to the Turkish commander-in-chief; the civil emissaries of the Powers—who were to exercise a kind of extra-territorial jurisdiction—are to be kept out of the disturbed regions, where they are most needed. Considered in the light of the facts, a Bulgarian appeal to the reforms is only a polite and diplomatic fashion of pointing the fact of Turkey's defection.

If "Dr. Jim" does not accept the call to frame a Cabinet for Cape Colony, it will be the first time that this gentleman adventurer has evaded a hard job. Indeed, the whole career of Cecil Rhodes's lieutenant is calculated to disconcert those whose imaginations are narrower than the "illimitable veldt." Apparently, he is as ready for the gigantic task of reconciling the Boers to their conquerors, and of repairing the crippled industries of South Africa, as he formerly was to lead a handful of dare-devils to Johannesburg. Such a complete reversal of rôles evinces an admirable gayety and an indefatigable zest. Whether these qualities are duly appreciated by the impoverished burghers of the two republics may be doubted. It is possible that they may resent one who so clearly envisages their case in a cheerful spirit, and it is safe to say that if "Dr. Jim" ever becomes the great peacemaker, the Cape must be counted the most notable province in the great realm of topsyturvydom.

MR. ROOT ON PANAMA.

Mr. Root at Chicago and Senator Hoar in the Senate both devoted Washington's Birthday to Panama apologetics. Mr. Root addressed himself to those "good and sincere men and women who have thought our course to be wrong," and to other respectable persons who "are troubled in spirit." Senator Hoar explained that he had called upon the President for an explanation, fully knowing that there was nothing to explain, but driven thereto by "personal and political friends, men of high standing, and not Mugwumps or men without standing." If Mr. Root and Senator Hoar had indeed spoken words to quiet the scruples of these conscientious Americans, they would have done a service worthy of the day. But Mr. Root pleaded, with all the perversions and suppressions of a skilled advocate; and Senator Hoar—declaring that his challenge of the Administration was merely tactical—threw his moral somersault with some loss of Senatorial dignity. Neither spectacle was calculated to propitiate the manes of Washington.

Senator Hoar's bland recantation of his own independence was merely characteristic of that idealist-partisan; Mr. Root's apology for the Panama business deserves serious consideration. Stripped of verbiage and illustration, his arguments come down to these:

(1) Colombia had never possessed full sovereign rights over the Isthmus, but held it subject in general to the convenience of the world, and in particular, under the treaty of 1846, to the will of the United States.

(2) The province of Panama "owned" the Isthmus, and, by the revolution of November, 1903, merely resumed possession of a valuable asset which it had never morally alienated.

Upon these two main arguments Mr. Root elaborately proves not only that we did no wrong, but that we could have done no wrong, in the Isthmus. Had Colombia misused her "trusteeship" for humanity (*i. e.*, her tenure of the Isthmus), we should have been right in ousting the malfeasant trustee; and of course, if the title of Colombia were bad—as Mr. Root asserted it was—why, then, our case was as good against the *de jure* owner. This is, with very trifling differences, Professor Grosvenor's "international eminent domain." We were acting for the world, and were justified in forcing Colombia to respect "the world's easement" in Panama.

That Colombia was and is in a tutelary position as regards us, is the very kernel of Mr. Root's contention. We always had a right of intervention. Such intervention was not war, was not, indeed, subject to the rules obtaining between equal Powers. Intervention in Turkey, the presence of a guard of marines at Seul, the Pekin relief expedition of 1900—these are not acts of war; but they are the signs of a sovereignty strictly limited by the interests of better and stronger nations. So of Colombia, we should have been warranted in taking any step that our paramount interest dictated. Such was evidently the view of the President in the suppressed message, later transmitted in part to Congress. He contemplated direct and forcible intervention. Now, whatever may be urged for the argument à priori, Mr. Root as a lawyer should be ashamed of his alleged precedents. Intervention, whether in morals or international law, presupposes an offence. Turkey is disciplined for concrete acts of violence in her territories; Pekin is besieged because the Legationers are in peril of life; our Ministry at Seul is guarded because there is danger of anti-foreign rioting, and no local authority to deal with it; other nations have been chastised for insults to foreign Powers, for non-payment of debt—always for some infraction of international good morals.

Now let us be fair and ask what is the sum of Colombia's offending? Simply that she tried to drive a hard bargain with us, merely that she was suspected of sharp practice towards the French Panama Company; or, more exactly, her offence is that, having made the first part of a bargain with us, she haggled vexatiously about the other half. This is absolutely all that can be charged to Colombia's discredit in this matter. Now the real parallel: The Boers tried to drive a hard bargain for the gold fields, over which England exercised a vague "trusteeship" analogous to ours in Panama. Mr. Chamberlain got tired of bargaining with them, and by force of arms vindicated England's "easement" in the two republics. In this affair Joseph Chamberlain is Theodore Roosevelt's guarantor. In both cases the opposition of a weak power to a commercial improvement was overridden in the name of civilization. That Mr. Roosevelt's luck was better than Mr. Chamberlain's nowise affects the moral issue. Mr. Roosevelt flew at smaller game. Let us stand squarely on the fact that Colombia's whole offence was that, being weak and poor, she undertook to drive a sharp bargain with our strong and rich state.

But, Mr. Root asserts, the only right in the premises was that of building a canal, and that right was ours. "It was not just," he says, "that we should pay anything." And again he holds: "We had yielded to the last point, beyond reason and justice, in agreeing to pay for a privilege to which we were already entitled, and we could not with self-respect consent to be mulcted further." The inference is inevitable that no weak Power holding a very valuable possession and one generally useful to humanity, is entitled to be paid for it. Consequently, any pay received is not legally a consideration," but merely a *pourboire;* and naturally the size of a tip is determined not by the waiter, but by the patron. Into this ethical bog we decline to follow Mr. Root. We do not grudge him his faith in a sumptuary law of nations, under which only the *noblesse* may wear gold-fields and interoceanic canals; we merely wish to make his doctrine plain to the moral judgment of our readers.

Nor do we desire to emphasize the suppressions in his argument. There is, for example, not a word on the naval order, issued before the revolution, preventing Colombia from so much as attempting to regain her sovereignty over Panama. Of course, the sovereignty of Colombia is by definition a pinched and limited thing, yet when the "fifty-mile order" was given out, she was the only authority on the Isthmus, and entitled at least to a limited respect. Mr. Root's apparent ignorance that the threat of the Colombian commander in Colon—upon which our marines were landed—was a canard, and has been officially denied, is probably only evidence of haste in preparing his brief. The matter is of little moment, and we let it pass. But we cannot pass in silence Mr. Root's assertion that the moral ownership of the Isthmus resided not in Colombia, but in the Province of Panama. This we do not deny, but our Government had officially taken the other view—even to aiding Colombia against the Panamans. Mr. Root evidently holds that we could, according to circumstances, stand by the lower law—*i. e.*, Colombia's actual proprietorship, or by the higher law—*i. e.*, Panama's moral proprietorship. When it is admitted that either country held the Isthmus subject strictly to our interpretation of the universal interests of mankind, that Colombia was not entitled to a cent of *solatium* for giving up the canal strip, but that Panama is to receive $10,000,000 for the aforesaid concession—the tangle of Mr. Root's ethico-political speculations becomes impossibly complex.

We prefer to fall back upon the undisputed elements of the case: that we wanted the canal and that Colombia was ungraciously driving a sharp bargain with us. Well, it was a matter of time and manners. Rightly or wrongly, we had given offence in Bogotá, rightly the lapsing of the Hay-Herran treaty had vexed us here. In such cases a little straightforward negotiation will usually set things right. The matter of time was important, but not all-important. A few months or a year in a work requiring a dozen years is not vital. As a matter of fact, four months have passed since the recognition of the Panama Republic. If time were everything, we should have gained time by accepting Gen. Reyes's offer, of November 6, to proclaim the treaty. But, as Senator Hoar remarked when a party vote was

still distant, honor is more than canals. And the matter of honor Mr. Root has not so much as grazed, for his whole pleading comes to saying that while for sixty years we had negotiated with Colombia under the forms of international comity, we had done so with mental reservations. When the convenient season came, we threw over the long pretence of law and fell back upon our private interpretation of public precedents. Harsh words are used of a man who uses this dual standard in his private affairs. And now the "good and sincere men and women" for whose reassurance Mr. Root has unlocked his arsenal of sophisms are troubled, not about the injury done to Colombia, but for the injury done ourselves in dealing crookedly with a nation some way our dependent. Not even a Senate vote can quiet so valid a protest of conscience.

THE EDUCATED NEGRO AND THE SOUTH.

In his admirable address at the recent meeting in the interest of Hampton Institute, its president, Dr. H. B. Frissell, dwelt upon a curious phase of the negro problem in the South. Speaking of the attitude of the general mass of white men towards the educated negro, he pointed out their remarkable ignorance of what the graduates of colored schools are doing to elevate themselves and their race. Even those friendly to their education do not read the negro newspapers or magazines, or listen to negro leaders such as Mr. Washington, or study the extraordinary statistics of the negro's rise in wealth since the close of the civil war. Only such broad-minded Southerners as the members of the Southern and General Education Boards are really familiar with the educated negro's progress. And this condition of affairs is all the more remarkable since the stock reply to every Northern remonstrant is: "Come down and live with us for a while, learn to know the problem as we know it, and in a week or two you will feel just as we do about it."

For this ignorance of the upward march of the educated negro it will not do to hold mere prejudice or race-hatred responsible. But since the caste system practically prevents the intercourse of the two race-elements, save in the relationship of employer and employee, of mistress and servant, the white man must necessarily remain largely in ignorance of what the more prosperous and industrious negro is doing for himself and his fellows. When the word Negro is mentioned, the picture inspired in the white Southerner's mind is all too often that of the colored desperado, of the ragged corner-loafer, of the animal-like plantation hand of the Black Belt, or of the shiftless, insolent, and dirty house servant. Sometimes, too, the word suggests the negro whose smattering of learning has been as dangerous to him as it proverbially is to men of all times and races. Only to the exceptional white man does it signify the honest, respectable negro farmer or tradesman or shopkeeper, for of these the white population sees but little and hears still less.

Proof of the correctness of Dr. Frissell's contention is not far to seek. Take the Calhoun School, in Alabama, for instance. Founded by Northerners, its primary object was to aid both whites and negroes by changing the ignorant, shiftless, immoral negro into an intelligent, industrious, and moral citizen, with a respectable home instead of a one-room shanty, the breeding-place of vice and disease. All the progress made by Calhoun is in the interest of the white population, since it increased the safety of the roads, made more efficient workers, and added materially to the wealth of the community. Yet the school had been at work for years before a white neighbor crossed the threshold of the "nigger teachers." Having at last broken the ice and seen for themselves the character of the work and the self-sacrifices of those engaged in it, they are now coming to recognize its worth, and have even begun, in a small way, to help along the enterprise.

To take a more striking example: one of the most prominent bankers in Richmond solemnly assured Northern visitors last spring that the negro was fitted only for house service or for work on the farm. The only kind of negro education he approved of was that which would produce servants or laborers. His spirit was in no way unfriendly to the negroes as such, and he spoke feelingly of the many admirable qualities of his domestics; but he was in total ignorance of what the educated negro is doing right in Richmond. He had never heard that the only woman bank president in Virginia, if not in the South, is a Richmond colored woman, or that the only woman apothecary licensed by the Virginia State Board of Pharmacy resides only a few blocks from him, and that she has a dark skin. He did not know that the colored physicians in the Richmond hospital were educated in New York, Paris, and London, or even that there was a colored hospital. He had heard of the largest of the three negro banks, but did not know that in a time of financial stringency it was the only one in Richmond to loan cash to the city authorities for their immediate needs. The banker was, of course, unaware that this bank is part of a negro fraternal society founded by an ex-slave, which, after an existence of only twenty-three years, has 65,000 benefiting members, holding policies valued at $7,715,702. This society has paid $825,217.25 in settlement of 6,048 death claims, has aided sick members to the extent of $1,125,000, and now owns real estate valued at $300,000. The monthly payroll of its employees is more than $4,000. Its bank has 10,000 accounts, and deposits of $200,000 with a capital of $100,000. Finally, the banker is still unaware that the best steam laundry in Richmond is owned by colored men, and represents a capital of $20,000.

It is not necessary to cite further proof of Dr. Frissell's statement. The evidence is all with this veteran educator, who has lived in the South for many years and is so nobly carrying on Gen. Armstrong's work. A serious question confronting the Northerners and Southerners engaged in the solution of the race problem is, therefore, how to get the facts of the negro's progress before the whites, and how to acquaint them with the high aims, the aspirations, and the actual achievements of the negro missionaries everywhere working to uplift their people. Only a mutual understanding and respect can help both races to live in the comity and friendliness which all who desire the country's peace must strive for.

JAPANESE AND RUSSIAN FINANCES.

To outward appearance, neither Russia nor Japan is financially in a position to wage a great war. But if wars never were fought except by contestants with plenty of ready cash, the list would be short. Take the case of Japan, one of whose leading statesmen remarked not long ago that "the financial condition of Japan is a very difficult one." No clearer view of what this situation actually is has been presented than is contained in Mr. W. Petrie Watson's article in the February *Fortnightly Review* on "The Financial and Economic Situation in Japan." The aim of this article is to trace the results so far achieved by the policy inaugurated in 1896, and known as "The Ten Years', or Post-Bellum, Programme." The person chiefly responsible for this policy was Count Matsukata, the Finance Minister. In a report compiled down to 1900-01, he stated his principle. Assuming office in March, 1895, he determined immediately that the first thing to do was to fix upon a financial scheme to be pursued in harmony with the changed status of the country, and with the particular state of affairs at home and abroad. Such a scheme was drawn up, the main points being to increase the national revenues so far as necessary, and to practise economy in expenditure as much as possible. Thus it was decided to depend on increased taxation for the ordinary class of expenditures, and, for the extraordinary, to look to the Chinese indemnity and public loans. At the same time, measures were taken with the object of developing the resources of the country, so that the growth of its

wealth might keep pace with its increased expenditures. During the period from 1890-91 to 1895-96, the annual expenditures, ordinary and extraordinary, were stationary at about £8,000,000; but in the following six years they rose to £28,000,000.

Now the most generous estimate of the full cost of the Programme did not exceed £60,000,000, and yet in 1902-03 the charge had practically reached that figure, and there is every reason to believe that the real total will be between £70,000,000 and £80,000,000. Already the Programme has absorbed £20,000,000 of the Chinese indemnity, and over £40,000,000 of other funds. Part of the £40,000,000 has been raised in Japan, and part has been borrowed abroad, and, of course, bears interest. Furthermore, the country's ordinary expenditures have doubled, with a corresponding increase in taxation. The most interesting feature of the whole situation has been the breakdown of the Government's loan policy. It was hoped that Japan herself would provide everything required for the productive undertakings, the projected total of these loans being £26,000,000. It turned out, however, that the European money market had to be appealed to. A loan of £10,000,000 was issued in 1899 in London. The prosecution of the works outlined in 1896 thus went on uninterruptedly. Meantime, conditions in the home money market afforded no hope of improvement. When the 1901-02 budget was in preparation, it was seen that further loan supplies were imperative. The budget was drafted with appropriations fixed for the industrial undertakings of the Programme, but it was found necessary before the opening of the financial year to bring in an amended budget, from which these appropriations were omitted.

The long and short of the matter is that the Programme collapsed just about midway in its career. The Government miscalculated the financial capacity of the country. The Japanese people had gone through a fever of industrial activity. This so exhausted their financial strength that they were unable to respond to the Government's call for aid. But, even worse, it has seemed that the weakness of the country's commercial system might seriously endanger the financial stability of the Government itself. The financial situation in Japan to-day is one that calls for the most careful handling. But what should chiefly interest the outside world at the moment is the fact that Japan's enormous expenditures on armament since 1896 have vastly increased her war efficiency. Mr. W. Petrie Watson, whose article was, of course, written some time before the outbreak of hostilities, says that "should the course of events involve Japan in war, the signs of a bankruptcy of resources, which it may be possible to detect to-day, will disappear in the streams of offerings that this people, in the enthusiasm of sacrifice, is always ready to pour upon the altar of patriotism." The accuracy of this prevision has been amply attested during the last few weeks.

The financial condition of Russia is essentially the same as that of Japan, no matter how great the superficial differences. The London *Economist* recently remarked that "the outstanding feature of Russian finance is, that for years past the country has been spending far beyond its income." This, of course, has meant constant borrowing, although every method has been employed to conceal the fact in the budgets. For instance, the estimates for 1904 indicate a deficit of £19,579,300. This has an ugly look, but it is explained that the deficit arises from the inclusion of £21,217,900 of expenditure which is classed as extraordinary, and which consists mainly of what may be designated as capital outlay upon the Siberian and other railways. It is pointed out, in fact, that if we exclude this and confine attention to the revenue and expenditure classed as ordinary, instead of a deficit there is a surplus of £1,363,600.

This, says the *Economist*, we are asked to regard as evidence that the Russian Government has a revenue in excess of its normal requirements, and that the finances of the country are consequently in a healthy condition. In the financial reports of the Russian Government there is a certain mysterious "Free Balance of the Treasury," out of which the annual deficits are covered. This fund is like the widow's cruse: the more it is drawn upon, the larger it seems to grow. Thus, M. Witte, in his budget statement, calculated that on January 1, 1903, this Treasury balance would amount to £11,466,000, whereas a year later it was set down at £25,740,000. This can probably be explained in large part by £12,700,000 realized by an issue of bonds. Evidently, if this "free treasury balance" cannot now be replenished by fresh borrowing, the Government must come to the end of its available resources. But this, of course, would not mean that Russia could not keep her forces in the field, for in the last resort there would be the printing-press. The effect on the general prosperity of the country of inconvertible paper issues could not be other than destructive; but it is the rule with nations, when the war fever is on them, to sin in haste and repent at leisure.

THE BALKAN SITUATION.

A circular note from the Sublime Porte, complaining of the warlike attitude of Bulgaria, does not necessarily mean war, but it does mean that the Sultan intends to exercise a free hand in Macedonia and Albania, that the Austro-Russian reforms are now mere idle words, and that the whole situation in the Balkans is as uncertain as it was when Russian and Austria intervened last spring. And in an important sense matters are worse: Russia is so fully occupied in the Far East that it is unlikely she will seriously renew the work of pacification in Turkey. Thus the duty of policing the Turkish frontier falls exclusively to Austria. It is a heavy and an invidious responsibility: and if there is any political courage and foresight in the European foreign offices, the Powers should take concerted action to strengthen Austria's hand, and force upon the Sultan the reforms stipulated by treaty. Here the European Concert could do all that Russia did, and more.

The time open to such precautionary action may not be long. It is not for nothing that the Porte has changed the apologetic tone of two years past for that of defiance. And from the Sultan's point of view, the need of defensive action is pressing. Zontscheff and Sarafoff have confidently promised to reassemble the Macedonian bands in the spring, Bulgaria is voting extraordinary war credits and reorganizing her army; meanwhile a mere beginning of the reform of the gendarmerie has stirred up a serious revolt among the lawless Albanians. Either way, the Sultan is in difficulties. If, obeying the stern command of Count Golutchovski, Turkey honestly adopts the reforms, the Albanians will rise; but the Macedonians probably will rise whether the reforms are introduced or not; and the Macedonians are openly supplied with arms and men across the Bulgarian passes. It is no wonder, then, that the Sultan takes the first opportunity to resent foreign interference, and to become the guarantor of his own sovereignty.

Indeed, if Turkey were capable of giving reasonably humane government to her northern provinces, the Sultan's declaration could only be applauded. But when it is considered that the note is virtually a warning that massacre and worse outrage are to be let loose in Macedonia, and, if possible, carried into peaceful Bulgaria, it is evident that humanity and the general interest alike dictate prompt settlement of the affair. A war between Turkey and Bulgaria would be disastrous. Bulgaria has, unfortunately, alienated all the other Balkan States, and now could hardly call upon her natural protector, Russia. She would probably have to fight alone. The war would be of the bloodiest kind; Macedonian irregulars would soon vie with the Turks in atrocity, and the result would probably be *nil* so far as settling the Balkan question is concerned. To be sure, the Macedonian leaders profess confidence as to the outcome of a Turko-Bulgarian war; but it is hard to forecast for Bulgaria any better fate than six years ago befell Greece, though undoubt-

edly King Ferdinand's army would put up a better fight than King George's did. But, in general, an isolated war in the Balkans would mean only waste of blood and money.

Nobody, of course, is eager to do for the persecuted Christians of Turkey what Russia did for the Bulgarians in 1877. Humanity at that price is too costly. But it is probable that concerted action of the Powers, accompanied by a naval demonstration, would not meet with serious opposition from the Sultan. Rather than fight, he would probably consent to have most of Macedonia put under a European Governor-General. Thus a new buffer State, a mainland Crete, would be established. And such action would do more to harmonize the rival races—Greeks, Bulgars, and Vlachs particularly—than would annexation to Bulgaria. It would also quiet immediate political jealousies. As for the difficult Albanian question, that is a detail. Austria brought Bosnia and Herzegovina from anarchy to stable order. She has already, by treaty, the right of policing the province of Novi-Bazar. It would only be necessary to stretch that prerogative a little to cover all the disorderly part of Albania.

But such a solution of the Balkan problem as that suggested above is only too likely to fail because of lack of courage in the Powers. It could, in fact, be carried out only through the frank initiative of some relatively disinterested country, like France or England, and certainly the new *entente cordiale* between these nations could be put to no more honorable use. With the adherence of Italy and Austria and the contingent support of Bulgaria, they would probably be strong enough to impose a genuine reform plan upon the Sultan. And France, incidentally, could do her ally, Russia, no more valuable service than to remove the causes of conflagration in the Near East. In a sense, the hope of any such diplomatic solution of the difficulty depends upon the French Minister of Foreign Affairs, M. Delcassé. But we fear that, in these anti-clerical times in France, it will not be possible even for him to advocate the *pax Christiana* for Turkey. The probabilities lie the other way—towards war between Bulgaria and Turkey—on Bulgaria's side, because of sympathy for her persecuted kinsmen in Macedonia, and for the hope of a greater Bulgaria; on Turkey's side, on account of that instinct which teaches even "dying races" to die with their face to the foe. That war is imminent, it would be foolish to assume—it may be long delayed; to-morrow the casual spark may fall in the powder barrel—but come it must, unless the Powers put an end both to the disorders of the Albanians and to the intolerable afflictions of the Christians of Macedonia.

LESLIE STEPHEN.

By the death of Sir Leslie Stephen many will feel that we have lost the first English-speaking critic. The word, in his case, meant more than a literary authority. His outlook upon life was wide. The whole movement of thought and conduct in which his lot was cast he surveyed with interested but calm gaze, and made his shrewd and wise comments upon scientific method and religion and education and morals, as well as upon books and writers. Thus his great range gave him the air of one who saw life steadily and saw it whole. Lowell complained that he was a child of an age that lectures, not creates. But it is almost a creation to produce a great critic; and we could well spare much of what is called "creative work" for more of the training in sane and balanced judgment which Leslie Stephen gave his readers.

His own career, with that of his brother, Fitzjames, is a striking example of the intellectual ferment of the age in which he lived. The emancipation from the smug and narrow Evangelicalism of his Clapham family illustrates, in little, the process by which mental enlargement came to thousands of his generation. But it was the peculiar charm of Stephen that he had none of the arrogance and assuredly none of the bitterness which too often mark the man who has broken away from old creeds. He himself has told us, in his own quietly humorous way, how he made the transition without violence or pain. He simply found that he could not, with his views, take holy orders, and thereupon turned, without spiritual wrench or agony, to the work that he could honestly do. There were heard from him none of the passionate outcries that came from Prof. W. K. Clifford, for example; he had nothing of the occasionally vitriolic touch of Greg, the reproachful note of Mill or Spencer, or the rude defiance of his own brother, Fitzjames. Sir Leslie was endlessly inquisitive; he brought his acute analysis to bear upon every problem that greatly moved men's thoughts; but he preferred to convey his teachings in forms of amenity, disclaiming wisdom at the very moment he most effectively disclosed the want of it in others, and acting always upon the principle laid down by Macaulay that, when an objection is raised, it "ought to be met with something more convincing than 'blockhead' and 'scoundrel.'"

The body of strictly literary criticism which Leslie Stephen leaves behind him is alone enough to confer distinction. His studies in the eighteenth century are unrivalled for thoroughness of information and sympathy of interpretation. He was none of your off-hand critics, pronouncing brawling judgments all day long on the strength of cheap and second-hand learning. He always longed to drench himself in material. No point too minute, no side-light too faint, to escape his inquiry. Hence it was by a kind of predestined harmony that he was called upon to become the editor of the monumental 'Dictionary of National Biography.' Some of his best work lies there. His articles give us not simply perfect mastery of all that is known about his subjects, with full bibliographies, but judgment in absolute equipoise of impartiality, with many a sly touch of enjoyable humor and a great wealth of literary allusiveness. The latest critical writing he published—his volume on George Eliot—was a masterpiece. The riches were packed into a little room; but, within its limits, no better criticism was ever done. Marian Evans, woman and writer, lives again under his pen; and his admirations gain the greater weight from the very deftness with which he lays bare the things of hers which he considers strained or inflated—'Romola,' for example.

It was no chance coincidence that made Sir Leslie Stephen President of the Ethical Society. Amiable and engaging as his temperament appeared, it was grave in cast. Conduct meant, for him, three-fourths of life; and he would have agreed again with Matthew Arnold in the sentiment that it is the business of those who are doubtful about another life to "pitch this one high." His addresses on themes of the practical life—on "Luxury," for example, or on the especial duties of literary men—are as persuasive as they are original. In all his approaches to the deeper problems of life he displayed a high seriousness. Seldom does he rise to fervor or eloquence—though there are noble passages in his 'An Agnostic's Apology'; but his dignity and elevation of manner never failed of rising to his argument. In the essay on "Evolution and Religious Conceptions" which he contributed to the *Evening Post* in 1901, he put aside all the crudities and flippancies of unbelief, and contended for religion as an "essential part of human nature," as well as a mighty factor in social organization.

AUTHORS AND REAL ESTATE.

It is credibly estimated by experts in certain suburbs that the presence of an author raises adjoining house-lot values at least five cents a front foot. Naturally, what has been called the "sentimental excess" would be much greater in the case of the author's own property. And the same principle holds of places with literary associations. When commemorative societies try to buy an author's birthplace they always pay more than the market price. Certain Scottish estates, indeed, add a percentage to the rental because the house has figured in the Waverley Novels, and append a

formal statement to that effect in the lease.

The classical instance of sentimental value is Thackeray's Young Street house, at Kensington. At the sale by auction the house was promptly run up to a 4 per cent. basis, when, admitting that the commercial value had been reached, the auctioneer challenged the audience to pay a "sentimental excess" of £500. About 10 per cent., £250, he actually received. Naturally, the excess was greater in the case of the Shakspere birthplace, which was bought in 1847 at £3,000; but there is only one Shakspere, and a birthplace (of which an author can have had but one) rightly brings the price of *unica*, whereas residences may be so many in the case of an author of migratory habit that they hardly count as *rarissima*. Yet even in Byron's case, whose residences defy enumeration, his association still costs the traveller dear at hotels which are vaguely associated with the dissipations of that wayward lord. Nor will any sentimental traveller forget the high price of the chop and the bottle at a London tavern which is said to have harbored Dr. Johnson, and actually exhibits his portrait and his chair.

Are we not dealing with a kind of value which may be legitimately considered in real-estate speculation, and surely must be taken into account by those pious folk who merely wish to do honor to the memory of great writers? These unthrifty enthusiasts pay the largest price because they buy at the wrong time. To defer purchase until the death of an author is to pay the entire sentimental increment; whereas, if the deed is drawn immediately upon the appearance of his first book, his home—even his birthplace—may be had at the ruling rates. We believe that in this matter commercialism and literary enthusiasm might appropriately join hands, and we cordially second the Manchester *Guardian's* proposal of an "Authors' Landed Property League." Such a syndicate would work in close harmony with the publishers. Its function would be the early acquisition of the residences of obscure authors of promise. Whenever a first book gave evidence of genius, the gentlemanly agent would visit the author and secure, if possible, options on his birthplace, upon his present residence, and all houses which he may subsequently inhabit. The request, being in the nature of a compliment, could scarcely be refused. Indeed, the conventional consideration of one dollar would hardly be to most young authors a negligible feature of the transaction. We know of several birthplaces, some of them most picturesquely situated and supplied with hot and cold water, upon which options could be secured at very favorable terms. Of course, many authors will neither achieve fame nor leave marketable associations, but in these cases the syndicate would at worst suffer only slight loss on the real estate, while the occasional exploitation of a popular and multi-residential author (and we could name several) would give to a conservative investment the occasional attractions of a brilliant speculative *coup*.

For so far we have considered only the passive side of the business, assuming that the syndicate works independently of the author, supposing that it merely exploits its real estate by promptly applying commemorative tablets and by proper advertising. For example:

CLAVERLY HEIGHTS, N. J.—A semi-detached suburban cottage, 5 rooms and bath, large butler's pantry, grounds pleasantly shaded. This desirable property was the RESIDENCE OF MALMESBURY BLODGETT between May 1, 1897, and April 30, 1898. His first book, 'She Would and She Could' (475,000), was written in the dainty Dutch oak library. The front door has been scratched by his dog, and the hall wainscoting has been much defaced by his second son ("little Winthrop" in 'The Sword of the Lord' 200,000 and still selling). All these marks of Mr. Blodgett's occupancy are noted on a tablet, and will on request be legally certified to any tenant. The undersigned also wish to announce that Mr. Blodgett's present residence at Willoughby Meadows, L. I., will shortly be put upon the market. It will be the scene of his charming novel 'Dora McBride' (advance sales 97,000). The second-story front room will be Dora's "blue boudoir." Appreciative tenants, and no others are desired, should address Mr. Blodgett's publishers, McFoolzum & Sellum, or

The Authors' Landed Property League.

Much might be done by these methods; much more by intelligent coöperation with the author. Beyond the power of any single writer to radiate associations, it is conceivable that writers and real estate in conjunction might be exploited upon a grand scale. Imagine a great tract of vacant land acquired by the acre, and a few authors settled upon it. Gradually, literary associations might be written into all the more desirable lots. The sales would be far removed from the vulgarity of the brass band and the free lunch. On bargain days reverent folk, book in hand, would walk about verifying such signs as these:

On this bench "Langham and Winifred sat enwrapped in the long silence of mutual confidence. How sweet it was to be there!" —('Winifred's Ordeal,' p. 186, Blinders Co.)

Or, again:

Under this tree "Francis stumbled on a root, and felt Mortimer's rapier glide chillingly between his arm and side. The moon shone on, indifferent to these warring human fates," etc.—('For King and Colors.' p. 7, Moorlands & Park.)

No confirmed reader of the modern novel could resist, we opine, the combined appeal of literary associations at home and literary men as neighbors. And it is not necessary to say that the investment company which counts among its clients any considerable portion of our novel readers, need cringe to none of the great consolidations of recent times. We see, indeed, no drawback to the plan except the increasing commonness of authorship, and we advise a syndicate such as we have suggested to begin operations before the digestive capacity of the literary market has been overstrained.

THE BEGINNINGS OF MODERN RUSSIA.

PARIS, February 10, 1904.

M. K. Waliszewski makes us acquainted with the origins of modern Russia. No enterprise can be more commendable, now that Russia has become one of the most important factors in the political destinies of the world. I was reading not long ago in the *Fortnightly Review* a remarkable article by Edward Dicey, entitled "The Two Empires," in which the author dwelt on the increasing importance of the Russian. We see this empire now extending itself through the immense continent of Asia to the shores of the Pacific Ocean, and we are on the eve of a struggle between her ambition and that of Japan, the armed representative of the yellow race. In his study of the origins of modern Russia, M. Waliszewski takes the back track. He has published in succession important volumes, chiefly on the history of Russia during the eighteenth century. His 'Roman d'une Impératrice: Catherine II. de Russie,' written from her Memoirs and correspondence, and from inedited documents of the State archives, has already attained its fourteenth edition; a second volume on Catherine, 'Autour d'un Trône' reviewing the colaborers, friends, and favorites of the famous Empress, has had an equal success. 'Pierre le Grand,' his education and work, published from new documents, appeared subsequently, as did 'L'Héritage de Pierre le Grand' and 'La Dernière des Romanov: Elisabeth I., Impératrice de Russie (1741-1762).'

M. Waliszewski tells us in the preface to his new volume, 'Ivan le Terrible,' which has just appeared:

"In the work of Peter the Great and of the great Catherine, modern Russia appears to us already fully armed for all the material and moral conquests which she has realized. This work, however, has antecedents, and Peter himself professed to be continuing a work. Whose work? We know his immediate predecessors, the first Romanoffs, obscure sovereigns of an empire which had no contact with Europe, which was closed to outside influences, and was powerless to draw from its own fund the elements of even a rudimentary civilization. If we go further, if we return to the last years of the sixteenth century, we find a time of trouble, disorder and anarchy, barbarism and night. Nevertheless, if we look closer, the sudden illumination of the eighteenth century is not a dawn; the light is too strong to be the light of a rising sun. Peter the Great was not mistaken as to it, and the night out of which his genius rose was only an eclipse."

By this figurative style M. Waliszewski means that Peter the Great had predecessors who merit the attention of history. One of them was that Ivan who received the appellation of "the Terrible," and who appears vaguely to the mind as a personification of cruelty, as a rival of Caligula and of Nero.

"This name of *Terrible* which I have been obliged to print on the front page of my volume in order that the man should be recognized," says M. Waliszewki, "is nonsense. The Russians themselves are deceived by it, as the name has been imposed on them by foreigners. The Germans hesitate between *der Schreckliche* and *der Grausame*, and the two versions are equally false. Never was Ivan IV. so called

by the Muscovites of his time. He was for them the *groznyi*, a word which means 'to be respectable and respected.' "

To be sure, in order to be respected in the time of Ivan IV., it seems to have been necessary to resort to means which appear to us cruel and barbarous. "Place before your eyes the gigantic crucible in which the Russian people worked between the Ural and the Carpathian Mountains, between the White Sea and the Black Sea; it was not by mildness, by gentleness, by half measures that twenty different races could be mixed and fused." It is possible that in this great work Ivan IV. a little exaggerated the atrocity which was characteristic of the manners of the time.

All rehabilitations are excessive in proportion to the excess of the accusations. Ivan the Terrible is now considered by Russian writers a "central figure," and, as such, everything is pardoned to him. M. Waliszewski has honestly tried to find his way between the exaggerations of the past and of the present. He begins by describing accurately the Russia of the sixteenth century, its classes, its political and social organization, its peasants, its serfs, its urban populations, its church. The reader will find many new and interesting details regarding provincial and judicial organization, the economic state of the country, and the Russian commune, which still exists partly in its ancient form. The state of the roads, which still leaves so much to be desired, was such in the sixteenth century that famine was a sort of normal condition for some provinces, on account of the difficulty of transportation. An Englishman called Jenkinson, who was an observer as well as a trader, tells us that he saw with his own eyes as many as eighty people dying for want of subsistence, and such subsistence!—in summer, herbs and roots; in winter, straw. He speaks of the indifference of the people in the presence of such misfortunes. Till the end of the century, money was rarely seen, and most transactions took the form of barter. We have but little light on the finances of the State. Under the son of Ivan IV., Fletcher values the revenue of the empire at 1,400,000 rubles. Under Ivan IV., M. Waliszewski values it at about 1,200,000 rubles. (The ruble counted for 16 shillings and 8 pence.) At the same period the revenue of Henry VIII. in England was not more than a million crowns. Ivan IV., therefore, asked from his people nearly four times as much as Henry VIII. Ivan IV., besides the taxes, got much from the thirty-six towns with the villages depending upon them, of which he was the personal proprietor.

If we turn our attention to the intellectual state of the country, we find ourselves in a very unexplored field. The invasion of the Mongols in the thirteenth century is generally regarded as a tide of Asiatic barbarism. "Recent researches," says M. Waliszewski, "have destroyed the illusion of a sea of barbarism overwhelming elements of European culture." The Mongols were not devoid of a rudimentary culture; they found an empire in decomposition, already severed from Europe, and completely isolated. This intellectual isolation of orthodox Russia was the direct consequence of its affiliation with the Alma Mater of Byzantium.

We regret that we cannot follow M. Waliszewski in his elaborate study of literature and art in the sixteenth century. The chapter devoted to this special subject is among the most instructive in his work. He shows well how the literary activity of the country was concentrated in the Church and in the convents. The people were kept, as it were, completely outside of it, and were completely given up to tradition and superstition. The picture of the family life is very striking: "Serfs or freemen, the servants formed in reality a sort of court, in which the head of the family, the boyar, played the part of a sovereign, imitating, in ceremonial and in the distribution of offices, the models of the grand-ducal palace."

Ivan III. died in 1505, leaving five sons; the eldest, Basil, was married first to the daughter of a boyar, but, having no children, he threw her in a convent, and remarried the daughter of a Lithuanian, Helen Glinski, who, on the 25th of August, 1530, gave birth to a son who became Ivan IV. Three years later she was left a widow. She was a person of strong character, and imprisoned some of her relations who disputed her rule. It is thought that she was poisoned in 1538. Her son Ivan was still a child; the power fell into the hands of the boyars, and their oligarchy soon became anarchical. In 1546, Ivan announced his intention to be crowned, not as a grand duke, as his predecessors had been, but as Tsar (a title which they had not assumed), and to marry a Russian, the daughter of a boyar. He intended to be a national sovereign. The coronation took place, with great pomp, on the 16th of January, 1547. The wife whom he chose the same year was Anastasia, who belonged to one of the oldest families. The marriage was celebrated the 3d of February, 1547.

Ivan's character revealed itself after a great fire which took place in Moscow. The population believed that the conflagration was due to incendiaries, and required victims. Ivan did not restrain the blind fury of the populace; he felt, however, the necessity of putting an end to the general anarchy of the country, and summoned a sort of parliament, composed of the representatives of all classes and of all the provinces. His reign was very eventful. M. Waliszewski enters into most minute details about the Russian expansion towards the East, the taking of Kazan, of Astrakhan, the conquest of Livonia, the struggles with Sweden and with Poland for the empire of the Baltic. Ivan became a candidate for the throne of Poland, but was defeated in the election by Báthory. A conflict arose between Poland and Russia; the incidents of the struggle were the taking of Polotzk, the entrance of the Poles into Muscovy, the siege of Pskov. A pontifical mediation was followed by a truce. Ivan looked not only on the side of Europe; he prepared the conquest and the colonization of Siberia.

His reign can be characterized by the downfall, in some cases the destruction, of the old aristocratic families, and by the establishment of an autocratic power. This revolution, which in appearance was made for the benefit of the people, bore in reality bitter fruit. "The new régime was like a house with two stories constructed on the same plan—functionaries above, serfs downstairs; slavery everywhere." In the West, Ivan's policy was a failure. In the East, Kazan, Astrakhan, and Siberia mark real successes for him.

"Such as he was," says his historian, "in spite of his defects and his vices, his errors and his crimes, Ivan was popular, and his popularity survived the test of misfortune and of time. In the Muscovite series of historical songs the Tsar has a place of honor; he is described as accessible to human feelings, severe but just, even generous. To be sure, his semi-sacerdotal majesty raises him so high that no criticism could touch him. . . . When he is seen in a bloody orgy over the corpses of the vanquished Tatars, or when, on simple suspicion, he sends his boyars to the executioner, the people are with him; they applaud the carnage as well as the joy of their master. . . . The people, when they cannot applaud, shut their eyes; they will not allow that the *Terrible* killed his own son."

The morality of the time is shown in the legend which has grown up around history.

Correspondence.

NOTICE OF WAR.

To the Editor of The Nation:

Sir: We should be glad if the pundits would tell us distinctly what, or whether any, preliminaries are necessary to a commencement of war. Do they mean, as it appears some of them do, that a nation is at liberty to fly at the throat of another nation without previous notice of any sort? Are we to be liable at any moment to sudden bombardment, and are ships homeward-bound in full security to find themselves in the hands of captors? There is a precedent of the kind in the conduct of England to France in 1755, under the foolish Duke of Newcastle. But it was treated by the French Government as a violation of public law, and is recorded by English historians with shame. Any rule based on the conduct of President Polk and his party in the Mexican war is pretty sure to be more honored in the breach than in the observance.

Rupture of diplomatic relations has not hitherto been treated as a declaration of war. It took place between Great Britain and Spain in 1848, when no war followed or was expected to follow.

In the case of the Crimean war a manifesto was published by Great Britain.

One pundit says that the first act of hostility is the commencement of war—a dictum which, though luminous in itself, does not dispel my darkness. Perhaps the Hague Conference would give us a ruling.

Pacificus.

DIMINISHING NEGRO ILLITERACY.

To the Editor of The Nation:

Sir: Probably "C. E. W." is not aware that there are figures of illiteracy for the Negroes alone as distinguished from "other colored." Those for 1870 and 1880 which he quotes refer only to Negroes. Others will be found in the 12th Census, Vol. 2, p. xcviii. They are as follows:

Illiterates	Ten years of age or over.
1870—2,806,233	in total pop. of 3,511,075 (79.9%)
1880—3,220,878	in total pop. of 4,601,207 (70%)
1890—3,042,668	in total pop. of 5,338,972 (57.1%)
1900—2,853,194	in total pop. of 6,415,581 (44.5%)

Such facts as these our country forgets

or takes no pains to know; it is busily looking for other sorts of things.

Respectfully yours,

W. E. B. DuBois.

Atlanta, Ga., February 20, 1904.

"ALL-RIGHT."

To the Editor of The Nation:

Sir: The communication in the *Nation* of February 11 regarding "all-right" recalls to my mind the use of this term in the Latin Quarter, Paris, when I was living there, a few years ago. There, and possibly throughout Paris, the term "all right" (pronounced "ăl richt") is used as a general designation for English and Americans. Thus, it is not uncommon for a stranger, in certain parts of the Quarter, to hear this expression called after him as he passes in front of the sidewalk-tables of some of the cafés. A popular song of the Quarter, too, a few years ago, had as its refrain: "ăl richt, ăl richt, rien ne les émotionne," the song as a whole being a Quarter satire on the English woman in Paris. "All right" is, so far as my experience goes, the most used English-American term in Paris, *i. e.*, the term so frequently used by even the cultivated travellers abroad that it, before all others, has been caught up by the veriest street urchin.—Sincerely yours, M. Len. King.

77 Mt. Auburn St., Cambridge, Mass., February 15, 1904.

PHILOLOGY ON THE PACIFIC COAST.

To the Editor of The Nation:

Sir: In the *Nation* for January 28, your correspondent from the Modern Language Association, in referring to the Philological Association of the Pacific Coast, said: "The latter is now organized as a branch of the American Philological Association, but its modern-language element predominates." Advocates of a "lost cause" may be pardoned an excess of zeal, and so I beg leave to correct your correspondent's misstatement.

I have before me the programmes of four of the five meetings of our western philological society. Out of 80 papers read at these meetings, 39 have dealt with subjects in classical philology, 29 in modern European philology, and 12 in Semitic and Oriental philology and general linguistics. The programme for the meeting of 1902, which I cannot find, would not alter this showing. At the last meeting, in December, 1903, the preponderance of subjects in classical philology was greater than at any previous meeting—a fact which is regretted by those most deeply interested in the Association.

Very respectfully yours,

Edward B. Clapp.

Berkeley, Cal., February 17, 1904.

Notes.

New publications of Houghton, Mifflin & Co. are 'Essays for the Day,' by Dr. Theodore T. Munger, and a dramatic poem, 'The Fire-bringer,' by William Vaughn Moody.

James Pott & Co. will bring out in the spring 'In Shakspere's England,' by F. S. Boas; 'Bygone London Life,' by G. L. Apperson; 'The World of Animal Life,' edited by Fred Smith; and 'Chester,' in a new series of "Ancient Cities."

The Baker & Taylor Co. have in press 'The Evolution of Knowledge,' by Raymond St. James Perrin, and a thoroughly revised and enlarged edition of Laughlin and Willis's 'Reciprocity.'

Among the Century Co.'s spring publications will be 'My Airships,' by Alberto Santos-Dumont, fully illustrated; 'Fable and Woodmyth,' by Ernest Thompson Seton; and 'Roof and Meadow,' by Dallas Lore Sharp.

The Outlook Company will soon publish 'A Preacher's Story of his Work,' by Dr. W. S. Rainsford.

The new edition of the Herbertsons' little volume, 'Man and his Work' (London: Adam & Charles Black), makes still more valuable the only available treatise in the English language containing such a compact fund of information, well selected and digested, dealing with the effects upon man, his industrial organization and social forms, of physical conditions from which he cannot, with all his art, escape. The present output indulges in the modest extravagance of a few illustrations, but there is, fortunately, no alteration in the simple and lucid treatment characteristic of the first. One cannot but hope that these authors, or others equally gifted with a sense of perspective, with clarity of expression and with common sense, will sometime undertake a less unpretentious treatment of environmental influences on man and society. The only work of importance in this field seems still to be the rather verbose and often involved 'Anthropogeographie' of Friedrich Ratzel.

From P. S. King & Son we have a quarto volume of some 300 pages forming a 'Catalogue of Parliamentary Papers, 1801-1900' (with a few of earlier date), compiled by Miss Hilda Vernon Jones. Miss Jones gives a brief historical review of the mode of publication, or non-publication, of these papers down to Session 1836, shortly before the accession of Queen Victoria, when they were allowed to be sold to the public. Miss Jones's Catalogue does not profess to be complete, but does include the most important documents, as derived from Messrs. King's special Parliamentary catalogues for fifty years. The compiler supplies an analysis of contents in cases where the title of a paper is not self-explanatory. The range of topics is enormous, as will appear by citing but a few titles: Coal, Corn and Grain, Cotton, Sugar, Coroners, Contagious Diseases, Cremation, Labor, Factories, Mines, Railways, Sewage, Irrigation, Telegraphs and Telephones, Prisons, Famine, Tuberculosis, Slavery, County Cess, Education, Civil Service, Elections (Corrupt Practices), Marriage (deceased wife's sister, married women's property), Extradition, Juggernaut, Keltic (chair); to say nothing of foreign relations—China, Venezuela, United States, New Guinea, etc., etc. This valuable guide to statesman, student, and journalist is sold at the reasonable price of two dollars.

Another highly serviceable index is that which accompanies Hazell's Annual for the first time (London: Hazell, Watson & Viney). This reference manual's nineteenth year is coextensive with 1903. Some consolidations in the classification are to be remarked, and are made feasible by the index. The burning fiscal question fills 29 pages with opposing views. The explosion in the Far East is foreshadowed in the closing sentence of the article on Russia, as well as in the article on China, which is accompanied by a map of the present seat of war, and again in the article on Japan, which contains the text of the Anglo-Japanese Alliance. For the rest, the Annual has the features which have long made it one of the most esteemed works of its class.

Among recent legal publications is a new edition (the ninth) of Theophilus Parsons's well-known treatise on the 'Law of Contracts,' in three volumes (Boston: Little, Brown & Co.). The editor is John M. Gould, who has added some six thousand new citations of cases. The total number of authorities cited in the work has now come to be about thirty-six thousand, and of course this is only a selection; to find all the cases in any given head of contracts, recourse must now be had to one or more cyclopædias. The value of Mr. Parsons's work consists in the authority of its text, and an annotator as good as Mr. Gould may be able to protract the life of this for a long time yet. Such books are not written any longer, any more than Greenleafs and Storys are—not because there are not lawyers in existence competent for the task, but because the tendency of legal writing is now in other directions. What those masters tried to do was to "lay down the law" in a final form, as nearly as possible as a court of last resort might lay it down. The result was, that they produced treatises to which courts of last resort became accustomed to go for the law itself. The elder writers could do this as we cannot, because, down to fifty years ago, it was still possible to study all the decisions, at least in single heads of the law. But now the cases have so accumulated that the writer of a treatise can no longer exhaust; he may point out principles which will serve as paths through them, but will generally content himself with using cases as guide-posts to these. Thus we have a multitude of new books which are no doubt excellent in their way, but which do not supersede the classical treatises, because they are different in kind. Of course, attempts in kind are made, but they are usually unsuccessful, partly for the reason we have mentioned, and partly because the men who make them are rather compilers than great lawyers.

'La Bruyère and Vauvenargues,' by Elizabeth Lee (E. P. Dutton & Co.), is a small volume of selections, translated into English, and accompanied by a biographical introduction and notes. Neither writer is much more than a name to English or American readers, though in France they are both classical. Much of La Bruyère's 'Characters' is out of date now—as a study of human nature the class has been superseded by the novel. Vauvenargues's maxims and reflections as literary productions have not the finish of Rochefoucauld, but a few of them have the stamp of individuality. "Great thoughts come from the heart" Voltaire said was Vauvenargues himself; and no one who is a good judge of moral maxims but will give a high rank to "Magnanimity owes to prudence no account of its motives," also highly approved by the same authority. The introduction is good in giving all the important facts relating to the lives of the two authors.

We have from the pen of Charles Brad-

ford another little volume for the devotee of the rod, entitled 'The Angler's Secret' (Putnams). Mr. Bradford gives us here, as in his former books, material for an hour or two of pleasant reading, whether by the winter fireside or the shaded banks of summer; but he can hardly be said to have caught the knack of the best type of literary sportsman. The chapter on flies might better have been left for the author's book on the same subject—one of no less than three volumes for "gentle sportsmen" which he announces as in preparation. The truth is, that the artificial fly becomes just a little tiresome to all except the one who has been so thoroughly bitten that the absence of the creature would leave an uncomfortable void, as with Tolstoy's victim of the midges in 'The Cossacks.' Mr. Bradford shows undue irritation at the scoffer. The tackle and methods of the genuine angler need no defence against the jeers of the dock-loafer with his hand-line, or the farmer's boy with his tamarack pole and tomato-can of fish-worms. Least of all is it necessary to prove that the said farmer's boy cannot catch more trout in a given time than the angler with his four-ounce bamboo and his flies. In the first place, he often can, because he knows the ground better; and, in the second place, the man who has the true "Angler's Secret" is not supposed to trouble himself seriously about the quantity of his catch, as Mr. Bradford never forgets except when running a tilt with his *bête noire*, the scoffer. The open print, wide margins, and appropriate illustrations of this book delight the eye, though the cover can hardly be called a complete success, as it warps too readily and its shade of green is not well chosen.

'The Technology of Sugar,' by John Geddes M'Intosh (Van Nostrand), is a volume of about 400 pages, dealing with the manufacture of sugar from the cane and the beet. More than half the book is devoted to a detailed description of the beet-sugar industry, from the beet in the field to the finished product. Some attention is paid to the historical development of processes, and many illustrations figure the apparatus used. Cane-sugar manufacture is dealt with in briefer fashion, but at sufficient length, as only the first processes differ from those used in the production of sugar from the beet. It is interesting to note that the introduction of improved and scientific processes in the treatment of the raw juices has taken place in connection with the beet industry, while the manufacturers of cane sugar have been slow to adopt modern methods—a fact which is to be explained by the different geographical locations and the environments of the two industries. Mr. M'Intosh points out that reforms are still necessary in cane-sugar factories, and adds, "It is not long since chemists were introduced into these torrid countries where mediocrity reigns supreme over the complete industrial vacuity of the natives." The treatment of the chemistry and analysis of sugars (47 pages) is perfunctory and not wholly satisfactory. At the outset the definition of sugars is open to criticism; and the table of solubility in mixtures of alcohol and water is unintelligible on account of an error in the headings. It appears from this table that a solution of sugar in water at 40° C. may contain 105.2 per cent. of sugar. Turning to the original table of C. Scheibler, from which this is adapted without reference, one sees that the figures represent the number of grammes in 100cc. of the saturated solution. As a whole, the book forms a useful contribution to an important subject.

The sixth series of 'La Vie et les Livres' M. Gaston Deschamps devotes to a resumption of his first theme, viz., the patriotism and energy of his fellow-countrymen as shown in the Napoleonic campaigns, in the terrible days of 1870, and more recently in hazardous expeditions into far countries beyond sea. One of the most interesting divisions (VIII.) of the first part discusses the strange confusion produced in the minds of militant cosmopolitans such as Benjamin Constant and Mme. de Staël, through their reluctance to accept the triumphs of a nature more successfully energetic than their own. In dealing with the Franco-German war, opportunity is found for exalting the sentiments of fidelity to a national ideal so tellingly expressed in the war-novels of the brothers Margueritte; while the opening sentence of the chapters on foreign or colonial enterprise points the way for contemporary French energy: "Il faut . . . tourner ces jeunes gens vers les grandes routes, vers le plein air, vers les endroits . . . où l'on se sent devenir un homme." How to do it is the problem.

President Eliot's annual report has the inveterate quality of interest and suggestiveness known to all friends of Harvard and of the higher education. Its one significant demonstration is that graduates of our public high schools surpass at college those from private schools. For the rest there is an uncommonly large number of loose ends; how to amend the Tabular View, or schedule of lecture hours, in opposition to the athletes and instructors who want blocks of leisure, mostly in the afternoon? how to rename the Graduate School, since all departments now begin with holders of the bachelor's degree? how to obtain an adequate building for the Library, and where to put it, and what number of volumes to restrict it to? how to secure the necessary endowments all along the line? Curious facts are that Radcliffe's students are chiefly drawn from eastern Massachusetts; that it costs nearly twice as much to educate a girl there as a boy at Harvard, "because former generations have provided educational endowments for the boy, but not for the girl"; that "the game which has been conducted at Cambridge with the least intelligence and success is football—except from a pecuniary point of view"; that "the students in Harvard College seem to be sick nearly twice as much as the students in the Lawrence Scientific School"—the real disease being malingering; that it is only since 1896 that the College has actually been living beyond its means.

One may read in Volume 2 of the Report of the Commissioner of Education, Department of the Interior, 1902, of the educational opportunities furnished to the people of Porto Rico, Alaska, the Philippine Islands, and Cuba. The race question has reached Alaska: Nome and other towns refuse to allow Indian or Eskimo children in the public schools. An interesting résumé is given of the training of feeble-minded children. Among a number of papers on subjects more or less allied to education, we note reports on the Reindeer in Alaska, Religion in Alaska, and an instructive group of tables upon illiteracy.

The annual reports of State Boards of Health are a form of public documents to which one seldom turns for steady reading, but from which one may cull many facts of general interest. The Massachusetts Board ranks high among its fellows, and its report for 1902, lately issued, contains more items deserving publicity than can be here noted. During the smallpox epidemic of 1901-02 the old custom of quarantining the inmates of a house from which a case of this disease had been removed, was given up: disinfection was employed instead, and the inmates of the house were then, after vaccination, allowed to go free. In the eighteenth century, deaths from smallpox, as well as from measles and scarlet fever, occurred chiefly with children under five years of age; since the introduction of vaccination the death-rate from smallpox has decreased, but more than half of the deaths in a thousand from this disease now occur after the fifteenth year, and this indicates that vaccination in childhood is not sufficient. A diagram is introduced to show that, during the past fifty years, the death-rate from pneumonia, cancer, and diseases of the kidneys, heart, and brain has risen from under three to nearly seven in 1,000; while the rate for other diseases has fallen from over eight to under five. It is noted that the diseases of decreasing death-rate are chiefly of the young; hence the lives thus saved are more valuable than the lives lost. A special diagram is given for the death-rate from consumption from four in 1,000 in 1850 to under two in 1900; but this is for "deaths in Massachusetts." No account seems to be taken of the increasing resort by consumptives in recent years to drier climates, where not all of them recover.

Cotton naturally takes the leading place in the Consular Reports for February. There are given statistics of the world's consumption and production, facts in regard to the condition of the industry in various countries, and a summary of the efforts made in the British colonies and dependencies to promote cultivation. An interesting account of the manufacture of lace in France closes with the statement that the Government, recognizing its importance, has provided for instruction in making lace by hand in the public and normal schools of those departments where the industry now exists. A report upon the commerce of Colon and Panama includes a detailed statement of the passenger and freight business of the railroad for the years 1901 and 1902. The Daily Consular Report for February 15 contains a striking description of Harbin, the centre of the Mantchurian railway administration, and "one of the greatest achievements in city construction that the world has ever witnessed." It has a population of 60,000, exclusive of soldiers, the growth of a little over four years. Intended primarily as a Government centre, it has become a commercial and manufacturing city, and is called the Moscow of Asia. The leading industry is the manufacture of flour. The public buildings alone have cost the Government upwards of $15,000,000.

"The Republic of Panama," a paper by the Hon. William H. Burr, is the principal feature of the *National Geographic Magazine* for February. A brief sketch of the republic's history and resources, with

some account of the various canal projects, beginning with the survey ordered by Charles V. in 1520, introduces a description of the plans recommended by the Isthmian Canal Commission, of which the author is a member. Other articles relate to the Eighth International Geographic Congress to be held in Washington next September and the Philippine weather service. Among the illustrations of the number is a remarkable photograph of an abandoned colony of flamingo nests in the Bahama Islands. Each of the 2,000 nests "is about 18 inches in diameter and 12 inches high, and is made up of mud which the bird scoops up from the bottom. In the bowl at the top of this adobe dwelling the female lays a single white egg. Of the period of incubation, condition of the young at birth, manner of feeding, etc., practically nothing is known." Formerly flamingoes were quite common on our Southern coast, but only one flock is now known to inhabit the United States, and its nesting-grounds have not yet been discovered, though they are somewhere in the vicinity of Cape Sable, Florida.

Our new commercial treaty with China, it is pointed out in a circular from the Copyright Office, contains three articles relating to Trademarks, Patents, and Copyright.

The fifth Italian Geographical Congress is to be held in Naples in the first half of April, beginning on the 6th. Membership is granted by the executive committee for a fee of ten lire, which entitles the payer to the volume of proceedings. The president of the committee is the Deputy Francesco Spirito, and its headquarters are near the Chamber of Commerce.

The pioneers in the field of comparative literature, it would seem, die young. The brilliant Joseph Texte, who held the chair of comparative literature at the University of Lyons, died a few years ago in the full maturity of his powers, just as a chair was being created for him at the Sorbonne. News has now reached this country of the death of another pioneer, Dr. Louis P. Betz, professor of comparative literature at the University of Zurich. The services rendered by Professor Betz to this newly organized department of research were many. His invaluable bibliography, 'La Littérature Comparée,' published four years ago with an introduction by M. Texte, called attention to the full accomplishment of the study up to that time, and a second edition, with many additions and corrections, is now, we understand, in the press of Trübner at Strassburg. American scholars were perhaps especially interested in his recent 'Studien zur vergleichenden Litteraturgeschichte der modernen Zeit,' which contained an important study of Poe's influence abroad. For several years Professor Betz edited a separate department of the *Litterarische Echo* of Leipzig, devoted to the increasing number of contemporary monographs and studies in comparative literature.

—The first double number for 1904 of the *Zentralblatt* (formerly *Centralblatt*) *für Bibliothekswesen* has just appeared, and calls for special mention on account of the change in management. Dr. Otto Hartwig, who has been editor since the journal was established twenty years ago, relinquished the editorship with the last number for 1903, and in a prefatory note the new editor, Dr. Paul Schwenke, "Abteilungsdirektor" at the Royal Library in Berlin, expresses the hope that his predecessor may long enjoy his *otium cum dignitate*, and that the journal may often receive contributions from his pen. After this, it is pathetic to read, on the last page of the same number, that, shortly before it went to press, on the 22d of December, Dr. Hartwig breathed his last. The change of editors has entailed some changes in the appearance of the journal, but nothing that had not already been contemplated by Dr. Hartwig. The only really important change is that the alphabetically arranged monthly lists of currently issued books on libraries, bibliography, printing, etc., will be enlarged in scope so as to cover both books and articles in periodicals. The titles will now be grouped according to a rather broad classification; at the end of the year they will be collected so as to form an annual bibliography, in realization of the plan for a 'Jahresbericht für das Bibliotheks- und Buchwesen' which Dr. Schwenke outlined a couple of years ago in a paper which he read before the "Verein deutscher Bibliothekare." Other changes are merely external; none in the programme is contemplated. The editor states expressly that "it will still be the aim of the journal to combine with the furtherance of the practical interests of libraries and the library profession that scientific spirit without which neither our large libraries nor their officers can exist, and which the journal has had to thank for the interest manifested towards it outside of professional circles."

—The number in hand is devoted to the proceedings of the conference of the above mentioned Verein in Halle, October 5 and 6, 1903. Among the papers read we may call attention to those on the "Preparation for Librarianship." While the writers of these papers, Drs. Gerhard of Halle and Schnorr von Carolsfeld of Munich, as well as the participants in the following discussion were at variance in some details of greater or less importance, there was no doubt in anybody's mind that mere technical training will make subordinate clerks, but not librarians. The existence of different grades of library workers was regarded as self-evident and the need of adequate training for the lower grades pointed out, but it was emphasized on all sides that those who aspire to enter the higher grade must have some scientific specialty besides the ordinary "Brotstudien" of library economy and bibliography. The librarian will come in contact with scholars and students, and must be able not merely to appreciate scholarship in general, but to understand the problems that meet the scientific investigator; and, in order to do this, he must be an investigator himself. "We do not want any pattern-made librarians," says Dr. Gerhard. "In the interest of our libraries we demand that their officers shall represent various branches of knowledge, and so mutually supplement each others' specialties." The chief bone of contention was the question whether the special bibliographical instruction required should be offered at universities, under professors, or in large libraries, under the guidance of active librarians. Says Dr. Schnorr von Carolsfeld: "A professorship of library economy is not sufficient for our wants. The training must be given in closest connection with the practice, in the rooms of a large library which can offer necessary material to animate and illustrate the instruction." In an outline of the subjects to be studied, he enumerates the various branches of bibliographical science, library administration in general, and the administration of the national library, and lastly linguistics. He points strongly to the necessity of the librarian being somewhat familiar with all languages that have a literature, so that he can find his way through title-pages and prefaces. Other papers of general interest are those on the "Organization of Popular Reading Rooms" and on "The Bibliography of Current Literature." There is also an appreciative paper on "The Printed Catalogue Cards of the Library of Congress."

—Mr. Falconer Madan has compiled a delightful supplement to Mr. Horace Hart's memorable 'Notes on a Century of Typography at the University Press, Oxford, 1693-1794,' which appeared four years ago. His field is more extensive, however, for he offers 'A Chart of *Oxford* Printing, "1468"-1900, with Notes and Illustrations' (Oxford: The University Press; New York: Henry Frowde). Still, the output other than that of the University Press did not exceed 5 per cent. of the town's total until about 1800, or 20 per cent. in the nineteenth century. The illustrations are notable: facsimiles of the first page of the first book printed at Oxford, with a disputable date (1468 for the more probable 1478); of the first page of the first book printed at Oxford at the Second Press (1517); of the first piece—a broadside—issued from Joseph Barnes's press (1584-5), which was started in 1585 on a loan of £100 from the University, and was the small beginning of the University Press; of the first page of the first book printed at the Sheldonian Theatre (1669); of the first page printed at the Clarendon Printing-House (1713); of the first page printed at the Clarendon Press (1830, a Greek New Testament)—besides cuts of the several printing-houses. Last of all is the analytic chart of production, exhibiting the theological and classical proportions by plottings in red and green, in comparison with a black zigzag for the yearly totals. The great upheaval of the black and red lines during 1840-42 "was directly due to the Tractarian movement, with its accompanying deluge of pamphlets." The text consists of brief annals of the various presses, with indications of the rarity of the incunabula. The so-called Second Press eschewed theology altogether. The privilege of printing Bibles was first granted in the royal charter of 1635-6; but there were long struggles with the London Stationers and King's Printers before the Bible Press began (in 1675). Meantime, in 1665, the oldest existing English newspaper started as the *Oxford Gazette*. The first Printer to the University ("Architypographus") was Samuel Clarke, M.A.; the antiquary Thomas Hearne stands fifth on the list, for a few months only; the last is the present genial controller, Horace Hart, to whom Mr. Madan dedicates his volume in graceful Latin.

—A great variety of curious statistics is added about the several habitations of the Press; the dates of acquisition or employment of unusual type; the first stereo-

typing; the advent of Oxford India paper; the union of the Bible and Learned Presses under Mr. Hart's management; the diversity of the University imprints; the perpetual copyright in Clarendon's 'Rebellion'; the beginning in 1882 of the 'New English Dictionary,' "estimated to make 13,000 [quarto] pages in ten volumes"; the list of Oxford printers and publishers. Here will be found the story of the Clarendon Press Keepsakes, begun in 1640, in honor of distinguished visitors, and lately illustrated (as our readers know) in the case of our ambassador, Mr. Choate. A section on the Oxford Almanacks, continuous from 1674 to the present day, save for 1675, is of much interest, and the first almanac, reduced, serves as frontispiece. Oxford, in 1783, was granted £500 a year for the loss of her monopoly in almanacs. Then there is the 'Corpus Statutorum' issued in 1634, and "still going on, the Addenda having at present (1903) reached p. 1084"—"a rare example of a book (not a periodical or serial) continuing for 135 years, 'necdum finitus.'" In 1877 the Caxton Memorial Bible was printed and bound within twelve hours, the binding being done in London, too. An American, the late Henry Stevens, suggested this feat, and Mr. Henry Frowde carried it out. Mr. Madan's 'Chart," we regret to add, is not for sale, and the presentation copies number but 100.

—When the proposal to substitute French or German for the rudiments of Greek still compulsorily exacted in "Responsions" from every candidate for the Oxford B.A. was defeated in 1902 by a small majority in Congregation (the vote against it numbering 189, that in its favor 166), notice was given of a more limited proposal against compulsory Greek. This has now taken effect. On February 9 Congregation discussed four resolutions, of which the first two respectively specify for exemption from compulsory Greek (1) candidates in the Honours School of Natural Sciences; (2) candidates in the Honours School of Mathematics. The third resolution abrogates for such exempted candidates the requirement of a knowledge of Greek in the still compulsory examination in Holy Scripture, substituting for it a larger acquaintance with the subject-matter of Holy Scripture; and the fourth resolution provides for the exempted candidates, as a substitute for Greek, (*a*) a mathematical or a scientific subject, (*b*) either French or German — the examination to comprise translations and composition. The test vote was upon the first resolution, which was carried by a majority of two; *i. e.*, if one of the majority had voted with the minority the result would have been a tie. The votes in favor numbered 164, and those against the resolutions 162, but of course there were many cases of pairing. A committee of twelve was then charged with the task of drafting an examination statute to give effect to the resolutions. Their statute will in time be voted upon by Congregation. If it be carried there, it has still to come before Convocation. This is, as a rule, the merest formality, since only a small number of the 6,000-odd belonging to Convocation who happen to reside in Oxford and therefore are also members of Congregation attend ordinary meetings of Convocation. But the evenly balanced state of opinion in Oxford may lead to an agitation of the Greek question in England at large and bring many non-resident M.A.'s up to Oxford for the final vote. This is not very likely to happen if Cambridge, where the question of compulsory Greek *and Latin* will soon be passed upon, pronounces against compulsory Greek.

—Marcus Dods's 'Forerunners to Dante' (Edinburgh: T. & T. Clark), while it has but little to do with the *altissimo poeta*, will be of interest both to Dante scholars and to the general public. It is really a popular, though scholarly, treatise on comparative eschatology among the nations of Europe, Egypt, and the Holy Land. As the author says: "The present research is not conducted from Dante backwards, but from the infancy of the idea forwards to the master interpreter as a convenient stopping-place and climax." There is no claim to completeness, nor is there any attempt at rigidly scientific classification. The Church Fathers are excluded; even Dionysius the Areopagite finds no place. The author apparently contributes nothing original; but he follows good authorities, and in his selection as in his brief comments he shows both learning and judgment. For the mediæval period he acknowledges special indebtedness to Wright, Delepierre, Ozanam, and Labitte; D'Ancona's 'Precursori di Dante' seems to have escaped him. A short chapter on the Babylonian and Egyptian legends of the dead is followed by a longer exposition of the Greek and Roman versions of the theme; here we find Homer, Pythagoras, Plato, Cicero, Virgil, and Plutarch. The "Descensus Christi" forms a chapter by itself—perhaps the most interesting one to the student of Dante. A discussion of "Apocryphal Literature" comprises both the familiar Christian and the less known Hebrew versions. "Early Christian Legends"—Carpus, Macarius, Brandan—introduce the "Mediæval Legends," which, as is natural, fill a large part of the volume; although there is nothing new in the collection, it is convenient and interesting to have so many stories together. From the very short "Conclusion" we may quote a few passages: "The visions began with simplicity and lack of elaboration, as we might expect, but were soon filled out and enlarged with more or less definite detail. By the time of Christ there are no less than three separate traditions, all of them substantial, which have grown up almost uninfluenced by one another. These may be called the Egyptian, the Classical, and the Hebrew. . . . At the beginning of the Christian era the 'Visit to the Dead' underwent a necessary change. The Jewish version becomes Christianized, the Classical and Egyptian become a mere influence, betraying their presence by occasional touches. It was in the main the Hebrew tradition that lived on." After the first century the author distinguishes "two main streams of literature," the apocryphal apocalypses and the "simple, pious legends" of saints and monks, which "flowed separately for some six hundred years." He emphasizes, furthermore, the striking fact that "in every vision recorded in these pages the joys of heaven are pictured as spiritual, while the pains of hell are invariably physical."

—We imagine it would be safe to say that the Duc de Berry, son of Charles X., is best known through his assassination and its political consequences. He had, however a romance, which lies wholly outside his public career, and dates from the period of his exile in England. The story of his marriage to Amy Brown, the daughter of a Kentish rector, is told by the Comte de Rorc'h-Yantel in a short essay entitled 'Le Premier Mariage du Duc de Berry à Londres' (Paris: Champion). This English girl who caught the Duke's fancy was wholly destitute of artistocratic relations, but possessed, in addition to good looks, much self-command and dignity of character. The singular fact is that neither the Comte d'Artois nor Louis XVIII. protested against the marriage. The bride believed her husband to be a noble, but was not aware of his exalted birth until the Restoration. Needless to say, she was not accorded her rank in the days when the Bourbons were trying to make the most of their return from exile by contracting profitable alliances. Pius VII. kindly annulled the first marriage, and in June, 1816, the Duke was wedded to the Princess Marie-Caroline, one of the Neapolitan Bourbons. Fortunately, the papal brief recognized the legitimacy of his children by the first marriage, and after his assassination his two daughters, besides being raised to the peerage of France, were provided with aristocratic husbands. Their mother lived to the age of ninety-three, and, apart from her divorce, was well treated by the Bourbons. The Comte de Rorc'h-Yantel gives us all the essential facts, with a few documents, and several quotations from Mme. de Gontaut added. While his little essay is readable, it cannot be said that he has mastered the intricacies of English topography or of English proper names.

ANCIENT IRELAND.

A Social History of Ancient Ireland, Treating of the Government, Law, Religion, Arts, Trades, Manners and Customs, etc., of the Ancient Irish People. By P. W. Joyce, LL.D. (Trin. Coll., Dubl.), M.R.I.A. In 2 vols. Longmans, Green & Co. 1903.

The study of the language, literature, history, and civilization of primitive Ireland has of late years attracted a greatly increased attention in England, and to some extent in Germany and France also. The Germans have, since the days of Zeuss, done much for Celtic philology, and a succession of eminent Irish antiquaries and philologists, including Petrie, George Stokes, Crome, Ferguson, O'Donovan, O'Curry, O'Grady, Reeves, Todd, and Whitley Stokes, have thrown a flood of light upon the times before the Anglo-Norman Conquest, where previously ignorant fancy had run riot and sober men had despaired of extracting the truth from credulous or inventive annalists. Early Ireland, it may now be said, has been recovered and brought within the realm of history; and the language is to a considerable extent known as far back as the eighth century, though few (if any) MSS. (except the Celtic glosses in Latin ecclesiastical books) date as far back as that age. This zeal for the study has taken a singular and what may be called a romantic turn in Ireland. The ancient language, which had been so rapidly dying that, ten years ago, men expected it to disappear altogether by the middle of the present century (for it had become confined to the wilder regions of the

west), is now being learned by thousands of Irishmen and Irishwomen both in Ireland and in England, who knew no more of it than they did of Chinese, and is becoming comparatively familiar in parts of Ireland where it had practically died out two or three decades ago. If this impulse, born of the revival of national sentiment, lasts, there seems no reason why the ancient Gaelic should not endure for another century, or as much further as we can now see.

One result of this renewed interest in early Irish history has been the publication of many collections of tales and legends, some of which, by their high imaginative quality, well deserve a high place in the literature of primitive races. Another result is seen in the publication of such books as the present one, which deal with the institutions, customs, and social life of the people in pre-conquest days. Dr. Joyce is well known as a Celtic scholar and antiquarian by his 'Names of Places in Ireland' and other works. He has here attempted the large task of presenting a sort of encyclopædic description of the people as they were before Strongbow's invasion brought them into direct contact with the English, their church into direct contact with Rome, and a part, though for nearly four centuries only a small part, of the country under English rule. The book is strictly practical, and is intended to instruct rather than to entertain the reader. Though copious references to particular incidents recorded by the original Irish authorities are given, there are no digressions into the realm of romance, and no attempt to deck out the simplicity of the description by any literary ornament. A similar treatment of the subject had been essayed many years ago by Eugene O'Curry in his 'Lectures on the Manners and Customs of the Ancient Irish,' an excellent book, which is not superseded by the present, although Dr. Joyce has availed himself judiciously of what O'Curry has collected, and has added much new matter, so that his picture is more complete. He is sensible and sufficiently critical, holding an even course between the credulity of the eighteenth century and the somewhat overstrained skepticism which, in and after the days of Niebuhr, was applied to almost all primitive records. Parallels from the customs of other early peoples are occasionally given, but we could wish that this kind of illustration had been more frequently employed, for it often serves to elucidate some obscure statement or strange usage, and it sometimes enables us better to realize the conditions under which usages are formed.

In the passage, for instance, which describes the satiric poets of Ireland and the immense influence of the libellous verses they composed, reference might well have been made to the severe prescriptions of the early Roman law upon this subject, and to the similar severity of the early Icelandic law. Speaking generally, Dr. Joyce has made less use than might have been wished of the old Norse sagas, which portray the life of a people in many respects unlike the Irish Celts in character, but standing on much the same level of civilization, and during more than two centuries in close relations with them, usually as enemies, but sometimes also as friends, for there were some remarkable family alliances between the Norsemen who had established themselves in Ireland and the native Irish princes. Kormak, the famous Icelandic poet, and Njal, the famous lawyer, who is commemorated in the Njal's Saga, were both sprung from such alliances, and both bore the names of Irish ancestors. And it has indeed been strongly urged by some eminent recent scholars that some of the Icelandic poems collected in the Elder Edda were composed in Ireland and bear marks of Celtic influence. This suggests the remark that Dr. Joyce adheres somewhat too strictly to his purpose to produce a purely descriptive treatise apart from history. He has done well not to attempt a narrative; but he might with advantage have somewhere indicated how important were the changes which must have passed on Ireland from its conversion in the middle of the fifth century A. D. (adopting the ordinary view) down to the Anglo-Norman invasion in the middle of the twelfth. Among these changes the most important were those caused by the Norse and Danish invasions, of which rather more than is here given might well be said, for they did much to break up the fabric of society in Ireland, and threw back its ecclesiastical civilization.

So much darkness has hung over the religion and mythology of the Celtic peoples that one turns with special interest to the treatment of this subject in a book of this comprehensive nature. Dr. Joyce has carefully collected a great many references to the old deities or old idols and to various rites, but we do not derive any clear impression of the faith and worship of the people as a whole. Perhaps there is no more to be known than he gives us. The first missionaries in any heathen country have, until our own days, troubled themselves very little to preserve the records of heathen practices, which indeed they wished to banish as quickly as possible from the minds of their converts. Although many of the heroic tales and other legends had their origin in pagan times, they were not written down till Christianity had made the use of writing tolerably familiar; and when they began to be written, a good deal of the ancient idolatry doubtless dropped out, though there remained plenty of references to the goblins, elves, and other spirits who are not incompatible with Christian belief, and certainly held their place in the belief of many good Christians down till very recent times, if indeed they can be said to have even now departed from the wilder parts of the country. One gets from the materials collected by Dr. Joyce the impression of nothing so definite and positive as the Olympian pantheon of Homer and Hesiod, nothing even so definite as the Scandinavian Æsir headed by Odin, but of a confused mixture of the worship of the great elemental bodies and forces of nature, such as the Sun, Fire, and the Sea or Water, with a probably still more primitive worship of local spirits inhabiting wells, rivers, stones, possibly also mountains and trees. There was, as is usual with peoples in the stage of spirit worship, a vast deal of sorcery; indeed, the so-called druids, of whom we hear as resisting St. Patrick, were probably rather wizards or medicine men than priests in the stricter sense of the term. It need hardly be said that the worship of stones survived in Ireland till far on into the nineteenth century —a few years ago a sacred stone in one of the islands off the coast of Mayo used to have a new woollen robe made for it from time to time—and a sort of worship is rendered to wells to-day in Cornwall and Wales, as well as in Ireland. Whether human sacrifices such as those which Cæsar ascribes to the Gallic worship prevailed in Ireland, seems doubtful. Dr. Joyce rejects the statement in the Dinnsenchus (one of the oldest and most trustworthy authorities) that they were offered, because this statement finds no support in other writings where, if true, it might have been expected. But in these cases the argument from silence is weak against a positive assertion where, as here, there is no special reason for suspecting the good faith of its author.

The account given of the laws of ancient Ireland is comparatively brief, as, indeed, it must needs be, for more than these two bulky volumes would be needed to deal fully with so large a subject; but it is clear and sensible. Dr. Joyce has recognized that although Keating and some other authors have talked of legislation and legislative assemblies, there was no such thing as legislation in our modern sense. The law was custom, preserved at first in the memories of learned Brehons, afterwards in written records, and presented chiefly in the form of records of opinions delivered or decisions given by famous jurists. It is a remarkable evidence of the progress in civilization which these primitive Celts had made, that their legal rules had become not only so numerous, but also so minute, and even subtle, and that the men who possessed legal lore held so high and honored a place in the community as is here described. Indeed, the early Celts seem to have paid a quite exceptional respect to all kinds of intellectual attainment. The Ollamh, or learned man, was the equal of kings. The poet stood at least as high as the Norse Skald, higher than the Greek minstrel as we find him in Homer. His art was one of extraordinary complexity, for the system of versification seems to have been at least as difficult, at least as much governed by intricate rules of alliteration and assonance, as was the system of Scandinavia. Here the resemblance stops, for the character of Celtic poetry and Celtic legend differs widely from that of Scandinavian. It is in a certain sense more imaginative, more dreamy, more suffused with mystery. But it is less forcible, less strenuous, less direct. In these respects the Scandinavian comes nearer to the Greek, though inferior to the Greek as is the Celtic work also, in grace and in fertility of invention. Homer effects by simplicity more than either the Icelanders or the Irish effect by their complexity. When one thinks of the exuberance of poetical talent among the primitive Celts, one cannot help feeling some surprise at the small amount of good poetry which this otherwise gifted race has produced in historical times and under the impulse of the literary movements of the sixteenth and nineteenth centuries. The sixteenth century was, indeed, for Ireland a time of frightful disorder and misery. But since the middle of the eighteenth century Ireland has had her chance, so far as literature, at least, is concerned. She has contributed to the literary roll of fame a large number of eminent names, some of them of the first

rank. But she has not contributed a single poet who stands high even in the second rank. The Welsh, an extremely intelligent people, have not got even so far as the second rank in this sphere of intellectual effort. Scotland stands in productivity much above either Ireland or Wales, but all the best Scottish poets have been Lowlanders, not of Gaelic stock, though perhaps with an admixture of Celtic blood.

We have no space to deal with the interesting illustrations of early Irish civilization which Dr. Joyce draws from the arts and industries of the country, from its music, from the social life and habits of the people. They give the impression of a race which had advanced further in literary culture and in artistic culture than it had done in the capacity for political organization. There may in this respect be a contrast between the primitive Celts and the primitive Teutons, but the subject is one which it would take long to work out. Though he is not always as critical or exact as might be wished in matters belonging to history, his book is a valuable storehouse of facts drawn from the original Irish records; and its value is enhanced by a very full list of authorities and an extremely elaborate index.

RECENT POETRY.

Mr. Theodore Watts-Dunton, whose faculty for far-reaching discrimination has sharpened English criticism with some admirable distinctions, has recently classed poetic moods as of acceptance and of wonder. In the 'Renascence of Wonder' he has written at large of the rise of Romanticism, and, narrowing his vision to the last decade, he has found the fundamental mood of current poetry to be that of acceptance, with a reservation in behalf of the little secondary renascence of wonder to be seen in the work of the Neo-Celtic school. Subject as it is to various modifications, this distinction will be helpful in determining the essential quality of some of the more interesting and significant books of contemporary verse.

In 'After Sunset' (John Lane), Mrs. Rosamund Marriott Watson writes of natural loss, and of the wistfulness of recurrent spring, with something of acceptance, it is true, yet with frequent stirrings of the old joyous or grievous wonder at the World. The former is nowhere more poignantly expressed than in the fine lines beginning a poem occasioned by a blackbird's song:

"Through the melancholy winter sunset
Pale with shores of pearl and seas of amber,
High in air above the silent garden
Floats a song of sweet, of strange denial,
Clear and mellow, insolent with triumph, . . ."

This citation, however, is not in Mrs. Watson's most individual vein. In the majority of her pieces she is more sparing in the use of poetic imagery and diction. Her writing is rarely bookish, though she shows considerable affinity with the German lyric poets. Indeed, her best work suggests theirs in its way of voicing tender sorrow with simple yet haunting grace, as in

THE CHILD ALONE.

They say the night has fallen chill—
But I know naught of mist or rain,
Only of two small hands that still
Beat on the darkness all in vain.

They say the wind blows high and wild
Down the long valleys to the sea;
But I can only hear the child
Who weeps in darkness, wanting me.

Beyond the footfalls in the street,
Above the voices of the bay,
I hear the sound of little feet,
Two little stumbling feet astray.

Oh, loud the autumn wind makes moan,
The desolate wind about my door,
And a little child goes all alone
Who never was alone before.

This is Mrs. Watson's most characteristic note. If there is nothing of orchestral amplitude about it, it is, at any rate, sincere and sweetly attuned.

"A. E.," who is understood to be a Mr. Russell, has, despite the affectation of anonymity, a finely individual faculty for verse. His 'Divine Vision, and Other Poems' (Macmillan) is compact of the filmy mysticism which has already been sufficiently expounded by Mr. Yeats and his followers, and it contains many allusions to the personages of Celtic mythology. Neither the one nor the other, however, has any very close relation to the quality of "A. E.'s" work at its best. In the ostensibly Celtic poems there are many fine flights of dactyls and anapæsts, and some impressions of Celtic landscape as striking as that in the first stanza of "The Voice of the Waters":

"Where the Greyhound River windeth through a loneliness so deep,
Scarce a wild fowl shakes the quiet that the purple bog-lands keep,
Only God exults in silence over fields no man may reap."

But, for the most part, the sense of beauty which informs these propagandist poems is a bit tremulous. There are many lines, like that comparing love to "a pearl-gray dawn," which carry the poetry of wonder a little too far; and though some of the pieces weave a fleeting spell about our mood, there is a lack of outline which keeps them from being quite memorable. The better things in "A. E.'s" book are all his own—brief love poems, full of a kind of quaint and highly intellectual tenderness, which suggests, without imitating, the poetry of the courts of love and of Donne. There is, for example, a poem called "The Burning Glass." From out his lady's spirit a beam passes through "the burning glass of womanhood," and the lover languishes at the focus, enduring all beauty and all desire. At the end he cries:

"Ah, time long must the effort be,
And far the way that I must go
To bring my spirit unto thee,
Behind the glass, within the glow."

Charming as this is in its fanciful quaintness, it fails a little in poetic sincerity. We do not feel our imagination impressed by the human rightness of the similitude. In "Refuge," with which we take leave of "A. E.," this fault is avoided. The symbolism is even more elaborate and complex than before, yet it satisfies the imagination as well as the fancy:

"Twilight, a timid fawn, went glimmering by,
And Night, the dark-blue hunter, followed fast;
Ceaseless pursuit and flight were in the sky,
But the long chase had ceased for us at last.

"We watched together while the driven fawn
Hid in the golden thicket of the day,
We from whose hearts pursuit and flight were gone,
Knew on the hunter's breast her refuge lay."

Mr. G. R. Woodward's 'Poemata' (Longmans) lets us abruptly down from the poetry of wonder to a wholesome "Augustanism." The poems he has collected are experiments in the translation of pithy popular verse, chiefly satirical, from Greek, Latin, French, and German. His method, which is subtle and well-considered, consists in using, so far as possible, homely English phrases, and pointing them with old-time spelling and elisions. In the Greek section this tone rings false, but in rendering poems like the Latin tale of "The Priest and Isengrin the Wolf," the French "Yver, vous n'estes qu'un villain," or the German "Ich bin der Doktor Eisenbart," it is extremely telling. Mr. Woodward likewise gives his verse an engaging academic suggestiveness by his happy knack of prefixing a pointed Early English tag to a translation from the Greek, and a phrase from Latin or French to a German song. It would be a pleasure to quote at length from a book so exemplary in scholarship and taste, but we must content ourselves with this "Recipe for Making Good Epigrams":

Omne epigramma sit instar apis.

Make your epigram in verse,
Witty, pithy, pointed, terse:
Like a bee, a little thing,
Full of honey, armed with sting.

Mr. George Stirling's 'Testimony of the Suns, and Other Poems' (San Francisco: Wood) enters the Parnassian Free-for-all backed by Ambrose Bierce. In the Dedication we are told that from Mr. Bierce's "unquestioned hand" the "splendid weight" of the "solemn laurels" has fallen on Mr. Stirling's brow,

"Beyond a lesser to recall."

For ourselves we might have been so crude as to affirm that Mr. Stirling's "loud symphonious lay" is blown through brass. We might, in our madness, have gone on to say that, despite his ear for the strong line, and his mastery over the chest-tones of verse, his work is largely given over to wordiness; that its meaning is elusive; that it lacks distinction. Fortunately we were warned in time; the amenities may prevail. We present Mr. Stirling's altisonant sonnet on

THE NILE.

Low moaning in the shadows of their might,
I echo all the voices of my dead.
I call until their memory be fled,
Thoth and Osiris sepulchred in night,
High Cheops and the Ramses. In my sight
Arise the ruins of their pomp, stained red
As by eternal sunset. I am led
To where the seas are mystery and light.

Thus ordered stand thy destinies, O Soul!
Thou callest, ere the lesser vision flee,
Thy cherished fled before thee to the goal
Far in the shadows of Eternity.
Thou art drawn down to where Death's thunders roll,
And lost at twilight in a stranger sea.

It happens that the latest piping from Mr. Badger's noisy nest of singing birds is not so shrill as that of other songsters who have been lured from bush to hand. The twoscore brief poems which compose Mr. Hilton R. Greer's 'Sun Gleams and Gossamers' include none which tempts to quotation. The inspiration is slender, and the artistic mediation of it imperfect, yet there are in the earlier lines of several poems some pretty pictures of nature, done with a refreshing actuality of observation. As soon as the poet makes the lyric return from nature to his own mood, the poem goes flat, yet the prelude has been pleasant. Objectively considered, such pieces are naught; but where the tone is so soft and uninsistent, the critical reader will hesitate to push the objective standard. He will prefer to recall with Sidney in Landor that "the most plaintive ditty hath imparted a fuller joy, and of longer duration, to its composer, than the conquest of Persia to the Macedonian."

From such thin reed notes to the "clamorque virum clangorque tubarum" which fill Mr. Thomas Hardy's Napoleonic drama, 'The Dynasts' (Macmillan) is a far cry. 'The Dynasts' is an emprise that makes even Prof.

Shaler's pentalogy of which we lately had to speak seem puny. The present volume is the first of three which will present "the Great Historical Calamity or Clash of Peoples, artificially brought about some hundred years ago," in nineteen acts and one hundred and thirty scenes. In his preface Mr. Hardy affirms his intention to write a closet drama, for closet drama, he is inclined to think, is the ultimate type of all drama, and, indeed, the only one suited to a meditative world which is "older, more invidious, more nervous, more quizzical than it once was." This is a ticklish assumption, and it may be gravely doubted whether a nervous and quizzical world will be anything but regretful that a writer of Mr. Hardy's power should leave a field in which he was acknowledged master to produce a work so uncouth and forbidding as 'The Dynasts.' The question for us is, How far is the performance poetic? The first expedient adopted by Mr. Hardy toward the idealization essential to poetry is the old one of supernatural machinery. He introduces certain Phantom Intelligences, The Ancient Spirit of the Years, The Spirit of the Pities, Spirits Sinister and Ironic, etc. These spirits give utterance to superhumanly pessimistic sentiments in a style quite superhuman. We have, for example, this description of the attitude of the Creative Will, whom Mr. Hardy prefers to style "It":

> "It lends Its heed
> To other worlds, being wearied out with this;
> Wherefore Its mindlessness of earthly woes.
> Some, too, have told at whiles that rightfully
> Its warefulness, Its care, this planet lost
> When in her early growth and crudity
> By bad, mad acts of severance men contrived,
> Working such nescience by their own device."

The expressions of the Phantom Intelligences never have the lyrical melody which has sometimes sufficed to make such utterances convincing; and it may be said categorically that they do not fulfil Mr. Hardy's hope, and cause "that willing suspension of disbelief for the moment which constitutes poetic faith." The mortal characters are little better. The talk in prose of the Wessex peasantry which occurs intermittently throughout the piece has the glamour and tang of literature; but the poetic dialogue in very pedestrian blank verse, wherein we are introduced to the House of Commons, the Council Chamber of Napoleon, or the cockpit of the *Victory*, is interesting chiefly from the weight of the action understood to be passing. Yet, when all has been said, the piece is poetically effective in precisely the way which might have been expected from the impressive intellectuality that has marked the novels of Mr. Hardy, as well as his strong, harsh verse. The means of presenting the action has something of the sublime. The reader is deified by the stage directions into a spectator sitting above the clouds, which unroll first to the one side, then to the other, offering panoramically to his view the great events which are passing on the wide stage of Europe and the adjacent seas. At times, by these stage directions, his gaze is made as intensive as it is extensive, and the result is a vision of the world in which the idealism of Carlyle, the scientific monism of Spencer, and the pessimism of Mr. Hardy queerly, yet effectively, blend. Thus, before Austerlitz, we are told:

> "*The silent insect-creep of the Austrian columns towards the banks of the Inn continues to be seen until the view fades to nebulousness and dissolves.*"

And at the climax of the battle we are granted a "weird seizure" of almost ghastly vividness:

> "*At once, as earlier, a preternatural clearness possesses the atmosphere of the battlefield, in which the scene becomes anatomized and the living masses of humanity transparent. The controlling Immanent Will appears therein as a brainlike network of currents and ejections, twitching, interpenetrating, entangling, and thrusting hither and thither the human forms.*"

This is the kind of quasi-poetic vision which gives 'The Dynasts' unity and—for all its uncouthness—power. It is the poetry of wonder in a larger kind. It is not wonder at the beauty of the rose, or the purity of maidenhood, or even at the mystery of death. It is wonder of the Lucretian sort that Mr. Hardy foreshadowed in a memorable passage in his 'Two on a Tower.' It is the emotion which comes to a man without religious faith when he passes in imagination beyond the flaming ramparts of the world into the bottomless universe of science. How far this impulse will avail toward making Mr. Hardy's completed trilogy a work of art, it is not safe to affirm. From the present portion, however, it seems likely that his lack of control over his medium will keep the work from quite conforming to any conceivable or valid æsthetic standard. It is likely, if completed, to remain one of those pieces of imaginative incunabula which, marking as they do the thought of a moody age, are made in time the basis of better work by better workmen.

The Ideals of the East. By Kakasu Okakura. E. P. Dutton & Co.

There may be other Japanese, and possibly a few aliens, who possess the information which Mr. Okakura has at his finger ends, but we doubt whether any native excels him in penetrative insight and comprehensive vision. It is quite certain that no foreigner has as yet read so clearly the meaning and suggestion of Japanese art, in its complete evolution from the letterless age to this day of the steam printing-press and the advertiser's trumpet blast. Furthermore, those who have seriously attempted to transfer the symbols of Buddhist and other Asiatic thought into the intellectual atmosphere of the Occident will feel like congratulating Mr. Okakura. He has succeeded admirably in expressing in our tongue the conceptions that underlie Asiatic art and poetry. We question the ability of any living foreigner to explore and present sympathetically, with such truth and clearness, force and suggestiveness, the Asian world of art ideas.

The contention of the author, as well as of his friend in Calcutta, Nivedita, who furnishes the introduction, is that

> "Asia, the great Mother, is for ever One. . . . The Himalayas divide only to accentuate two mighty civilizations, the Chinese, with its communism of Confucius, and the Indian, with its individualism of the Vedas. But not even the snowy barrier can interrupt for one moment that broad expanse of love for the Ultimate and Universal which is the common thought-inheritance of every Asiatic race, enabling them to produce all the great religions of the world, and distinguishing them from those maritime peoples of the Mediterranean who love to dwell on the Particular and to search out the means, not the ends, of life."

On this fundamental idea, the founder of the New Hall of Fine Arts (Nippon Bijitsuin) near Tokio, a sort of Japanese Merton Abbey, proceeds to show the range of ideas in the art of Asia, and to demonstrate that the whole culture of Continental Asia converges upon Japan, and finds free, living expression in her art. To him, all Asiatic culture is broadly divisible into Chinese learning and Indian religion. It is not the industrial and ornamental features of his country's art which really forms its characteristic element, but that great life of the Ideal by which it is hardly known as yet in Europe.

We have in Mr. Okakura's work an entirely new reading and interpretation of the history of Eastern Asia, for he shows that it was not the Buddhaizing, but the Indianizing, of the Mongolian mind which was the process actually at work during the centuries after the Christian era. The whole mythology of the East came to Japan, but the islanders, instead of merely imitating or adopting, selected. They assimilated only as they thought proper. To call this long process by the simple name of Buddhism would be like calling the Christianity, say of Germany, by the name of Franciscanism. Japan was Indianized by sea as well as by land, and by way of the south as well as from the north.

The true burden of Japanese art, when studied in its entirety, is the expression in symbol of all Asian culture. In the stream called Buddhism the ethical genius of northern China and the rich imaginativeness of southern Asia were overflowed and united. The doctrinal and missionary evolutions of Buddhism, in its various "vehicles" or forms, within the Japanese archipelago gave rise to the intense pantheism of the Heian period (800-900 A. D.), the emotionalism of the Fujiwara (900-1200), the heroic manliness of the Kamakura (1200-1400), while the greatness of the present, or Meiji, period (1868-) has been accomplished through the revival of pure Shinto, the primitive religion of Yamato or early Japan—that is, Shintoism largely shorn of merely borrowed Buddhistic elements.

But now all lovers of the Orient stand dismayed before the disintegration of taste and ideals which is coming about in consequence of competition with the West. Mr. Okakura's book is a trumpet-blast recalling the Asiatic peoples to the pursuit of those proper ends which have constituted their greatness in the past and are capable of bringing about its restitution. The author's method of procedure is practically to restate the history of Japan, in condensed form, from the point of view of art. In a certain way 'The Ideals of the East' reminds us of Mr. Brooks Adams's 'The New Empire,' having all the suggestiveness and not quite the exaggeration of the American writer's volume. Having been for the best part of his adult lifetime a student of his nation's art-products, especially of those stored in the imperial treasure-houses gathered during a thousand years, and some of them unopened for centuries, Mr. Okakura has, in China and India, made detailed study and comparison with the art of the continent. Analyzing with keen insight the intellectual products of northern and southern China and surveying the primitive art of Japan, he gives the historic, chronological, and philosophic basis of many of those symbols which form the re-

pertory and stock in trade of the artists of the Far East. The dragon, for example, is the symbol of infinity, of endless change, and of the supreme sovereignty; hence, also, of the imperial person. Out of the experiments in alchemy came the wonderful porcelain glazes of China. The search for the elixir of life, the potion of immortality, in the Eastern seas, resulted in one of the first settlements of Asian continentals in Japan.

Re-reading the story of Buddhism in Indian art, our author traces the course of culture eastward, where, in the "Islands Lying at the Break of Day," rose, in the ninth century, a forest of sculpture, a new morning of painting, a glory of temple and shrine on the landscape, and, in palace and monastery, an outburst of literary production. These, through seven periods, each of which is analyzed and described, viz., from 552 A. D. to the present time, have made the true civilization of Japan. With each new wave of culture came fresh fertilizations of the Japanese mind. The lover of Japanese art and history is tempted to liberal quotation, which space will not allow. Suffice it to say that, as an interpretation of Japanese history through art, this book is unique and worthy of the closest study.

The author's belief in the power of Japanese art to hold its own against the onslaught of the West is grounded on Mikadoism. "The wild whirlpool of individualism, seeking ever to make its own stormy will its law, would have dashed the nation to pieces in its seething turmoil had not the solid rock of adamantine loyalty formed its immovable base." He praises the strange tenacity of his race, "nurtured in the shadow of a sovereignty unbroken from its beginning," and he assures us that while Japan borrows the forces of Western civilization, yet "the sad problems of Western society turn us to seek a higher solution in Indian religion and Chinese ethics." It is the mission of Japan, the new Asiatic power, to return to her own past ideals not only, but also to feel and revivify the dormant life of the old Asiatic unity. Mr. Okakura's last word is, "Victory from within, or a mighty death without."

It need only be added by the cold-hearted Western critic that Mr. Okakura is not an historian, but an interpreter of history through art. Entering those undated regions of eternal time, first officially mapped out as to chronology in 1872, in which he places the origin of Japan's imperial dynasty, he is as clueless and helpless as we poor mortals who have to depend on almanacs and calculations. When he talks about things after 552 A. D., at which point written history begins, he is clear, forcible and convincing, speaking as one having authority, and not as the scribes. In those portions of his argument which rest on the idea of political sovereignty "unbroken from eternity," he will be more convincing to Japanese peasants and those "educated" Japanese who, like so many orthodox Christians of to-day, wear blinkers as to certain questions inquiry into which might dispel pleasing and even profitable illusions.

The Oligarchy of Venice. By George B. McClellan. Boston: Houghton, Mifflin & Co. 1904.

The fact that since writing this little book Mr. McClellan has been elected mayor of Greater New York will naturally give it a passing notoriety. Some readers may be drawn to it not so much to discover what Venice was as what Mr. McClellan is; and in this they will not be wholly disappointed, because in his criticism of Venetian events he lets drop here and there opinions which he obviously means to apply to contemporary American politics. In one sense, indeed, his study may be regarded almost as a warning against the doctrine of Imperialism. We shall not criticise the book from the standpoint of Mr. McClellan the politician, but from that of the historical student. What contribution does he make to our knowledge of Venetian history?

At the outset we must declare that he makes very little. His monograph cannot be compared with Mr. Horatio Brown's larger work, nor even with Mr. Brown's epitome printed a year or two ago in the Temple Primers series. The reason is not because Mr. McClellan has chosen a single side of Venetian history, but because he lacks the historian's instinct. He proposes to describe the purely political evolution of the Republic, and he does so in such fashion that often where he is literally correct he is wholly wrong in spirit. He has such a detestation of the very word "oligarchy" as many good persons have of "Tammany." Accordingly, he tries to persuade us that the disasters and final collapse of Venice were caused by the oligarchy. It seems never to have occurred to him that forms of government are not inevitably good or bad; that there have been benevolent despotisms and unworthy democracies; that liberty has thriven under limited monarchies as well as under republics. The point for the historian of Venice to illuminate is how an oligarchy grew up there as the true expression of the nation's ideals and as the best fulfilment of the nation's needs: for the oligarchy was as inevitable in Venice as the leonine characteristics are in the lion, and instead of assuming that it must have been always bad, the duty of the historian should be to show what it actually accomplished. If you lay the blame of the fall of Venice on her oligarchic system, you must in fairness give to that system the credit for the centuries on centuries of Venetian prosperity, splendor, and civilization. But Mr. McClellan does not discriminate. He traces clearly enough the steps by which the governmental organism was perfected; but the reader could hardly guess from his pages how that organism really affected the lives of the Venetians.

Equally serious is Mr. McClellan's dulness of perception of the time element in history. He makes generalizations which may fit a particular period, but are misleading for earlier or later times. As Venice endured eleven hundred years, this defect is peculiarly harmful in her case. For Mr. McClellan it would seem that *once* and *always* are synonyms, and that circumstances do not alter cases. We share his abhorrence of American expansion in the Philippines, but this does not blind us to the fact that the Venetian expansion had different causes and should be judged by its own moral and political results. To condemn Venice for extending her dominion on *terra firma* without stating the reasons which led her to that "folly," is neither historical nor candid. The Chioggian war taught her that unless she controlled the adjacent mainland, on which she chiefly depended for her food supply, she might at any moment be blockaded and starved. That sort of expansion has nothing in common with the American wild-goose chase in the Philippines.

Nor can we agree that the decline and fall of the Republic were directly due to the oligarchy. We perceive that nations and political systems grow old and decay, just as individuals do, and that any system must be expected to wear out after a thousand years. In order to establish a case against the oligarchy, it would be necessary to show that republics and monarchies do not become enfeebled with age, and that great wealth, the reward of centuries of toil and enterprise and thrift, will surely corrupt an oligarchic society, but strengthen the moral fibre of democracies and empires. Mr. McClellan does not sufficiently emphasize the effect of the discovery of America and of the water route to India on the fortunes of Venice. If ever the Fates dealt an irremediable blow to a nation, they dealt it to Venice then. Her geographical position was her destiny, and, after the stream of commerce and civilization flowed away, by no fault of hers, through far-distant channels, she could not draw them back. The change made her obsolete as a world power, just as the introduction of railroads made stage-coaches obsolete.

Instead of inveighing against the oligarchy, an historian should show what the oligarchy did to postpone the inevitable collapse. He should tell how the Signory met and survived the League of Cambray—a feat which no incompetent government and no debased people could have achieved. He should tell how for two hundred years, though sinking into old age, the Republic maintained, for the most part single-handed, a magnificent resistance to the Turks, and how, in spite of her final defeat, she did not desist until the power of the Ottoman was broken forever. Such reminders as these would be more to the purpose than are stale arraignments of oligarchy. Or, it would be better even to show how, if any other form of government could have saved Venice, it could have been organized. No historian has done this—we think that none will; but it offers a pretty problem for historical visionaries.

The greatest pity is, however, that Mr. McClellan's book will temporarily resuscitate the ancient, false view of Venice which reputable historians during the past fifty years have tried to dispel. Since Romanin published his monumental work, fortified by countless documents, there has been no excuse for perpetuating the legend that the Venetians were a narrow, cruel, backward people, semi-barbaric in their love of display, materialistic and shopkeeping in their spirit. By a paradox, the city which was for centuries the best governed, the most humane, and the most sanitary in Europe, is still popularly supposed to have abounded in crimes and judicial outrages, and in unhealthy conditions. Even Mr. McClellan goes out of his way to mention that state prisoners were strangled—as if that form of execution were peculiarly atrocious or were practised only in Venice. The romancer's and the playwright's misconception of Venice, as the abode of *bravi* and of terrible Councillors and Inquisitors,

ought to be outlawed; it has run its course in fiction, and it never represented the historical truth.

A writer in search of melodrama will of course pitch on the few exceptional occurrences in Venetian history, and ignore the genuine national character as expressed throughout a millennium. And if, like Mr. McClellan, he has no historical time-sense, he can easily cause the exceptional to appear as the habitual, and the immense service which Venice rendered to civilization to be forgotten. A single sentence reveals Mr. McClellan's incurable defect as an historian: Venice, he says, "ceased to exist as abruptly as she began." Abruptness is surely the last attribute to be associated with Venice. Founded about 450 A. D., she grew slowly, and only in 1000 became a great power according to the measure of that age; her decline began about 1500, and her last flickering breath was stifled by Napoleon in 1797. To suggest that a state which took more than five hundred years in growing to maturity, and three hundred years in dying, with five centuries of prime between, was *abrupt*, is to misuse language, or to misread history. Had Mr. McClellan ever had a clear idea of what it means for any form of government to outlive the shocks of a thousand years (or of five hundred, if we reckon with him the closing of the Great Council as the date from which the oligarchy predominated), he would have been less ready to decry the Venetian oligarchs; but, even then, he would lack most of the essentials of the historian.

It is so desirable that our public men should be educated, if not scholarly, that we are disposed to welcome every one of them who comes forward as a serious student of history. Hence we regret the more keenly that we have to point out such vital defects in Mr. McClellan's essay. Remembering that England counts among her public leaders historical writers like Mr. Morley, Mr. Bryce, Sir George Trevelyan, and Lord Rosebery, we feel that our American "scholars in politics"—President Roosevelt, Senator Lodge, and Mayor McClellan—have not adequately upheld the literary prestige of America. It may be unpatriotic to say so, but it is the truth.

Mezzotints. By Cyril Davenport, F. S. A. London: Methuen & Co.; New York: G. P. Putnam's Sons. 1903. Large 8vo, pp. xiv., 207.

This volume affords a pleasant indication of a survival of interest in mezzotint engraving (which Sir Joshua Reynolds pronounced the best of all modes of engraving "to express a painter-like feeling"), notwithstanding the remarkable development of mechanical processes which have recently usurped the field formerly occupied by the hand-workers on wood and metal. The vast utility and low cost of the many processes of photo-engraving may justify their present exclusive use for book illustration where exactness is of primary importance. The half-tone print and the process block are certainly better in every way than the average hand-wrought engravings that immediately preceded them. But the noble art of engraving, as a means of original artistic expression, has a character and value as such with which no process work can be compared, and for which such work can never be a satisfactory substitute. The interest in mezzotints appears to have fallen off before the introduction of the mechanical processes, and its revival had its tangible beginning, as this author tells us, in an exhibition of the mezzotint plates of Turner's 'Liber Studiorum,' held by the Burlington Fine Arts Club, in the year 1872, which was followed in 1881, 1886, and 1902 by exhibitions of other works of the most eminent mezzotint engravers.

Mr. Davenport discusses the materials, tools, and processes employed by the mezzotint engraver, the development of mezzotint out of roulette work, the method of prolonging the life of a mezzotint on copper by the process of steeling, the varieties of effect that may be got by manipulation and by tricks in printing, and the care of prints. The process of mezzotint engraving grew out of roulette work, *i. e.*, the use of an instrument devised to lighten the labor of dotting. The method of producing shade by dots instead of lines, or in connection with lines, dates back to the earliest times of metal engraving; but the primitive workman cut his dots one by one with the graver point. In the seventeenth century a small-toothed wheel, fixed at the end of a steel shaft, came into use, and by working this over the plate a great many minute incisions were easily made which, holding the ink, produced in the print a dotted shade. It was soon seen that the whole surface of the plate might be evenly roughened in this way, so as to print a uniform field of shade, and that this roughened surface might be smoothed again in places with a burnisher so as to give the complete light and shade of a shaded design. To further facilitate the roughening process a roulette in the form of a toothed cylinder was devised, so that with such a roulette and a burnisher an elaborate effect of chiaroscuro might be obtained with a minimum of mechanical labor. Work of this kind appears to have been first practised by Von Siegen and Prince Rupert, about the middle of the seventeenth century.

The developed art of mezzotint has a different character, and is wrought with different tools. The roughening process is done with the rocker, a chisel-shaped instrument with a rounded edge and a series of fine channels cut lengthwise on its face. The ridges between the channels form a series of minute teeth on the bevelled edge, so that when rocked over the plate they cut in, and, by repeated rocking, produce a finely granulated surface, with myriads of minute incisions and raised points of burr. The lights are got with a scraper which cuts off the burr, and further smooths the surface to any degree that may be necessary to give the desired amount of light in the print. This perfected manner of mezzotinting appears to have been introduced by Blooteling, a Dutch engraver, who practised his art in England for a time toward the close of the seventeenth century, and gave rise to the remarkable English school of mezzotint engravers. The list of English engravers in mezzotint is a long and an honorable one, beginning with William Sherwin, a follower of Blooteling, and including the names of Earlom, Lucas, and Lupton, who developed the process to its highest point of excellence. But the superiority of the later work to that of the earlier time often consists in little more than greater fineness of the mezzotint ground, giving a velvety depth to the deepest shades, and in superior skill in scraping. The connoisseur is prone to magnify the importance of these mechanical qualities, and Mr. Davenport betrays a tendency to do so. Mezzotint engraving is only a means to an end. In the hands of an artist of ability it is capable of producing very admirable results; but mere skilful rocking and scraping have no value in themselves, and even mechanically imperfect rocking may be no obstacle to the production of a beautiful work of art.

The author discusses (pp. 87-88) the fitness of the process for different classes of subjects, and inclines to the conclusion that it is not well suited to landscape. He gives no reasons for this view, which is clearly without foundation. Mezzotint is suited to any kind of subject in which full chiaroscuro is required; but for all subjects some foundation of etching in connection with it is needed to define forms and accentuate details. In fact, etching and mezzotint are mutually supplementary processes, and to determine the just proportion of each in any given case requires nice artistic judgment.

On page 13 occurs the questionable statement that

"Some art processes help their votaries, some do not. Line engraving helps least of all the methods of engraving upon metal; etching with acid helps most. An unskilled draughtsman can be made to produce an etching with artistic qualities in it. Mezzotinting comes between these two extremes. It is easy to produce a bad mezzotint, but excessively difficult to produce a good one."

It would be better to say that some processes offer fewer mechanical difficulties than others, and are therefore better suited to original artistic expression. Only spurious artistic qualities are possible to an unskilled draughtsman. Accomplished draughtsmanship is a fundamental qualification of the etcher. And to say that it is difficult to produce a good mezzotint is incorrect; mezzotinting is an easy process, and to produce a good mezzotint is easy to an accomplished artist, and impossible to any one else.

The photogravure illustrations fail to represent the original prints truly. In the "Standard-Bearer" by Prince Rupert facing page 68, for instance, the color values are very imperfectly reproduced, and the modelling is more than half lost. The same is true of the Von Huysam, facing page 140; while in the "Inverary Pier" of Turner's 'Liber Studiorum,' facing page 182, every quality of the original is falsified. But the book contains a good deal of interesting and instructive matter, and is handsomely made up.

The Indians of the Painted Desert Region: Hopis, Navahoes, Wallapais, Havasupais. By George Wharton James. Boston: Little, Brown & Co.

This is a beautifully illustrated book; the pictures, all taken from photographs, are strikingly attractive, and very well selected for the text. The author is sensible of this, and also of his ability to do justice to his subject. He writes of himself (p. xx, preface): "To those who know the persistency and conscientiousness of my labors in my chosen field, and the pains I take both

by observation and from the works of authorities to gain accurate knowledge, and my *overwillingness* to acknowledge by pen and voice those to whom I am indebted, it will not be necessary to state that I have endeavored to make this book a standard."

Mr. James certainly writes well. His descriptions of nature are fascinating, only somewhat too flowery for a country where aridity prevails to an extent almost appalling; but this is a matter of individual taste and feeling, and no two pairs of eyes see alike. There is abundant "local color," but the paint is sometimes laid on too thick for reality. Mr. James is evidently in love with the region, and also to a certain extent with its aboriginal inhabitants. But he is also just to the Europeans who first came in contact with them, the Spaniards, which is not always the case in works of the kind. He well says, regarding the causes that led to the bitter hostility of the Navajos towards the Spanish settlers: "And here we have, I believe, one of the additional sources of enmity between the Navaho and the Spaniard. As their wards, the Spanish were in duty bound to care for and protect the pueblos." This statement was, we believe, made years ago, and not as a mere "belief," but with abundant evidence drawn from reliable sources.

There is no lack of personal incident in this entertaining volume, with its narrative of travel and episodes from the author's intercourse with the aborigines of the several tribes mentioned in the title. His personality appears frequently in these tales, but not in too prominent a manner, nor are the stories sensational or marked by exaggeration. They are told agreeably, and fittingly illustrate the country and its inhabitants. True to his profession of "overwillingness" in acknowledging sources from which he drew information, Mr. James appends more than three pages of the "literature" of his theme. He quotes abundantly in his text, but, above all, is careful to give a full list of his own writings. It includes, to all appearances, every newspaper article emanating from his pen, and is consequently of the nature of a timely advertisement of himself and what he calls "his labors in my chosen field." On the whole, he has attained his object, which was "to place in compact form for the general reader reliable accounts of places and peoples in the United States hitherto known only to the explorer and scientist."

Of the four clusters of Western Indians described, the Havasupay, dwelling in Cataract Cañon, are the least known, and the information furnished about them is therefore the more welcome. How much of what he records—of their folklore, for instance—is the result of Mr. James's own investigations is not made quite clear. His description of the practices of the Havasupay shamans offers nothing very new in fact. That their ways "are similar to those of fakirs in all lands and ages" is a very just remark, and incidents almost identical with those he relates on pages 256 and 257 are well known from many parts of the American continent. It remains to Mr. James's credit, however, that he has recorded them in the case of a tribe so little known.

To criticise the author for one or two errors in Spanish words and sentences would be unfair, since he makes no claim to knowledge of the Spanish language. That "tintero" is the proper term and not "tintaro" is self-evident, and also that we should read "desierto pintado" instead of "pintado desierto," as in the preface.

A History of Bethlehem, Pa., 1741-1892. By Joseph Mortimer Levering, Bishop of the Moravian Church. (Issued as a Memorial Volume by the Sesquicentennial Committee of the Moravian Congregation of Bethlehem.) Bethlehem, Pa., 1903. Pp. xvi., 810.

The Moravian Church, or, as it is known in Germany, the Brüderkirche, is the lineal heir of the preaching and work of John Hus. The Ancient Unitas Fratrum, preserved in the "hidden seed," literally in "dens and caves of the earth," driven by persecution emigrated in 1725 from Moravia, and sought refuge on the estates of Count Zinzendorf in Silesia. Here the enthusiastic Count organized the Renewed Unity of the Brethren, and included within it the Moravian exiles. This organization within the State Church of Germany had for its purpose the spread of evangelical teachings, and thus constituted itself a vehicle for missionary effort. In 1740, after having made a vain effort to establish a colony in Georgia, the Count determined to found a mission centre in Pennsylvania. At first, under the leadership of Peter Boehler, the Brethren devoted themselves to the construction and management of a school for negro children that had been planned by Whitefield on his lands in the barony of Nazareth. But as Whitefield and Boehler fell into dispute on doctrinal points, the Brethren withdrew from the scheme and moved ten miles south to the banks of the Lehigh River, where, on lands purchased from William Allen, they erected a log house, half living-room, half stable. On Christmas Eve, in 1741, came Count Zinzendorf, and in the midst of the evening worship, in a burst of his characteristic enthusiasm, he led the little band from the living-room to the stable, singing the hymn of Adam Drese:

> "Nicht Jerusalem, sondern Bethlehem,
> Aus dir kommet, was mir frommet."

And thus the little settlement received its name.

Zinzendorf's plan was to form in Pennsylvania a union of all the numerous bickering religions and sects that were scattered over the State, and then to use the force of this union for the purpose of Christianizing the Indians. He did not wish to absorb all these elements within the Moravian Church (p. 84); but, rather, just as the Moravian Church formed a part of the Unity of the Brethren, so should all the religions and sects of the colony be united, each possessing its measure of identity, for the furtherance of greater effort. Bethlehem was planned as the centre of radiating energy. It became, and that quite naturally, the target for the hot shot of all sorts of opposition. The seven so-called Pennsylvania synods at which the plan was discussed augmented this opposition, but also stimulated individual effort, and when the overenthusiastic, if somewhat hasty and tactless, Count returned to Europe in 1743, his purpose had to some extent been accomplished, though in a fashion that he did not understand.

Zinzendorf's successor and agent in the management of the settlement, Augustus Spangenberg, gradually abandoned the Union idea, and devoted the energies of his people to the conversion of the Indians. The colony was constituted a General Economy of a type quite different from those developed later at Harmony and at Zoar. There was no community of personal funds, for there was no personal investment on the part of the settlers. Rather it was a community of support, since all of the original cost of the undertaking had been paid for with money accumulated in Germany, much of it being actually from Zinzendorf's private means. The aim was to make the most, for the moment, of insufficient funds, and the arrangement was never looked upon as permanent. By it half the workers were constantly available in the mission field, while the remainder maintained the farms and the trades. To save roofs, the various classes or "choirs"—the unmarried men, the unmarried women, the married couples, the children—were accommodated in separate buildings. This segregation remained in force until after 1762, when families were given the opportunity to erect homes for themselves on rented land.

The French war brought trouble for the settlement. Its neighbors distrusted the Moravians as having constant intercourse with the Indians, and it was only through the friendly mediation of Benjamin Franklin that this feeling was prevented from breaking out in an open attack upon the village. As it was, the work of the Brethren suffered severely from Indian raids. In the meantime the former oligarchical government had given place to one less paternal. The village had now, besides its Helpers' Conference, representing the European authority, its *Aufseher Collegium* (Selectmen); and before the end of the Revolution these latter were chosen in open town meeting, not always dominated by the Helpers' Conference. During the Revolution the influence of the oligarchy was exerted to keep the villagers in the position of non-combatants, though few of them were Tories. Here, again, immunity from the suspicions of their neighbors was purchased by the location, within the Brethren's House, of the General Hospital of the Continental Army.

While the village could not be accused of Toryism, the authorities in Europe looked with small favor on the democratic movement in America. Hence, when the war was over, John F. Reichel was sent to choke off the possible entrance of nationalizing forces, and a new close régime was inaugurated. Then for thirty years, until 1817, representation in the Council was by classes, and the Selectmen were identical with the Helpers. But the general era of prosperity that opened with the nineteenth century brought to bear a force from without that no "protection" walls could withstand. Business and society were making demands that had to be met. First, the women rebelled at the wearing of distinctive headgear (p. 617). Then the younger Brethren became unruly and had to be disciplined. Then the more important citizens openly denounced official demagogy, and refused to consider themselves insubordinate when reproved. Finally, the forces from without conquered and the close régime was abandoned. Slowly the last financial connections with the Old World were severed, the ground-rents were satisfied, and the close community of dependent factors became a village of some 500 individuals. It was after 1830 that land was freely sold to any buyer, and it was after 1852 that the

last link in the European chain was severed.

Bishop Levering's book is, perhaps, too bulky by reason of details that have been inserted to satisfy a certain class of local buyers. It contains a large number of half-tones of fair quality, most of them reproductions of old and rare paintings and drawings, and it is well indexed.

BOOKS OF THE WEEK.

NOTABLE BOOKS ISSUED IN FEBRUARY

By the Author of "Elizabeth and Her German Garden," "The Solitary Summer," "The Benefactress," etc., etc. Published February 13. Second Edition. Cloth, $1.50.

The Adventures of Elizabeth in Rügen

"'Elizabeth in Rügen' is well worth the time it takes to read it. Its optimism, its wholesome outlook, its bubbling merriment, its frank joy of living—all are so genuine. It constantly provokes laughter, not by verbal tricks, but by humorous turns of thought."—*The Record-Herald, Chicago.*

"It says a great deal for the genuineness of her humor, the wholesomeness of her feminine philosophy, that this book has for the reader a charm as great as had that in which she first wandered vivaciously into print."
—*The New York Tribune.*

Mr. CYRUS TOWNSEND BRADY'S

new novel

A Little Traitor to the South

is a "war-time comedy with a tragic interlude," of the days when an attempt to torpedo a warship needed vastly more courage than in these days of modern submarines

Illustrated in colors by A. D. Rühn, with decorations by C. E. Hooper. Cloth, 12mo, $1.50.

Mr. EDEN PHILLPOTTS'

new novel

The American Prisoner

A Romance of the West Country.

"Intensely readable . . . perfectly admirable in its elemental humor and racy turns of speech."—*The Spectator* (London).

Third Edition in press. Illustrated, Cloth, 12mo, $1.50.

Mr. ISRAEL ZANGWILL'S

new novel, recently dramatized,

Merely Mary Ann

"is good, deliciously, satisfyingly good," says *Everybody's Magazine;* "to miss it is to miss one of the really worth while books of the year and lose a genuine treat in the reading."

Paper, illustrated with scenes from the play, 50 cents.

By LEWIS O. BRASTOW, D.D.

Professor of Practical Theology, Yale University.

Representative Modern Preachers

Cloth, crown 8vo, $1.50 net. (Postage 13c.)

Careful and critical estimates of different preachers who have been leaders of various schools of preaching during the last century, including such men as Robertson, Beecher, Bushnell and Phillips Brooks.

Mrs. SARA ANDREW SHAFER'S

new novel

The Day Before Yesterday

It is a restful, irresistibly amusing story of child life, with a quiet, happy charm that suggests the fragrance of apple blossoms. It should be saved for a quiet hour when one is in the mood for its subtle understanding, wistful reminiscence, the delicate humor, and still more delicate pathos of its comprehension of the child's point of view. *Cloth, 12mo, $1.50*

Dr. JOHN WILLIAMS STREETER'S

novel out-door book

The Fat of the Land

tells with practical exactness the facts of how in four years he made a run-down farm into a beautiful home and a paying investment.

"It is wonderfully attractive . . . and withal as practical and full of common sense as a balance sheet."—*Brooklyn Eagle.*

Cloth, 12mo, $1.50 net. (Postage, 13c. extra.)

Mr. JACK LONDON'S

latest book in a cheaper edition

The People of the Abyss

"The underworld of London has been pictured many times before . . . But Mr. London alone has made it real and present to us."—*Independent.*

New Edition, cloth, $1.50 net. (Postage, 20c.)

By PAUL H. HANUS

Professor of the History and Art of Teaching, Harvard University.

A Modern School

A book for the general reader interested, as every one must be, in the results of modern education, as well as for the teacher whose direct professional interest is in its methods.

TWO TIMELY BOOKS

The Story of Japan.....$0.65
The Story of China.....$0.60
By R. VAN BERGEN

Apropos of the Russo-Japanese War, books upon the countries of the Far East involved in the conflict now raging possess particular interest for all readers. There are no better books on Japan and China than these. Written by a resident in these countries, they are profusely illustrated from photographs, and give in attractive form a good knowledge of past history and present conditions in the two Empires of the East. From these volumes can be gained an intelligent appreciation of the situation.

If your bookseller cannot supply them, they will be sent direct by the publishers to any address, postpaid, on receipt of price.

AMERICAN BOOK COMPANY

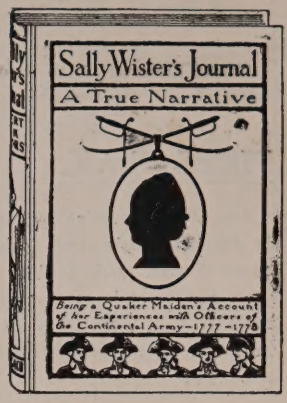
"Sally Wister is one of those charming maidens whose memory has been preserved,—like that of Dorothy Osborne or the Jessamy Bride,—by a fortunate accident. . . . We profess ourselves her devoted servants." THE ATHENÆUM (London).



Sally Wister's Journal
A True Narrative
Being a Quaker Maiden's Account of her Experiences with Officers of the Continental Army—1777-1778

Sally Wister's Journal

although a strictly historical document, is also a romance of unequaled charm. "The Journal has in many respects the attractions of a work of fiction. In fact, we have had considerable difficulty in persuading ourselves that we are not dealing with a wholly imaginative work. It throws many side lights upon the history of the times, giving interesting pictures of the society of the Revolution. . . . It is one of those books that one needs to read in order to get rid of the unreality that is apt to hang about the pages of history," says the Baltimore *Sun*. "A most delicious piece of literature," says the Philadelphia *Inquirer*. "The love-story is very pretty. This little scene has the color of an artist's interior,"—says the Hartford *Courant*.

SALLY WISTER, 16 years old, daughter of Daniel Wister, merchant, of Philadelphia, kept a journal of her experiences during the winter of 1777-1778, while exiled from Philadelphia during its occupation by the British. The family lived with relatives in an old farm house on the Wissahickon, which was occupied at times by various prominent officers of the Continental army. Sally saw much of the officers and heard much of the fighting, and comments on both freely and quaintly. Gen. Smallwood is "tall, portly, well-made: a truly martial air, the behaviour and manners of a gentleman"; Capt. Furnival, "the handsomest face I ever saw, a very fine person"; Captain Finley is "wretched ugly"; Maj. Stoddert, "very reserved" but has "an engaging countenance and address," etc. Later the Major grows much less reserved. Another officer who throws off his reserve is Capt. Alexander Spotswood Dandridge, of Virginia, a relative of Martha Washington. Sally calls him in the Journal "the handsomest man I ever beheld."

For a picture of this period from another standpoint read

"The Quakers in the Revolution"
By Isaac Sharpless, LL. D.

The second part of "A Quaker Experiment in Government."
12mo, cloth, $1.50.

Carefully edited from the original manuscript by Albert Cook Myers, M.L., who has collected a great mass of material elucidating the text, and also many portraits, relics, documents, signatures and pictures relating to characters appearing in the Journal. Beautifully printed on deckel-edge paper, profusely illustrated, and bound in antique style with a cover design by Walter Whitehead. **$2.00 postpaid.**

FERRIS & LEACH, Publishers, Phila.

"The descriptions of people and places are always interesting; and a great deal of valuable information, not easily accessible, is given."—*Independent.*

New York **G. P. PUTNAM'S SONS** *London*

The Nation.

NEW YORK, THURSDAY, MARCH 3, 1904.

The Week.

Have we an Administration shaken in the wind? On Wednesday week there was official announcement that a regiment was to be sent to the Isthmus. That looked splendidly prompt and vigorous. No nonsense; having seized the property, we were to enter at once into possession, and let daylight through any one who objected. But on Friday the news came that so many influential Republicans had gone to the President and warned him against dispatching troops to Panama that he had recalled his orders. Why all this vacillation and timidity? Have the Republican leaders suddenly become a lot of hysterical old ladies that they should thus beg their President not to go hunting for trouble? It looks like a studied effort to put Mr. Roosevelt under bonds to keep the peace during the Presidential campaign at least. That is not a bad thing in itself and as long as it lasts; but how, then, is the popular heart to be fired by the thunder of the captains, and thousands of votes won by parading bands of "Teddy's Terrors"?

It passes us why they should still be talking at Washington of a cloud on our Panama title. The legal question is, to be sure, before the French courts, but, if they do not decide in our favor, it would clearly be another "hold-up." That, of course, the President would endure from no man, be he tiny Don or hulking Mounseer. If France were to block our little game, we should at once set up an independent republic in Savoy, which never did honestly belong to France, anyhow. Furthermore, Secretary Hay would promptly write a note to M. Delcassé ventilating again his pretty doctrine of "inchoate rights." We do not see, therefore, that there is any cause for alarm. Our Panama precedents will give us ample warrant to cheat, oppress, and browbeat in any quarter of the earth where there is anything we want.

In burking the Isle of Pines treaty, the Senate has been about small business. It will be recalled that the Platt amendment left the status of this island contiguous to Cuba to be settled by special treaty. The discovery had been made that it was a pleasant land, containing marble, mineral springs, and abundant timber and fruit. Certain Americans had taken up large land holdings, on the theory that the doubt expressed in the Cuban act meant that the Isle of Pines was to be annexed to the United States Of course, these investors took merely a speculative chance, for the State Department, to its credit be it said, has never countenanced the idea of annexation. In fact, it would be as absurd to put the Isle of Pines out of Cuban jurisdiction as it would be to cede, say, Block Island to a foreign Power. But the American pioneers have had good friends in the Senate. Mr. Penrose of Pennsylvania has quietly had their interests in charge, and the expiry of the treaty under the time limit is largely due to him. The spirit of such an action is more disgusting than the action itself. The Senate does itself only discredit in qualifying its general policy of generosity to Cuba by tardiness at this point. It is like giving an immense quitclaim and then insisting that the beneficiary pay the postage. Of course, Secretary Hay will extend the treaty and give the Senate another chance to mend its diplomatic manners.

The Hague Tribunal has granted the blockading Powers—Germany, England, and Italy—exclusive rights to the 30 per cent. of Venezuelan customs set aside by the peace protocols of February, 1903. At first blush the decision is a disappointment. It seems to encourage the collection of debts by squadrons. It gives the three Powers that blustered in the Caribbean a privileged position, while it makes the Powers with claims as good wait till the quarrelsome creditors are paid. But these considerations should not be unduly urged; for, first, it is a good thing to have so ticklish a matter settled on any terms; and, second, the Hague Tribunal has evidently given a decision not in equity, but in law. By the protocols of February 13, and in spite of Minister Bowen's persistent efforts to the contrary, 30 per cent. of the customs collected at Puerto Cabello and La Guaira was appropriated not to the creditor nations as a whole, but to the blockading allies. The final May protocols made no change in the situation. Accordingly, the Hague Tribunal, acting as a court of law, merely passed on the existence and validity of this contract, not on its equity. It is unfortunate, we believe, that the case could not have been decided on its equity. In that case, we might have expected a very different outcome, and we certainly should have had a judgment on the general morality and expediency of the blockade. There is a lesson in the partial success of the present award: cases should, by common consent, come as wholes before the Hague Tribunal, so that its equity jurisdiction may have unhampered exercise.

The conviction of four of the postal thieves at Wasington on Friday is none the less gratifying because it is somewhat surprising. The attitude of the prosecuting attorney, Holmes Conrad, seemed to foreshadow the acquittal of Samuel B. Groff, but he falls with the other three conspirators. The trial was long and subbornly contested. This particular group of plunderers was headed by August W. Machen, a ringleader in the frauds; they joined in procuring the best counsel to be had; and yet, in spite of all, they are pronounced guilty. The verdict will indubitably help President Roosevelt politically, for, had these rascals escaped, the Democrats would have redoubled their cries that the big fish were breaking through the net. The sucessful outcome of the trial will, of course, strengthen the hands of the prosecution and encourage the hope that George W. Beavers, State Senator George E. Green, and the other chief offenders are not to escape the law.

Teaching history by promoting expositions is a royal road, but expensive. Is it worth $9,600,000 to the Government to have the youth of the country taught the date and details of the Louisiana Purchase? This question has already been settled to the satisfaction of the St. Louis managers, and it seems probable that Oregon will also get some hundreds of thousands of dollars from the general treasury to help impress upon the country next year the fact that a century has passed since Lewis and Clark crossed the Rocky Mountains. Afterwards will come the projected Jamestown Expostion in Virginia and the proposed tri-centenary jubilation over the discovery of the Hudson River. The Buffalo Fair, when the United States was called upon to settle bills amounting to half a million dollars, and the deficit of the Charleston Cotton Exposition are recent enough to suggest that the exposition habit is growing alarmingly. Yet Congress apparently finds it impossible to draw the line, and prefers good-naturedly to stand and deliver. It is just possible that a cheaper way to teach American history might be found; and the Old South historical leaflets could enter the bidding for funds.

Courts always avoid jurisdiction when possible, and it may be that the Supreme Court's refusal, on Tuesday week, to interfere with negro disfranchisement in Alabama was based upon a technicality which might be removed in a later case. Yet only slight hopes can, apparently, now be entertained of judicial relief. The court admitted "the gravity of the statements of the complainant, charging violation of a Consti-

tutional amendment which is a part of the supreme law of the land," but professed itself powerless to grant a remedy —at least, in the case presented. If this attitude of the Court is persisted in—that is, if the Supreme Court cannot expound and apply the supreme law of the land—the only effective resort is to that "political action" to which the opinion of the court refers, as it did in the previous decision in Giles vs. Harris. The injustice is admitted. That discrimination against negro voters exists in Alabama which is illegal even under the State law, is not denied. This cannot go on without leading to the most serious results. If a nation cannot be half free and half slave, neither can it be half a democracy and half an oligarchy.

Maryland Democrats, under Gorman's leadership, are determined to disfranchise every negro in that State, according to dispatches from Annapolis. They have not only adopted in caucus the more stringent of the two proposed amendments to the Constitution, but have made such changes in it as will leave the decision of a citizen's right to vote almost entirely in the hands of a board of partisan registers. Considerable doubt, it is reported, was felt as to the wisdom of that provision which gives no right of appeal, for this is retained even in the sweeping laws of States further South. But in Maryland there has been no disguising the fact that the movement is against the negro as a negro. It is not possible to pretend that he is in a majority, or that white supremacy at the polls is endangered. It is simply a scheme of the Democrats to assure to themselves the control of the State. Not content with this, the Maryland Legislature is now favorably considering two Jim-Crow bills, one of which applies to the entire State and the other merely to the "black-belt" counties. One of their novel features is that there is to be a division of the races on steamers as well as on railroad trains. Any violation of this law will subject the steamboat officials to a fine of not less than $25 and not more than $50 for each offence. All this is sad enough reading for those who believe in equality before the law; but what disturbs and discourages intelligent negroes most of all is the steady refusal of a Republican Supreme Court to take cognizance of the violations of the Federal Constitution in the matter of the suffrage.

Gov. Vardaman of Mississippi would not have the negro educated, but does not want to see him lynched, either. The Governor's energetic and successful efforts on Sunday to rescue with his own hands a negro murderer from the hands of a raging mob are worthy of the highest praise. They will do much to hearten others in resisting this form of savagery. We can well believe that Gov. Vardaman was spurred on to uphold the law, in this case, by the horror of a fiendish lynching which occurred in Mississippi only a few days before. The details, as given in the Vicksburg *Evening Post*, are almost unprintable for atrocity. If they be credible, white men were guilty of revolting torture, upon the persons of a colored man and his wife, which leaves the stories of Indian or Chinese ingenuity in torment far in the rear for devilish cruelty. If this thing cannot be stopped, the whole civilization of the South will fall into the pit.

Mr. Booker Washington has felt compelled to speak out against the renewals of this race barbarism. He writes to a Birmingham paper to point out that the recent burnings and torturings of negroes have been for crimes "not even remotely connected with the abuse of a white woman." That is, the old excuse is more and more proving to be hollow, and what we are seeing is a blood-mania driving people frantic at the sight of black men charged with any offence whatever, or even suspected of it. Where are these inhuman practices leading us? Plainly, as Mr. Washington says, to the destruction of white and black alike. Nor can it be denied that, as he maintains, the barbarous tortures inflicted upon negroes are "more disgraceful and degrading to the people who inflict the punishment than to those who receive it." The latter are, too often, men who have never been lifted above brute passion; but their tormentors have been instructed, have generations of ordered liberty behind them, yet cast every semblance of civilized beings away to join in bloody deeds that would disgrace a red Indian. This is what cuts thinking and humane men to the heart. They see their fellow-citizens in the South, under the horrible delusion that they are defending a superior civilization, really pulling down the whole fabric of our government, and leaving the world aghast at the spectacle of their inhumanity.

At last one Democratic newspaper in Kentucky has had the courage to speak out against the bill to kill Berea College. The Lexington *Herald*, edited by Desha Breckinridge, although not in favor of the co-education of the races on the sacred soil of Kentucky, still contends that, before the Legislature acts, "it ought to send a calm, able, unprejudiced committee to Berea and have a fair, full, just, impartial investigation and examination." The *Herald* then points out that excellent work has been done by Berea, and that its diplomas have always been received as evidence of competency to teach. "Many thousands of dollars," it continues, "have been invested on the faith of the charter and amendments granted by Kentucky and on the higher faith of the justice and charity of her people." The silence of the Kentucky authorities in regard to these gifts, if not their approval of them, the *Herald* believes, "ratified the conduct and maintenance of that institution on the recognized basis of the co-education of the races and the sexes." In conclusion, it asks whether it is "now fair to suddenly and without any real new cause attempt its destruction." The Grayson, Ky., *Tribune*, a Republican paper, is much more outspoken. It declares that the real object "is not so much to destroy the school as it is to bolster up 'the negro domination scarecrow' crowd and make a few votes." Fortunately, the constitutionality of the bill is seriously questioned, and it is likely to meet with greater opposition in the Senate.

Mayor McClellan's approval of the resolution of his Tammany Civil Service Board exempting from the civil-service rules some fifty-three deputy tax commissioners comes as a blow in the face to all who saw in him a second Abram S. Hewitt. Up to this time, those opposed to his election, both in and out of the press, have credited him with a desire to give New York an enlightened government. His sincere efforts to prevent a return of the "red-light" conditions, and to suppress gambling, have been handsomely praised by the newspapers most antagonistic to his candidacy. As a whole, the first two months of his administration have done him great credit. But that is now marred by his approval of an act which has no other motive than to provide more jobs for Tammany's place-hunters. Said Senator Plunkitt recently in a characteristic outburst to an *Evening Post* reporter: "We didn't go in for humbug civil service and all that rot. Tammany is for the spoils system, and when we go in we are goin' to fire every anti-Tammany man from office that can be fired under the law. It's an elastic sort of law, and you bet it will be stretched to the limit." Plainly, the Senator has unusual powers of prophecy, combined with very accurate inside knowledge.

The full report of the New York Commission on the Law's Delays is now for the first time available. It reveals a truly lamentable situation. The judicial statistics which are gathered prove that "the New York Trial Term of the Supreme Court is about three years behindhand." What does that mean? Of course, that thousands of our citizens have to suffer injustice without possible redress. This is especially the fact in mercantile cases. As Mr. Justice Gaynor said in his testimony before the Commission: "A commercial cause cannot live more than

three months; in three years it is as dead as a door nail. It has got to be tried speedily or it never will be tried." Yet this is the great city built up by commerce! In it, as things are to-day, a merchant may not be able to collect a promissory note in five years' time. In Brooklyn the courts are some two years behind; but the denial of justice is nearly as great as in this county. Only contrast this with the state of the case in other large American cities. In Philadelphia a new issue may be reached within six months. A jury case in Chicago may be reached in nine months, and an equity case in three. Baltimore enables a litigant to have his day in court within three to four months, and St. Louis within two to four. It is only in wide-awake and progressive New York that he has to wait three years!

No part of the Commission's report is more important—more truly startling—than its description, fortified by official figures, of the great cost of the existing referee system, and especially of condemnation proceedings. Besides heaping delay upon delay, they pile up expense mountain high. From the Comptroller's report it appears that the city of New York has paid $2,567,373 for real property acquired in the Croton watershed within the past ten years, and paid for the cost of condemnation $1,311,089—that is, 51 per cent. of the total award! This is more than huge extravagance; it is a public scandal. Behind it lies a system of political favoritism, under which fees as high as $40,000 are paid to individual commissioners, really for extending over years work that should be dispatched in a few weeks. To cut up by the roots such unparallelled wastefulness, it is proposed that all condemnation proceedings shall be turned over to the Supreme Court Commissioners named in one of the bills before the Legislature. It is to be their function also to hear all references, to try special cases without a jury by consent of both parties, and to act as English Mastery in Chancery in passing upon all the preliminaries of a case—sham defences, etc.—so as to bring a clear issue quickly to trial. The salaries of twenty of them at $10,000 a year would be but a trifle compared with the enormous sums now paid to referees and condemnation commissioners; while such a body would undoubtedly do much to remove our open reproach.

In appointing Mr. Ismay president of the International Mercantile Marine, or Shipping Trust, the directors have acted wisely. It may not be wholly palatable to those who defended this extravagant combination on the ground of patriotism, that the executive management should be transferred from an American to an Englishman; but the truth is now pretty well recognized that the theory of American control of the ocean through the Stock Exchange was mostly a dream of the stock-inflation period. The official title of the combination fairly states its character; the fleets controlled are international, as they were before the change in ownership, not only because of the ports between which they journey, but by virtue of the flags they fly, the governments to which they owe allegiance, and the crews and officers that man them. There are, in short, both English lines and American lines combined under the auspices of the Mercantile Marine, and it is obviously common sense to pick out for its management the best talent available. Aside from this international aspect of the matter, the selection of the successful head of the subsidiary White Star Line is a fresh illustration of the manner in which the logic of events has defeated the logic of the so-called new finance. It is not so very long since financial markets soberly affirmed that the mere fact of consolidation, on an enormous scale, was enough to ensure industrial success. Experience—a dear school, as usual—has since then been teaching very rapidly that the old commercial virtues which carried to success the enterprises absorbed into the Trusts and holding companies, are equally essential, if indeed not more so, to the management of the combination. The Steel Corporation had to learn this lesson, and it is hardly to be supposed that other creations of the "consolidation era" can continue blind to it.

The recurring Japanese attacks upon the Russian fleet at Port Arthur are plainly in the aim of keeping it in a constant state of alarm and anxiety. A really serious attempt upon it does not seem to have been made since the first one. Brief bombardments lasting fifteen minutes are in no sense anything more than reconnoissances in force. Apparently, there have been three successive appearances of the Japanese in the early morning hours, when the vitality of the besieged is at its lowest. And besieged the Russian fleet is. Any attempt on its part to make for the open sea would quickly demonstrate that the Russian "victories" of which St. Petersburg hears so much are due to the withdrawal of the Japanese after accomplishing their purpose. The latter have effectively "bottled-up" the Russians, even though their attempt to block the channel failed. It is altogether likely, too, that these frequent demonstrations mask the movements of troops and transports. The Japanese army has now been on the move for two weeks. Ten days hence something of its plans and progress should be revealed. Whether its objective is Vladivostok, Harbin, or Port Arthur, it is probable that the movement will display the dash and vigor which have marked all the Japanese military operations since 1895.

By the narrow majority of 51 the Balfour Government escaped censure on the Chinese ordinance for the Transvaal. Here are the conditions of the act: The Chinese laborer indentures himself for three years, at the end of which time he is to be returned to China; during that term he is bound to serve "the master who imports him, or such master to whom the first shall legally assign his rights." The contract laborer is bound to live in established compounds, which he may not leave without special permit "signed by a person authorized by his importer," nor in any case shall such liberty exceed forty-eight hours. Furthermore, any Chinese laborer caught out of his compound is subject to summary arrest, and any one who aids him to escape is subject to punishment. Finally, the contract laborer may not engage in trade, lease land, or do other work than such as his importer or assignee requires of him. This contract would not stand a moment in a civilized country, as between civilized persons; the system is simply, on a large scale, that peonage, sporadic cases of which our Federal courts are suppressing in the South; the transportation of these laborers is the notorious coolie trade, in which for forty years no American vessel has engaged except under peril of Federal seizure and forfeiture. It is an act repugnant to civilization, and especially abhorrent to English ideas of personal liberty.

How, then, has the Government dared impose such an ordinance upon the crown colony against the protest of the Boers, led by Botha, against the voice of Sir Gordon Sprigg, Premier of the Cape, without any other approval than that of Lord Milner's private council? Why, simply in obedience to this imperious necessity: the Rand mines must be worked. "The war was in a certain sense a miners' war," said Mr. Chamberlain, addressing an audience of British colliers; and if it was worth while to spend the blood and treasure of the late war for the mines, to sacrifice a little English principle, to introduce a qualified slavery, are now very small matters. For this purpose of working the mines, the Government, as a Liberal member pointedly said, will fill the Rand with "convict settlements, mitigated by the chance of forty-eight hours' tickets of leave." "We must underpin a temporary structure," said the Colonial Secretary. This was his main argument, and beside it descriptions of the beautiful home life in the compounds and professions of good faith in recruiting coolies in the Far East rung painfully hollow.

A HEDGING STRENUOSITY.

President Roosevelt is just now the most extensively explained man extant. Friend after friend of his rises up to deprecate, to elucidate, to propitiate. He is not the man you think him, they say plaintively. He is the Great Misunderstood. This man who has made publicity the breath of his nostrils, who has written and spoken himself to the dregs, has, it appears, been singularly misjudged by those who have observed him the most closely. Hence the necessity of one confidant and counsellor after another coming forward to enlighten a misled public.

The latest of these is the author of the anonymous pamphlet, 'Mr. Roosevelt and the Presidency,' which is being largely circulated in this city. It is one of those defences which are calculated to make their subjects writhe. The vindication reads so uncommonly like a confession! For example, our pamphleteer writes engagingly of the Panama *coup*, "I confess that I, for one, do not like it. I do not suppose that anybody likes it, *President Roosevelt least of all*." Call you this defending your friends? Then there is such wholesale recognition of distrust of the President, of opposition to him on the part of "scores of the most powerful men in this town." People will seize upon the indiscreet admission, and will forget the lumbering argument that we ought, after all, to "stop the drift of our opinions and feelings towards opposition to him." All these excuses by a friendly hand read amazingly like accusations.

In one sentence the author of this placatory pamphlet puts his finger on the raw. It is where he says that Mr. Roosevelt's "doctrine of the strenuous life is distinctly tiresome." The country is widely echoing the sentiment. People cannot live in a perpetual hurrah. We do not wish to be always "making things hum"; we long for a little time to think things over. It is very obviously the case that the nation has wearied of the President's strenuosity. At first we cheered it, then we smiled at it, finally we are all bored by it. Man shall not live by bounce alone.

Politically, the President's situation at present is not unlike Mr. Blaine's after his nomination in 1884. He had been the great exponent of the brilliant and the aggressive in politics. Especially in foreign relations had it been asserted by his admirers that he would display a bold initiative. He would "make them kings stand round," and fill all Americans with a delirium of joy at the sight of their flag at last respected abroad. But while this reputation did very well as a means of securing the nomination, it was found to be rather a discourager than a compeller of votes. Accordingly, we had throughout that campaign old and trusty friends of Mr. Blaine rising to explain that he was really one of the most cautious and conservative of men, and that, once in the Presidency, he would be a sucking dove.

The same sort of hedging is now going on visibly in President Roosevelt's case. With his nomination assured, he naturally begins to think of the desirability of getting elected, and the process of conciliating opposition is already under way. It mainly takes the form of protesting against the assumption of overstrenuousness. It is all a mistake, we are gravely assured, to suppose that the President is a hasty man. Do not be deceived by appearances. Why, this Hotspur, as you think him, is really a very Cavour for patience and slowly matured plans. It grieves him to have people think that because he has been rash in Panama he will also be rash in San Domingo. Does anybody suppose he dreams of mixing us up in the war in the Orient? Why, it is absurd—especially (as it was hinted in the Senate) since he has found out that his first notion of "showing a strong front" to Russia caused so much alarm.

Two difficulties confront the President's apologists. One is that they are in danger of making his boasted strenuousness of the past only a joke or all a sham; the other, that people will scarcely know what there is left in Mr. Roosevelt if all the qualities they have thought they saw in him are solemnly disowned. The truth is, that the President is embarrassed by his own success; his own acts are the shadows that cling to him still. He is not simply a candidate: he is a man in office, a man who has been tried. Why should he change simply after being elected again? There stand those three years of his record; if you admit that there is much in them to shake confidence, what warrant have you for denying that there will be still more in the next four? That is the great obstacle which the explainers and the soothers have to get over. And, besides, they have to create a satisfactory new Roosevelt in the room of the one they would obliterate. In the seventeenth century King Charles I. propounded an oath requiring acceptance of the government of the Church of England as laid down by "Archbishops, Bishops, Archdeacons, *et cetera*." But the people complained that they did not know what the *et cetera* covered. Similarly, Mr. Roosevelt's character has been impressed upon his countrymen as made up of Boldness, Impetuosity, Strenuosity, *et cetera*. But his apologists are now taking away all except the *et cetera*.

TORPEDOES IN THE EASTERN WAR.

The Japanese successes at Port Arthur are still too vaguely known to permit experts to reach any sound conclusions as to their effect upon the naval warfare of the future. Nevertheless, they already have given an impetus to the construction of torpedo boats of the surface and sub-surface types. In Washington there is reported to be a "general feeling" among naval officers that our own torpedo fleet should be enlarged. What is more significant is the action of the Navy Department in drawing plans for submerged torpedo-tubes in the battleships of the *Virginia* class now building. The omission of this form of armament from these ships called forth energetic protests several months ago from naval officers familiar with the torpedo service.

No officers who have given the subject much attention believe that torpedoes have reached the limit of their development. After hesitating for some years, the British Admiralty finally followed France's example and built a half-dozen submarines, rather in deference to public sentiment than for any other reason. But its experiments with Holland boats have now led it to enter upon a very extensive building programme. Just how many it will add to the nineteen it now possesses has not been revealed. It is significant, however, that it leans rather to the submersible type of boat than to the pure submarine, and it is known that its new craft are no longer to be solely for purposes of defence. In the opinion of the Admiralty, the time has come for the development of the offensive boat capable of leaving harbors and searching for the enemy in his own ports. It is a shrewd guess that its decision was hastened by the French efforts along offensive lines, that nation having recently laid down two 400-ton boats, double the size of any now in existence. Had the Japanese been in possession of some of these craft, they would have been capable of making effective use of them because of the comparative nearness of Port Arthur and other harbors to their own bases.

Failing them, the Japanese were forced to rely upon their surface boats, which they handled so effectively in the war with China. Whether their success was due to their own aggressiveness, their well-known contempt for death, to Russian slackness, or to favorable weather conditions remains to be seen. According to the dispatches, a second torpedo attack in a blinding snowstorm was less fortunate than the dash of February 9. In general, it has been laid down that moderately bad weather favors the attacking force. On the other hand, experiments at Newport have shown that it is more difficult for a battleship to "pick up" torpedo boats with their searchlights on moon-lit than on dark nights. The searchlight remains the chief defence of ships lying at anchor or under way. With the abandonment by the English of the crinoline-like torpedo netting and heavy booms, the only protection from torpedo boats is the strength of hull, the watchfulness of the

crew, the searchlight, and the rapid-fire gun. When squadrons are under way, an additional safeguard is afforded by the presence of torpedo-boat destroyers upon the flanks of each ship. Naval officers freely admit that these "remedies" are inadequate, and that well-handled torpedo boats attacking in force a fleet at sea would be altogether likely to reach their prey.

It is in regard to the question of defence, therefore, that official information about the Japanese achievements will be eagerly awaited. If it is now or subsequently proved that there is practically no safety for a fleet at anchor which has not a swarm of small warcraft about, the value of the cumbersome battleship will be largely decreased. Upon the extent of the damage to hulls and the power of the torpedoes will depend any attempt of naval constructors to strengthen ships against explosions. So far as can be read from the dispatches, none of the Russian ships went down at once, and most of those struck were kept afloat until they could be beached. Our own wooden vessels of the civil war generally went to the bottom like stones when damaged by mines or torpedoes. On February 5, 1895, after two unsuccessful attacks upon the Chinese by sixteen Japanese boats, three Chinese ships sank at once and a fourth went down shortly after.

So far as the torpedo is concerned, the weapon of to-day is far more efficient than that of seven years ago. Lieut.-Commander Lloyd H. Chandler of the United States navy, in a recent lecture before the Naval War College, laid great stress upon advances in the construction and use of automobile torpedoes, and expressed his belief in a coming turbine-engine torpedo of at least forty knots' speed for a run of 800 yards. In a joint attack upon a target in Narragansett Bay, Lieut.-Commander Chandler's fleet of seven boats fired fourteen torpedoes at a distance of 800 yards when steaming at from 20 to 23 knots. One torpedo jammed in the tube, the other thirteen struck between the flags on the target. For this greatly increased accuracy the gyroscope is responsible. It "enables the commanding officer of a torpedo vessel to point his ship at the point he desires to hit, and then, by electric firing, to discharge torpedoes from all tubes in the ship simultaneously, in such a way that they will run parallel to the course of the ship." The old trouble of a torpedo's diving or of its being deflected in firing has been done away with. The only task of the commander is to fire at the point where the enemy, if in motion, should be when the torpedo has finished its run.

Lieut.-Commander Chandler, be it noted, protested earnestly against the abandonment of the submerged tubes in the battleships of the *Virginia* class. Still, it is his opinion that the torpedo will not revolutionize naval warfare or lead to the abolition of certain types of ships. If there is to be such a revolution, it must result from the evolution of the submarine vessel. It is not at all likely that trustworthy news from Port Arthur will upset his belief, however much light it may throw upon the ability of torpedo boats to blockade a fleet and nightly terrorize its crew, while their own heavy ships are left free to roam the seas.

CHAMBERLAIN'S HOLD ON THE MIDLANDS.

The bye-election in South Birmingham seems to show that, in his own city, Mr. Chamberlain is as powerful as ever, whatever may be the case elsewhere. Lord Morpeth, who is an uncompromising supporter of Mr. Chamberlain's protectionist proposals, and was in January defeated at Gateshead, has been returned for South Birmingham as the successor to the late J. Powell Williams by a vote of 5,299 to 2,233 for his free-trade opponent. Before Home Rule split the Liberal party, all the seven divisions of Birmingham were safe Liberal seats. In 1885, the Liberal majority in the constituency which now returns a protectionist by 3,000, was upwards of 1,700.

It is doubtful whether, in a democratic community with a highly organized party system, the influence of a single man has ever been so strikingly exhibited as has been for the last nineteen years that of Mr. Chamberlain in Birmingham and its neighborhood. Until 1885, the Midland metropolis was a centre of aggressive dissenting radicalism. The overwhelming majority of its people were opposed to protection and to the influence of both the landed aristocracy and the Anglican Church. Nowhere was more bad feeling stirred up in the Liberal party by the enactment of Mr. Gladstone's Education Act than in Birmingham and its vicinity. So large was the Radical majority in the three counties of Warwickshire, Worcestershire, and Staffordshire that, in 1885, from their 39 constituencies no less than 31 Liberals were returned to Parliament. In 1886, Mr. Chamberlain and his followers still professed to be Radicals, and to be at one with their Gladstonian colleagues on everything except Home Rule for Ireland. Since that year, however, they have steadily supported the Tory Ministries of the Marquis of Salisbury and of Mr. Balfour. Their leader has himself been a member of a Cabinet which introduced and put through Parliament an Education Act by the side of which Mr. Gladstone's might almost seem to have been drawn by a committee of a dissenting synod.

Instead of all these things, so opposed as they were to all the lifelong prejudices and convictions of the Midland electors, provoking a Liberal reaction, precisely the opposite effect has been produced. The more Tory and reactionary the policy of the Unionist party has become, the stronger it seems to grow in the old-time Radical strongholds of the Midlands. At every general election since 1885, the number of Liberals returned from the three counties above mentioned has diminished, and in 1900 only six were elected where, fifteen years before, thirty-one had been successful. It is easy to understand how Birmingham might in 1886 have voted Unionist as, in 1896, New York city voted Republican. What is puzzling is, that there has been no swing back in the intervening seventeen years. It is as if, after 1896, New York had steadily and enthusiastically supported protection, Federal control of elections, and rigid legislative restriction of the sale of liquor. It is true that in Birmingham the Unionist Liberals have not been, as a rule, called on to vote for old-time Tories for Parliament, but have been given former Liberals as candidates, while the New York Republicans have adopted a much less shrewd policy. Still, the rule, that the Unionist candidates in constituencies with Liberal traditions should be Liberals was generally observed throughout Great Britain.

No such results as those attained in the Midlands followed elsewhere. It is impossible to doubt that Mr. Chamberlain's own personality must have had a great deal to do with what has happened where he has been most immediately in control. His home counties appear to stop at nothing for which he asks. Outside of the Midlands, the Liberals have carried every constituency in which they were successful in 1885, and in which there has been a bye-election since Mr. Chamberlain announced his new policy. In addition, they have gained two seats, namely, at Norwich and in the St. Alban's division of Hertfordshire, in which, in 1885, Conservatives were successful. During the same period there have been three bye-elections for Midland seats. In 1885, every one of these returned a Liberal. At the bye-elections the Unionists carried all three. In the outside constituencies there has been at the bye-elections, as compared with 1885, an average Liberal gain of 323 to a seat. In the three Midland constituencies there has been, on the other hand, an average Unionist gain of 2,319.

REGULATION OF PUBLIC ADVERTISING.

Mr. Charles Mulford Robinson's interesting article, "The Abuses of Public Advertising," in the March *Atlantic*, is virtually a report of the progress of the restrictive movement. Massachusetts and Pennsylvania have passed laws en-

larging the power of the State and requiring public property to be kept clear of posters. Chicago, Buffalo, Rochester, and other cities have limited the size of billboards. San Francisco has prohibited street advertising within the building line. New Hampshire attempts at least to protect her wayside trees against the bill-poster. In New York and New Jersey stringent bills before the Legislature at any rate attest a public interest in the cause. On the other hand, the Associated Bill-Posters of the United States and Canada have become an influential body, and are persistently hostile to all restrictive ordinances, testing them promptly in the courts. Still, all the indications are that the movement is not a fad, but a serious attempt to do away with generally perceived abuses. Mr. Robinson, who is no enemy to advertising *per se*, advises the Bill-Posters' Union to treat with the enemy, lest a worse fate befall.

The fact that advertising is to be restricted, and for æsthetic reasons, might as well be faced by those interested. When Parliament gave the town of Dover special jurisdiction in the matter, and certain monstrous signs on the chalk cliffs were ordered down, there was no pretence that these offending structures were deleterious to the public health or morals. The town authorities simply voted to protect their scenery. Similarly, the Massachusetts law, which the courts have sustained, is not based upon fire risk, sanitation, or any of the grounds usually alleged; but it permits the regulation of advertisements "in or near to or visible from public parks and parkways," simply because that right is "necessary for preserving the objects for which such parks and parkways are established and maintained." This is a clear expression of the principle that advertising is out of place in pleasure-grounds. A natural extension would be the assertion of a like jurisdiction over the immediate surroundings of public buildings and monuments.

We may expect a gradual advance of direct legislation, but Mr. Robinson points out suggestively that indirect means, under the present law, have not been exhausted. The Boston and Albany Railroad, for example, has in many places circumvented the advertisers by planting screening shade trees along its line. On many scenic routes this would be not only perfectly practicable, but excellent business. But the hideous file of "flats" on the Newark meadows could not be reached in this manner. Only restrictive legislation will save those noble stretches of marshland for the pleasure of the public. It is certain, also, that there is greater redress than is supposed in the ordinary law of nuisance. Chicago admits this principle by requiring advertisers in resident blocks to procure the consent of three-quarters of the householders concerned; and since the Massachusetts and English courts have recognized that a nuisance may affect the sense of sight, there is always hope that a suit in damages against offensive advertising would be successful in the courts. For it is certain that a man who advertises, say, "The Whiskey of his Ancestors" in heroic ugliness before your windows, perpetrates only a lesser nuisance than he who establishes a steam piano at your door. But the general easy-goingness stands in the way of this remedy, and probably more is to be expected from public-spirited societies than from individuals.

Merely enforcing the existing laws would do much to mend matters. For example, city ordinance 664 forbids the posting of any medical announcement, whether of physician or remedy; and yet Commissioner Pallas is cheerfully letting out billboards to patent medicines, and a gigantic fisherman with a codfish still remains, from Brooklyn Bridge, the tutelary genius of lower Manhattan. It seems, then, that the Municipal Art Society and similar bodies are doing good service in framing bills and in pointing the eccentricities of benighted public officials. All this keeps the matter in the air, but it is certain also that these societies have a large and promising field in searching the present ordinances and securing their enforcement.

Commissioner Pallas's decision to let out the Public Library fence to bill-posters has brought the whole matter urgently before the city. His predecessor had prevented that use of public property. Now Commissioner Pallas, against the face of many persons whose residences, shops, or offices look out on the Library site, has let the fence out for about one-tenth of its commercial value. All his explanations of this act bear the look of a studied ignorance. As a matter of fact, perfectly explicable and very discreditable reasons for his decision suggest themselves. It is an unpleasing commentary on New York that Pennsylvania absolutely prohibits all advertising on public property, and Boston assumes jurisdiction over all bill-posting within eyeshot of its parks, while we are at the mercy of every ignorant or corruptible commissioner. A certain gratitude is due, however, to Mr. Pallas for giving the young lions of municipal improvement something to sharpen their teeth on.

Even to these, conservatism may be safely commended, for the advertising interests are powerful, and more, perhaps, may be done by educating them than by opposing them. But it is evident that the bill-posters are already on the defensive. This suggests that it is good strategy, first, to clear up outstanding matters before a general advance. It may be that a reconnoisance of the present defences would show that the position of many classes of offenders is so weak that they may be summoned to yield at discretion. We are confident, for example, that the right of traction companies possessing no real estate, but only a right-of-way, to let advertising might profitably be challenged in the courts. Their charters certainly give no such privilege. In London the authorities even stripped the placards from the juggernaut 'busses. There is, in short, pending the great campaign, excellent skirmishing at hand for all champions of advertising reform.

THE CRIME OF BEING A COLLEGE PRESIDENT.

The shortcomings of college presidents have always been a fruitful theme for discussion; the stern moralists of press and pulpit, burning with zeal for education, have never hesitated to point out the faults of our leaders in learning. Such chastisement the presidents themselves doubtless accept with gratitude, realizing that they are miserable sinners, deserving far more punishment than they get. The more recent indictment against them, in a magazine article, accuses them of cowardice about taking the unpopular side of a public question, of truckling to rich patrons, and of pretending that their young prize-fighters are their best students. In the face of such charges it may seem rash to offer any defence, yet something may be said by the devil's advocate in behalf even of the lowest of God's creatures. The pious mind which can find in every part of the cosmic order, in reptiles and in pestilence, some proof of divine benevolence, may trust that college presidents also shall share in the uncovenanted mercies of God. The wretches may, after all, be living up to their best lights.

The first count against them is cowardice. Some must plead guilty at the outset. Others excuse silence in political crises by urging that the burden of daily duties prevents such a mastery of political questions as would warrant them in posing as leaders and throwing the weight of their official positions on one side or the other. As private persons, they have strong convictions; but they hesitate at a step which in public opinion would commit the university in a partisan contest. To be involved in a political fight may seriously damage an educational institution, impair its usefulness in its legitimate field; and the president may therefore think twice before taking the stump, and yet not be exactly a poltroon. But ignoring the extenuating circumstances, we find that college presidents still compare favorably with the damned who suffer in the next circle above them in the inferno—United States Senators. For unhesitating courage, President Hyde of Bowdoin ranks with Senator Hale or Senator Frye; President Tucker of Dartmouth,

with Burnham or Gallinger; Eliot of Harvard and Harris of Amherst, with Hoar and Lodge; Faunce of Brown, with Aldrich or Wetmore; Hadley of Yale, with Platt or Hawley; Butler of Columbia and Schurman of Cornell, with Platt or Depew; Wilson of Princeton, with Dryden or Kean. Indeed, college presidents are not absolutely despicable when set against the most heroic figures in American life—newspaper editors. A detailed comparison here would be easy; but every man can make it for himself, beginning with President Hyde and the editor of the Portland *Argus*, and ending with President Wilson and the Newark *Advertiser*.

The second count is boot-licking for the sake of endowments. But the amount of actual begging which college presidents do is much exaggerated. Some chronic and shameless mendicants there may be, but there are a number of presidents who are neither highwaymen nor toadies. A college president who is reputed to be very successful in raising money lately remarked in private: "There are not half a dozen men to whom I ever said a word suggesting gifts to the university. The corporation has been very anxious to protect its executive from such tasks. The same thing is true of all the older colleges." Men in other callings are forced into much more begging. The average minister has more to do with raising money than the average president ever dreams of. Nearly every pastor in the country faces the financial problem, and has literally to raise his own salary by filling the pews with people who will pay it. More than that, every man who believes in philanthropy is a beggar for some good cause. No one ever condemns the layman who spends and is spent in behalf of our hospitals, settlements, and schools; on the contrary, the efforts of our merchants and bankers to get money from their friends for a noble undertaking are always counted to them for righteousness. People point to the late Gen. S. C. Armstrong, who secured so much for Hampton, as the ideal of a high-souled public benefactor. Booker T. Washington, in his 'Up from Slavery,' testifies that he has "always avoided what the world calls 'begging'." "I think," he says, "that the presentation of facts on a high, dignified plane is all the begging that most rich people care for." He adds that such work has given him an opportunity to meet "the best people in the world." Indubitably, he and the cause of education would have been the losers if he were able to remain shut within the walls of Tuskegee. No, it is not the filthy lucre that contaminates college presidents or other people, but the filthy spirit.

On the last count most of our college presidents can plead not guilty. A few of them may be stunned by the shouting of undergraduates, and a few may imagine that noisy young graduates express the mature views of the alumni; but such misguided men are uncommon. Indeed, our college presidents have, on the whole, offered the sanest and most caustic criticism of athletic excesses. They, if any, are in a position to note the disastrous effects of the craze for intercollegiate games, its inroads upon the true efficiency of a university. When we observe the hysteria of the daily and weekly press on the occasion of a football game between Harvard and Yale, when we listen to the chatter about muscular Christianity in which enthusiastic but short-sighted clergymen indulge, we can always turn to the reports of President Eliot and refresh ourselves with his calm indifference to the shriekings of the mob. He and his fellow-laborers are not yet deserving of utter reprobation.

THE PSYCHOLOGY OF MILITANT JAPAN.

TOKYO, February 3, 1904.

The delay of Japan to strike her menacing antagonist has caused much surprise in Europe and America. Besides the reasons usually assigned, there are others of great weight. If their import were grasped, the surprise would be vastly greater than it is. Two grounds for prompt action by Japan have been made clear. (1.) The relative strength of Japan, as compared with that of Russia, was at its maximum nearly one year ago. The last increment in the "post-bellum programme" was then added to the navy, while the army and the coast defences were as strong then as they are now. Russia has used the interval vastly to increase her strength on land and sea, while Japan was a quiet witness to the preparations of her antagonist. (2.) Armed conflict with Russia seems sooner or later inevitable. This is a logical inference from the growth, the aggressions, and the mode of procedure of Russia. To Japan, it was as clear a year ago as it is now. Japanese policy since 1896 has almost rested on it as a practical axiom.

Two other motives make a strong undercurrent drawing Japan in the same direction. Uncertainty heaps up economic loss for the nation. The extent of these losses cannot be accurately stated, but they are enormous. They are not measured merely by the disorders created since the critical situation began to develop nearly a year ago. For years, economic progress has had to carry the dead weight of a conscious peril. The ominous shadow of a possible conflict with Russia has, since 1896, and especially since 1900, chilled the ardor of initiative and enterprise in the whole nation—who knows how much? The nation has labored like a husbandman who clears the land and plants his vineyard under an impending avalanche. In the cheerful sunlight of the fertile plain, how much more "heart" would there be in his labor!

But, for nearly a year now, much more is lacking in the national labor than the mere element of cheer. There has been a positive and palpable slackening of the pace. Five years ago, the reaction after the war with China had ended, and a powerful economic momentum had been attained. It was only temporarily retarded by the "Boxer" troubles. Just when the momentum had been regained and every other condition seemed to favor increased impetus, Russia's action took a course opposite to that indicated by her professions and specific promises. The political situation transformed the economic conditions. In industry and trade, sluggishness and stagnation appeared. Of all this, the condition of the money market is a sufficient index. Since 1898, banks had paid 6 per cent. to 7 per cent. on current deposits, and were incessantly embarrassed by lack of funds. For the last year they have been embarrassed by a surfeit of funds. Rates of interest were repeatedly lowered, reaching 2 per cent. to 3 per cent. on current account. Each reduction of interest apparently aggravated, instead of relieving, the conditions. Extensive refunding of debts was effected, but vainly has the press urged the people to use the unprecedentedly cheap funds to open new enterprises and to extend the scale of existing operations. The people have been content to let their funds lie in bank or to buy the better securities and *to wait*. The cause being specific and known, economic loss and suspense are strong motives for immediate action.

Beyond all specific reasons why Japan should have promptly entered the lists against Russia, there is a strong general reason, viz., it was an opportunity at hand to gain a prestige which she covets, and which she believes can be gained only by martial victory over a Western Power. The existence and strength of this motive are best explained by a quotation (written several years ago) from Capt. Brinkley, who is perhaps the best authority among foreigners on such subjects:

"No one who should tell the Japanese of to-day that the consideration they have won from the West is due solely to their progress in peaceful arts, would find serious listeners. They themselves held that belief as a working incentive twenty years ago, but experience has dissipated it, and they now know that the world never took any respectful notice of them until they showed themselves capable of winning battles. At first they imagined that they might efface the Oriental stigma by living up to civilized standards; but the success they had attained was scarcely perceptible, when suddenly their victorious war with China seemed to win for them more esteem in half a year than their peaceful industry had won for them in half a century. The perception of that fact upset their estimate of the qualifications necessary for a place in 'the foremost files of time,' and had much to do with the desire they henceforth developed for expanded armaments. . . . Japan has risen to the headship of the Far East. Is that the goal of her ambition? One of her favorite sayings is, 'Better be the tail of an ox than the comb of a cock.' She is now the comb of the Oriental cock. That is not enough. She wants to be the tail of the Occidental ox. How is it to be done? Evidently by following the route that has already led her so far. She can not turn back. Her destiny forces her on, and there is no mistaking the signpost set up by her recent experience. She has been taught that fighting capacity is the only sure passport to European esteem, and she has also been told again and again, is still perpetually told, that her victory over China proved nothing about her competence to stand on the lists of the West. She will complete the proof, or try to complete it. Nothing is more certain, nothing more apparent to all who have watched her closely."

Japan is, therefore, among the nations whose civilization she has espoused, like

the "new" boy who must "prove his mettle" in order to gain standing in his new circle of associates. But it is not malice that prompts the fight. It is coercive sentiment. While war would be welcome to a great part of the nation, the Government has used every honorable means to preserve the peace.

In the face of such motives promptly to accept repeated challenges from Russia, why has Japan waited? Reasons for the delay have appeared in the foreign press, but over against the preceding facts they hang very light in the scale.

(1.) Cowardice is a reason actually alleged by many Russians. Whether they honestly believed it or not, Russians in the extreme Orient have persistently represented to Chinese and Koreans that Japan feared the colossal might of Russia, and hence meekly swallowed her repeated insults. Thus it is credibly reported that Fu Yu-fen, on his return from Port Arthur in December, told Prince Ching that Viceroy Alexieff and his staff officers had shown Fu the Russian fleet and fortifications; that they represented Japan as being helpless in the face of such preparations. The staff officers plainly said that, when Russia flatly rejected the Japanese demands, the Tokyo Government had humbly requested Russia to reconsider her resolution, and that such facts clearly showed that Japan had not the heart to fight. Russians at Port Arthur and Vladivostok even now hold the Japanese—soldiers and citizens, Government and nation—in absolute contempt. Certain it is that Russia long mistook the temper of Japan. But in no other quarter have Japanese patience and forbearance been construed as cowardice.

(2.) More plausible and more general is the belief that Japan fears, not to fight, but the fatal consequences of war. It is said that she sees little to gain through victory, and national greatness—perhaps even national existence—to lose through defeat. Immediate victory must, because of the colossal pressure and inexhaustible reserve of Russia, be followed by ultimate defeat. Immediate defeat must make national calamity in larger or smaller measure quick and sure. If victory can bring only "Dead Sea" fruits, and defeat must make ruin immediate and certain, would it not be wise to avert the conflict and trust to time, to new combinations, to possible disintegration of the Russian Empire, or to possible regeneration of the Chinese Empire, to deliver Japan from the paws of crushing fate? When threatening clouds lower all around, is it not best to follow reason and instinct alike towards the single ray of light? So Japan is picturesquely represented, and she is pitied for her seemingly relentless, grinding fate. But statesmen do not hang issues so heavy on hopes so slight. Daniel might hope for deliverance by miracle, but nations dare not. Japan has the situation to resolve, and she does not wait for a spontaneous solution.

The controlling motive of Japan is, in fact, regard for foreign favor. Her patience and self-restraint are intended to win the approbation, if not the support, of the outside world. She feels, as any Western Power in her place would feel, the pressure of the world for peace. In this, she has been especially susceptible to the influence of Great Britain and the United States—the former her ally, and the latter her traditional friend. But she has felt, in addition, powerful restraints which no Western Power in her place would feel. Her recent entrance into the comity of nations imposes restraints. Japan feels that, in the eyes of the West, she is still on probation. In the zeal of her youth, she was severely chastened. The coalition of three great Powers to clip her wings was a harsh disillusion, but the lesson was well impressed. She will now employ no means, pursue no course, and seek no end that disinterested nations might condemn. In short, the reasons for her self-effacing policy in connection with the "Boxer" complications now operate with magnified force.

Japan, again, will give no food to feed the Western fear of the "Yellow Peril." She recognizes that the crime of her color is still greater than the crime of her youth. She recognizes the existence in the West of a fear that she may teach the yellow race its power, and then lead it to its revenge. She has even seen a recent minister of the French Cabinet conjuring with this satanic wand; and she knows the sensitive superstition of his audience. She cannot afford to give the least ground to justify those fears. The fact of her having twice within ten years fought against China—once alone, once in coalition with Western Powers—did not remove this worst aspect of the "Oriental stigma." She must not, therefore, hasten too ardently to the seeming defence of a yellow race, not even with the express purpose to defend her own vital interests. Better fight more and harder battles later than suffer greater defeat in hastily winning easy ones. To assure this, however, she dare not strike till her conciliatory spirit, her remarkable forbearance, the very moderation of her demands shall have convinced her friends, if not all other nations, that she fights, not for territory, but for life; not for closing markets from the world, but for keeping them open for the world; not for the yellow race, but for the *human* race.

Japan is in a truly hard position. In her own heart she would desire only peace and space to breathe. Yet these are harshly denied her. She has cast her lot irrevocably with the West; yet among Western Powers she still finds herself in the position of a suspect. They distrust her capacity, and they mistrust her of sinister designs. By a strange irony of fate she is goaded to welcome war with a Western Power in order to prove her capacity. Yet she is restrained from accepting a direct challenge or even resenting bad treatment, because it might seem to justify the suspicion of sinister designs. But delay gives time for all to see the vital truth, viz., that the "Yellow Peril" is at most a remote contingency, a mere spectre, to escape which it would be folly to seek refuge under the approaching Russian avalanche.

E. H. VICKERS.

THE WHISTLERS IN EDINBURGH.

LONDON, February 17, 1904.

Edinburgh has been more prompt than Boston in paying a tribute to the memory of Whistler. The Exhibition organized by the Copley Society will open next week—will have opened before my letter can reach New York. But already a collection of Whistlers, as important in quality if not in numbers, has been arranged, and has been on view in the annual Exhibition of the Royal Scottish Academy since the 6th of February. Some account of it must be of interest at the moment when everybody will be going to see the collection in Boston, for one exhibition supplements the other.

Scotland, at least, has of late years done her best to make up for the indifference and contempt with which the entire United Kingdom always treated Whistler, and England—save for the International Society of which he was the president—until the very end. The "Carlyle," as everybody now knows, was bought by Glasgow—the only one of Whistler's pictures in any national or municipal British collection. The Scottish Academy, as everybody may not yet know, made Whistler an honorary member not so very much more than a year ago, while within even a shorter time the honorary degree of LL.D. was conferred upon him by the University of Glasgow. I say nothing of the fact that, long before, Scottish collectors had begun to buy his pictures; for, after all, there were a few English collectors who from almost his earliest period showed the same good sense and who are among the most notable contributors to the present exhibition, though Scottish and English collectors both have recently displayed such a readiness to dispose of their Whistlers, at enormously increased prices, to American buyers that an outcry has been raised in the country that never thought of securing one when it had the chance—and has not yet. However, a few of Whistler's masterpieces still remain in the United Kingdom, and Edinburgh could easily fill the serious gaps in Boston. The "Mother," perhaps the greatest of all, has not been spared from Paris for either exhibition. But the "Carlyle" cannot be overshadowed even by the Luxembourg portrait, and the "Carlyle" has been sent from Glasgow, and there is nothing approaching it in importance in America—though it might be remembered that America could have had it, and that Whisler's portrait of his mother toured the country, vainly seeking a purchaser, for months.

I do not think I ever quite realized before the wonderful beauty of the "Carlyle." In the Glasgow galleries it has always looked, though I was hardly willing to admit it, flat and dingy. It impressed me more a few years since, when it hung at the Guildhall in London, and all the pictures of the modern men who are considered masters in England, including Mr. Sargent, faded into insignificance before it. But it impresses me most now at Edinburgh, where it has been excellently placed in the "Great Room," so there can be no question in my mind that the fault at Glasgow was in the lighting, and not in the picture. Where it is hanging at the Scottish Academy, not only the character in the face, and the pose, the decorative dignity, in the composition, can be seen, but the subtle harmonies that play all through it. Splendid as are many of the other Whistlers shown, I cannot help feeling that among them the "Carlyle" towers.

One of these others is the "Miss Alexander," no less famous, made no less familiar by frequent reproduction; by some people considered the finest portrait of all, excelling even the "Mother" and the "Carlyle." With this I do not find it easy to

agree, for it does not gain by being seen with the other portraits. I do not mean to say it is not fine. It is—one of the finest pictures painted in modern times. But it has not the distinction of the "Carlyle." The figure does not fill the canvas as faultlessly, as inevitably, as that of the old man who sits in the quiet room. Nor do the butterflies, the daisies, the detail of the floor, the cloak on the chair seem to belong as absolutely to the design as the few simple accessories in the "Carlyle." There is the same mastery of paint, the same unerring feeling for beauty, the same refinement; and it may be, too, that the picture would show to better advantage if it were cleaned and varnished. I do not want to be misunderstood. I would not venture to criticise so great a work of the master. It is only that I do not think Whistler, in it, reached quite the same height of perfection as in the "Carlyle." It is said that he had infinite trouble and difficulty with his subject, and so it seems; the little girl looks tired—tired out.

The second "Miss Alexander," which I had never seen before, is also here, gray like the "Carlyle," but, unfortunately, like many pictures left by Whistler—for instance, the beautiful "Tulipe: Rose et Or," now at the International—unfinished. And still another portrait I had never seen before is the "Mrs. Huth," a marvellous arrangement of black against black—and such blacks! Who but Whistler could have created them? The portrait of Irving as Philip II. I do know. But in the Grafton Gallery, where it was last, I believe, publicly exhibited, the light was bad, and half its charm disappeared. I understand, moreover, that the picture has been cleaned since then; certainly, now, one can enjoy not merely the fine swagger of the pose, but the delicate harmony in the color—the black cloak telling so splendidly against the black background—and the amazing way in which the decoration is put in. By the side of Velasquez's Actor, it would hold its own.

These portraits make an extraordinary group, and my regret is that they were not hung together, and their effect thus concentrated. And the Scottish artists who are represented must feel something of the same regret, for though no doubt the intention was to honor them by placing them next to Whistler, they suffer sadly from the compliment. In the comparison, the commonplace of their own vision is exposed, and the coarseness of their methods. Besides these portraits, there are a number of characteristic pictures: the "Valparaiso"—the upright one with the mysterious figures on the great pier (the other, for the moment, can be seen at the International in London); the "Old Battersea Bridge," so fine in tone, and the "Trafalgar Square, Chelsea," all of London in it—the painting that bewildered and misled the poor critic when it was first shown; "The Thames," painted from the same place from which the wonderful lithograph was made, and as wonderful in its way; the blue "Nocturne," one of the loveliest of them all. I should also mention Whistler's small portrait of himself, with the paint-brushes, the work of some thirty years or so ago—proof that he had developed and mastered his methods from the very beginning; several small heads of children; series of the little studies of the sea he was constantly making, giving to the subject a beauty of color no one before him had suspected; the little shops that he always discovered, no matter where he happened to be, inexhaustibly picturesque and suggestive in his eyes, though no other painter had ever looked at them in just the same way. All these are things that Boston cannot have, though the collection there, I suppose, will be much larger.

The water-colors have a no less prominent place; and who could, or can, suggest a great interior, or a quiet little village green, in this medium with such delicacy, such directness, such subtlety? And there are a few of his exquisite pastels as well. While a special point has been made of the etchings, there has been no attempt to get together so comprehensive a collection as that exhibited in the autumn by Messrs. Obach in London, or of seeking the sensation of forgotten plates and unknown states, as was done at the Leicester Gallery. But two of the finest and most characteristic series have been obtained—the work the artist prizes for its beauty, not the experiments which the amateur collects for their rarity. The prints of the Thames set, lent by Mr. Pennell, are unusually fine, and these etchings, almost his first, Whistler never excelled, though he may have equalled them; and, indeed, no more beautiful etchings were ever made by any one, anywhere. The Venice set comes from Windsor Castle; the prints are probably early ones, and therefore very interesting, but they are not as fine as many later impressions I have seen. These two sets are fairly representative of Whistler's work as an etcher; and as long as the collection could not be complete, a better choice could not have been made.

Altogether, the exhibition at the Scottish Academy is one that the student of Whistler's art cannot ignore. It may be that a still more exhaustive show will be arranged later on; but at the present moment, anybody who comes straight from Boston to Edinburgh will have an opportunity to study Whistler that has never been offered before. The show, which he superintended himself, at the Goupil Gallery (London) early in the nineties, had the additional interest of his approval—it represented him as he wanted to be represented; but the two exhibitions now open are wider in their scope and cover a longer period.

N. N.

THE WHISTLER MEMORIAL EXHIBITION.

BOSTON, February 25, 1904.

Whistler has surely come to his own at last, as far as Boston is concerned. At the present moment, besides the memorial exhibition organized by the Copley Society, there are two other Whistler exhibitions open here—an exhibition of reproductions, etc., at the Public Library, and an exhibition of etchings at a dealer's. Every one is talking and thinking of Whistler, and the opening reception of the Copley Society's exhibition was, as a reception, a brilliant success. Everybody who is anybody in Boston, socially or intellectually, seems to have been there, mingled with artists, critics, and connoisseurs from many other cities. Copley Hall was crowded to suffocation for several hours, while the street was blocked with carriages and the lobbies were thronged with arriving and departing guests. Under such conditions, it would have been impossible to see the pictures, even by daylight, and Whistler's work is less fitted than almost any other to be understood or appreciated by the glare of artificial illumination. One postponed consideration of the works which were the occasion of the gathering, and confined one's self to wondering what many of the people there really thought of the artist in whose honor they were assembled, and what that artist himself, could he have been present, would have thought of the manner in which the honor was conferred. One can imagine him delighted at his personal triumph, yet somewhat chagrined at the temporary eclipse of his art, and a little cynical as to the real value of the tribute.

Such memorial exhibitions of the work of a recently dead master, common enough abroad, are rather new in this country, and it may be said at once that the Copley Society has done extremely well. It was fitting that the exhibition should be held in Whistler's native country and native State, for, though he preferred to call himself "of Baltimore," he was actually born in Lowell, and probably more of his work is owned in this country than in any other. Most of this the Society has secured, and it has also borrowed some important and beautiful pictures from abroad. In spite of some inevitable *lacunæ*, the exhibition is thus a large and representative one—almost too large from one point of view. It contains more than eighty paintings in oil, and a hundred or more drawings, watercolors, and pastels, besides eighty etchings, dry-points, and lithographs. The exhibition is the outcome of six years of effort, for the Society was apparently prevented from holding it during Whistler's lifetime only by the artist's fastidious objection to large exhibitions. He preferred to show his works a few at a time, in carefully selected groups and in delicately chosen surroundings, so that each individual picture or etching might have its due of quiet contemplation. Undoubtedly he would have felt that in such an exhibition as this, however carefully arranged, some of the pictures must be sacrificed to others, and would have thought a part, even a small part, better than the whole. From the point of view of the impression to be made on the general public, also, it is doubtful if the exhibition is not too large. It contains many tentative efforts in directions which the artist found to be false routes, and soon abandoned; many works never really completed according to his own standard of completion—insufficient things which had not or should not have left his studio; some things which, though conceived on his own best lines and completed to the measure of his ability at the moment, are yet failures. If some of these things could be eliminated, the exhibition would be finer, and would give a better notion of Whistler's special gifts to a public that may possibly be puzzled and disconcerted by them, and may give them undue weight in estimating the value of his art.

For the serious student, however, these very pictures have a great interest, and such an one cannot wish them away. To know how a given artist attempted this or that before he found what he could do best; how

he attacked his problem, and his methods of beginning a work of art as well as the final result; how he failed as well as how he succeeded—all this is necessary to our understanding of him. For the student, then, the exhibition is none too large, and his only regret is that it could not have been a little larger—that it could not have included certain pictures of special interest from their date or their exceptional importance, such as "At the Piano," the earliest of the specifically Whistlerian Whistlers, the portrait of Carlyle, and that of the artist's mother which the world proclaims his masterpiece, or the "Miss Alexander" which his special admirers generally prefer to it.

If these pictures were, for one or another reason, unobtainable, the Society has yet been able to gather works fairly and worthily representing every phase of Whistler's artistic activity and every epoch of his career, and to display them in a creditable manner; endeavoring to follow, as nearly as possible, Whistler's own ideas of installation and decoration. The oil paintings (all but a few small ones which hang in a screened-off lobby within the entrance) occupy the main gallery, which is large enough to obviate any necessity of crowding the pictures together or of hanging them very high; so that while there is not all the amplitude of spacing which might be desired, there is yet a reasonable border of plain wall surrounding each work. This wall has been covered with a silvery gray grass-cloth, of Japanese origin, and woven with a faint striping or clouding in the color, which makes a very favorable background for most of the pictures, though its faintly violet or pinkish hue contrasts rather too sharply with such of the earlier works as have become, or always were, somewhat yellower or browner in tone than those of a later date. The lower part of the walls is broken with horizontal battens, while at the top, just below the cornice, are spaced certain golden butterflies designed, I believe, by the architect, Mr. Howard Walker, and extremely well designed. With the object of still further breaking the great height of the room, certain bits of bric-à-brac—brass plates and the like—have been placed here and there; and though one may think these unnecessary, they are not very obtrusive. A great white baldachin shades the middle of the room and concentrates the light upon the walls; and, of a bright morning, the lighting is adequate and agreeable. The stage of the hall has been screened off to produce a small room which contains the drawings and lithographs, while the watercolors, pastels, and etchings hang in certain side rooms. These smaller rooms are hung in white and yellow, and the amount of work shown has necessitated some crowding, so that it is more difficult to concentrate attention on particular pieces. Unless one has a great deal of time to spend upon the exhibition, this part of it is likely to leave a somewhat confused impression of mass; but this fault seems to be unavoidable under the circumstances.

Those in charge seem to have committed only one real error. The familiar-looking catalogues bear on their brown covers Whistler's mark, the butterfly, represented with the sting in its tail which he added when he was engaged in critic-baiting; and the same form of signature appeared on the cards of invitation to the reception. Whistler himself never used it on any work of art; and surely, in this memorial exhibition, it is with his art alone that we are concerned. Some day it will be necessary to consider 'The Gentle Art of Making Enemies' for the light it may throw upon the character of its author; but for the present it is as well to forget it.

Though there are inevitable transpositions due to the exigencies of the hanging, there is something like a rough chronological order in the placing of the paintings; the pictures beginning at the left of the door being mostly early work, while those on the right wall are mostly late. After the middle sixties Whistler seldom dated his work, and there are few indications of date in the catalogue. Some help can be got from the varying forms of signature, though not all his important works are signed; some from evidences of style. From such sources and what one can pick up from owners and connoisseurs, one gains a notion of the development of Whistler's style and the stages through which it passed; and, in trying to give an idea of the contents of the exhibition, I shall follow something like the order of production.

There are some schoolboy drawings of Whistler's here, done when he was fifteen or sixteen years of age, which I confess I did not see, and some work, done under instruction at West Point, which has no value save that of curiosity, and shows no special promise. He began the serious study of art in Paris in 1856, and his earliest etchings were done in 1858 and 1859. Of about the same time must be the often reproduced portrait of himself, "Whistler with a Hat," No. 55. It is neither very good nor in any way characteristic of the artist, and is principally interesting because it shows unmistakably the influence of Courbet. Courbet was at that time the great revolutionary force in French painting, and it was his success that caused Gleyre, Whistler's titular master, to retire in disgust from the Salon; so that it is interesting to see that his influence was the first notable one brought to bear on the young artist. This portrait is also important as fixing a date, and as reminding us that Whistler goes back to a time preceding impressionism. He was only a year younger than Manet, and the development of the two artists was, for a time, almost parallel. With the later developments of impressionism Whistler had no sympathy whatever—indeed, his conception of art was radically opposed to that of the impressionists; yet the starting-point of both his art and theirs was the realism of Courbet.

"At the Piano," which I know only in reproduction, is supposed to have been painted about 1860, and its character would seem to have been a presage of Whistler's later style. Not so with the next picture exhibited in Copley Hall, dated 1861, the "Coast of Brittany," No. 42. This is an attempt at plain realism, and not a very successful attempt. It represents a huddle of rocks, all of one heavy brown, amongst which is a poorly drawn and painted figure of a Breton peasant girl; a strip of intensely blue sea beyond; and a rather commonplace and ugly blue sky. Nearly contemporaneous should be the "Interior" of a Breton cottage, No. 49, which is equally without special quality. The next year, 1862, produced three remarkable pictures, "The Blue Wave," "The Building of Westminster Bridge," and the "White Girl," Nos. 54, 34, and 71. "The Blue Wave" is a sort of sequel to the "Coast of Brittany." There is the same intense blue of the sea, the same or a deeper brown in the rocks, a greater vigor and a stronger sense of life and motion. But there is also a charm of beautiful arrangement, and a rich harmoniousness of color which the earlier work entirely lacked. It is already a Whistler, and a fine one, though with stronger oppositions of light and dark and of warm and cold color than his matured taste would have approved. The "Building of Westminster Bridge" appears to me a very great and impressive picture, but one which seems to announce a talent of an altogether different kind from that of Whistler. In subject it is connected with the early etchings of the Thames series, its *motif* being that of intricate line as shown in the timbers of the scaffolding. In painting it is vigorous, direct, and extremely skilful. Its color is warm and conventional, composed mostly of yellowish and brownish grays. But its most notable quality is an imaginative lift—a feeling of the conquering power of humanity over matter. From it one would expect that the painter was to develop into a great landscape painter, partly realistic, partly romantic, not like any one of the French romantic school, but with strong affinity for them all. "The White Girl," on the contrary, is unmistakably Whistler, and Whistler alone—the first of the "Symphonies in White," though that title was not invented until the painting of the "Symphony in White No. 2." It is warmer in color than those which succeeded it, and suffers a little from its present surroundings. It has probably turned a trifle yellow from age, but it must always have had a slightly browner tone than its later companions. Apart from this, it manifests nearly all the characteristics of its author, at least in germ—his hatred of rotundity and aggressive modelling, his love for delicate oppositions as of white on white or black on black, his beauty of spacing and pattern, his grace of line, and his carelessness of, or inability for, constructive drawing. The qualities it has not he never mastered; the qualities it has he refined on more and more, making them more prominent by the deliberate sacrifice of the others. But there is a youthful freshness and charm in this early work which makes one like it better than some more mature and masterly things.

In 1863 Whistler painted "The Thames," No. 70, a singularly dry and uninspiring production, and in 1864 "The Thames in Ice," No. 31, a vigorous sketch which seems to reveal, for once, the influence of Manet. But in these years, from 1860 to 1864, he must have been producing, also, a series of sketches, now belonging to Mr. Freer, which are delicious in themselves, and of extreme interest. They may easily be misunderstood if their date and purpose be not kept in mind. I gather from their present owner that they were hardly considered by Whistler as completed works of art, and that most of them never left his studio until his death. They were experiments, preludings, attempts to master new ideas of arrangement and a new key of color. They hang, all together, near the entrance to the gallery, and are numbered from 19 to 24. The "Venus" has no face

and no arms, and no legs below the knee, but the tone and color of flesh are exquisite. The others are in the nature of sketches of compositions, partly Japanese, partly Greek in inspiration; quite without specific form or detail, but admirably graceful in line and altogether lovely in delicate, clear color. No one that I know of had at that time done anything like them, though they remind one of what the art of Albert Moore was to be.

In 1864 Whistler made an ambitious attempt to carry out on a large scale a scheme of this kind in the "Princesse du Pays de la Porcelaine," which occupies a place of honor at the end of the gallery. The picture has been vastly admired, but does not seem to me successful. For once the painter missed the perfect harmony of color and tone which he sought, while the absence of firm representation is even more conspicuous than usual. The greatest merit in the picture is its grace of sweeping line. A year or two later (the picture once bore a date, but it has been painted out by the artist himself) came the "Little White Girl" or "Symphony in White No. 2" (No. 28 in the catalogue). It is an almost unequivocal success, a trifle edgy in its flatness, but perfect in its harmony of arrangement and of color. The girl's face and figure have been thought to reflect the temporary influence of Rossetti, and certainly they have a kind of beauty not elsewhere visible in Whistler's work. The face in the mirror is not so successful, but the picture is, as a whole, of a refined loveliness of which few artists have been capable. Of nearly the same period must be another delightful picture, Mr. Hecker's "Music Room," No. 15, almost as perfect a piece of art as exists, though it is somewhat enigmatic. One does not quite know what the woman in a black riding-habit is doing, or how the elderly lady at the piano comes to be reflected as she is in the mirror without being visible in the room itself; but one does not greatly care. The richness of the black, the Corot-like quality of the flesh, the ravishing beauty of color, the justness of value, and the wonderful lightness of execution—these are enough.

The next few years were those of Whistler's most abundant production, and in them he struck, in rapid succession, all the notes of his gamut. To the late sixties or the early seventies belong the portrait of his mother, the portrait of Carlyle, the "Miss Alexander," "The Balcony" (No. 37), and "The Ocean" (No. 74), and others betraying the Japanese influence, and the first of the later marines and of the nocturnes. The three great portraits mentioned are not here, but the "Rosa Corder" (No. 25) must be of about their time, and is an admirable picture, far more complete than any other of the portraits here shown. It is an arrangement of black on black, with a single note of brown in the hat which the lady holds in her gloved hand; and the tone is both full and subtile, while the pattern of line is delightful. The head is low in tone and with little modelling, but is finely drawn and beautiful in character. The picture is not only a fine work of art, but a sympathetic portrait.

From the time he was forty or thereabout, there seems to have been a lessened physical vitality in Whistler, and his work becomes less abundant and less complete. We have fewer pictures of a kind which require any sustained effort, his canvases become smaller and his handling grows slighter. He cares less and less for serious study of character in portraiture or for realization in anything, and his art approaches nearer and nearer to what he tried to prove all art should be—a pure matter of the arrangement of tones and lines, with no other meaning than its beauty. It is the time of "harmonies" and "nocturnes" and "notes"—a "symphony" is too ambitious and complicated. His best work in oils, during the last thirty years of his life, seems to have been confined to certain heads and certain sea and river sketches on canvases a foot or two square, or panels of a few inches in dimension—many of them painted at a sitting, others painted and repainted yet left, intentionally or unintentionally, with something of the vagueness of sketches. But if he has eliminated all but a few qualities of painting, he expresses those which he has retained with the greater perfection. If you will be content to ask for nothing but what he gives, he will give you such delicate sensations as you will get from no one else, as delicate as the odor of vanished flowers. I must be content to name a few of these things which seem to me to be among the finest of them, such as "Le Petit Cardinal" (No. 40) and "The Little Rose of Lyme Regis" (No. 43) among the heads; or "Blue and Silver—Trouville" (No. 51), cool and pearly; "Nocturne in Blue and Silver—Cremorne Lights" (No. 56), quite perfect; the nocturne of which the sub-title is "Bognor" (No. 65), and two of "Chelsea Embankment" and "Battersea Reach" (Nos. 61 and 63), which are wonderful suggestions of atmosphere and the mystery of night. Mention should also be made of "The Falling Rocket" (No. 64), which was one of the pictures so unsparingly censured by Ruskin, and of the similar, but somewhat less successful, "Fire Wheel," No. 66.

I shall not attempt, in the tail of this letter, to deal with the lithographs and etchings, nor do I feel particularly competent to do so at any time; but a word must be said of the pastels. They are the last word of slightness—a bit of gray or brown paper, a line of two of crayon and a touch or two of color—a kind of disembodied art, a hint, an insinuation of beauty; but they are so dainty, so graceful, so charming, that one understands the enthusiastic admiration of the true devotee of Whistler, and may even incline to wonder if they are not, perhaps, the best he had to give us. For, after all, Whistler's was a slender and fine talent rather than a great and robust one—a talent of nice discriminations and fastidious choice, of elegance rather than of strength; and his peculiar qualities shine the more clearly when all effort at realization has been abandoned, when the grosser elements of art have been purged away and painting has almost ceased to be representation. It was not for nothing that he chose the butterfly for his emblem, and these are the most butterfly-like of his works, as light and as evanescent—a hover of painted wings, a dip to the choicest flower, and gone again.

NOTICE OF WAR.

TO THE EDITOR OF THE NATION:

SIR: The answer authorities on international law would be most apt to make, in reply to the inquiry of your correspondent "Pacificus" as to "what, or whether any, preliminaries are necessary to a commencement of war," is that no preliminaries are essential. Preliminaries have usually taken one of two forms—that of a formal note presented by one of the belligerents to the other, or that of a manifesto issued by one state announcing to the world that a state of war exists between itself and another State. In the case of the manifesto, no time need elapse before the first blow is struck; in the case of the formal note, the first actual hostile act would serve equally well as notice, inasmuch as it is not the intention to warn the enemy in order that he may have time and opportunity to put himself in a state of defence. We have not yet come to that quixotic stage of development, and the most that can be said of either note or manifesto is, that they are a survival of the mediæval fashion of a fanfare of trumpets and a herald's voice in the opposing court, or, in modern phrase, to put one's self properly on record. There is no thought of giving the other party time to bolster up defences.

The practical futility of the formal declaration is shown in the three modern instances of its adoption. The Crimean war was opened by the observance of every formality; the war of 1870 was begun by a declaration handed to Bismarck by the French *chargé d'affaires*, and the Russo-Turkish war of 1877 by the presentation of a dispatch to the Turkish *chargé* at St. Petersburg, and yet in each case no time was allowed for dissemination of the news before blows fell. In the latter case, Turkish territory had been invaded some months previous to the notice.

William Edward Hall, the eminent English writer upon international law, says, in his treatise on the subject:

"To regard a manifesto as the equivalent of a declaration, is to be satisfied with a fiction, unless it be understood that hostilities are not to commence until after there is a reasonable certainty that authenticated information of its contents has reached the enemy Government. The use of a declaration does not exclude surprise, but it at least provides that notice shall be served an infinitesimal space of time before a blow is struck. A manifesto, apart from the reservation mentioned, is quite consistent with a blow before notice. The truth is that no forms give security against disloyal conduct, and that when no disloyalty occurs, states always sufficiently well know when they stand on the brink of war. Partly for the convenience of the subjects of the state, and partly as a matter of duty towards neutrals, a manifesto or an equivalent notice ought always to be issued when possible, before the commencement of hostilities; but to imagine a duty of giving notice to an enemy is both to think incorrectly and to keep open a door for recrimination in cases, which may sometimes arise, when action, for example on conditional orders to a general or admiral, takes place in such circumstances that a manifesto cannot be previously published."

According to Holtzendorff's 'Handbuch' (1889, v. IV., §§82-4), neither declaration nor manifesto is necessary, though a belligerent ought, it is said, to give notice of some sort if he can do so consistently with his politi-

cal interest and his military aims, and De Martens ('Traité de Droit Int.,' III., 205) considers that neither proclamation nor diplomatic notice is obligatory, provided that the state of relations is such that hostilities will not be a surprise.

Lack of notice of hostilities is undoubtedly hard on those ships "homeward-bound in full security," but war-clouds do not gather in a day, and, when skies grow threatening, it's well to look out for a storm. Moreover, the object of war is to get the better of your adversary.

SARGENT HOLLAND.

No. 1120 CHESTNUT STREET, PHILADELPHIA, February 27, 1904.

WORDS OF COMMENDATION.

TO THE EDITOR OF THE NATION:

SIR: There are some things that give us much satisfaction when we realize their worth to us from time to time amid the activities of a busy life. One of them to me is the remembrance of the many years that I have been a constant reader of and subscriber to the *Nation*, and in all those years its unvarying adherence to high standards in its praise and criticism of public men and policies. Not always have I held to the same views, yet always has the standard been clear and elevated. To-day it is still an inspiration, amid untold causes and cases for discouragement; and while praise and eulogy for a distinguished Senator are still holding forth and overcome all who attempt to define or reason as to what is best or better, the *Nation*, with its usual thoughtful comment, holds up the man and his methods and the judgment that has been passed on all such, in spite of rank praise and intemperate ovation.

Here in Boston, one other paper has put forth bravely a discriminating estimate that will well compare. For a citizen and voter, it is well that such facts can be recorded and referred to in these days. If it has become the vogue to believe a patriot to be one who can estimate the worth of political parties in dollars, and who can establish the prosperity of a nation on a policy of inflated ideas that makes the average business man think white is black and vice-versa, do we not require such issues of public opinion from those who are brave enough to stand forth and declare them? Surely the average man to-day is a rank coward in his political opinions. He has no views except to shout for the best fellow. He does not recognize a principle in his political creed. It must all be based on the man and his ability to catch votes; and such a vote-getter is worth far more than principles, hath declared every one of our great leaders, and can be bought and measured with a price, while we cannot do this with a principle.

This is the doctrine established by the distinguished Senator just now departed, and by those not so distinguished who have not yet departed, but who still have control. I do not believe it is possible to prevent more or less of false principles or an entire lack of all principle in the control of parties or men, nor do I believe it is possible for this Administration to avoid the natural consequences of such effects to its policy in national affairs, when so manifestly under the leadership of men represented by the much-lamented Senator; but I do most earnestly believe that papers like the *Nation* go far in counteracting the influence of these ideas and methods, and in changing the results, so that men who believe, but do not always dare to stand up, who are strong, but do not have the voice or nerve to declare, can have a leader and a voice at all times among them.

It is such a voice and leadership that I know and wish to recognize now by giving this testimony as to the need and value of views and criticisms such as the *Nation* has always upheld and made clear.

BENJ. SPAULDING.

BOSTON, February 26, 1904.

MR. CHOATE IN ERROR.

TO THE EDITOR OF THE NATION:

SIR: In a recently published address on Education in America, delivered at the opening of the summer meeting of the University of Oxford, Mr. Choate, our ambassador to England, has incorrectly stated the scope of the work of two of the foremost educational institutions of the United States.

After praising the Johns Hopkins University as a notable example of private endowment, Mr. Choate says that "it is mainly a post-graduate school, and maintains schools of Law, Medicine, Science, and Agriculture." This statement is partially misleading. Johns Hopkins has no school of Law or of Agriculture, but, in addition to the Scientific and the Medical Schools, it maintains flourishing schools for graduate study in History and Economics, in the Languages, both ancient and modern, and in Philosophy.

Mr. Choate terms the Carnegie Institute "the most signal advance in university extension yet made in America." As generally understood, university extension implies the extension of the benefits of mental culture conferred by a university to persons unable to attend the regular university lectures. This is accomplished by popular lectures, by prescribed readings, or by similar means. The Carnegie Institute is designed to aid trained specialists to carry on extensive research work, and also to aid in strengthening the work of universities already established. Hence it can in no sense be called an example of university extension. It may be noted that Mr. Choate has misused this term, university extension, in other instances. He refers to the founding of Harvard University as "the first and a most signal example of university extension." He also calls attention to the great increase in the technical schools of the United States, as well as to the increased prevalence of the elective system of study in the universities and colleges, as forms of university extension.

The address is, on the whole, an excellent one, and fully adequate to the demands of the subject. BEVERLY W. BOND, JR.

JOHNS HOPKINS UNIVERSITY, February 25, 1904.

THE SPELLING OF "ALLEGHENIES."

TO THE EDITOR OF THE NATION:

SIR: In reviewing Vol. VI. of the 'Historic Highways of America' you speak as follows of the spelling of Alleghenies:

"The variety of spellings of an important geographical name almost calls for Federal interference. The river which in New York is officially 'Allegany,' becomes, by crossing the line into Pennsylvania, 'Allegheny,' while in the writings of Roosevelt and others the mountains are the 'Alleghanies,' Mr. Hulbert, however, prefers to call them the 'Alleghenies,' and the spellings found for both river and mountains in the authors whom he quotes are as numerous as those of the name of Shakspere."

When my publishers returned the proof of the volume in question to me, they objected to my spelling of Alleghenies with an "a" because it was contrary to the decision of the United States Board on Geographic Names. I stood corrected, and now have been taken to task for following that decision. I should like to have your opinion on the value of the authority which was followed in this case—the last report of the United States Board on Geographic Names. Is not that the "Federal interference" for which you plead?

Faithfully yours,

ARCHER BUTLER HULBERT.

ROME, ASHTABULA CO., OHIO, February 24, 1904.

[Only nominally; and our remark was playful. The Board has no authority to compel uniformity.—ED. NATION.]

Notes.

D. C. Heath & Co., Boston, will shortly publish a First and Second 'Book for Non-English-Speaking People,' by W. L. Harrington and Miss Catharine J. Cunningham, who have experimented with their lessons in the evening schools of Boston.

Paul Elder & Co., San Francisco, announce a 'Psychological Year-book,' compiled by Janet Young, and 'The Simple Home,' by Charles Keeler.

'The Socialization of Humanity,' by Charles Kendall Franklin, is soon to be issued by Charles H. Kerr & Co., Chicago.

From Henry Frowde we may expect 'The Titles of the Psalms: Their Nature and Meaning Explained,' by J. W. Thirtle; 'Chronicles of Adam of Usk' (1377-1421), edited with a translation and notes by Sir E. Maunde Thompson, who edited the British Museum MS. in 1876, when it lacked the concluding quire, since found; 'Queen Elizabeth and the Levant Company,' an episode in the establishment of British Trade with Turkey, edited with illustrations by the Rev. H. G. Rosedale, D.D.; and a fifth edition of W. E. Hall's 'Treatise on International Law,' brought down to date by J. B. Atlay.

A year ago, in noticing Gardner's 'Story of Siena and San Gimignano,' (London: Dent; New York: Macmillan), we foreshadowed its being reissued in handier form among the "Mediæval Town Series." This has now come to pass, with that companionable gain to the tourist which we also anticipated.

Prof. W. W. Goodwin has prepared an abridged edition of his 'Demosthenes on the Crown,' which has just been issued by the Macmillan Company. It is a volume of about 300 pages, of excellent typography, containing all the apparatus which the college student not a specialist needs for understanding and appreciating the speech. The notes are pointed and brief, though sufficient; the admirable historical sketch of the period is, substantially, retained, together with the analysis of the argument,

discussion of the legal questions, tables of dates, etc. The work is a model text-book for its purpose, in its neatness, finish, and freedom from surplusage. On page 276 the printer has transposed the figures in line 3, making the date 334 instead of 343 B. C.

The, with one exception, complete and unabridged selections in 'Modern Prose,' edited by Profs. Carpenter and Brewster of Columbia (Macmillan), will no doubt be welcome in the secondary schools for which it is intended. The modernity is vouched for by the extracts from Jack London, Hamlin Garland, James Lane Allen, and Maurice Hewlett, in a line stretching from Gibbon down. Ruskin, Carlyle, Thackeray, Stevenson, and Lincoln are doubly exhibited. The variety is still very great; but, to say nothing of the doublets, the living names we have mentioned might all have gone unrepresented in favor of a master of English prose who is not more an Englishman than an American, and to be honored as such. We mean Goldwin Smith. We would also gladly exchange Jack London for Thomas Paine.

The second number of the "Newnes Art Library" (London: George Newnes; New York: Frederick Warne & Co.) deals with 'Velasquez,' and has much the same faults and merits as the first, which was devoted to Reynolds. In this case there are no reproductions of old mezzotints, because, fortunately, no such mezzotints exist. The sixty-odd plates are a liberal allowance—too liberal in some respects, for they include pictures almost certainly not by Velasquez. The "List of Principal Works," which is by no means brought up to date, states that the allegorical figures in the background of the Uffizi equestrian portrait of Philip IV. are "attributed to another hand," but does not notice that the horse and rider are as utterly unlike Velasquez's work as are these figures. The picture answers in every respect to the descriptions of the portrait painted by Rubens in 1628, except that the King is too old for that date. It would seem to be a copy of Rubens, with the head altered to suit the time when it was painted. The portraits of Philip III. and Margaret of Austria are given with no intimation that they were only retouched and altered by Velasquez, who never saw the originals of them and was incapable at any period of the wooden workmanship of the figures. The frontispiece is the early portrait of Don Carlos, brother of Philip IV. (an odd selection), and this is labelled, under the picture itself and in the list of illustrations, "Don Balthasar Carlos," a misnomer which the style of the work should have rendered impossible. This same portrait, by the way, is given in the edition of R. A. M. Stevenson's 'Velasquez' published in the Bell-Macmillan "Great Masters" series as "Philip IV.," a more excusable blunder in that it involves no impossibility of date. The brief biography by A. L. Baldry seems accurate enough as far as it goes, but one would have preferred some pertinent statement of the character of Velasquez's art and of its place in the art-history of the world. Finally, the plates, though somewhat better executed than in the 'Reynolds,' are far from satisfactory.

'The Chemistry of India-Rubber' (Lippincott), by Carl Otto Weber, is a valuable contribution to the rather scanty and untrustworthy literature of this subject. Its 300 pages contain a very satisfactory discussion of the results which have been obtained from the chemical investigation of rubber and its substitutes, as well as of the processes of vulcanization, with a full and carefully considered chapter on the physical testing and chemical analysis of rubber articles. The author writes from an intimate personal acquaintance with his subject, and contributes much valuable material from his own researches. Manufacturing processes as such are not treated. The india-rubber industry has been developed and is still largely developing on empirical lines. Dr. Weber points out that there is a wide field here for scientific investigation, and that the rubber industry of the future will belong to the country which takes the lead in such investigations. This book was avowedly written with the "hope of arousing the interest of chemists and technologists alike to the study of the remarkable class of substances known as india-rubber, the very name of which would seem to suggest that our present-day knowledge of them consisted chiefly in the fact that they may be used for erasing pencil marks"; and it seems admirably conceived to serve this purpose.

'The Art of Illumination,' by Dr. Louis Bell (McGraw Publishing Co.), is a thorough and interesting study of the problems connected with the best utilization of artificial light. The first three chapters give a very readable and instructive discussion of the physical and physiological principles which are involved, and are followed by a detailed description of the various means employed for illumination, with comparisons of their efficiency and economy. The lighting of houses, of large interiors, outdoor and decorative lighting, form the subjects of succeeding chapters. The high intrinsic brilliancy of the incandescent electric and gas lights is a menace to the eyes unless the sources of light are properly placed or screened; while the command we have of intense radiants leads to the temptation of lighting too brilliantly, with injury not only to the eyes but to the artistic effect. Dr. Bell finds, however, that the steady tendency is towards a more and more complete subdivision of the radiants, and subordination of great brilliancy to more perfect distribution. "The true criterion of effective and efficient lighting is not simple illumination, . . . but visual usefulness which takes account of the physiological factors in artificial lighting." The book is thoroughly practical, and abounds in facts and suggestions of great value to all who install or who use artificial light.

Mr. Harold Hilton's 'Mathematical Crystallography and the Theory of Groups of Movements' (Oxford: Clarendon Press; New York: H. Frowde)—"movement," by the way, is an ill-chosen word, since there is no continuity in the transformations considered, and reflexion in a plane is one of them—is a book supplementary to the treatises on crystallography. It is divided into two parts. Part I. is mainly occupied with proving mathematically that the thirty-two classes of crystals with which the reader will be familiar are, upon certain hypotheses sufficiently probable, the only classes possible. What are called "forms" of crystals are not, in this part, seriously considered. On the other hand Part II. may be regarded as an attempt to explain, by further hypotheses, the geometrical nature of crystal-forms, and to show that they are 230 in number. It is an account of recent strictly geometrical studies of possible regular displacements of regular arrangements of molecules in space. No dynamical considerations are introduced; but there is little room for doubt that the results here developed must be the foundation for any future dynamical theory of crystals. The whole is presented with the utmost clearness, and, being very easy to read for a mathematical book, must be studied by every student of crystallography who can make any pretension to thoroughness.

Mr. John Edward Campbell's 'Introductory Treatise on Lie's Theory of Finite Continuous Transformation Groups' (H. Frowde) is the first book presenting in our language an account of perhaps the most important mathematical theory that has had birth in our time; Burnside's 'Theory of Groups' covering the subject only in a general way. Although the omission by Mr. Campbell of the important matter of possible types of group-structure is to be regretted, the student will find this volume by far the best introduction to its subject in any language; for the presentation is fairly abreast of the day, and the theory has been developed in sufficient detail with very considerable ability. There is a convenient index.

The old Spanish poem on the career of Fernan Gonzalez is not a highly interesting literary document; Fitzmaurice-Kelly dismisses it in a single sentence, Ticknor in a couple of lukewarm pages. But Menéndez y Pelayo has recently called attention to its historical significance in the eleventh volume of his "Antología de Poetas Líricos Castellanos," and Prof. C. Carroll Marden has done well to edit it in the spirit of the latest philological sobriety, in his 'Poema de Fernan Gonçalez, texto crítico, con introducción, notas, y glosario' (Baltimore: Johns Hopkins Press). The editor has had access to much new material, including unpublished fragments of the poem itself and manuscripts of the several prose chronicles based on the poem. As a result of this, he has restored the language and metre to their original thirteenth-century form, and has supplied several passages lacking in the current versions of the text. It is a pity, perhaps, that the American interest in Spanish literature should be so largely limited to textual or philological research; but since it is so, a critical text like this—dedicated to Menéndez Pidal, and worked out in a manner not unlike his own—is worthy of respect.

Students of Dante and of early Italian literature will welcome the illuminating study of Prof. Karl Vossler on 'Die philosophischen Grundlagen zum *süssen neuen Stil* des Guido Guinicelli, Guido Cavalcanti, und Dante Alighieri' (Heidelberg: Carl Winter). Professor Vossler has attempted to connect the lyric of the *dolce stil nuovo* with the contemporary philosophy to which it owed so much—an essential propædeutic to the study of this period, considering the highly abstract and symbolic character of the verse. This is brought out more forcibly by focussing attention on the three problems that particularly attracted the members of Dante's school—to use Professor Vossler's terminology, the *Adelsfrage*, the *Liebesfrage*, and the *Erkenntnisproblem*. Few monographs with so broad an outlook

come these days from the German centres of research.

The publisher Loescher of Turin has entrusted to two distinguished scholars, Prof. Francesco Novati and Prof. Rodolfo Renier, the editorship of a new periodical devoted to mediæval studies, in succession to the recently suspended *Studi di Filologia Romanza*. The new *Studi Medievali* will appear twice a year, at a biennial subscription rate of 30 lire, and will include every phase of the study of mediæval literature, both in the vernacular and in Latin, with the sole exception of purely glossological studies. Its chronological scope will extend as far as the end of the thirteenth century in Italy, and the end of the fifteenth in France and Spain since in transalpine lands the mediæval tradition survived a century or two later than in the true home of the Renaissance. The two editors already control a magisterial review, the *Giornale Storico della Letteratura Italiana*, and their new venture is assured of success in advance.

In the "Patagonian Andes," the opening article of the *Geographical Journal* for February, Sir T. H. Holdich gives his impressions of the country received while serving on the Chile-Argentine Boundary Commission. He remarks on the wonderful beauty characteristic of its lake and mountain scenery, its magnificent climate, and is hopeful of its future as an agricultural and grazing country. The introduction of cattle on the pampas has brought to light a curious and unexplained fact, that the native wiry tufted grass is supplanted by a "matted growth of the richest grass that is known in the world of pasture land." He attributes the "successful attainment of the boundary settlement to the firmness and statesmanship of the Presidents of the two Republics, who were unanimous in their efforts to secure peace and good will between the two countries. . . . Probably no country in the world's history has made such strides in material advancement as Argentina under President Roca's administration." Prince P. Kropotkin contributes a paper, with several charts, on the orography of Eastern Siberia, the result of personal investigations during a five years' stay in that region, and Drs. O. Nordenskiöld and Andersson tell of the scientific work of the Swedish Antarctic Expedition. There is also an abstract of Baron F. von Richthofen's inaugural address as Rector of the University of Berlin upon "the impetus and direction of geography in the nineteenth century," and a description, by Prof. J. D. Everett, F. R. S., of a "flat model which solves problems in the use of the globes," containing facts of interest especially to teachers.

The Massachusetts Commissioner of Public Records, Mr. Robert T. Swan, has, from the moment he took office, been an efficient advocate of the divorce of politics and public service. His sixteenth report is a fresh argument to this end. Thanks to his recommendations, the term of office of city clerks has been extended to three years for such cities as voted in favor of accepting the act—and they all had to vote yea or nay. Six cities held out in favor of the annual clean sweep, but by small majorities, and they are amazed that the Commissioner advises the necessary special legislation to enable them to reconsider. Other matters of general interest in this report are the exposition of the change from Old Style to New Style, the list of typewriting ribbons and pad approved as durable for records (with a curious illustration from a fire test), and the discussion of the sifting of public papers whose accumulation acts as a deterrent to fire-proof accommodation. The librarians who behold their granaries bursting with obsolete and worthless works, might find a hint in this section.

'Drainage Modifications in Southeastern Ohio,' by W. G. Tight (professional paper No. 13, United States Geological Survey), offers a remarkable illustration of the wholesale manner in which large rivers may be provoked to change their courses when their discharge is obstructed by the advancing ice sheet of a glacial epoch; and this comes as an important lesson at a time when rivers were gaining a reputation for long continuance in ancient paths. Professor Tight shows that the present Ohio River and its chief branches in the district studied are not of geologically ancient origin, as had long been supposed; they are the new drainage courses taken in geologically modern times, after the rivers of an earlier period, which thereabouts flowed northward, probably to the basin of Lake Erie, were blockaded by the ice sheet of the first glacial epoch. The courses of the earlier rivers are recognizable as flat, well-developed valley-floors, more or less clogged with gravel and silt, and standing 100 or 200 feet above the level of the present rivers. Several series of the abandoned, high-level, wide-open valleys have been traced. When they were the drainage paths of the region, its relief was much less than it is now. The present valleys depart most irregularly from their predecessors; they are commonly narrow-floored and rather steep-sided; and, owing to their deep erosion, the region is much more hilly than it used to be. The Ohio River, along the southeastern border of Ohio, is generally transverse to the older valleys.

The first international congress for school hygiene has been called to meet in Nuremberg in the first week in April. Papers by Professor Cohn of Breslau; Axel Johannsen, of Christiania; Lagandre, of Paris; Liebermann, of Buda-Pest; Hüppe, of Prague; and Eulenburg, of Berlin, are on the programme. The congress has been divided, for its work, into ten sections, and practically all the leading questions of school hygiene will be discussed by specialists. Local committees have been established in many educational centres. The attendance at the Nuremberg meeting promises to be exceptionally great.

A call has been issued for the Second International Congress for the Universal History of Religion (*Allgemeine Religionsgeschichte*) to meet in Basel from the 30th of August to the 2d of September of the current year. The first congress of this kind convened in Paris during the Exposition of 1900, and the coming convention is called in accordance with the decision of the Paris meeting. At the Basel congress there will be eight sections, viz., on the religion of the so-called "Nature races," including Peru and Mexico; the religion of the Chinese and the Japanese; the religion of the Egyptians; the religion of the Semites; the religion of India and Persia; the religion of the Greeks and the Romans; the religion of the Teutons, Celts, and Slavs; the Christian Religion. A contribution of 20 francs insures a copy of the transactions of the Congress. The call is signed by a local committee, headed by Professor Orelli, of the University.

—The March *Century* opens with a lively account of the Paris Bourse and its curbstone appendages, written by Cleveland Moffett and illustrated by Castaigne. The official character of the Bourse, its legal restraints, and the relation of these facts to the development of outside brokerage, are clearly set forth. The article of most intense interest in the number is an account of a visit to Prince Bismarck by the late Henry Villard, only a few months after Bismarck's resignation, and while his resentment was still at white heat. During an afternoon drive over his estate, the Prince poured forth in good English (that the coachman might not understand) a torrent of resentment so violent that in Mr. Villard's opinion to repeat it would only invite doubt as to its reality. After it was over he remarked: "It was quite a relief to me to have this opportunity to speak without restraint to a gentleman who, I am sure, will honor my confidence." This, however, was but an incident in a visit of two days, during which the conversation took a very wide range over topics of general importance, political and otherwise. The closing instalment of the Thackeray-Baxter letters gains a special interest from references to the civil war, though the fact that the Baxter family had representatives both North and South put Thackeray under some restraint in the expression of his views. He looked upon peaceable separation as better than war for the Union, and urged the argument that the separation of the American colonies from the mother country had proved the best for both. The Rev. Arthur Judson Brown has a short but very suggestive paper on economic changes in Asia, as a result of the intrusion of foreign influences. The chief point touched is the rapid rise in the cost of living to the native, unaccompanied as yet by a corresponding rise in earning power by which to meet the new conditions.

—In the March *Harper's*, Julian Hawthorne presents copious extracts from his father's correspondence with W. D. Ticknor, chiefly during the years 1853-1860, while Hawthorne was in Europe. The letters are, of course, very interesting, but an intelligent regard for the fame of the writer would have had left much of their contents to the privacy for which they were intended. The bits of literary criticism which they contain are not always felicitous, as, for instance, the warm praise of "Hiawatha" on the score of originality, and the suggestion that Longfellow "seems to have caught the measure and rhythm from the sough of the wind among forest boughs." The ill-natured flings at female authors, in particular and in general, might well have been spared. The kindlier side of Hawthorne's nature appears to advantage in his insistence upon loaning $3,000 to his friend Bridge, whether adequate security should be offered or not. One is reminded here of Thackeray's letters to the Baxters, in which he insists that they shall draw upon him if the civil war has occasioned them any financial embarrassment. The loan of Bridge was fully repaid, though Hawthorne fared not

so well in furnishing funds to secure the publication of Delia Bacon's Baconian theory of Shakspere. One may take his choice here whether to pity him as the victim of excessive kindness, or to regard the loss as a fine instance of deserved retribution. It is characteristic of Hawthorne that Miss Bacon was not allowed to know at the time that his favor in writing the preface to the book was supplemented by financial aid. Prof. John Bassett Moore gives a detailed account of American diplomacy during the Revolution. Dr. Charles A. Eastman relates his early impressions of the white man's civilization. One would search long in his well-written paragraphs for any indication that the civilization which he manifests is a borrowed and not a native product. As his Indian lineage is unquestioned, however, his achievements cannot be discounted on the score of mixed blood, the stock explanation by which anti-negro sentiment seeks to discredit the accomplishments of the African race.

—A large share of the March *Scribner's* is devoted to the continuation of "The Undercurrent," the correspondence of Mrs. George Bancroft, and Capt. Mahan's "The War of 1812." Captain Mahan, of course, finds in his theme ample material for censuring the policy of economy in military and naval expenditure which characterized the administrations preceding the war. Even the lamentable failure of General Hull's campaign in the Northwest must be traced further back than the incapacity of the general: "The true authors of the national disaster and its accompanying humiliation are to be sought in the national administrations and legislatures of the preceding ten or twelve years." Captain Mahan touches but one side of the problem. Another and not irrelevant side is the fact that the policy of economy stimulated a rapid growth in wealth and population, thus furnishing a firmer background for resistance when the crisis came. Financial and numerical growth would have been heavily handicapped by the maintenance of a large army and navy from the start, England would have been stimulated by our course to greater exertion in the same line, and the struggle might conceivably have ended in her favor. On the whole, the most effective and invulnerable historical arguments for unlimited armies and navies are to be sought in the future rather than the past. James Huneker contributes a highly laudatory paper on Richard Strauss. He has given back to instrumental music its rightful sovereignty, relieving it from further fear of the encroachments of the music-drama, "at the best a bastard art." He has enormously intensified the eloquence of the modern orchestra, increased its capacity for rare, subtle beauty tenfold, and enfranchised it from operatic bondage. He makes of it a vibrating, dynamic machine, a humming mountain of fire; he takes us near the realm where madness lies, gives us glimpses of vast orphic vistas where Dissonance may be King, iron twilights tenanted by enigmatic figures of another world, moons glowing from blood-red skies upon icy landscapes; and yet the sacred bounds of his art are never quite overstepped.

—In Volume VIII. of 'The Philippine Islands, 1493-1898' (Cleveland: The Arthur H. Clark Co.), covering the years 1591-1593, we have a continuation of the details of Spanish administrative activities, mainly controversial, to which the two preceding volumes of this series have introduced us. The stage-setting and actors are also the same. It is the old Bishop Salazar (he is too fiery to be called venerable) against Governor-General Perez Dasmariñas in the centre of the scene. The question of collection of tributes is the main theme, but it becomes more plain how the real issue involved is as to whether or no the civil authorities shall knuckle once and for all to the ecclesiastical, and confine themselves within the general policy and the lines of activity which the Bishop and those of the friars addicted to him shall lay down. Incidentally, some further insight is afforded into the Spanish-Portuguese contest for the trade of China, and into the essentially perennial nature of the ruinous competition the Chinese are capable of giving to the Filipinos if allowed a free hand in the archipelago.

—Statistics furnished to the King by Perez Dasmariñas in 1591 show a population of 667,612 Filipinos subject to Spain, on the basis of four people (including women and children) to each tribute-payer. These people were commended to 236 individual *encomenderos*, while 31 *encomiendas* were reserved to the king for the support of his higher officials. Spain had only 12 *alcaldes-mayor* out in the provinces (the *alcalde-mayor* was a judicial-executive officer). There were in all 140 friars, or one to nearly 5,000 people tributary to Spain. As a matter of fact, less than half the people already tributary to the civilian conquerors were being reached by missionaries at all, and the Governor-General called for 160 more friars at once. These figures are worth examining, in view of the constant assertions of recent writers on Philippine matters (particularly in Spain) that the friars everywhere preceded the lay conquerors in the pacification and settlement of the Philippines. Again, we are regularly asked to believe that the population of the Philippines increased under Spain from less than half a million to nearly nine millions. Figures frequently quoted for this purpose are the Philippine parochial registration of approximately 375,000 in 1583 (a large part of them unbaptized), and the parochial registration in 1897 of about 7,000 000. A very slight examination of the statistics of 1591 of Perez Dasmariñas will show what a margin of exaggeration careless Spanish writers have allowed themselves. The southern extremity and all the mountainous north central part of Luzon were then unreached by Spanish authority, which was as yet not any too well asserted over the Cagayán valley, the Ilocos provinces, Pangasinán, Zambales, Bataán, southwest Cavite, Batangas, and the Camarines. Cebú was but fringed, and the merest beginnings made in Sámar, Leyte, and Bohol. Of all the great island of Panay, only its southeastern part was really known to the Spaniards. Negros, Paragua, and Mindoro were *terra incognita*. Moreover, so was Mindanao, by which corner Magellan entered the archipelago, and we have no estimate of the population at all in Dasmariñas's figures. Yet they give an approximation to three-quarters of a million people. The population of the archipelago may have been no more than a million at the time of the Spanish discovery, and it also may have been as much as two millions and a half.

—Ferris & Leach, Philadelphia, publish in two handsome volumes 'George Fox; An Autobiography,' an abridgment of George Fox's 'Journal,' properly esteemed one of the company of great religious autobiographies in which St. Augustine's 'Confessions' takes the highest rank. The abridgment and editing are by Rufus M. Jones, professor of philosophy in Haverford College, who, though evidently himself one of "the people called Friends," makes no exorbitant claim for Fox, and in his notes and introduction exhibits a degree of detachment that deserves remark and praise. The introduction is happily conceived, and the notes convey, in almost every case, information that illuminates the text. This appears to have been abridged from the edition of 1694 in a judicious manner. That edition, while passing for a complete reproduction of the original manuscript, which is now owned by Charles James Spence of North Shields, England, failed of exactness in various particulars. It improved Fox's spelling and diction, and it omitted some of the franker and more startling passages. Professor Jones writes as if acquainted with the manuscript, which he describes as "a little livelier, fresher, and more graphic than any published edition"; but he makes no claim of having based his own text upon it. He does not overrate the value of the Journal as a picture of English life, with all its sects and schisms in a great and stirring time, with glimpses of Cromwell and Monk, and of the battles and sieges of the civil war. Perhaps some exception may be taken to Prof. William James's "well-known fact, that religion must be studied in those individuals in whom it is manifested to an abnormal degree." The frontispiece portrait of "George Fox in Ecstasy" is not reassuring at this point. The illustrations generally are a very real addition to the book. For the most part, those of houses and churches represent buildings which have suffered little change since Fox's time.

—Members of the legal profession have long wanted an adequate and imposing portrait of Chief Justice John Marshall. In response to that demand, Mr. Gustav Kruell has undertaken to reproduce on wood, in his unparalleled series of engravings of great men—mostly great Americans—the oil painting by Inman in the possession of the Philadelphia Bar Association. The block is 8x11, and the bust, nearly to the waist, is well set in an oval. The engraving is remarkable for its rich color, and the flexible technique is most instructively exhibited in a variety of ways—in the exquisite silvery hair, the flesh, the lawn kerchief, the costume, and the background. Of the likeness we cannot speak from acquaintance with the original Inman, but are ready to take on trust the combined product of the camera and of Mr. Kruell's rare gift of interpretation of character. This print—on Japan paper, as usual—is worthy to rank with the best of its predecessors; and one who should hang the Marshall beside the same artist's engravings of Webster and Lincoln, brother lawyers and statesmen, would possess three as remarkable examples of black-and-white, on wood or in any other medium, as the range of art can show, and at the same time illustra-

tions scarcely less extraordinary of versatility and development of treatment in the hand that wielded the graver for all. The proof impressions may be had of Mr. Kruell at No. 14 North Maple Avenue, East Orange, N. J.

NERO IN WHITEWASH.

The Life and Principate of the Emperor Nero. By Bernard W. Henderson, M.A., Fellow and Tutor of Exeter College, Oxford, etc. With maps and illustrations. London: Methuen & Co.; Philadelphia: J. B. Lippincott Co. 1903.

The attempt to rehabilitate the reign of Nero before the court of public opinion betrays no moderate degree of courage. Even Tiberius offered a hard problem, but it must now be admitted that the scholarship of a half-century has radically softened the verdict in his case—a verdict based too much upon the general tone of the Annals of Tacitus and too little upon a careful study of the facts there recorded. Were it not for the last few years, about which serious difficulties still confront the rehabilitator, Tiberius might easily stand among the most sensible and efficient of Roman Emperors.

But Tiberius has to his credit a period longer than Nero's entire principate during which it can be shown, even from the unfavorable pages of Tacitus, that he was an efficient and economical executive and fairly correct in his personal habits, whatever may have been true during those gloomy years after the baleful rise and fall of Sejanus. If Nero, too, had his bright period, the circumstances were radically different. Tiberius came to the throne at the age of fifty-five, in the strength of a vigorous manhood. He had seen many years of creditable service in responsible positions under Augustus. He had the training necessary to a fairly independent career, and we do not learn that he had about him ministers of such dominant character and influence that his acts, whether good or bad, may in any important degree be ascribed to them rather than to him.

Nero entered his principate a mere boy in years, and already a pretty badly spoiled boy in certain important traits of character. He had had no opportunity to fit himself for rule by practical experience, military or civil, and he came to the purple accompanied by an adviser of strong influence who had sustained to him the close relation of tutor since his eleventh year, the philosopher Seneca. Burrus, a sturdy and capable soldier, was in the important position of Pretorian Prefect; and these two men were backed by the influence of an imperious mother, who, whatever her faults in other directions, was certainly ambitious that her son should enjoy an efficient and successful reign. Would one naturally expect a youth of sixteen, coming to the throne under such circumstances, to break his leading-strings and make the administration of a great empire essentially his own within the first five years? But the fairly beneficent portion of the reign is confined within its first five years, while the power of Seneca and Burrus was still unbroken. When we take into consideration all that Mr. Henderson is obliged to admit concerning the remaining years, there is certainly more Neronian bias than historical probability in the conclusion that Nero is personally entitled to the credit for the better features of the famous "quinquennium."

We have not overlooked Mr. Henderson's explicit assertion that he holds no brief for Nero. Explicit assertions, however, cannot go very far against the general tone of a book itself. Tacitus just as strongly asserts his impartiality in dealing with Tiberius, Gaius, Claudius, and Nero. Mr. Henderson is not another Tacitus, but his tendency to put upon his facts an interpretation favorable to Nero is as strong and as constant as that of Tacitus in the opposite direction. Is Nero entitled so uniformly to the benefit of the doubt? We can appreciate the position of those who regard it as well-nigh impossible to believe that Tiberius plunged into a career of monstrous debauchery after living a fairly regular life to his seventieth year, although we cannot regard such a moral catastrophe as unthinkable when we consider the basis of Roman morality at the time, and the tremendous mental and moral shocks to which the aged Emperor was subjected. We must at least stop short of Tacitus and refuse to make the crimes of these few years of senile mental and moral degeneracy the basis of a belief that the regular habits of preceding years were a mere cloak of hypocrisy over a nature essentially depraved. But Nero! Where in his life is the period of established character, administrative industry and ability, to form a rational basis upon which to decide every questionable point in his favor?

We have read Mr. Henderson's book with care, and we do not find that he has presented any such basis. The admissions which he feels obliged to make are too numerous, too damaging in their character, and cover too nearly the whole of the reign. There is no attempt to deny Nero's monstrous career of unnatural vice, nor will the author allow even the partial palliation that might be found in attributing this in any important degree to mental insanity, since this would undermine his basis for considering the emperor a sagacious ruler, despite the enormity of his personal habits. Like Tiberius, Nero had a terribly imperious mother; but Tiberius suffered underneath the rasp, with no thought of securing relief through matricide. Nero cut the galling apron-string by a deliberate, though stupidly contrived, murder. Some have refused to believe the story because of the very stupidity of the plot, but Mr. Henderson distinctly accepts the tale as it has come down to us, after full discussion. "The undoubted slayer of brother, mother, wife, and of any who could threaten his possession of the imperial power," is the verdict of the closing paragraph, so far as this feature of his reign is concerned. It is as freely admitted that in his later years (and his "later" years began early) he was "tyrannical to the extent that he would show no mercy to any form of opposition." This spirit, shown preëminently after the conspiracy of Piso in "an outbreak of imperial wrath and suspicion directed against all sorts and conditions of men, and resulting in a series of executions and suicides which indeed make but a dull monotony of horror of the record," Mr. Henderson rightly enough explains as growing out of the conspiracy; but his disposition to throw the moral responsibility upon the conspirators rather than upon Nero, will not bear examination. Similarly, he would charge the many months of bloodshed and disorder that followed the death of Nero to the moral account of those who conspired to dethrone him; but the woes of that pitiable period were possibly as largely due to the fact that Nero had lived and reigned as to the fact that he had now ceased to live and reign.

The somewhat extended attention given to Nero's career as a poet, actor, harpist, vocalist, athlete, and what not else, must have upon the average reader an effect seriously damaging to the author's main thesis. The giddy tour of Greece, the return to Rome in triumphal procession with his one thousand, eight hundred and eight crowns won in artistic and athletic contests, the crown of wild olives upon his head, and the Pythian laurel in his hand, smoke of sacrifice and scent of saffron filling the streets, voices shouting, "Hail, Victor of Olympia! Nero Apollo! Nero Hercules! the One and Only Lord! Augustus! Voice Divine!"—is it anything else than degenerate vanity swollen to the point where intellect and common sense must suffocate beneath the pressure? Mr. Henderson, of course, agrees with modern competent authorities that there is no sufficient evidence upon which to convict Nero of the burning of Rome, but he is quite ready to accept as historic fact the story that he stood upon the tower of Mæcenas and chanted his poem of the Sack of Troy as he watched the flames raging beneath. "The scene was a temptation which no impressionist artist could easily resist, and the young artist emperor least of all." The mob would inevitably argue from the song the guilt of the singer, and "thus Art and Drama revenged themselves upon the artist."

But, along with inordinate vanity, indescribable debauchery, fratricide, matricide, uxoricide, and all else that the author admits, was there still a wise and successful ruler in this youth? We think that the average reader, basing his estimate upon Mr. Henderson's book alone, must be impressed with the extreme improbability of such a conjunction. We must, of course, admit upon due evidence even the extremely improbable; but so much of good government as may be shown to have existed during the period in question can be explained upon other and more reasonable grounds than the initiative of a Nero. Let us go back a little. For forty-five years after the battle of Actium, the genius of one of the world's greatest organizers had applied itself earnestly to the systematization of the new empire. A vast governmental machine was thus perfected and set into operation. For fifteen years more, at least, Tiberius considered it a sacred trust not to interfere with the working-gear of this machine. It was a machine that left no room for genuine political liberty, a machine that could lend itself readily to heartless oppression in the hands of a tyrant; but it was also a machine capable of orderly and effective administration, of the Imperial stamp. And such a machine, as history has repeatedly shown, may grind out on the average what the world is willing to class as very good government, even though it have a tyrant, an incompetent, or an imbecile as the nominal head. Was there any excess of order and efficiency under Nero beyond what might have been expected of such a system under the circum-

stances? If so, Mr. Henderson has not made it evident. If Domitius Corbulo carried on the military operations of the Empire in the Far East with brilliant success, it is not to be forgotten that he received his appointment when Nero was but seventeen, and Burrus and Seneca were at the height of their power; the next important appointment for the East came when the influence of these veteran advisers was waning, and the incompetence and cowardice of Cæsennius Pætus came near ruining all that Corbulo had done. Britain was the scene of misgovernment not far surpassed by the worst conduct of the rapacious aristocrats who harried the provinces in the days of the expiring republic. Seneca had his millions out on usury there, and exacted his dues with a rigor very similar to that of Brutus in the East, a century earlier. "Under the grievances of the loss of liberty, and an alien rule, of greed, extortion, eviction, debt, the province fretted ominously." When the King of the Iceni died, bequeathing his sovereignty and a share in his estate to the Emperor to secure the safety of his family, "his kingdom and his house alike were treated as the spoils of war. Centurions governed the kingdom. Slaves lorded it in the house. The Queen was scourged; her daughters were outraged. . . . The chief nobles of the tribe were robbed of their ancestral estates. The kinsmen of the dead king were thrown into chains." All this describes a condition existing six years after Nero came to the throne. Evidently good government was not universal. And considering the fact that the provincial subjects of the Empire did not, as a rule, have their condition faithfully recorded from their own point of view, one may be pardoned for raising the question whether the lot of the provinces under the Cæsars was, on the whole, quite so roseate as it is sometimes painted.

We cannot agree, then, that the position of either Nero or his principate has been materially altered by Mr. Henderson's labors. But he should not let himself believe that the Nero of Christian tradition in the Middle Ages is the Nero of popular opinion to-day. The endeavor to restore him "from his position of terrible isolation as the Abomination of Sin upon this earth into the ranks of common humanity" is an endeavor to do what is already substantially done, so far as the classes likely to be reached by this book are concerned. But "the ranks of a common humanity" descend pretty low, and Nero's place therein is far down. If the cause of Imperialism, in Roman times or any other, needs the rehabilitation of such an Emperor, so much the worse for the cause.

HUMANISM.

Humanism: Philosophical Essays by F. C. S. Schiller. The Macmillan Company. 1903.

Quite recently the word "pragmatism," first used thirty years ago by our American philosopher, C. S. Peirce, has become fashionable as the designation of a novel way of looking at the mind's relations to reality. Throughout almost the entire past both Science and Philosophy have been accustomed to suppose that "Truth" must needs consist of a hard-and-fast system of propositions, valid in themselves and eternally, which our minds have only to copy literally. Logic and mathematics had always seemed to constitute such systems, and the entities and laws of physics and chemistry, just as our text-books formulated them, were supposed to be equally "objective."

But three influences have at last conspired to dissolve away this appearance of absoluteness in such facts and truths as we can formulate. First, philosophic criticisms like those of Mill, Lotze, and Sigwart have emphasized the incongruence of the forms of our thinking with the "things" which the thinking nevertheless successfully handles. (Predicates and subjects, for example, do not live separately in the things, as they do in our judgments of them.) Second, not only has the doctrine of Evolution weaned us from fixities and inflexibilities in general, and given us a world all plastic, but it has made us ready to imagine almost all our functions, even the intellectual ones, as "adaptations," and possibly transient adaptations, to practical human needs. Lastly, the enormous growth of the sciences in the past fifty years has reconciled us to the idea that "Not quite true" is as near as we can ever get. For investigating minds there is no sanctity in any theory, and "laws of nature" absolutely expressible by us are idols of the popular-science level of education exclusively. Up-to-date logicians, mathematicians, physicists, and chemists vie with one another as to who will break down most barriers, efface most outlines, supersede most current definitions and conceptions, and show most skill in playing about the old material in new ways, limited only by the one rule of the game, that the new thoughts must dip into and coalesce with the material at more than one point of sensible experience.

Thus has arisen the pragmatism of Pearson in England, of Mach in Austria, and of the somewhat more reluctant Poincaré in France, all of whom say that our sciences are but *Denkmittel*—"true" in no other sense than that of yielding a conceptual shorthand, economical for our descriptions. Thus does Simmel in Berlin suggest that no human conception whatever is more than an instrument of biological utility; and that if it be successfully that, we may call it true, whatever it resembles or fails to resemble. Bergson, and more particularly his disciples Wilbois, Le Roy, and others in France, have defended a very similar doctrine. Ostwald in Leipzig, with his "Energetics," belongs to the same school, which has received the most thoroughgoingly philosophical of its expressions here in America, in the publications of Professor Dewey and his pupils in Chicago University, publications of which the volume 'Studies in Logical Theory' (1903) forms only the most systematized instalment.

Last year the volume 'Personal Idealism,' a collection of essays by Messrs. Sturt, Schiller, and other Oxford teachers, announced the pragmatist doctrine radically to English academic circles; and now Mr. Schiller publishes his own scattered essays to the same effect, dropping the term "pragmatism" altogether, and boldly describing as "Humanism" the philosophy of which he is so far the most vivacious and pugnacious champion. No one can ever foresee what terms will succeed in the struggle to gain currency. "Pragmatism" (*i. e.*, practicalism) is certainly somewhat blind. "Humanism" is perhaps too "wholehearted" for the use of philosophers, who are a bloodless breed; but, save for that objection, one might back it, for it expresses the essence of the new way of thought, which is, that it is impossible to strip the human element out from even our most abstract theorizing. All our mental categories without exception have been evolved because of their fruitfulness for life, and owe their being to historic circumstances, just as much as do the nouns and verbs and adjectives in which our languages clothe them.

The ancient phrase, "man the measure of all things," was, it is true, originally used skeptically: the human view was by Protagoras contrasted with a possible superhuman view which would be truer. But this contemporary humanism is so radical that it "falls on t'other side," and creates a new standard of sincerity and veracity. There is no possible superhuman view, it seems to say, to act as a reductive and falsifier of "merely human" truth. Experiences are all; and all experiences are immediately or remotely continuous with each other. As surely as we have thoughts, so surely are some of them superior. They are *experienced* as superior—other way of "being" superior there is none. And the experience consists not in their copying independent archetypes of "reality," but solely in the fact of their *succeeding better*, and connecting themselves more satisfactorily with the residuum of life. Truth, in short, lives in the actually felt relations between experiences themselves. It is *in rebus* and not *ante rem*. Error and truth are neither more nor less different than are our happinesses and unhappinesses; and a more "real" difference than that, it is impossible to conceive.

Mr. Schiller expresses all this in an admirably lucid and profound essay, "On Preserving Appearances," which forms both a constructive statement of the humanistic doctrine, and a telling criticism of the universal skepticism which Mr. Bradley uses his fantastically useless "Absolute" to support. In spite of the fact that humanism harmonizes so well with the surface of the sciences and with the psychology of our thinking activity, it is sure to repel those who hear of it for the first time, because it seems to leave us with a reality so foundationless and restless. An eternally fixed order of things, both physical and moral, appears to be instinctively demanded by men's imagination. Without it the universe feels flimsy in the mind, and as if purely accidental. Finite judgments such as Humanism composes truth of, can give no anchorage, for they are always liable to revision. Finite goods have no stability—they turn to ashes as soon as we possess them; and the world without a fixed Absolute of some kind behind it resolves itelf into an endless chase after novelty. Can such a chase be all? Is there nowhere any *terra firma?*

This to most persons seems a serious charge, and Mr. Schiller meets it in a most original manner. Reëxpounding Aristotle's idea of an "unchanging energy," he sets up the purely empiricist notion of an "Ultimate" in time as a substitute for the transcendentalist idea of an Absolute in eternity, and thus equips his humanism with the desiderated element of a standard of fixity in values. According to the current doctrine of "rel-

ativity," if an ultimate kind of experience were ever reached as the result of progress, consciousness would have forthwith to cease, no matter how satisfactory it were in quality, for its existence depends on change, and change is incompatible with being "ultimate." But Mr. Schiller denies *in toto* the truth of the doctrine of relativity. He criticises it effectively, and shows that an intense but changeless consciousness of its perfected satisfactions might quite well be the final condition of a world that had evolved itself successfully.

Obviously, this notion of an ideal Ultimate is capable of furnishing empiricism with a definite religious background, and of stopping the mouths of those who accuse it of turning reality into a set of magic-lantern shapes that come and go. If Mr. Schiller's notion of a changeless consciousness prove credible, it will amount to a decisive step forward in the history of empiricism. But humanistic empiricism will have many other steps forward to make before it conquers all antagonisms. Grant, for example, that our human subjectivity determines *what* we shall say things are; grant that it gives the "predicates" to all the "subjects" of our conversation. Still the fact remains that some subjects are there for us to talk about, and others not there; and the farther fact that, in spite of so many different ways in which we may perform the talking, there still is a grain in the subjects which we can't well go against, a cleavage-structure which resists certain of our predicates and makes others slide in more easily. Does not this stubborn *that* of some things and not of others; does not this imperfect plasticity of them to our conceptual manipulation, oppose a positive limit to the sphere of influence of humanistic explanations? Does not the fact that so many of our thoughts are retroactive in their application point to a similar limit? "Radium," for example; humanistically, both the *that* and the *what* of it are creations of yesterday. But we believe that ultra-humanistically they existed ages before their gifted discoverers were born. In what shape? There's the rub! for we have no non-humanistic categories to think in. But the *that* of things, and their affinity with some of our *whats* and not with others, and the retroactive force of our conceptions, are so many problems for Humanism over which battle is sure to rage for a long time to come.

Mr. Schiller has but skirted some of these problems without entering into them deeply. But he has gone profoundly into others, and his style is as clean and clear and lively English, as his thought is strong and original. His ideas are sure to form the storm-centre for the philosophy of at least the next decade. Rather than give an analysis of the separate essays of which his book is composed, we have thought best simply to describe their purpose in general terms, and to call the attention of our readers to their great ability and importance.

William Makepeace Thackeray. By Charles Whibley. Dodd, Mead & Co.

It is just fifty-seven years since the first number of 'Vanity Fair' appeared in a yellow cover, and forty since its author died. Hitherto, Thackeray's critics have been troubled by his fame—more concerned to justify or depreciate that than to examine the work on which it rests. Mr. Whibley has thrown off the trammels, or, perhaps, is young enough never to have been inconvenienced by them. He approaches his subject without nerves and very much in the spirit of his own time, which happens to be a time when English literature is less insular than in the middle of the nineteenth century, and, with both loss and gain, more cosmopolitan. The present generation of English writers has been influenced by foreign theories of literary art; and, in regard to the novel, since Thackeray's day, there has been a revolution of opinion not only about what may be said, but also about the form in which it must be said. It almost follows that a critic attached to the theories of the moment cannot sympathize deeply with an early Victorian.

Mr. Whibley is very well informed about early Victorian times, but he doesn't admire them; so his judgment of a novelist who stands preëminently for his period, his country, and his class falls short of comprehensive fairness. The general tendency of his criticism is to consider most of that which in Thackeray's work expresses temporary conditions as unessential, and, thus denuded, to exhibit its permanent value. He performs the operation skilfully, and probably with no suspicion that a reader who should take his book as an introduction to Thackeray might wonder why on earth he had ever come to be so famous. This, not because Mr. Whibley is deliberately unjust, but because he does not sympathize, and because his point of departure is, we think, the wrong one for arriving at a true estimate of an English novelist.

Most novelists of all nations have chiefly occupied themselves with transient aspects of life, and the great Victorians, with one exception, never seriously thought of looking beyond. We incline to the opinion that novelists who render the transitory with fidelity and vivacity are good novelists, and that, given (like Thackeray) "literature in the blood," their greatness may somewhat depend on the closeness with which they are bound (as Mr. Whibley truly says Thackeray was) to the superstitions of their age. He only aspired to record the manners and reflect the temper of his time, and, when he took a higher flight, we know that he surprised himself. When Englishmen with literature in their blood (the phrase is Mr. Whibley's) have also fine ideals, and strong emotions and perception of universal truth and beauty, they become poets, not satirical novelists or easy-going, picturesque, fluent journalists. To disparage Thackeray because he was not Balzac is hardly more pertinent than to find fault with him because he was not Shakspere or Shelley. This is not to excuse him for sneering at Balzac and for being inexpressibly shocked by Shelley. Some one has recently collected evidence that he liked best second-rate books; but he might be so benighted if he were living to-day, in which case he would never be at a loss for reading agreeable to his taste.

Still, let it be granted that he fell upon evil days, and that, if he had more often and more continuously soared beyond, we should now be able to derive from the whole of his work such pleasurable satisfaction as a large part always yields. No doubt he was always being pulled one way, towards ironical representation, by his mind, and another way, towards sentimental edification, by his morals, which were absolutely the professed morals of the British middle class. There is evidence scattered all through his work that the shackles chafed, but, on the whole, he believed that they were for his good and the world's good. When he was estimating the work of eighteenth-century writers, he went splendidly free, but when it came to the personal character of many of them he wrapped himself in his sacred conventions. He denounced some mighty men with an air of moral impeccability that can only be associated with the early Victorian paterfamilias standing, with coat-tails spread, admonishing a subservient wife and daughters from the vantage of the domestic hearth. Mr. Whibley repudiates vigorously slanders that have lived too long. His pages in defence of Swift display considerable passion, and he concludes that Thackeray entertained a kind of personal hatred for Swift, and that the "lectures on the Humorists is the worst blot on his literary reputation." We cannot feel that he hated any of the Humorists, but only that he felt it his duty to appear as if he did. So skeptical was he of the existence of virtue in any other time and place than in the Victorian home, that he nailed his faith to that; and as often as he found himself cutting loose from the home deities, he pulled himself up sharply and poured out expiatory oblations. When in that mood he could be reckless in defamation; he could deny truths proclaimed by his own creative genius—even his humor and sense of humor forsook him. This conflict of character enfeebled his work, for, as Mr. Whibley says, it produced a kind of uncertainty, and justifies Carlyle's admirable comment: "A beautiful vein of genius lay struggling about in him. The genius never overcame the struggle."

This sheer genius of constructive characterization and satirical representation of life had a good deal to struggle against besides a declamatory passion for morals. Thackeray had no idealism. He never imagined the spirit looking before and after and pining for what is not; he took no cognizance of the desire of the moth for the star, of the night for the morrow. Mr. Whibley errs, we think, in calling him a philanthropist. He was not, like those other great Victorians, Dickens and Charles Reade, deeply concerned with the miseries and wrongs of the people. He saw only the great world, the would-be-great, and a horde of sycophants and flunkeys. His genius had to work for the most part on what might be seen and heard in clubs and in more or less genteel homes. But of this meagre material it wrought beautiful visions of love and friendship, of common joy and sorrow, and sordid pictures of struggles for money, social position, or even for a good dinner with claret (the favorite beverage) flowing. In the representation of snobs and snobbery, the genius triumphed, unconscious of its shame. 'The Book of Snobs' (1846), says Mr. Whibley,

"touched the popular fancy, and made Thackeray famous. It achieved more than this: it profoundly influenced its author. Thackeray once told Motley that 'the Snob papers were those of his writings he liked the least,' and we can easily believe it. None the less he never shook himself free from its bondage. Henceforth he was more often than not a chronicler of snobs, and it was only when his imagination carried him

back to the eighteenth century that he forgot the twisted standard of life he had set up for himself. It is not uncommon, this spectacle of an author enslaved by his own book; but the slavery dimmed Thackeray's outlook upon the world, and it is impossible to observe without regret the complacency wherewith he answered the too urgent demand of the people."

It is not necessary to accept this explanation of Thackeray's life-long preoccupation with a mean subject in order to share Mr. Whibley's regret.

It is to be expected that Mr. Whibley would think 'Esmond' the best book, for several reasons—the chief one being that the style has sustained distinction, and that here "Thackeray proved that he could write if he would with perfect artistry." His preference involves modern disapprobation of the disregard for form characteristic of the Victorian novelists. But they called themselves writers, not literary artists, and they relied for effect on the vitality of their creative force and the extraordinary energy and variety of their faculty of expression. While recognizing the artistic superiority of 'Esmond,' both 'Vanity Fair' and 'The Newcomes' seem to us greater books; the one because of the presence of Becky Sharp (a portrait of a universal type so brilliant and penetrating that time cannot wither it), and the other because it is drenched in the atmosphere of the period. In discussing 'The Newcomes,' Mr. Whibley remarks that "in half a century the unessential has been winnowed from that which matters, and we may look upon what appeared the masterpiece of all novel-writing with a less partial eye." There are some unwinnowed volumes of 'The Newcomes' still extant. This is indeed a fortunate circumstance for those persons who now or hereafter may care for a living picture of English society in the middle of the nineteenth century.

Mr. Whibley is as much a man of his own time as was Thackeray, and the best of his book is in his candid expression of a modern view, and in the sketches of personages from whom some of Thackeray's characters are supposed to have been drawn; the worst is the scant, even grudging commendation of his author. In exclaiming, "What an essayist was lost in the author of 'Vanity Fair'!" he betrays a lack of sense of humor which may well excite a doubt about his competence to criticise a humorist.

Russian Orthodox Missions. By the Very Rev. Eugene Smirnoff, Chaplain to the Russian Embassy in London. London: Rivingtons. 1904.

Answers may be found in this book to various questions concerning the missions of the Russian Church. The compiler begins with a brief account of the colonist-monks, the missionaries of the primitive Russian Church, who did wonderful work in converting and assimilating the Finnish and other alien races, and continues his historical account of varying methods down to the present day. It is interesting to note that, in the more recent past, Russian missionaries have Christianized the country progressively eastward, beginning with the Tatars of Kazan immediately after the conquest in 1555, sending representatives to Kamtchatka in 1705, to Yakutsk in 1714, to Pekin in 1714, to Alaska in 1793. Most of these missions were intermittent in character until the introduction of "the Kazan system." More space is devoted to the originator of this system and to the system itself than to any other topic in the book. Yet, possibly because of the author's strong tendency to tautology and a laborious style, possibly because he has imperfectly collated different accounts of the system, the result leaves the reader puzzling over several statements. The Tatars had been converted *en masse* before Mahometanism became a serious competitor. This conversion was merely outward and ceremonial, it is admitted. Then came a falling-away, also *en masse*, not only among the Tatars, but among the Finnish tribes along the Volga. The missionaries were unable to use the translation of the Scriptures into the literary Tatar language of the mosques (made by the Bible Society about one hundred years ago), because the baptized Tatars did not understand it. The Orthodox priests did not know enough Tatar to translate the most necessary prayers. One wonders how the Tatars got converted and baptized. The next step was to introduce Tatar into the course of instruction at the Ecclesiastical Academy of Kazan. One of the graduates, N. I. Ilminski, who remained as lecturer in Tatar and Arabic, was placed at the head of a committee for translating the sacred and ecclesiastical books. Ilminski labored eleven years at this task, employing the Tatar of the Koran and the mosques, only to discover, after a residence of two years in Cairo for study, that the popular or conversational language was entirely independent. Again one is puzzled, and inquires, Why was not this simple discovery made long before, as Kazan has a very large Tatar population?—particularly when, on the very next page, the statement is made that the Tatars effected their alarming propaganda of Mahometanism through the medium of precisely that language of the Koran and the mosques. Ilminski's "system," as gradually worked out, consisted in using exclusively the colloquial Tatar language, printed in Russian characters. His able assistant, a baptized Tatar, in an accidental manner completed the system by organizing a school, on very simple, rational lines. Ilminski's translations are now used as the basis of translations into numerous other colloquial dialects, all printed in the Russian characters, and schools are established for the children. This constitutes the Kazan system which has revolutionized the missionary work of the Russian Church, and results in the preparation of native priests and teachers.

The narratives of the Siberian missions, with their hardships, vast extent, and difficulties of every sort, are of great interest, as is also the biography of the Christianizer of Alaska, afterward metropolitan of Moscow, a most remarkable man. In some cases the missionaries have to deal with languages which have never been studied, and in many cases contain no equivalents for the necessary words. Thus, for instance, "Be ye wise as serpents and simple as doves" was, perforce, translated in one case: "Be ye wise as ermines and simple as seal cubs." The mission in North America is dealt with briefly; so is the mission in China. Perhaps the most curious and interesting passage, at the present moment, is that which refers to the mission in Japan. Founded in 1860 by the monk who has since become bishop and is still at the head of it, it had, in 1900, 231 communities, 25,231 orthodox Christians, 33 ecclesiastics in addition to the bishop, 16 readers in minor orders, and 152 catechists. All of these, with the exception of the bishop, one priest and one deacon, are Japanese. An ecclesiastical seminary with sixty-four students (all figures refer to the year 1900), a catechetical school with ten students, and a girls' school with seventy-four pupils and thirty-eight teachers, five of whom had received their higher education in the ecclesiastical academies of Russia, are enumerated. Statistical tables are given for the various divisions into which circumstances have split up the mission fields in general, and the little handbook has its interest for those who take a broad view of missions, as well as for the experts.

English Literature: An Illustrated Record. By Richard Garnett and Edmund Gosse. Vols. II. and IV. Macmillan Co. 1904.

We have already noticed Volumes I. and III. of this sumptuous work, but the two remaining volumes, which have since reached us, are of sufficient importance and independence to deserve individual mention. Volume II., to which both editors contribute, covers a space of about seventy years from the accession of Elizabeth in 1558, including the period of the most splendid poetry and the most artistic prose. While all the literature of this extraordinary time is reviewed with appreciative judgment, and as fully as the design of the work admits, most stress is naturally laid on those two great, and we might almost say mutually complementary, personages, Bacon and Shakspere.

Dr. Garnett's study of Bacon, as man and as philosopher, gives a vivid picture of a powerful mind guided only by the dry light of pure intellect, and regarding the affections and emotions as perturbing forces, to be minimized since it is not possible entirely to get rid of them. The only critical remark we have to make upon this part of the work is to note that, while recording the extreme severity of the penalties imposed on Bacon at his condemnation, the fact that they were to a great extent remitted by the King is not mentioned.

The treatment of Shakspere's work is full and judicious, but that of his life is not quite so satisfactory. While the author of a separate biography of the poet may feel it his duty at least to mention every apocryphal tradition and absurd mare's-nest that gossip has handed down or conjecture invented, one would think that a work like this would keep soberly to the ascertained facts and to probabilities only just short of certainty, and, where there are gaps in the record, let them be gaps, without trying to fill them up with brain-cobwebs. Here, apropos of the fact that we do not know certainly what Shakspere was doing between 1585 and 1592, Dr. Garnett not only expresses his belief that in these years he was enlarging his knowledge of books and men, but also that he travelled extensively on the Continent. The French scenes in "Henry V.," we are told, "indicate" that the poet had visited France; his description of a fleet setting sail, and his use of military phrases, that he accom-

panied Leicester on his expedition to the Low Countries; and the editor strongly inclines to the belief that the poet's knowledge of Elsinore and Venice shows that he had visited both those places, though he reluctantly admits that "there is not sufficient evidence." If lively description is proof of personal experience, we may confidently set down that Shakspere was once at least shipwrecked in a storm, that he was present at a pitched battle and a siege, and that at some time in his life (probably in his wild youth) he was ducked in a river.

More subtly penetrative is the reasoning (not devised by Dr. Garnett, but approved by him) which proves that Shakspere was forty-eight years old when he wrote "The Tempest." *Prospero* asks *Ariel* the time of day, and is told that it is two in the afternoon. Now assuming the natural day of twelve hours to symbolize the seventy-two years of human life, since two-thirds of the day has passed at two o'clock, we have the proportion 12:8=72:48. Q. E. D.

Among the portraits which greatly enhance the value of this volume, we have the three which (whether like him or not) were certainly meant for Shakspere: the bust, the Droeshout engraving, and the oil painting held by many to be the original of the latter. To these the editor has added the Chandos portrait, but not the Jansen.

Volume IV., which is the work of Dr. Gosse, and which includes the writers of the last quarter of the eighteenth century, and virtually the whole of the nineteenth, will probably be to many readers the most attractive of all. These men lived in our own atmosphere; the problems confronting us confronted them; they took up the burden that we are still bearing. For the lives of these writers abundant details were at hand, and the editor has used them so as to seize the illuminating points. The literary criticisms show discriminating judgment, catholic appreciation, and delicate taste. The profusion of portraits, views, and facsimiles gives this volume especial value and interest.

An appendix furnishing translations and transliterations, and a very full index, fittingly complete a work of which, as a whole, we may say that it is a worthy history of the grandest body of literature in any modern language.

The Man Roosevelt: A Portrait Sketch. By Francis E. Leupp. D. Appleton & Co.

Mr. Leupp's book has an undeniable interest apart from the immediate appeal of his subject. His pen is one long trained in the art of picturesque presentation, and its cunning does not fail him here. The various elements of the "portrait" he draws are skilfully pitched upon, and if the total result looks too much like a composite photograph, dim feature warring with dim feature, that is the necessary defect of his method, which is the journalist's *chose vue*. That the book is as far as possible from a full and measured estimate—to say nothing of a final estimate—of President Roosevelt, Mr. Leupp would be the first to admit.

Some one expressed surprise to Pitt that a man of so little character as Fox should have had so compelling an influence over so many men. "The remark is just," replied Pitt, "but then you have not been under the wand of the magician." Mr. Leupp clearly has been. Strive as he may to conceal it, the spell is clearly upon him—the spell cast by a virile and spontaneous nature which fascinates its thousands. We do not forget Mr. Leupp's occasional protests that he judges the President impartially, or condemns certain courses of his. But these relate to minor matters. The author shows us Mr. Roosevelt's exuberance running unconsciously into exaggeration, so that all his little fishes talk like whales. Nor is the frequent bathos of the Presidential style forgotten. Admission is made that Rooseveltian impetuosity often swells into a fault. Other abatements of admiration occur; but, as a whole, the book is clearly of the "Friendship's-Tribute" order. One explanatory defence reads queerly. Mr. Roosevelt has been criticised—notably by ex-Secretary Long—for having urged that the Spanish ships en route to Cuba, long before the war broke out, should be attacked and sunk at sea. This has been invidiously adduced as a good example of the President's original ideas on the subject of international law. But it is all based on a misconception, elucidates Mr. Leupp. He has notes jotted down in 1898 which prove that Mr. Long omitted "one essential feature of the story"—namely, that Mr. Roosevelt proposed, as a preliminary, to have Spain notified that the sending of her fleet "would be considered an act of war." That was to make all regular! To serve notice upon a friendly nation that the moving of ships from one part of her territory to another would justify us in "smashing" them is enough, as a cowboy friend of the President's might say, to make Puffendorf puff worse than ever.

Mr. Leupp refers to a mysterious moral struggle through which Mr. Roosevelt had to pass years ago. It practically came down to this: Should he support for the Presidency a party nominee whom he thought morally unfit? Also, should he give up for party his belief in free trade? Mr. Leupp admits that it cost Mr. Roosevelt a temporary pang to do both these things, but the doctrine of the "larger good" carried the day. That is, Mr. Roosevelt was persuaded that he could do more good by "acting with his party." But, obviously, what he really meant was securing office from his party. Anybody can "act" with any party. A party will welcome, in a campaign, the most chronic "kicker," and accept his advice and his vote with the greatest pleasure. But office-holding, of course, is reserved, as a rule, for the "regular"; and it is plain that office-holding was what Mr. Roosevelt had in mind. The principal difference between him and more frankly partisan aspirants is that the latter do not execute a moral flourish over their ambitions. We can understand the attitude assumed by Mr. Roosevelt, but we see no reason for trying to throw an ethical glamour about it. The perils involved, all men can see. When you say, with a sigh, as Mr. Leupp represents President Roosevelt as saying, "I am a Republican first and a free-trader afterwards," you may yet find yourself saying, "I am a Republican first and an honest man afterwards."

International Exchange. By Anthony W. Margraff. Chicago: Fergus Printing Co. 1903.

During the Mexican War, the late Mr. August Belmont surprised his fellow-bankers in Wall Street by undertaking to place Government funds in Mexico for the modest commission of 3 per cent. Inasmuch as the steamship companies charged about this rate for freight on specie, the other bankers could not understand where the profit came in; but Mr. Belmont arranged an arbitrage operation in exchange, which was then an unusual, though it is now a very common, transaction, and no doubt reaped a handsome profit in consequence. This was in the early days of a business which has since become a striking example of what economists call the tendency of profits to a minimum. Up to some thirty years ago bankers expected to make at least a half of one per cent. on their exchange operations, and the business was decidedly profitable; but nowadays, according to Mr. Margraff, they aim to make only one-twentieth of one per cent., which is certainly not enough to cover the inevitable risks—except, perhaps, when times are very prosperous.

Any one who is desirous of taking up this unprofitable business will find in the book before us a most elaborate account of modern methods of conducting it. The figures given are quite correct, and no important species of operation has been neglected. The reader, however, will meet with one unexpected difficulty, in that Mr. Margraff writes in a strange language, which we take to be Chicago English, and which we find exceedingly puzzling. Not satisfied, perhaps, with his own skill in the use of this singular tongue, Mr. Margraff has obtained the assistance of his publisher, Mr. R. C. Fergus, who contributes a sort of double-barrelled introduction, which appears to be slightly explosive, but not otherwise dangerous, as far as we can understand it. From this introduction we quote a sentence, neither better nor worse than others, in order to show that our difficulties are not imaginary:

> "The first point presented by the author is the proper training of young men to a thorough knowledge of the subject-matter of a vocation in the International Department through the school, first of a text-book leading to the classroom to be established, and in so doing prevent the exception of an educational institution for the personnel of the American Foreign Banking Department."

What this is all about we do not pretend to know, but we cheerfully concur in Mr. Fergus's final sentence, because we feel satisfied that it does not portend any bodily mutilation for Mr. Margraff: "Happy is the thought that the space of years allotted to man will permit of other fragments from our American financier."

The Nile Quest: A Record of the Exploration of the Nile and its Basin. By Sir Harry Johnston. Illustrations and maps. F. A. Stokes. [The Story of Exploration.] Pp. xv, 341. 8vo.

Sir Harry Johnston has done more in this book than simply tell the story of the exploration of the Nile—a story which began some three thousand years ago and is not yet finished, for there is still a stretch of some two hundred miles of the basin of the Mountain or White Nile which is practically unknown. In addition to a narrative of the various attempts to solve the mysteries of the Nile sources, he displays

the latest theories as to the origin, affinities, and migrations of the negro races inhabiting northeastern Africa, along with much information about the physical features, fauna and flora of the region in which the river takes its rise. These are subjects which he had special opportunities for investigating while organizing the Uganda Protectorate.

The early explorers, from Herodotus down to the Portuguese missionaries in the fifteenth and sixteenth centuries, left few records, and the first chapters have no personal incidents to enliven them. The interest of the book to the average reader begins with the narrative of the remarkable achievements of the Scotchman, James Bruce, who, in the latter part of the eighteenth century, followed the Blue Nile from its source in the Abyssinian highlands to its junction with the main river at Khartum. It culminates with the account of Speke's adventurous journey from the Indian Ocean to the summit of a hill "when the vast expanse of the Nyanza burst suddenly upon my gaze." Another historic moment was when, after the lapse of nearly twenty centuries of doubt, the Mountains of the Moon were found to be a reality, not the figment of Ptolemy's brain, or, more accurately, that of Diogenes, the Greek merchant, his authority for the statement of their existence. Stanley was encamped near Lake Albert Nyanza, in his expedition for the relief of Emin Pasha, when, he says,

"My eyes were directed by a boy to a mountain said to be covered with salt, and I saw a peculiar shaped cloud of a most beautiful silver color, which assumed the proportions and appearance of a vast mountain covered with snow. Following its form downward, . . . I became for the first time conscious that what I gazed upon was not the image or semblance of a vast mountain, but the solid substance of a real one, with its summit covered with snow."

To the achievements of these three explorers and of Schweinfurth and Sir Samuel Baker the most space is given. Baker would have accomplished more as an explorer had not his task been largely to free the region of the Upper Nile from the slave-raiders. His reward, however, is greater, for he "is, in the remembrance of the old people, the one heroic white man they have known; terrible in battle, scrupulously just, at all times kind and jovial in demeanor among friends; a born ruler over a savage people." The travellers of recent years have been so numerous and their discoveries so relatively unimportant that little more than a bare reference to them was possible in a small volume. It is interesting to note that the aim of the last of the seventy-seven (men and women) who constitute Sir Harry's "Roll of Fame," Sir William Garstin, was not geological research, but to discover where irrigation works could best develop the natural resources of the Sudan and Egypt. In the series of maps prepared by Mr. Bartholomew, the progress of the quest is graphically shown, as well as the extent and minuteness of our present knowledge of the Nile Basin. There is an inconsistency between the spelling on the maps and in the text which should have been avoided. The journey of Bruce began in 1768, not (as stated on p. 77) in 1786; and Cancer should be substituted for Capricorn on page 298. The illustrations are portraits of explorers and scenes on the upper river. An excellent index meets the need of reference.

Wells' Tables for Chemical Calculations.

With explanations and illustrative examples. By Professor HORACE L. WELLS of Yale. With thumb index. 58 pp., 8vo, $1.00 *net.*

This volume is designed to facilitate the use of logarithms in quantitative computations, and contains five-place tables in unusually large type, together with various special chemical tables based upon the most recent data. The method of using the tables is shown clearly by many illustrative examples.

FOUR WEEKS AGO LAST SATURDAY WE PUBLISHED THIS BOOK IN ITS ORIGINAL FOUR-DOLLAR FORM. THE EDITION WAS IMMEDIATELY SOLD OUT AND A LARGE DEMAND MADE EVIDENT FOR A LOW-PRICED EDITION. HERE IT IS:

$1.50 *net*

KOREA

"A timely book, a well-considered, matured and informing work by a man who knows the country from end to end and can put pictures on paper with consummate ease."
—*London Academy.*

By ANGUS HAMILTON

With map and illustrations. $1.50 net.

FEW BOOKS HAVE BEEN SO WELL RECEIVED.

NEW YORK SUN: "It is a singularly useful as well as a timely book."
PHILADELPHIA PRESS: "An absolutely up-to-date description of Korea and its people."
NEW YORK HERALD: "Invaluable to students of the present war. Full of information and interest."
NEW YORK TRIBUNE: "He has written a good book and he has published it at just the right moment."
CHICAGO RECORD-HERALD: "As commendable for its unbiassed spirit as for its remarkable fund of interesting and useful information."

First Volume **LITERARY LIVES** *Ready Now*

MATTHEW ARNOLD

By G. W. E. RUSSELL, Collector and Editor of Mr. Arnold's "Letters." With 17 illustrations, $1.00 net. (Postage 10 cents.)

CONTENTS

INTRODUCTION METHOD EDUCATION SOCIETY CONDUCT THEOLOGY

A BOOK of an interest and value fully warranting its choice to introduce a series so important as LITERARY LIVES, in which will appear, from time to time, biographical and critical studies, by distinguished writers, of well-known authors of all countries, the whole under the editorship of Robertson Nicoll, LL.D. Mr. Russell, who unquestionably is acquainted with his whole subject more intimately than any other, does not attempt here so much a criticism of the verbal medium through which Arnold uttered his heart and mind as a survey of the effect he produced on the thought and action of his age.

General Gordon's Reminiscences of the Civil War

Seventh Impression February 27. $3.00 *net* (postage 21 cents).

The Life of Edward Fitzgerald

By THOMAS WRIGHT. With many illustrations. 2 vols., 8vo, $7.50 *net.*

An important biography welcomed by the large and rapidly increasing body of admirers of the genius of Edward Fitzgerald. It contains a great amount of new matter, and many unrecorded anecdotes, and throws new and interesting sidelights on the life of this great letter-writer and fascinating man of genius, whose work is becoming better known and more appreciated every year.

COMING NEXT WEEK

OVERTONES

A Book of Temperaments

By JAMES HUNEKER

Has all his originality and novelty in point of view, his breadth of knowledge and richness of illustration in the exposition, his raciness and pungency in the individual phrase.

$1.25 *net* (postage 12 cents).

FREEDOM AND RESPONSIBILITY

By ARTHUR TWINING HADLEY

12mo, $1.00 *net* (postage 11 cents).

The *New York Tribune* says: "President Hadley's discussion of these themes is, throughout, on a high plane, worthy of him and of the great University he represents."

Senator Hoar's Autobiography of Seventy Years

Now in its Fourth Edition. Two volumes. $7.50 *net* (expressage extra).

Introduction to Classical Latin Literature

By PROFESSOR WILLIAM CRANSTON LAWTON, Author of "Introduction to Classical Greek Literature." Illustrated, $1.20 *net.*

Like its predecessor, this book is thoroughly literary in spirit, and is the work of a sympathetic critic rather than a mere chronicler of data. The distinguishing trait and signal excellence of the volume is its vivifying treatment, which deals with Latin and Latin authors as if the language were living and its authors of to-day.

Revised Edition
Lane's Latin Grammar
FOR SCHOOLS AND COLLEGES
BY
GEORGE M. LANE, Ph.D., LL.D.
Professor Emeritus of Latin, Harvard University
Price, $1.50
Distinguished for completeness, convenience of arrangement, accuracy of detail, and precision of expression. Combines condensation with clearness in its formal expression of principles. No law of the language is neglected, no exception forgotten; ample and apt illustrations are given; yet the whole is brought within small compass. In the revision by **Prof. Morris H. Morgan** of Harvard University many changes and corrections have been introduced throughout, and the chapter on Sound has been very largely rewritten, and also extended.

A. S. BARNES & COMPANY, 156 Fifth Avenue, New York

Prizes for Economic Essays

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate an examination of the value of college training for business men, a committee composed of

PROFESSOR J. LAURENCE LAUGHLIN, University of Chicago, Chairman;
PROFESSOR J. B. CLARK, Columbia University;
PROFESSOR HENRY C. ADAMS, University of Michigan;
HORACE WHITE, Esq., New York City, and
HON. CARROLL D. WRIGHT, National Commissioner of Labor,

have been enabled, through the generosity of Messrs. Hart Schaffner & Marx, of Chicago, to offer four prizes for the best studies on any one of the following subjects:

1. The causes and extent of the recent industrial progress of Germany.
2. To what is the recent growth of American competition in the markets of Europe to be attributed?
3. The influence of industrial combinations upon the condition of the American laborer.
4. The economic advantages and disadvantages of present colonial possessions to the mother country.
5. The causes of the panic of 1893.
6. What forms of education should be advised for the elevation of wage-earners from a lower to a higher industrial status in the United States?
7. What method of education is best suited for men entering upon trade and commerce?

A First Prize of One Thousand Dollars, and
A Second Prize of Five Hundred Dollars, in Cash,

are offered for the best studies presented by Class A, composed exclusively of all persons who have received the bachelor's degree from an American college since 1893; and

A First Prize of Three Hundred Dollars, and a Second Prize of One Hundred and Fifty Dollars, in Cash,

are offered for the best studies presented by Class B, composed of persons who, at the time the papers are sent in, are undergraduates of any American college. No one in Class A may compete in Class B, but anyone in Class B may compete in Class A. The Committee reserves to itself the right to award the two prizes of $1,000 and $500 to undergraduates, if the merits of the papers demand it.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as thesis for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and not needlessly expanded. They should be inscribed with an assumed name, the year when the bachelor's degree was received, and the institution which conferred the degree, or in which he is studying, and accompanied by a sealed envelope giving the real name and address of the competitor. The papers should be sent on or before June 1st, 1905, to

J. Laurence Laughlin, Esq.,
University of Chicago
Box 145, Faculty Exchange Chicago, Illinois

Historic Highways of America

By Archer B. Hulbert

A series of monographs on the History of America as portrayed in the evolution of its highways of War, Commerce, and Social Expansion.

Comprising the following volumes:

I—Paths of the Mound-Building Indians and Great Game Animals.
II—Indian Thoroughfares.
III—Washington's Road: The First Chapter of the Old French War.
IV—Braddock's Road.
V—The Old Glade (Forbes's Road.
VI—Boone's Wilderness Road.
VII—Portage Paths: The Keys of the Continent.
VIII—Military Roads of the Mississippi Basin.
IX—Waterways of Westward Expansion.
X—The Cumberland Road.
XI, XII—Pioneer Roads of America, two volumes.
XIII, XIV—The Great American Canals, two volumes.
XV—The Future of Road-Making in America.
XVI—Index.

Sixteen volumes, crown 8vo, cloth, uncut, gilt tops. A limited edition only printed direct from type, and the type distributed. Each volume handsomely printed in large type on Dickinson's hand made paper, and illustrated with maps, plates, and facsimiles.

Published a volume each two months, beginning September, 1902.

Price, volumes 1 and 2, $2.00 net each; volumes 3 to 16, $2.50 net each.

Fifty sets printed on large paper, each numbered and *signed by the author*. Bound in cloth. with paper label, uncut, gilt tops. Price, $5.00 net per volume.

"The history of American trails and carries in colonial times; of paths, roads, and highways in our national beginnings; and of our great lake, river, and railroad traffic in later times is and has been of the first importance in our social and political history. Mr. Hulbert has shown himself abundantly able to investigate the subject and put in good form the results of his labors."—Professor William M. Sloane, *Princeton University*.

"Mr. Hulbert has evidently mastered his subject, and has treated it very ably and enthusiastically. History is too frequently a mere collection of dry bones, but here we have a book which, when once begun, will be read eagerly to the end, so vividly does the author bring scenes and personages before us."—*Current Literature*.

"As in the prior volumes, the general effect is that of a most entertaining series. The charm of the style is evident."—*American Historical Review*.

"His style is effective . . . an invaluable contribution to the makings of American history."—*New York Evening Post*.

"Should fill an important and unoccupied place in American historical literature."—*The Dial*.

Early Western Travels

1748-1846

A SERIES of annotated reprints of some of the best and rarest contemporary Travels, descriptive of the Aborigines and Social and Economic Conditions in the Middle and Far West during the Period of Early American Settlement.

* * *

Edited, with Historical, Geographical, Ethnological, and Bibliographical Notes, and Introductions and Index, by

Reuben Gold Thwaites

* * *

With facsimiles of the original title-pages, maps, portraits, views, etc. 31 volumes, large 8vo, cloth, uncut, gilt tops. Price $4 net per volume (except the Atlas, which is $15 net). Limited edition; each set numbered and signed.

* * *

An Elaborate Analytical Index to the Whole

Almost all the rare originals are unindexed. In the present reprint series this immense mass of historical data will be made accessible through one exhaustive analytical index.

Rarity of the Originals. This series comprises only works of permanent historical value. All are quite scarce, and bring steadily-advancing prices. Some of them are of exceeding rarity—so rare, in fact, that they are not to be found in the largest collections of Americana in this country. Many are so hard to find that for several years past, orders placed for them both here and abroad, without restriction as to price, have not been filled.

Mr. Thwaites's Eminence as an authority on all matters connected with the history of the West, and his well-known standing as an Editor and Librarian, will be sufficient assurance of the value of the Travels selected, and of the care with which the series will be edited throughout.

The Philippine Islands

1493-1898

* * *

Being the history of the Philippines from their discovery to the present time.

* * *

EXPLORATIONS by early Navigators, descriptions of the Islands and their Peoples, their History, and records of the Catholic Missions, as related in contemporaneous books and manuscripts, showing the political, economic, commercial, and religious conditions of those Islands from their earliest relations with European Nations to the end of the nineteenth century.

* * *

Translated, and edited and annotated by E. H. Blair, *and* J. A. Robertson, *with introduction and additional notes by* E. G. Bourne. With Analytical Index and Illustrations. Limited edition, fifty-five volumes, large 8vo, cloth, uncut, gilt top. Price, $4.00 net per volume.

"The most important project ever undertaken in the line of Philippine history in any language, above all the English."—*New York Evening Post*.

"The work is second in importance only to the original documents; to the student it is even of greater value, since it places before him translations of these historical data which would otherwise be totally inaccessible, and without which no work on the Philippines could be definitive."—*American Anthropologist*.

"At the present time few subjects are discussed so widely and so ignorantly as matters relating to the Philippines."—*Chicago Chronicle*.

"In addition to its value as accurate history, the work is full of interest and of suggestions of thrilling mediæval romance and adventure among strange scenes and wild people."—*Philadelphia Telegraph*.

Full descriptive circulars may be had on application to the publishers

THE ARTHUR H. CLARK COMPANY

Cleveland, O.

IMPORTANT NEW MACMILLAN PUBLICATIONS

Fiction

By the author of "Elizabeth and her German Garden," etc.

The Adventures of Elizabeth in Rügen

"The real charm of the delectable Elizabeth's books is her own refined, tender, wholesome, womanly nature beneath their buoyant optimism and intellectual vivacity."—*The Record-Herald*, Chicago. *Cloth, $1.50.*

Mr. EDEN PHILLPOTTS'

new novel—4th edition

The American Prisoner

"There is individuality, patriotic sentiment, a strong love interest of whose kind the world does not tire. The author's innate love and subtle appreciation of nature vibrates in every scene."—*Pioneer Press.* *Cloth, $1.50.*

Mr. CYRUS TOWNSEND BRADY'S

A Little Traitor to the South

is a "war-time comedy with a tragic interlude," of the days when an attempt to torpedo a warship needed vastly more courage than in these days of modern submarines.

Illustrated in colors by A. D. Rahn, with decorations by C. E. Hooper. *Cloth, $1.50.*

Mrs. SARA ANDREW SHAFER'S

The Day Before Yesterday

is a book for the quiet, idle hour when one is in sympathy with its subtle understanding of childhood's point of view, its wistful reminiscence. *Cloth, $1.50.*

"This is one of the pleasantest books of the year . . . the story leaves an impression of cleanness and coolness, and sweet living on the memory," says *The Evening Post*, N. Y.

Miss MARGERY WILLIAMS'

The Price of Youth

is a clever, insistent drawing—a vivid sketch, full of individuality and wit, of the unusual but by no means improbable circumstances of a girl's experience among the pines of an out-of-the-way village in New Jersey. *Cloth, $1.50.*

Miss MARGARET SHERWOOD'S
romance of

King Sylvain and Queen Aimée

is a tale of love as fresh and passionate and true as any idealist could ask; it tells of how two royal lovers escaped from the restraints of court into the forest; of how they found room in the sunshine, home and a garden; and also of how with great misgiving they brought a son to claim his own.

Illustrated in colors and decorated by SARAH S. STILWELL. *Cloth, 12mo, $1.50.*

A new novel by **ONOTO WATANNA**

Author of "A Japanese Nightingale," "The Wooing of Wistaria," "The Heart of Hyacinth," etc.

Daughters of Nijo

This includes a rarely interesting, because reliable, view of Japanese court life. *With illustrations in color and decorations by Kiyokichi Sano. Cloth, 12mo. $1.50.*

Miscellaneous

Mr. FREDERICK AUSTIN OGG

Instructor in History, Indiana University

The Opening of the Mississippi

A STRUGGLE FOR SUPREMACY IN THE AMERICAN INTERIOR

The story of the prolonged diplomatic negotiation in which the purchase of Louisiana was but one incident—an important one, to be sure. Four nations, Spain, France, England and the United States, were from time to time involved in it, and no account of the great Middle West is complete without a careful survey of its devious courses. *Cloth, 8vo, $2.00 net.* (*Postage 22c.*)

By LEWIS O. BRASTOW, D.D.

Professor of Practical Theology, Yale University

Representative Modern Preachers

Careful and critical estimates of nine different preachers who have been leaders of various schools of preaching during the last century, including such men as Robertson, Beecher, Bushnell and Brooks. *Cloth, cr. 8vo, $1.50 net.* (*Postage 13c.*)

"It is unique in its class . . . a selection so made as to illustrate the leading forms in which Christian truth can be presented."—*T. T. Munger.*

Dr. SAMUEL D. McCONNELL,

Rector of All Soul's Church, New York

Christ

The author of "The Evolution of Immortality" aims to substitute for the blurred indistinct doctrinal conception of Christ, a clear and simple outline as the sufficient basis of religious faith. *Cloth, 16mo, $1.25 net.* (*Postage 10c.*)

Dr. JOHN WILLIAMS STREETER'S

novel out-door book

The Fat of the Land

"It is wonderfully attractive. It is a nature book that is as full of practical suggestion as one of John Burroughs's talks about the birds—and withal is as practical and full of common sense as a balance sheet."—*Brooklyn Eagle.*

Cloth, 12mo, $1.50 net. (*Postage 13c. extra.*)

Mrs HUGH FRASER'S *delightful*

Letters from Japan

"Nowhere else do we get so closely into touch with the actual Japanese men and women—yes, and children, too—as in this book."—*The Outlook.*

Published in one volume with all the illustrations of the 2-vol. $7.50 ed. Cloth, $5.00 net. Ready next week.

Mr. JACK LONDON'S

The People of the Abyss

"The underworld of London has been pictured many times before . . . But Mr. London alone has made it real and present to us."—*Independent.*

New and Cheaper Edition, cloth, $1.50 net. (*Postage 20c.*)

By PAUL H. HANUS *Harvard University.*

A Modern School

A book for the general reader interested, as every one must be, in the results of modern education, as well as for the teacher whose direct professional interest is in the methods of preparing a pupil in an all-around way for the duties of an active life.

Cloth, 12mo, $1.25 net. (*Postage 13c.*)

On NET books ordered from the publishers, carriage is uniformly an extra charge.

The Nation.

NEW YORK, THURSDAY, MARCH 10, 1904.

The Week.

Senator Hale well brought out on Thursday the military weakness entailed upon us by the Philippine Islands. "We have got to have ships in the Philippines," he said, and added: "In case of war we should have to spend hundreds of millions in the Philippines." This is the final touch to that lovely picture of our Imperialists in which the archipelago, like Hawaii, was to be a bulwark for attacks from the East aimed at Bunker Hill or New Orleans. But Mr. Hale did even better service than that. He had the courage to state that he proposed to discuss the navy without regard to charges of lack of patriotism. Never in time of peace has this cry been so effectively used to cut off debate as at present. As a whole, the Democrats have been ready to subordinate convictions to the fear of being called unpatriotic. So it was left to Senator Hale to bring out the fact that our large-navy boomers have arrived at one of their goals by outstripping every nation save England. Next we shall be told that we must surpass England, too, and then England plus Russia, etc., and the dangers of a German and English alliance will be dwelt upon. Another truth uttered by Senator Hale was his statement that the American naval officer "is the naval officer, pure and simple, and the American navy bounds his complete horizon. To him the navy is everything, and the Naval Board is run too much in the direction of enormous ships. In some respects, the naval officers are like the farmer who wants to raise the biggest pumpkin."

Secretary Taft's speech at the Ohio dinner on Saturday was the manly, straightforward utterance the public has come to expect from him, and will remain the ablest defence of the Administration's course in the islands. In so far as it breathed a spirit of friendliness for the Filipinos, exemplified his intense desire that they primarily shall profit by the development of the archipelago, and related the substantial progress already made, Mr. Taft's remarks will be heartily applauded by every American, irrespective of party. If he and others like him could have the complete supervision of the destinies of the Filipinos during the next fifty years, unhampered by party considerations and by neglectful or selfish Congresses, we doubt not that the result would be most creditable to the United States. Unfortunately, times and parties change, and the assurances of a Taft regarding American unselfishness will have but little value after he and his co-workers have passed from the political scene. There is but one safeguard, and that is that some expression of our national good faith and unselfish purposes in respect to the Philippines shall be put on record in a binding form, similar to the Teller resolution in regard to Cuba.

The postponement of the Frye Shipping bill until the tariff shall have been removed from Philippine products is in accordance with the do-nothing preelection policy. It is an advantage, of course, not to declare Filipino-American trade coastwise traffic until there shall be enough American ships to carry the goods and enjoy the monopoly; it will be advantageous to the Filipinos to obtain free entry at our ports, but Congress is surely doing nothing to win the gratitude that redounds to a quick giver. Mr. Roosevelt and Gov. Taft have pleaded for free trade with the islands, have emphasized the pressing need of opening our markets, and now Congress says, "Yes, we recognize the need; the islands are sadly cramped for want of trade facilities, and in a year or so we will do something about it." Even such a grudging admission is worth something, for it is hardly possible that after a Presidential campaign quite so plausible a reason for standing pat upon folly and wrong can be found. But certainly the policy of delay in a matter of simple justice and expediency can do little to win good will in the islands, or, here, to attract votes to "a party that does things."

Government by commission, we are told, is to be extended from the Philippines to the Panama Canal zone. It may be the best way of administering that anomalous holding; in any case, it seems less objectionable than a military government. But consider the resultant political mosaic on the Isthmus. There will be a quasi-republic separated into two parts by a ten-mile strip under foreign control. This strip of practically alienated territory will contain the capital and the chief commercial city of the quasi-republic, besides all its means of communication. Recall, also, that the possessors of this strip are at liberty to intervene at their discretion anywhere else in the republic. It will be seen that the Republic of Panama is very much like an Æsopian ape, let us say, who has bartered away his stomach, heart, "lights," and liver, but has received a solemn certificate of possession for the remainder of his anatomy. One can see the end of a distribution of that sort. Already the Panama Republic has a very pretty race problem of its own in the rivalry between the Spaniards in control and the negroids who make up the bulk of the population. The present Government need not last any longer than it takes the Junta and its adherents to divide our $10,000,000 and any contingent *douceurs* from the French Panama Company. Annexation is already the cry of those who have not come in for the "divvy." And, indeed, annexation was always the logical policy of an Administration which has gratuitously involved itself in such diplomatic hypocrisies as the present protectorate is continuing *ad nauseum*.

Our old friend, "Loomis, Acting," off for a first-hand inspection of San Domingo, speaking for the Administration in last week's *Independent*, proposes, first, to intervene to "quiet the disturbing elements" in San Domingo. We are to make the people "return to the industries which are, at present, utterly neglected." Mr. Loomis affirms that "obviously" the time has come for us to "do something." This may be obvious to him, but what others will think obvious is that the Administration has been at last lured into taking, in San Domingo, the first step that costs. The Dominicans have been openly playing their game. Ever since the unhappy Panama precedent was set, the idea has spread that Uncle Sam is an "easy mark" for people with revolutions to unload upon a confiding old gentleman. Almost ostentatiously have the struggling factions in San Domingo aimed at getting the United States to give them, as Gen. Sanchez innocently puts it, "a little assistance." He will alarm the "stand-patters" by his further intimation that one thing wanted is the free importation into our markets of Dominican sugar But Mr. Loomis is thinking of a treaty "bringing San Domingo under the Platt amendment" as affecting Cuba—in other words, setting up an American protectorate. He calls it "friendly protection." Now there is nothing unexampled in the Dominican situation. It is the same old story of revolution. We have dealt with it for years in the time-tried methods. Why abandon them now? Insist upon the protection of American citizens. Demand redress for every outrage. But "police" San Domingo? Mr. Roosevelt has plenty of other ways of making himself absurd. This sort of nonsense he should leave to Sancho Panza in Barataria.

Mr. Williams, the Democratic leader of the House, is generally pretty sure of his facts, but last week he had to make a retraction. He told the tariff "stand-patters" that if they could have their way, this country would not have any imports

at all, except in non-competing products. What are the articles, he said, the like of which cannot be raised in the United States? Polar bears, guava, breadfruit, and a few things of that sort. That was where he was weak, as he himself soon discovered; for the next day he announced to the House that, on further thought, he did not believe these articles could be so regarded. The fact is, he discovered that the principal product of our fine new dependency, Guam, is breadfruit, and Porto Rico and our other tropical colonies raise both breadfruit and guava. And as for polar-bear skins, are we not getting them from Alaska? Mr. Williams raises a very important point here. Any one can figure out for himself what a great thing Imperialism has been for our infant industries. Under our policy of expansion we have sampled about every kind of soil and climate known to this earth. There is hardly a product of the arctic, temperate, or torrid zone that could not, by legislative hothousing at least, be produced somewhere within our jurisdiction.

"The only motive," said Representative Overstreet in defending the Congressmen involved in the postal scandals—"the only motive was to promote the interest of their constituents." "And," he added, "there has been a complete exoneration of members of the House; instead of there being a reflection upon them, their honor and respect will be enriched." But nobody who dwells outside the mephitic atmosphere of politics can entertain any illusion as to the nature of the transactions in which these statesmen were engaged. Senators and Representatives inevitably have a powerful influence over executive officers, and often view them as mere servants. When a Congressman has "landed" his man in the Post-Office Department, he looks for favors in return, and if he does not get them he bestows his august patronage upon some one who is more pliant. In practice, the system works exactly as might be expected. One example, that of Congressman (now Judge) Warren B. Hooker, is enough to reveal the method. In October, 1901, the Government leased for a post-office a building in Dunkirk, of which he was part owner, at $1,350 annually, for a term of ten years. The next January—through the kindness of George W. Beavers, now under indictment—the rent was increased to $1,500; and in May the ten-year lease was cancelled and a new one drawn at $2,000. In this particular case the Congressman happened to be a direct beneficiary of the fraud; but the principle is the same whether the money goes to the Representative, to a henchman, or to some constituent whom he wishes to lay under obligations; the principle is that of robbing the Government.

Monday's revelations go far to explain the rottenness of the postal and other departments. The Legislature and the Executive are theoretically acting together in an effort to conduct public business as efficiently and cheaply as possible; they have in reality struck hands in an endeavor to secure the minimum of efficiency and the maximum of expense. Mr. Payne's report contains many cases of grants for clerk hire for which the business of the office and the rules of the department offered not a shadow of pretext. When men of the standing of Congressman Hill of Connecticut, Senator Cullom, Speaker Cannon (that watchdog of the Treasury), Congressman Payne of New York, and Hepburn of Iowa are taken red-handed, no one can marvel that Beavers, Machen, and the small-fry of department subordinates rush for loot, with the cry, "Now or never!" These petty frauds are convincing evidence that it is practically impossible to conduct our Government economically; and they give us pause when enthusiasts press for enlarging the scope of administrative activities.

The findings of the special investigators for the Interior Department, Charles J. Bonaparte and Clinton R. Woodruff, seem to confirm the gloomiest view of gross laxity in the conduct of affairs in the Indian Territory by the "Dawes Commission." What was justly regarded ten years ago as a Governmental missionary body has been struck by a kind of dry rot that has destroyed, not only the philanthropic impulses which actuated the original members, but the instinct of official rectitude in their successors. There is a pie to be cut, and the men with the widest pie knives are found to be those who should be beating back the hungry looters. Ten years ago Commissioner Armstrong went from town to town among the Five Tribes begging on street corners to be heard. In substance, he declared that it was the Commission's purpose to save the tribes from the flood of aliens pouring over the borders and seizing, by lease, the best of the Territory lands. He preached allotment effectively. Now, with Senator Dawes a memory and Commissioner Armstrong out, the Commission's chairman, Tams Bixby, is spoken of as a menace to the Indian population of the Territory. The conditions that he helped to create and openly defends are officially called discreditable to the United States. Truly, times have changed, and the suggestion of Representative Curtis, that the Commission, which has become unduly expensive and inefficient, should also change and give way to a single agent, might now be seriously considered.

Naval circles are tremendously stirred up over the recent accident to the *Iowa's* guns. The fatal mishap of last year on that ship as on others had made the service uneasy; but this last blowing off the muzzles of two of the *Iowa's* guns has created positive alarm. The *Army and Navy Journal* characterizes the situation as "very deplorable, if not alarming." It speaks also of "the failure of several boards to find any sufficient cause for these accidents," and of the "depression noted both among officers and men who have to deal with these guns." But it becomes positively excited in discussing an order issued by the Bureau of Ordinance on February 8, which reduces the muzzle velocities of guns on board ships at navy-yards and at the naval proving-grounds. This order, which was admittedly issued because of the latest accident on the *Iowa*, shows that even in the sacred precincts of the Navy Department confidence in our naval weapons has received a great chill. The *Journal* terms this an "almost incredible order," a "fatal blow to the efficiency of the fleet," and proceeds to recall the fact that the *Iowa's* guns were built of forgings which three boards of officers, after careful examination, had rejected. The latter is a most astonishing allegation and should be promptly investigated. Since the effect of the Ordnance Bureau's order is to make all our navy weapons 30 per cent. less effective than similar European guns, there is naturally much shaking of heads in the navy.

Circuit-Attorney Folk is having no easy time of it in his campaign for the Democratic nomination for the Governorship of Missouri. Not only are there four or five other candidates in the field all bent on opposing him and confusing the issues, but also he has the open opposition of the boodlers he has been prosecuting. Above all, the Republicans are trying to cast doubts upon the sincerity of his reform promises by calling upon him to smash the Democratic machine, or at least to attack it more vigorously. Thus, the St. Louis *Globe-Democrat*, not content with his never-ending denunciation of the corrupt Democratic legislatures, insists that Folk ought also to denounce all previous Democratic administrations as well. "Whether Folk is nominated for Governor or not," remarks the *Globe-Democrat* grandiloquently, "the Republicans of Missouri intend to put him on the stand as their main witness against the party with which he has been acting in this State." This, of course, is the true way to do justice to the bravest and most devoted public servant St. Louis has had in the memory of man. It is also the way to build up that strong and pure Opposition party which Missouri needs as badly as many other States. Meanwhile, Folk has been listened to by thou-

sands in his tour of the State, and his demands for pure government at Jefferson City are heartily applauded. There is little doubt that a vast majority of the Democrats of Missouri want him.

One hundred and five of the leading lawyers of Philadelphia have sent to their brethren of the bar throughout the State a circular letter asking an opinion of the proposed nomination and election to the Supreme bench of Gov. Pennypacker. "As the disapproval of the profession seems to be universal," says the letter, "it is thought desirable to get the whole body of the Bar of Pennsylvania in touch upon the subject." When shown this letter, Gov. Pennypacker, who seems to have thrown away conscience and dignity on taking office, said that he saw nothing wrong in getting such an expression of opinion. But he knows very well that the result will be an overwhelming vote against him, although he was, less than three years ago, one of the most respected jurists in Pennsylvania. To-day the bar, without distinction of politics, looks upon his candidacy as a menace to a pure judiciary that ought to be averted at all hazards. Its one hope of success is to drive him into withdrawing. But if his cousin "Matt" Quay insists upon nominating him, the bar may rage as it pleases. Unless the heavens should fall, the machine, which Senator Penrose praised so extravagantly the other day, will do its boss's bidding, and would do so if he nominated the worst shyster in all Philadelphia instead of an official who has broken his pledge to the people.

The State Civil Service Board has promptly disposed of the Tammany plan to place the sixty deputy tax commissioners in the exempt class of municipal employees. But the Board rebuked the Mayor and the local Civil Service Board in still other ways. It refused to exempt the superintendent of ponds and conduits, and blocked the effort to place all laborers in one general class. For this humiliation the Mayor has only himself to blame. As in the case of Commissioner Pallas, he is paying a large price for having selected officials whose theory of office-holding is Tammany's. The State Board has put him in the position of having been thwarted in an inexcusable attack upon the civil serivce. There was no attempt whatever to show that satisfactory examinations could not be given to candidates for deputy tax commissioners. Indeed, if any employment calls for definite information, it is the assessing of real estate, and a man's fitness for it can be ascertained by an intelligent board. The Mayor tried to hand these offices over to Tammany by quoting some decisions of the Court of Appeals which did not bear upon the question. Fortunately for the public, the State Board saw through all this, and knew where the merits of the case lay. Thus the Mayor, professing his ardent desire to aid the Democratic party by giving a high-toned administration, has the mortification of seeing a Republican Board get all the credit in this affair.

That the money, time, and energy nowadays devoted to athletics is excessive, has just been shown by the New Haven correspondent of the *Evening Post* who analyzed the expenditures at Yale. He showed that the receipts from athletics are now a round $100,000 a year, a sum which, "treated as income, would pay the present salaries of about forty Yale professors," and which is "nearly as large as the income derived from invested university funds." The increase in expenditure in the four leading branches of sport is shown by the following comparison of outlay six years ago and now:

	1896-'97.	1902-'03.
Football	$13,004	$28,471
Baseball	11,357	14,712
Boating	10,512	16,167
Track	4,228	9,746
Total	$39,101	$69,096

These figures, an increase of about 77 per cent., relate in general to "operating expenses," and not cost of maintenance or building up of athletic plant. This large sum has gone to extravagant training-tables, to the best rooms at hotels, to parlor cars, and to countless other luxuries demanded by the players and their coaches. This prodigality, our correspondent writes, "tends both to perpetuate itself and to expand." The figures quoted are for Yale; but an examination of accounts from other Eastern colleges would yield results that are similar and perhaps even more disheartening. As to the waste of time and energy, we have the testimony of President Eliot in his last annual report. He complains sharply of "the breaking up of college work for the individual student by frequent absences to play games at a distance from Cambridge"; and he adds: "It is a greater evil than formerly, now that intercollegiate games take place all the year round—that is, in winter as well as in spring and autumn."

For a good many months now the tendency of wages has been in a downward direction. Employers of labor have emphatically asserted that they could not pay the old scale and make money enough to keep their plants in operation; and their point of view has been generally accepted by the labor element. But to-day there are indications in certain quarters, notably among the bituminous coal miners, that the working classes are less disposed to take the employers' view of the situation. What is the reason? Why, simply this: while wages have been sagging, the cost of living has kept on increasing. The average of commodity prices is higher than a month ago, and higher than a year ago, when the cost of living was regarded as unusually high. The speculation in foodstuffs and cotton has been paid for by the masses, as is always the case. Meats have risen somewhat lately, but the most striking feature has been the advance in bread. Early last week the New York bakers began to mark up buns and rolls from 10 cents a dozen to a cent apiece, loaf bread remaining unchanged. But later came the news that the Chicago bakers had advanced the price of a loaf a full cent. The ordinary man may be able to ignore other signs, but dearer bread is sure to make him feel like the worm at bay.

Sir William Harcourt's retirement from public life removes a picturesque and potent figure from English politics. A sledge-hammer speaker, a guardian and exponent of the old Parliamentary tradition, a militant Liberal, he will be sorely missed. Though a hard hitter, he fought fairly, and won the respect even of his opponents. In fact, many of his warmest personal friends are in the ranks of the Conservative party. Mr. Balfour himself has said that he regards Sir William as the "last living captain of the Old Guard of Parliamentarians." Regret will be the deeper that the veteran has been compelled by failing health to withdraw from the scene, on the eve of what appears to be the destined triumph of the principles in behalf of which he has struck such ringing blows.

While, technically, the Dreyfus case is now before the French courts only in the form of a motion for a new trial, there is good reason to believe that the whole frightful injustice is about to be set right. The application to the Court of Cassation sets forth clearly the "new fact" requisite for a revision, and that new fact is, of course, the discovery of more old forgeries in the documents on the strength of which the unfortunate officer was found guilty at Rennes. A fine indignation marks the official report in which these iniquities of the Dreyfus prosecution are at last laid bare, and we must believe that all France will rejoice when the tardy reparation is made, as it seems inevitable now that it will be, and the condemned and martyred officer not simply cleared, but restored to his rank in the army. The lull since Rennes has not been without its use. Passion has subsided. The French people now see that it is not a case of gigantic treason, or plots against the army, or a scheme to rend France in twain, but a mere matter of justice to a man wrongfully accused and persecuted fiendishly. We may hope, therefore, that the whole fabric of fraud, forgery, and falsehood will speedily be thrown to the ground amid universal acclamation.

IRREPRESSIBLE INDEPENDENCE.

After being dismissed for the hundredth time by the Imperialists as impracticable folly little short of treason, independence for the Philippines again comes forward as a political issue. This time it stands clear of party, and drops old controversies. The name Anti-Imperialism it lays aside, the better to urge its great plan without prejudice. To-day we have a committee formed for the single purpose of securing independence for the Philippines at the earliest moment. Its immediate method of work is to circulate petitions calling upon the National Conventions of both parties to adopt resolutions pledging to the people of the Philippines independence upon terms similar to those under which Cuban independence was established. That our readers may judge of the great weight of the men who have given their names to this movement, we subjoin the full list of members of the "Philippine Independence Committee":

Charles F. Adams, Massachusetts.
Dr. Felix Adler, New York.
President Edwin A. Alderman, Louisiana.
James M. Allen, California.
W. H. Baldwin, jr., New York.
Gen. R. Brinkerhoff, Ohio.
George Burnham, jr., Pennsylvania.
Andrew Carnegie, New York.
President George C. Chase, Maine.
R. Fulton Cutting, New York.
President Charles W. Eliot, Massachusetts.
Philip C. Garrett, Pennsylvania.
Judge George Gray, Delaware.
President G. Stanley Hall, Massachusetts.
Chancellor Walter B. Hill, Georgia.
W. D. Howells, New York.
The Rev. W. R. Huntington, New York.
President William DeW. Hyde, Maine.
Prof. William James, Massachusetts.
President David Starr Jordan, California.
President Henry Churchill King, Ohio.
Prof. J. Laurence Laughlin, Illinois.
Charles F. Lummis, California.
Hon. Samuel W. McCall, Massachusetts.
Wayne MacVeagh, Washington, D. C.
Bishop W. N. McVickar, Rhode Island.
The Rev. C. H. Parkhurst, New York.
Gen. William J. Palmer, Colorado.
George Foster Peabody, New York.
Bliss Perry, Massachusetts.
Bishop Henry C. Potter, New York.
Hon. U. M. Rose, Arkansas.
President J. G. Schurman, New York.
Prof. Edwin R. A. Seligman, New York.
President Isaac Sharpless, Pennsylvania.
Hon. Hoke Smith, Georgia.
Judge Rufus B. Smith, Ohio.
Bishop J. L. Spalding, Illinois.
Prof. W. G. Sumner, Connecticut.
Robert Ellis Thompson, Pennsylvania.
Prof. Henry Van Dyke, New Jersey.
Horace White, New York.

Evidently, it will not do to try to sneer away these men as a set of fussy and fantastic meddlers. Here are nine college presidents, from Harvard to Tulane, from Bowdoin to Leland Stanford, besides eminent professors; here are two Bishops of the Episcopal Church, with the famous Catholic prelate, Bishop Spalding, together with other distinguished clergymen; here are men known for remarkable achievement in law and letters and business and philanthropy, whose reputation for patriotism and sound judgment is beyond cavil. To employ again the old contemptuous flings in speaking of these gentlemen would be to write one's self down either fool or knave. They are a body of men whose endorsement any philanthropic or financial or political project in this country would be proud and delighted to get. It is, taken by and large, a list of famous Americans, and it is they who are standing for Philippine independence.

Their appeal and petition are convincing proof that the best mind of America has not been deceived by Imperialist sophistry, and that our most sensitive consciences have not been lulled to sleep by the bribes of the exploiter. American ideals are not dying at the top. Our intellectual and moral leaders still feel the painful wrench away from a past of liberty for all and opportunity for all, involved in this continued domination over a distant people. They see that it is at once bad business, bad morals, and a most wofully mistaken patriotism. Already the reaction upon government at home is visible. The growing impatience of law—freshly illustrated in the announced determination of the President to dig the Panama Canal, "title or no title"; the tendency to substitute military methods for those of courts and legislatures; the spreading contempt for the rights of an "inferior race"—all these things have a very direct connection with our six years of arbitrary rule in the Philippines. Poison in the system at the extremities is sure to make its malign effects felt in the head. Besides, we are not yet so callous and shameless that we can forget all our historic protests in behalf of the right and the advantage of self-government. When we trample upon the demands of the Filipinos, we really tread our own past in the dirt.

It is clear that Secretary Taft must have got wind of this new agitation in favor of Philippine independence. His speech on Saturday night was, in part, an almost pathetic appeal not to utter the word "independence." He thought it would do incalculable harm in the Philippines. We might cherish the sentiment of ultimate independence, but it would never do to mention it above a whisper. Now to this we say that it is ridiculous to imagine that any such policy of hush can be carried out. The mails are open; the wires are working. Mr. Taft's own speech will speedily be read in Manila. He himself uses the word independence; he makes it evident that many in this country wish to give it to the Filipinos; President Roosevelt himself has publicly spoken of the possibility of Philippine independence—how absurd, then, to suppose that all this can be kept from the knowledge of the people most affected! Furthermore, Secretary Taft seems to imply that we must not trust to ordinary human motives in dealing with the Filipinos. The professed aim is to train them to self-government, but of its great stimulus and crowning reward they are to be kept in studied ignorance! Nowhere else do we so proceed. To children, to striving inferiors, to the ambitious in any sort, we always hold out the promise that attainment shall carry privileges and recognition with it; but to the Filipinos, in whom the feeling of nationality is so strong, and whom it is so urgent a duty to fit for an independent national life, we are told that we must deny any pledge of the success that follows effort. This is simply to bid defiance to human nature, and to make our policy seem either fatuous or insincere.

In any case, the irrepressible issue is once more upon us. It comes in most practicable form. The demand is that the national parties, one or both, shall declare independence to be the national policy. Is the Republican party, boasting still of being the party of intelligence and moral ideas, going to despise the counsels of these citizens whom it must confess to be among the ablest and most disinterested? Will the Democratic party, failing action by its rival, seize the opportunity to strike a blow for freedom? The conventions at Chicago and St. Louis must answer.

FREE AGENTS IN THE SENATE.

It would seem that the exact aim of the Senate investigation of Mr. Smoot has not been clearly understood. Some have thought that a moral protest against Mormonism was contemplated. Dread of contamination by a friend of polygamists—though not himself charged with polygamy—has been imagined to be the motive of pure-minded Senators. But this is all a mistake. It was made perfectly plain a week ago that the real objection to Senator Smoot is that he would not be free to vote in the Senate as his judgment and conscience might dictate, but would be controlled by men, or an organization, outside. This was brought into high relief when the counsel against Smoot, Mr. Tayler, was asked what relevancy all the testimony about polygamous practices had to the inquiry in hand. He replied:

"I expect to prove that Mr. Smoot could not by any possibility put himself up against his associates in his actions."

"Not even in his vote as a United States senator?" asked Mr. Beveridge.

"No; not even in his vote as a senator," responded Mr. Tayler.

We see, then, that the plan is to purge the Senate of members who are not free to think and say and vote the thing they will. Senator Smoot was admitted on his *prima-facie* credentials. He is to be turned out, if at all, because the Sen-

ate discovers that a body of men in Utah, holding no public office, tell him how he must vote. This is his great offending. He is not a free agent. Ostensibly an untrammelled Senator, passing upon matters of great public concern with open mind, he is in reality the bond-slave of an organization. It is this which leaves the noble Beveridge aghast. "Not free to put himself up against his associates, even in his vote as a Senator of the United States"! Abundant grounds for expulsion in that.

Now we sympathize heartily with this attempt to make the Senate an august assembly of free men. Its debates would be vastly more earnest and effective if its orators knew that the vote would go according to the weight of argument. As it is, there are too many melancholy cases of a Senator going to a colleague to congratulate him on his magnificent speech, and to add, "You have thoroughly convinced me, but you can't have my vote." It is not only the Mormon Church that has power to bind and loose nominally independent Senators. An "Apostle" dictating Senatorial votes is a more novel figure than a Boss who does the same thing, but really no more fearsome. Logic is logic, that's all we say; and if the Senate is going to turn out a member for submitting to outside dictation, Senators might well look at each other in alarm, and ask, "Which of us is safe?"

It would be easy, for example, to set on foot a rigorous Senatorial investigation of the Sugar Trust, on all fours with that of the Mormon Church. Are the Trust's Senators any freer than the Mormon Apostle? Will the directors of the Sugar Trust allow their representative in the Senate any greater liberty than the Apostles of the Mormon Church concede to their delegate? A committee bent on ascertaining the truth about this could bring out some sensational facts. Its inquiries would be of deep interest to Senator Aldrich, and he would naturally be as stern in calling for the expulsion of a Senator who took orders from the Sugar Trust, as of one under the domination of the Mormon Church. Simply to take another example by chance, how would Senator Depew fare under a close cross-examination on this point? How is his "vote as a Senator of the United States" determined? Do the railroads have anything to say about it? Does he first have to ask Platt? Is his freedom as a Senator too much of the nature of the theological moral freedom of an unregenerate man—freedom to do wrong, but not to do right? We ask the questions in no invidious spirit. Mr. Depew is not a sinner above all who dwell in the marble room. Indeed, we fear that if even Senator Hoar were required to go through the Smoot ordeal—to say, that is, whether he dared vote against his "associates"—the result would be to leave the absolutely disinterested, the entirely moral and free representation of Massachusetts in the hands of Senator Lodge alone.

It is far from our wish to disparage the anti-Smoot movement. Behind it is a great body of the most respectable sentiment in this country. It sees in the Mormon Senator a slight cast upon a pure family life—the foundation, certainly, of all our public virtue. This sentiment seems to us to be striking a little wildly at Mr. Smoot, and not to have clear legal warrant for demanding his exclusion from the Senate; but that does not prevent us from perceiving the excellent motives which have led honorable women not a few to interest themselves so deeply in this case. Our only point is that if the Senate, in casting about to find a reason for expelling Smoot, shall decide that he must go becouse he is not a free agent, it will have accepted a principle which, if logically applied, would decimate its membership even more rapidly than the process of indictment by grand jury.

"AT THE MERCY OF ARCHITECTS."

"I have an impression that public buildings outside of the city of Washington are being placed at the mercy of architects who are bidding upon them," said Mr. Gallinger in the Senate on Monday week. The debate was on the appropriation for a State-Justice-Commerce building, and Mr. Gallinger had moved an amendment to the effect that the architect's fees should be limited to 2½ per cent.—half the customary commission. For an hour or more the Senate was very much at the mercy of architects; and Mr. Dryden, Mr. Newlands, and Senator Hoar were kept busy explaining that the architectural profession is not a cabal to plunder the Government. There were curious ignorances to be enlightened. "The architect is intrusive," said Senator Hale. "He says, 'You cannot get a good building without me.'" To disprove this arrogant pretension, Mr. Hale cited the case of the Congressional Library, to build which "we dropped every architect, and Gen. Casey did it." Mr. Hale also bid the Senate remember that in the Hall of Records bill had been happily inserted "a clause shutting off architects."

But the debate reached a higher eloquence when Mr. Gallinger revealed the revolting fact that a New Hampshire building was waiting upon the convenience of a Boston architect. Senator Gallinger, feeling that he had been undone in his own State, complained pathetically, "It is very evident that the plans of that little building, costing $90,000, are in the hands of an architect in Boston, who is making those plans and receiving compensation." At this Mr. Hale cried aloud that the Federal Supervising Architect was "giving way to outside architects," and Mr. Tillman asked by what authority a Massachusetts man got a New Hampshire job, inquiring. "Have you not some people in New Hampshire who are architects?" Senator Gallinger could not deny that this superfluous and rapacious class did exist in his State. Indeed, a little later he was very willing that New Hampshire architects should get all the Government jobs in that State. Incidentally, the old grievance of Mr. McKim's White House extension was aired anew. Senator Cockrell declared the modest structure to be unfit for "a second-class lawyer" in Missouri. Yet the battle raged chiefly about the Boston man with a New Hampshire job.

It was discovered, to the chagrin of Senators Hale and Gallinger, that there is a law—the Tarsney act—under which the Supervising Architect may invite competition from five firms, reimbursing the losers for their actual outlay. The Boston architect was merely the winner in such a competition. For a moment it seemed as if the machinations of the most sordid of the artistic professions had been uncovered. "Compensate an architect for merely competing!" was cried in various directions. And to quiet these suspicions required Mr. Newland's explanation that compensation in these cases is necessary, that it merely covers actual disbursement for draughting, etc., leaving the architect without reward of any kind for his personal services, and that firms of standing will naturally not enter competitions under the terms of which they may be considerably out of pocket.

From this point the debate began to go the way of the architects. It appeared that Gen. Casey had, after all, not planned the Congressional Library out of his general engineering "experience and good taste." The buildings which Senator Gallinger had selected as convincing examples of a blessed pre-architectural era, turned out to have been planned by the best architects of the time. Mr. J. K. Taylor, the Supervising Architect, defended, by letter, the customary commission of 5 per cent. Senator Newlands even spoke in defence of "that man McKim," asserting that "we owe a debt of gratitude to Mr. McKim, if for nothing else, that he decided to hold to the individualized White House as it existed for a hundred years, not changing it or altering it at all, but completing it according to the original plans." Senator Dryden, who has built great office buildings, maintained that the architect is worthy of his hire, and that the worst place to economize in any building, and especially in an expensive one, is on plans, specifications, and supervision. Mr. Newlands cited happily the ugly and costly plans made for an enlarged, and disfigured, White House by an army engineer. Had these plans been accepted, "you would have saved in the architect's fees, and

you would have lost in the great expenditure for the building. That is what I say is the advantage to be secured by getting these men of training and experience. You not only get art, you not only get efficiency, you not only get perfect construction, but you also get the most economical construction."

In some ways it seems a pity that such elementary instruction should be needed in the most dignified legislative body in the world. Time spent in proving that architects are not deliberate looters of the Treasury seems stolen from more important affairs. And yet Mr. Dryden and Mr. Newlands did a good service in showing that architects, like other citizens, render a service for the pay they receive, and are not banded to thwart Senatorial jobs or to hold up the Government. It was also something for Mr. Hale and Mr. Gallinger to learn not only that architects do not build, but that builders give a better value when they are supervised by an architect in the owner's interest. If there are honorary memberships for laymen in the architectural societies, it is easy to see where two might gracefully be disposed. The presence of an honorary architect or two on the floor of the Senate would at least extend its proverbial courtesy to a profession that needs it, and would surely prevent the ignorant imputation of dishonesty to gentlemen who, more than any other class, perhaps, are making our cities better to look at and better to live in.

RUSSIA'S INTERNAL CONDITION.

What does the present war mean as regards the internal condition of Russia? Even if she is successful in the end, her present financial burdens make the cost of the war a matter of great anxiety. But if she should find that she had met her match in Japan, there could, in the opinion of many, be no telling what the effect would be on her internal policy. Thus, a writer in the *Fortnightly Review* says that, "internally, Russia is not strengthening, but is weakening"; and he adds that "her internal condition means that defeat would involve perils without limit." In a word, there is a general belief that the material situation is worse than appears on the face, and that the wisdom of M. Witte's vast expenditures for internal development is open to sharp questioning.

In recent numbers of the *Yale Review*, Mr. N. T. Bacon has been presenting his ideas of the present condition of Russia. He appears to have studied the facts at first hand, and his picture is a very black one. He began his articles before M. Witte had been displaced from the Finance Ministry, and has not yet told us how far the recent "bumper" crop in Russia has caused him to modify his conclusions. The general impression which one obtains from Mr. Bacon's presentation is that about everybody in Russia is looking for a revolution. He says that "After us the Deluge" seems to be the feeling of the nobility in Russia at present. It looks, he adds, as if, with the constant recurrence of famines, the same result must follow that followed the famines in France from 1788 to 1790. The stock argument in Russia against "the coming revolution, by the few who think it will not come," is that the peasantry are too unorganized and too ignorant to rise; but there is an undeniable ferment, as Prince Kropotkin has explained, in factory towns. And Mr. Bacon says of one of the Czar's ministers that "this minister was the only man whom I met in Russia who was not looking forward to a revolution inside of fifty years, the furthest limit set by any one with whom I talked."

The first thing that attracted Mr. Bacon's attention was the enormous increase in the Russian public debt. In 1900, when the figures were smaller than now, there was an admitted bonded indebtedness of the national Government of $3,233,000,000—an increase, according to the Official Intelligence of the London Stock Exchange, of $764,000,000 since 1889. This increase was practically incurred in a time of peace. But on top of this the Government had guaranteed interest or dividends on railroad securities of a par value of $675,000,000, and had also guaranteed the mortgage bonds of various land-credit institutions to the extent of about $335,000,000; these institutions being very much like our farm mortgage companies, which collapsed so disastrously prior to the panic of 1893. So that, in all, the Government was responsible for about $4,243,000,000. The railroads have profited quite largely from the guarantee, and in the last two years there have been immense defaults by original mortgagors to the land-bank companies, making these in turn unable to meet their obligations. Within about a year and a half vast amounts of land belonging to the nobility have been foreclosed on, but it has generally been impossible to sell them for more than a mere fraction of the face of the mortgages.

The external debt of Russia is still largely held abroad. The internal debt was placed in Russia. About $300,000,000 of it went originally to the nobility, as indemnity for lands taken at the liberation of the serfs, but many of these bonds are now owned outside of Russia. During the last ten years hundreds of millions of foreign capital has been invested in Russian industries, and, in addition, much foreign banking capital is employed in the empire, where interest rates are comparatively high. Mr. Bacon figures that the external debt, plus one-half of the internal debt, together with the foreign investments in industrial pursuits, would probably bring the sum of what Russia owes abroad to about $3,200,000,000, with an annual interest charge of about $135,000,000. The significance of this last fact is shown by a table indicating the Empire's excess of exports for a great many years. From 1892 to 1901 inclusive, the excess ranged between $42,000,000 and $90,000,000. In 1902 there was a nominal surplus over the foreign interest charge, which was considerably smaller than at present. But the Government has continued to offer large amounts of new loans abroad, "which shows that all is not well with Russian finance." In short, while M. Witte would not admit that he was obliged to sell bonds to pay his interest, he did acknowledge that he had to do so to prevent gold exports; but Mr. Bacon says that it comes to about the same thing.

Mr. Bacon finds that the Russian railroads are heavily overcapitalized; he thinks that about three-quarters of their cost has been caused by plundering the Government in one way or another; and he takes the heavy appropriations in recent budgets for "supplementary rolling-stock" to mean that the roads have not been charging sufficiently to depreciation. He considers Russian agricultural conditions the most degraded he has ever seen, and holds that they are growing worse. The money-lender abounds in Russia, and practically absorbs all the profits of agriculture. The population is increasing rapidly, but so are the national expenditures. The striking fact is, that while the Imperial domains in Russia theoretically may be counted as an offset to the existing debt, as may also the great iron works and mines, such ownership by the Government actually means the impoverishment of the country. Superficially, the Government has been getting richer, but this has been at the expense of the population, as a result of the greatly increased taxation instituted by M. Witte to carry out his magnificent programme "for developing everything in all directions at once."

"HECKERISM" BEFORE THE ITALIAN COURTS.

Renewed interest in what is variously known as "Heckerism" and "Americanism" in Roman Catholicism has recently been aroused by an action brought in the civil tribunal of Rome against the head or General of the Jesuit Order. The action appeals to Americans not so much because of the questions in controversy, as of certain arguments and statements relating to American conditions which are to be found in the learned brief filed by the plaintiff's attorney in support of his client's contention. It is brought by one Olinto L. Spadoni, professedly an archæologist of distinction and the Roman correspondent of various English and American newspapers,

against Lodovico Martin, the General of the Jesuits at Rome. The cause of action is for the recovery of the expenses alleged to have been incurred, and the services alleged to have been rendered, by Spadoni in destroying the separatist movement of the Catholics in the United States under the alleged leadership of Archbishop Ireland and the Paulist Fathers. Such services, the plaintiff avers, were rendered with the approval of the General of the Jesuits and upon his promise to pay for them.

It is interesting to trace the growth of the separatist movement as described in the plaintiff's brief, containing, as it does, some rather surprising statements about our country. The attention of the court is called, with Latin rhetorical flourishes, to "the reactionary movement by a shrewd sacerdotal phalanx organized in the United States under the name of the Paulists," whose object was to take away ten million American Catholics from the jurisdiction of Rome It tells of the unsuccessful attempts by the Jesuits to oppose this movement until the plaintiff's "stupendous project" had been put into execution. And here we come upon some decidedly novel views of the development of Americanism as presented by the plaintiff's attorney. It was not, he says, "the God of liberty and of national independence" that armed American citizens "and made them drive the foreigners from their land" at the time of our Revolution. It was rather the economic system of the balance of trade engendered by the policy of the times, which was directed towards "preserving and developing national wealth by increasing the exportation of home products to a maximum, and reducing the importation of foreign products to a minimum." "Interests, as well as life and customs, had to be nationalized in favor of the mother country." "Thus the monopoly of the national commerce having been raised to a system of political government, the doctrinaire Monroe was the first to declare the liberty of the individual in the exercise of economic rights, . . . and democratically to nationalize everything by the celebrated motto, 'American life, American conscience, and American faith.'"

We hope this was made clear to the court. The next step was to extend the influence of such Monroeism "to the practice of the Roman Catholic faith." "Various priests and their followers accepted the reform movement inspired by the spiritualism of the so-called Paulists, who preached direct relations between God and man, without any priestly intervention." The brief proceeds to state how the Paulist movement aimed at the independence of American Catholics upon the Roman See, and hoped for "a great national victory over foreign influences, especially those from decrepit Europe." This religious movement became political also through the power exercised by the reformers by means of the great financial resources at their disposal and "the support of the Federal Government, headed by President McKinley." This politico-religious reaction reflected the motto of "America for Americans, . . . and became known as Americanism."

At the height of the movement, which threatened the Church with the loss of ten millions of the faithful, and against which the Jesuits seemed powerless, appeared on the field, as a sort of Knight Templar, the aforesaid Signor Spadoni, "a noted Roman publicist, founder and proprietor of the *Roman Herald*, and Roman correspondent of the famous newspaper, the New York *World*." "With his wide knowledge of American questions," Signor Spadoni "perceived the grave danger to the Holy See from such Americanism" as the Brief outlines, and the necessity for prompt action. "The moment was propitious for putting into execution a plan evolved in defence of the Roman Church, and for gaining thereby a reasonable compensation for the work to be done." "Through agents in America and Italy, and through valuable correspondents and secret information, he [Spadoni] became convinced that he was abundantly able to conduct a campaign against Americanism through his personal relations and his high office as publicist." Thus armed, Signor Spadoni, in November, 1898, interviewed Father Martin of the Jesuits, to whom he explained his plan of action, which included the coöperation of the Jesuit Order, though only to the extent of inducing the Pope to issue an encyclical against Americanism, and to discipline Archbishop Ireland, "the leader of the reform ideas." Signor Spadoni, meanwhile, was to endeavor to induce his American correspondents to censure the Papal attitude, which he would defend through a newspaper to be specially published in Rome and disseminated in America.

Upon this summary statement of facts, the plaintiff claims an implied contract to pay for his services. The evidence adduced, judged by American standards, seems to show that the only testimony in any way bearing on the alleged contract was a statement made by Father Martin in his interview with Spadoni: "There are good deeds that we compensate." On February 4, 1889, Spadoni issued an Italo-English paper called the *True American Catholic*, which he asserts he distributed widely. As we know, the Pope issued his encyclical against Americanism in the January following, and this is adduced as further evidence of the agreement alleged to have been made by Father Martin. "The hydra of Americanism was crushed; the victory of the Holy See was complete, Spadoni's programme triumphed."

The result of this action will be awaited with curiosity. The defence denies most of the relevant facts alleged, except that it admits the interview had between plaintiff and defendant. To us, from a distance, it must appear that the plaintiff has a hard case to prove. And if, under Italian law, the burden is on him to establish his allegations about "Monroeism," we fear Signor Spadoni has undertaken a task before which even a "noted publicist and Roman correspondent of the famous newspaper, the New York *World*," may well tremble.

THE ATHLETIC IMBROGLIO AT BROWN.

PROVIDENCE, R. I., March 4, 1904.

On the 18th of January the board of directors of the Brown University Athletic Association, by a vote of seven to two, repealed the rule debarring students who had ever engaged in athletics for money outside of the University from representing Brown in intercollegiate games. The announcement of this action, on February 5, while not unexpected to the few who knew of the discussion which for some time had been going on in the board, came as a startling surprise to the University as a whole and to the public, and immediately precipitated a discussion which thus far has quite overshadowed every other University interest. The air was not cleared as the history of the vote became better known, nor have subsequent events tended to heal the breach thus suddenly created. It shortly appeared that the action of the board in opening athletics at Brown to professional players had been taken, not only without consultation with the authorities of the University, but in disregard of direct adverse opinion from those sources as well. The objections of the President of the University, communicated to members of the board in advance, were ignored. A request from the Faculty for delay, made three days before the publication of the action of the board, was of no avail. A decidedly adverse vote of a meeting of class secretaries had had, apparently, no weight, while the practically unanimous condemnation of the step by the press of the country, and the protests of influential alumni, seemed only to fix more firmly the determination of the board to persevere in its chosen course. The executive and advisory committee of the Corporation, at a meeting held on the afternoon of the day on which the announcement appeared, refused to accept the resignations, promptly tendered, of the two minority members of the board, and condemned the action of that body "in repealing certain important rules without previously submitting such action to the Faculty, Corporation, or students of the University"; the Faculty shortly requested the board to suspend the operation of its vote until the University could be consulted; but neither Corporation nor Faculty could bring about a change in the attitude of the athletic directors. Finally, on February 26, the executive committee put a temporary stop to what was rapidly becoming a scandal by directing the board "to allow no games under changed rules until action shall have been taken by the Corporation at its annual meeting in Septem-

ber, 1904." Four days later, the majority members of the board resigned.

This extraordinary episode, most regrettable, I can but think, from every point of view, raises some questions of more than local interest. Much has been said throughout of the powers of the board of directors. The board, created by the Corporation on the recommendation of the Faculty, consists of nine members. Three of the members are elected by the undergraduates, and the remainder are appointed by the Corporation—three from the Faculty, and three from the alumni. As directors of the Brown University Athletic Association, an incorporated body, the board has entire control of athletics in the University, save as regards the scholarship and standing of members of the teams, in which latter respects the control continues to vest in the Faculty. Throughout the controversy, the majority members of the board have insisted on the right of the board to act as it did, even in the face of protest from those to whom the interests of the University as a whole have been committed, or who for any reason feel particular concern for its welfare. The board, in other words, asserts its virtual superiority to President, Corporation, Faculty, students, or alumni in a very important department of the University life. It must be tolerably clear, however, not only that such a claim is merely technical in its foundation, but also that it puts the emphasis on the wrong point. The board represents the University as well as the Athletic Association, but it appears to have forgotten that, in a matter involving a radical change of policy, jeopardizing the good name of the institution, and opening the way to damaging criticism, there is need of a sounder defence than alleged technical right. The relations between the different parts of a university society ought in practice to be regulated by comity rather than by appeal to the letter of the law, by courtesy and confidence rather than by definition; and any attempt to stand on technicalities in such matters raises a presumption not only of unsoundness in the position itself, but also of intentional disregard of the interests of others.

Not less serious is the charge which the board brings against the student body, here and elsewhere. The eligibility rule cannot, it is said, be enforced at Brown, and is no better enforced at other institutions than it has been here. And why? Because the students will not assist the board by giving the evidence necessary to disqualify a candidate, even though they have such evidence in their possession. Everybody knows, we are told, that the rule is regularly evaded. Everybody knows that men play on the teams at Brown and elsewhere who have violated the rule against "summer ball"; but the receipt of money for summer playing is concealed by various devices, while "any attempt to obtain proof of the rule's infraction [*sic*] in individual cases," says the board in its labored defence, "has at last come to be met, on the part of Brown's athletes, by a polite but frank refusal to answer questions that might incriminate themselves or their fellows." This, of course, is only another way of saying that Brown students are dishonest, and uphold their athletes in dishonesty. Personally, I have formed no such low opinion of university men, either at Brown or anywhere else; but if the statement of the board is true, then the situation seems to me to be one which cannot too soon receive the serious consideration, not only of university authorities, but also, and particularly, of the honest and intelligent public by whose favor the universities live. If a generation of great concern about athletics has so debased the morals of young men that whole communities of them will systematically cheat and lie, the sooner we find a substitute for athletics the better. Fortunately, however, there is little difficulty in placing the blame where it chiefly belongs. The protestation of an athletic board that it has in all sincerity tried to enforce a rule, when taken in connection with its frank admission that it is known by undergraduates not to believe in the rule, is not convincing: moral standards in any department are usually not well maintained by men who do not believe in them.

We have here, I think, a peculiarly striking illustration of certain tendencies which have characterized the administration of college athletics everywhere in this country. There are few institutions, I fancy, which do not suffer from the tendency of athletics to dominate over the other interests of the university, few where the athlete is not more highly regarded by the mass of the students than the scholar, few where special favors and different standards for members of the teams have not come to be expected. Instead of becoming a vitalizing element in student life, I can but think that athletics have too often proved a divisive force, developing a class of men who are in the university but not of it, and whose sense of the fitness of things is likely to undergo for three or four years almost total eclipse because of the extraordinary attention paid to them. Along with this magnifying of the athletic office has gone also, unfortunately, a growing willingness on the part of a certain element to view college sports as essentially professional. So long as wealthy alumni are ready to pay students to play ball in college, so long as athletic associations pay men not to play ball in the summer in order that their eligibility may not be brought in question in the fall, it is not easy to develop a vigorous moral sentiment in favor of the strict enforcement of a rule like the one now in controversy at Brown. So far as my observation goes, it is the younger alumni rather than the undergraduates who are chiefly responsible for the lowered tone of university athletics in these directions.

As to the merits of the eligibility rule itself, there is at Brown, as elsewhere, diversity of opinion, although the recent discussion of the question has been clouded by what seems to me radical confusion of thought. In and of itself, there seems to be no reason why a university student should not, if he wishes, earn money by playing ball in the summer. There seems to be every reason, however, why he should be asked to choose definitely between this sort of professionalism and true sport. And it can hardly need pointing out that, between enforcing the old rule, irritating as it may seem to the few who wish to eat their cake and have it too, and putting university athletics frankly on a professional basis, there appears in practice no middle course. Explain it away as one may, the public draws a pretty sharp distinction between amateurism and professionalism, work and play, sport and business. I cannot frame a definition of a university so as to include among the proper functions of such an institution the maintenance of hired gladiators. The point much debated at Brown, as to whether the board ought not to have waited until joint action with other colleges could be secured, seems to me to beg the question: the real issue is professionalism, not the method by which professionalism shall be introduced.

For the difficulty into which the board of directors of the Brown University Athletic Association has plunged the University, there seems at present to be but one straightforward solution: that is, to maintain the old rule, and to place the administration of it in the hands of men who believe in it and are not afraid to enforce it. There are many, both within and without the University, who believe that the rule can be enforced to the letter, and that, too, with the ultimate approval of the whole student body. To the objection that this could be done only by the rejection of candidates on suspicion rather than on evidence, and that in consequence there would be no teams, it may be replied that athletic teams are not absolutely essential to a university, and, indeed, could well be dispensed with for a season or two for the sake of attaining honest amateurism. With this, however, will have to go, I am convinced, a drastic treatment of the money aspect of the case if the difficulty is to be quite done away with. So long as intercollegiate athletics continue to be maintained at their present enormous financial cost—not to speak of the debilitating favors and concessions to players in other ways—the temptation to fraud and deceit will embarrass the administration of any rule. It will be some compensation to Brown for the present disturbance of its athletic peace if the settlement of the pending controversy shall be such as to contribute to reform along both of these important lines.

WILLIAM MACDONALD.

SICILY.

PALERMO, November, 1903.

Sicily, which has often been compared to Ireland in respect of its economic misfortunes and social antagonisms, does resemble Ireland in this very different point—that it has got a beautiful seacoast with a dull interior. The inland regions of the two isles are, however, unlike, for while that of Ireland is level and wet, that of Sicily is hilly and dry. Nearly the whole of the interior of Sicily is covered with mountains, which in the north form a high range, mostly of old crystalline rocks, and in some places keeping fragments of the ancient forests. Their tops are covered with snow through the winter, and through the summer there is verdure on the upper slopes. Though the mountain lines are seldom striking, the summits, some of which exceed 6,000 feet, have a sort of Alpine dignity when they form the background of a view. To the west the forms are bolder, for the limestone often rises in isolated peaks or jagged teeth of rock. But, taken as a whole, the inland part of Sicily is dreary, especially in the late summer and autumn, seeing that it is bare, arid, dusty,

with scarcely a stream, scarcely a tree, not a blade of grass, and few farmhouses; for though most of the available land is cultivated, the bulk of the inhabitants live in towns perched on the tops of rocky hills, and one sees few villages and clusters of houses.

The coast, on the other hand, has an almost unbroken line of striking landscapes to show. The southeastern and southwestern corners of the island are, though often pleasing, comparatively low and tame, but everywhere else steep hills or craggy mountains rise from the sea, and bold promontories stand out between great sweeps of bay, with here and there the glittering white houses of a town. Where all is beautiful, it is hard to make a choice. A succession of splendid mountains guard the northwest extremity between Palermo and Trapani, sometimes falling in precipices to the deep blue waters. All along the north coast from Palermo to Messina romantic glens descend from the Madonian range, while seaward the volcanic cones of the Lipari Isles rise on the northern horizon, more beautiful in the blue of distance than when one draws near to their gray, ash-strewn sides. In a softer and broader style, nothing can be finer than the superb bays behind which Girgenti and the ruins of Selinus stand. But, on the whole, the palm of varied loveliness belongs to the sixty miles of eastern coast that lie between Catania and Messina. Here long tongues of lava, alternating with cliffs of limestone, stretch down to the sea; a wealth of vines and olives, of lemon and orange groves, clothes the slopes; the gray walls of ancient fortresses stand out upon the heights, and, behind all, the majestic mass of Etna rises in a long, gentle line of woodland and pasture to the point where its cone of snow starts abruptly up into the air.

The coast strip seems to be much moister than the inland region; it is at any rate much greener and more attractive to a northern eye than the bare brown hillsides of the interior. No country seems less fitted than Sicily to have been the birthplace of pastoral poetry, for even along the seashore it is rather the splendor of the wide landscape that charms the eye than any smaller beauties of detail that tempt one to linger on the paths. Proserpine gathered flowers in the vale of Enna, and down to Mrs. Hemans poets and poetesses have talked of "Flowery Sicily." Theocritus lured the Muses to his island, and by their help made it the classic land of rural delights. But throughout the greater part of Sicily, as one sees it now, one finds no brooks, no springs, no shade, because no trees, but only thorny bushes; no grass, no mossy banks, no cool caverns, no songs of birds, no green leaves through which the soft wind may whisper—none, in short, of the recognized elements and appliances which pastoral poetry has been wont to use. Was this always so (in which case Theocritus was a still greater imaginative artist than even his admirers have deemed him)? Or has Sicily itself changed by losing with its forests its streams and birds and mosses? Doubtless the land is drier than it was in the old days; but when one reads Theocritus in Sicily—where, indeed, it is almost impossible to procure a copy of his poems—one notes that his landscape is not the sort of landscape which rises to our minds when we think of rural beauties. It is not even the landscape of Virgil's Eclogues, which, though they are largely imitations of Theocritus, have here and there a northern touch about them.

If the Sicilian landscape has in certain respects suffered since the days of Theocritus, it has also gained something in the orange and the lemon, whose deep, glossy green makes the beauty of many a view, relieving the gray of limestone rocks or the brown of a dusty hill. Long after the orange and the lemon, there came in our own time the Australian gum or eucalyptus, which, growing fast, has already become a conspicuous object in many places. It is not a lovely tree, and one feels it to be a stranger; but it is better than mere bareness, and it is said to lick up moisture from malarious hollows.

Such changes as the aspect of Sicily has undergone are, however, as nothing to those which have passed upon her population. There can hardly be anywhere in the world so great a mixture of diverse races. Three peoples inhabited the isle before either the Greeks or the Carthaginians came; and since the Roman conquest many others have entered, not to speak of the vast mass of slaves, war captives and kidnapped barbarians, who for a long time may have formed the largest part of the inhabitants. So now in Sicily one sees an extraordinary variety of types of face and figure. There is no Sicilian type, even in color, for dark complexions do not predominate. There are now and then Greek faces, yet hardly more often than in southern Italy. Both men and women are rather short of stature and seldom broad or stalwart. Few are handsome, though few are ugly; when beauty is seen, it is most frequently in the children. So, too, in pictoral art and in architecture there is little that one can call distinctively Sicilian. In the great days of the fifteenth and sixteenth centuries, when the Tuscan, Umbrian, and Lombard schools were in full life, Sicily produced little of high artistic merit. In the seventeenth century some painters of eminence arose, working under Spanish and Neapolitan influences; but the best of them, Pietro Novelli, died young, and he cannot be said to have reached the front rank. Several of the cities of northern Italy, even cities smaller than Venice or Florence, have left a larger body of fine work than did all Sicily in the Middle Ages and the Renaissance. Nor is there any specifically Sicilian style of architecture. Interesting, indeed, many of the buildings are. Those of the twelfth century, especially the cathedrals of Cefalú and Monreale and the exquisite little Cappella Palatina in the Castle at Palermo, are among the most striking pieces of Norman-Romanesque that remain in Europe. But their interest lies in the singular mixture they exhibit of different styles and influences. They are partly Byzantine, partly Saracenic (or rather Mussulman), partly Italian; and the wonderful mosaics which adorn them were probably designed, possibly executed, by Byzantine artists.

In studying the mediæval remains of Sicily, one is constantly struck by the fact that it was a meeting-point of different streams coming from different quarters. It is like one of those moraines at the foot of a glacier where one finds fragments of different kinds of rock from all the mountains that have sent down stones from their crumbling cliffs to the surface of the moving ice mass. After the Middle Ages, the dominant influence was that of Spain or of Naples, itself half Spanish; yet the work is inferior to that of Spain in its best period. The grasp of Spain is perhaps most plainly felt in the street architecture of the cities and in the heavy interiors of the churches restored or erected from the days of the Emperor Charles the Fifth till the coming of the Bourbons. They are perhaps less gloomy than the churches of Spain, but they are just as dull and just as tasteless in the ornamentation wherewith they are loaded. Neither in art nor in literature did the finer flowers of the Renaissance bloom in Sicily; and for this, as well as for ecclesiastical domination, Spanish influence may be largely to blame.

No part of southern Europe gives a stronger impression of the immense power of the priesthood before the Revolution than does Sicily. Every city is full of large churches, with space for far more than all the inhabitants the city can ever have counted. Most of these churches are now closed. Some have been turned into barracks, or are used for some other public purpose. The sums of money spent upon them must represent an enormous capital, far larger than was expended upon all public works, whether civil or military, ever since Sicily was recovered from the Mussulmans. Nowadays, although the people do not seem to be less of church-goers than are those of middle and northern Italy, there are very few shrines along the roads, and few signs of any general interest in religion. The island might seem to have given so much more than enough to the Church during Spanish and Bourbon centuries as to feel no need to give anything now. Yet the blight of the Inquisition, whose grim palaces frown upon the traveller so often in the cities of Spain, has left fewer traces here, and does not seem to have ever struck deep root.

Singular places they are, to an American or English eye, these old cities of Sicily, now half deserted, but with houses built so solidly of stone that they stand as if they might continue to stand for centuries to come. Sometimes, as in Monte San Giuliano (the ancient Eryx), on its mountain summit, two-thirds of the houses are tenantless. Sometimes, as in Castrogiovanni (the ancient Enna), the city, though planted on the long ridge top of a hill 2,600 feet above sea level, is still tolerably well filled with inhabitants, who seem to have nothing to do but stand about and talk to one another. From the cats and the children upwards—Sicilian towns swarm with cats and children—everybody lives in the open air, and nobody seems to feel the need of work. Lodging is cheap, a little clothing goes a long way; and these southern people, content with scanty and simple food, take no thought for the morrow. As the Irish got a bad name from the former prevalence of agrarian troubles, so, too, the Sicilians have got a bad name owing to the prevalence of brigandage, itself the fruit of agrarian difficulties, and from the power of the secret society called the Mafia. Brigandage is to-day nearly extinct; and though the Mafia is still strong, one can find out little that is authentic about it.

On a traveller the people make an agreeable impression. They are cheerful, friendly, polite to strangers and to one

another. They have a certain taste for art, and especially for color, as appears by the pains they take in decorating their carts with paintings, representing all sorts of subjects, not only religious, but adventures in history, or in tales of chivalry, or scenes of modern life, even to midnight meetings of the Mafia and popular ballet dancers. They have a quick intelligence, but not much solid power or originality—at least if one may judge from the fact that the island has produced, since it became a Roman province, no man of the first rank, and very few of conspicuous gifts. In the last century it claims Bellini, the composer, and Francesco Crispi, the prime minister of Italy. But whereas in early Greek days its annals were illustrated by such names as those of Stesichorus, Empedocles, Timæus, Gorgias, Philistos, Epicharmus, Theocritus, it has had no Sicilian of unquestioned greatness since Archimedes, who fell with the independence of his country twenty-one centuries ago.

As it is by far the most interesting of the Mediterranean islands, so Sicily has had by far the most interesting history. Sardinia, its near neighbor, is about as large and not less fertile. Yet Sardinia has had practically no history; that is to say, it has never figured in the annals, the wars, or politics of Europe, has never been the scene of any remarkable events. Placed between Italy and Africa, looking on its eastern side to Greece and on its western to Spain, Sicily has been the battlefield of diverse races and hostile powers. Never once in its long and chequered history has it been the dwelling-place of a nation. It came nearest to this in the days of the great Greek tyrants of Syracuse, who had nearly reduced the whole island under their sway, and who, could any one of them have founded a dynasty of strong rulers, might have made a country so rich and populous into a powerful State which would soon have become wholly Greek in language and culture. The First Punic war destroyed the last chance of any such development, and Sicily has since then passed from one foreign master to another, often more wretched in peace than she was in the days when the fierce and constant strife of Greeks and Carthaginians was drenching her soil with blood.

Correspondence.

THE EMPIRE OF THE SEAS.

To the Editor of The Nation:

Sir: Not the least cause of these international troubles present or to come seems to be the pretension of Great Britain to the empire of all the seas, notably of the Mediterranean, which she treats as a British lake. The fact that she has scattered possessions cannot warrant such a claim on her part, or render it otherwise than offensive to the world in general and dangerous to herself. That she is already overstrained, the enormous amount of her naval estimates shows.

Russia, a great inland empire, struggles for access to the open sea. Great Britain is resolved that she shall not have it. She is blocked at the Dardanelles, warned off the Persian Gulf; and, lest at any time she should reach the Eastern Mediterranean, Cyprus, otherwise perfectly worthless to Great Britain, is annexed. Naturally, she turns eastward and tries to establish herself on the Pacific. Her presence there is not in itself more offensive than that of Great Britain, who holds points on the coast of China by no title but that of the strong.

Some years ago there was an outcry in England that British ascendancy in the Mediterranean was insecure, and a meeting of merchants implored the Admiralty to increase the Mediterranean fleet. Voices less loud in favor of a different course were heard, and among them was said to be that of the first military authority of the time.

Pacificus.

THE LAW'S DELAYS IN CHICAGO.

To the Editor of The Nation:

Sir: I regret to be obliged to call your attention to the report of the work of the courts in Cook County, in which Chicago is situated, contained in to-day's issue of the Chicago *Record-Herald*, a copy of which I enclose, because it shows that your statement on page 161 of your last issue is incorrect.

Aside from the temporary causes for delay in the congested condition of the criminal calendars, which required six judges to abandon the civil dockets to afford relief and to prevent the discharge of criminals without trial under the statute, and the difficulty of working a newly instituted method of calling cases, the chief difficulty in reaching the trial of ordinary civil suits seems to be the fact that 75 per cent. of the time of the trial courts is taken up with the hearing of personal-injury cases, all of which are long-drawn, hotly contested legal battles, and prevent the hearing of ordinary commercial and other civil cases.

The disregard for life and limb under corporate management, especially railroad management, the multiform accidents resulting from the increased use of electric and other machinery in recent years, the pernicious activity of legal and extra-legal "ambulance-chasers," have become a distinct social and legal evil, the effect of which is plainly manifested in the congested condition of court dockets throughout the country. I imagine New York has its full share.

A permanent remedy will not be found in increasing the facilities or personnel of the courts of justice, but rather in a reform of business methods in the corporate and other employers whose stockholders are finally the chief sufferers from the evil. The use of accident-insurance companies, and the consequent division of responsibility between corporate officials and treasuries on the one side and those of these companies on the other, have increased the evil and delayed the remedy.

The incidental suffering and the practical denial of justice to all others in the community which have resulted, may bring about the necessary reform in the revival of the employer's conscience, who will be made to feel by the complaints of his fellow-men and the inroad on his pocketbook that "Thou shalt not kill," or maim, is the law of corporations as well as men.

Very truly yours,

Eugene E. Prussing.

Chicago, March 5, 1904.
